The Lady's Work-table.

INTRODUCTION.

COMPLAINTS are frequently to be heard that railroads are the greatest enemies to needlework. Instead of staying at home, as in former days, bending over the tapestry-frame or the lace-pillow, ladies are, in these days, apt to prefer travelling about the world, visiting foreign countries, and making acquaintance with other peoples. To a great extent this charge is true; but if the monster pieces of work, such as tapestries, which help us to read the pages of history, and cunningly wrought laces, which are still used to adorn many churches, are no longer worked as labours of love, on the other hand, there is greater variety of handiwork. Ladies employ their spare hours in carving and fretwork; lace-making is a most fashionable work; *guipure d'art* finds many admirers and many producers; braiding, *appliqué*, tatting, embroidery, knitting, netting, and crochet, are all more or less practised. The Russian embroidery, worked on cambric with fine black silk, is one of the favourite pastimes of the neat-fingered; and the illuminating of texts, and of albums in which crests and monograms are collected and mounted, show that the paint-brush and pencil, although to some extent mechanically employed, are not idle. So far as space permitted, we have given designs for several varieties of work, full instructions for that popular employment, fretwork, and some useful hints in mending and making fishing-nets.

Description of Coloured Pattern.

Writing Table or Piano Rug.

THIS DESIGN is appropriate for either of the above elegant and useful articles, and has been arranged with every consideration for facility of working.

Only five colours are required for it, and all are so distinctly shown, that even in the darkest days of the season it may be taken up as a pastime when other works have to be laid aside; it will also be found a particularly agreeable pattern to copy by lamplight. When the needlework is completed a centre of rough white lambskin is to be inserted. We have ascertained from a West-end furrier that the rug may be made up, and the skin furnished, for about 15*s*. The black and scarlet edge on the Berlin pattern may be worked or not, according to taste; but if it be *not* worked, a black and scarlet cord must be sewn round the edge of the rug when finished, beyond which, if expense be no object, a white fur fringe, of two inches wide, would be a decided improvement.

The pattern should be worked on a canvas of ten stitches to the inch; the wool should be double Berlin.

The materials requisite are as follows:—Seven-eighths of Penelope canvas of *full* 21 inches wide; 2oz. black wool; 2oz. scarlet; 1oz. stone-colour; 1½oz. violet; ½oz. white.

One quarter of the rug is shown in the pattern. The entire size, if worked according to our directions, will be 28 inches by 20.

An error has been made in colouring the miniature design by introducing more spots in the border than there are in the working pattern. As the latter is correct, we have to request the worker to copy it faithfully, without paying any regard to the miniature.

1. Crochet D'Oyley or Headdress.

By Mlle. Riego de la Branchardiere.

MATERIALS.—For D'Oyley, Toilet Cushion, &c., use Walter Evans and Co.'s Boar's-head Crochet-cotton, No. 16, and Walker's Uncotopic Needle, No. 3½. For Headdress, Cotton No. 30, and Needle No. 4½.

The Spray of Thistles.

Commence with 30 chain, and for the

1*st Leaf*—Turn, miss 1, 15 plain, 6 treble, 2 plain, turn; work 1 chain to cross the stem, and up the other side, 2 plain (2 chain, 5 long, 2 chain, 1 plain, twice), 1 chain, 5 treble, 5 single, 1 chain; turn, and down the other side of the leaf, 5 single, 5 treble, 1 chain, 1 plain, 2 chain, 5 long, 2 chain, 1 plain, 2 chain, 3 long, and before finishing the leaf, work 21 chain for the

1*st Thistle*—Turn, miss 5, 1 single in the 6th stitch to form a round loop; turn, 1 chain to cross the stem.

1st round—Work 8 plain in the round loop, 1 chain to cross the stem.

2nd round—Work 2 treble in 1 stitch, join to the 3rd treble stitch of the 2nd side of the 1st leaf; (2 treble in 1 stitch, 4 times), and to form the top of the thistle, 13 chain, turn this chain to the right, and join to the last treble stitch, miss 1, and work 5 single on the 13 chain; (7 chain, join to the same treble stitch as before, miss 1, and work 5 single on the 7 chain, 3 times); (3 chain, miss 1, and 1 plain in the 1 chain between the bars of the thistle, 4 times); 3 chain, 5 single down the side of the thistle; and to finish the calyx (2 treble in one stitch, 4 times), 1 single, and down the stem, 2 single, 2 chain, 2 single, miss 2, 2 single, 2 chain, 4 single, and leaving 2 chain, work 33 chain, and for the

2*nd Leaf*—Turn, miss 1, 5 plain, 16 treble, 2 plain, turn, 1 chain to cross the stem, and up the other side, 2 plain, 2 chain, 1 long, join to the 5th treble stitch of the calyx of the thistle; 4 long, 2 chain, 1 plain, 2 chain, 5 long, join to the last 3 chain of the thistle; 2 chain, 1 plain, 1 chain, 5 treble, 5 single, 1 chain; turn, and on the other side, 5 single, 5 treble, 1 chain, 1 plain, 2 chain, 5 long, 2 chain, 1 plain, 2 chain, 3 long; and before finishing the leaf, make 16 chain for the

2*nd Thistle*—Work as the 1st Thistle, joining it to the 1st long stitch of the 2nd side of the 2nd leaf; when finished, work on the stem, 2 single, 2 chain, 2 single, miss 2, 3 single; and to finish the leaf, 1 single on the top of the last long stitch, 2 long, 2 chain, 2 plain; and on the stem, 9 plain, then 2 plain on the stem of the 1st Thistle; and to finish the 1st leaf, 1 single on the top of the last long stitch, 2 long, 2 chain, 2 plain; and on the stem, 2 plain, then 28 chain; and for the

3*rd Leaf*—Turn, miss 1, 5 plain, 16 treble, 2 plain; turn, work 1 chain to cross the stem, and up the other side, 2 plain, 2 chain, 3 long; then 7 chain, join to the 5th plain stitch of the stem of the 2nd leaf; work 17 chain for the

3*rd Thistle*—Turn, and for the calyx, miss 5, 1 single in the 6th stitch, 1 chain to cross the stem.

1st round—Work 8 plain in the round loop, 1 chain to cross the stem.

2nd round—(2 treble in one, twice), join to the last single stitch of the stem of the 2nd Thistle (2 treble in one, 3 times), 13 chain, join to the last treble stitch, miss 1, and work 5 single on the 13 chain; (7 chain, join to the treble stitch as before, miss 1, 5 single on the 7 chain, 3 times), join to the 5th treble stitch of the calyx of the second thistle; (3 chain, miss 1, and 1 plain in the 1 chain between the bars of the thistle, 4 times); 3 chain, and 5 single down the side, then (2 treble in one stitch, 4 times), 1 single, and down the stem, 2 single, miss 2, 2 single, 2 chain, 4 single; and on the 7 chain, 1 single, 2 chain, 2 single, miss 2, 2 single; and to finish the leaf, 1 single on the last long stitch, 2 long, 2 chain, 1 plain, 2 chain, 5 long; join to the 2 chain worked down the stem of the 3rd Thistle; 2 chain, 1 plain, 1 chain, 5 treble; join to the 7th treble stitch of the calyx of the 3rd Thistle; then 5 single, 1 chain, turn, and down the other side, 5 single, 5 treble, 1 chain, 1 plain (2 chain, 5 long, 2 chain, 1 plain, twice), then 1 plain, and down the stem, 3 plain, then down the centre stem, 3 plain. Fasten off.

Work 15 Sprigs more the same.

The Rose Sprig.

Make 51 chain, turn, and on the chain, miss 1, 1 single, 1 plain, 4 treble, 1 plain, 3 single, 1 plain, 4 treble, 1 plain, 2 single, 1 plain, 1 treble, 3 long, 1 treble, 1 plain, 1 single, 1 plain, 1 treble (2 long in one stitch, 3 times), 1 treble, 1 plain, 1 single, 1 plain, 1 treble (2 long in one, 3 times), 1 treble, 1 plain, 1 single, 1 plain, 1 treble, 1 long; turn the work on the wrong side, leaving 5 chain; then 4 chain, miss 8, 1 plain on the centre of the last 6 long, 4 chain, miss 10, 1 plain on the next 6 long, 4 chain, miss 9, 1 plain on the 3 long; turn back, 5 chain, miss 1, 1 plain in the 4 chain, 2 chain, join to the 13th stitch from the commencement—that is, the 2nd stitch of the 2nd 4 treble; then 3 chain, 1 plain in the same 4 chain as before, 5 chain, 1 plain as before (then in the next 4 chain, work 5 chain and 1 plain 3 times); 5 chain, 1 plain in the 3rd 4 chain, 2 chain; join to the 5th stitch from the commencement, then 3 chain, 1 plain in the 4 chain; 5 chain, 1 plain in the 4 chain; 1 single on the top of the last long stitch; and on the foundation chain, 2 long, 1 treble, 1 plain, 1 single, join to the 1st stitch of all, which will make it round; turn so as to work on the foundation chain, still keeping the work on the right side.

1st round—50 single all round the foundation chain, worked rather loose, so as not to draw it in.

2nd round—3 chain and 1 single, 33 times, working on the lower edge of the stitches of the 1st round, leaving the upper edge at the back; 1 chain and 1 plain, 17 times, on the lower edge as before.

3rd round—Work on the upper edge of the stitches of the 1st round, keeping the last round down in front under the thumb of the left hand, 5 single, 6 chain, miss 4, 2 plain, 7 chain, miss 2, 2 plain, 8 chain, miss 3, 2 plain, 7 chain, miss 2, 2 plain, 6 chain, miss 4, 4 single, 4 chain, 2 plain, 4 chain, 1 plain; then for the

1*st Small Leaf*—8 chain, turn, miss 1, 2 plain, 2 treble, 1 plain, 1 single, leaving 1 chain; then for the

2*nd Small Leaf*—9 chain, turn, miss 1, 2 plain, 3 treble, 1 plain, 2 single, 1 single on the 1 chain of the 1st leaf; and on the rose 1 plain (4 chain and 2 plain, 7 times), 4 chain, 1 single, on the 1st stitch of this round; and for

The Bud—17 chain, turn, miss 1, 1 single, 1 plain, 1 treble, 3 long, 1 treble, 1 plain; turn, 1 chain to cross the stem; and on the other side, 3 plain, join to the 5th 4 chain of the rose, counting from the small leaves, then 6 plain; and for the 1st *point*—4 chain, join to the 2nd treble stitch in the 2nd small leaf, miss 1, 3 single on the 4 chain, 1 single on the top of the last plain stitch, 1 single on the bud, 5 chain, 1 single in the same stitch as the last; and for the 2nd *point*—5 chain, turn, miss 1, 4 single; then on the bud, 7 plain, 1 single, and on the stem, 3 single; and for the

3*rd Small Leaf*—10 chain, turn, miss 1, 2 plain, 4 treble, 1 plain, 2 single, then 2 single on the stem; and for the

4*th Small Leaf*—6 chain, turn, miss 1, 1 plain, 2 treble, 1 plain, 1 single, then 3 single on the stem; and on the rose, 1 single, 4 chain, 2 plain.

4th round—In the 6 chain, work 9 treble, then 1 single between the 2 plain of last round; and in the 7 chain (1 treble, 9 long, 1 treble), 1 single as before; and in the 8 chain (1 treble, 11 long, 1 treble), then 1 single as before (1 treble, 9 long, 1 treble, in the 7 chain), 1 single as before; then 9 treble in the 6 chain, and on the 4 single, 1 single, 4 chain, miss 2, 1 single. Fasten off.

Work 7 Roses more the same.

The Joining Pattern.

1*st Shamrock*—Commence with 12 chain, turn, miss 4, 1 single, turn back (5 chain and 1 plain in the round loop, 3 times), turn back; (1 plain, 3 treble in the 5 chain, take one of the roses and join to the 4th stitch of the 2nd division of it, 3 treble and 1 plain in the same 5 chain as before); miss 1, 1 plain, 3 treble in the next 5 chain; and before finishing this shamrock, work 11 chain for the

2*nd Shamrock*—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 2 treble, join to the 2nd stitch of the 1st division of

Digitized by Google

the rose, 4 treble, 1 plain); miss 1 (1 plain, 3 treble, join to the point of the 4th small leaf, 3 treble, 1 plain); miss 1, 1 plain, 3 treble; then 12 chain for the

3rd Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the centre division of the last shamrock, 3 treble, 1 plain); miss 1 (1 plain, 6 treble, 1 plain), miss 1, 1 plain, 3 treble; then 14 chain for the

4th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 2nd division of the last shamrock, 3 treble, 1 plain); 2 chain, join to the point of the 3rd small leaf; then 10 chain for the

5th Shamrock—Turn, miss 4, 1 single, turn back (3 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 5th plain stitch of the bud, 3 treble, 1 plain); miss 1 (1 plain, 2 treble, join to the point of the bud, 4 treble, 1 plain); miss 1 (1 plain, 3 treble; take a thistle sprig, and join to the 2nd treble stitch of the third leaf of it, 3 treble, 1 plain), 7 single on the stem; then on the 4th shamrock (1 plain, 5 treble, join to the point of the thistle leaf, 1 treble, 1 plain); miss 1 (1 plain, 3 treble, join to the last 3 chain of the thistle, 3 treble, 1 plain); 5 single on the stem; then 10 chain for the

6th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 3rd 3 chain of the thistle, 3 treble and 1 plain); miss 1, 1 plain and 3 treble; then 8 chain for the

7th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 4th 3 chain of the 2nd thistle, 3 treble, 1 plain); miss 1 (1 plain, 6 treble, 1 plain); miss 1 (1 plain, 3 treble. Take a second thistle sprig, and join to the 2nd long stitch of the 1st leaf, 3 treble, 1 plain); 3 single on the stem; and to finish the 6th shamrock, 3 treble, 1 plain, miss 1 (1 plain, 3 treble, join to the 1st stitch of the sprig, 3 treble, 1 plain), 5 single on the stem, then 4 single on the 4 chain; and to finish the 3rd shamrock, 3 treble, 1 plain, work 4 single on the stem; then 15 chain for the

8th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the last division of the 3rd shamrock, 3 treble, 1 plain); miss 1 (1 plain, 3 treble, join to the last stitch of the thistle sprig, 3 treble, 1 plain); miss 1 (1 plain, 3 treble, join to the last long stitch of the thistle leaf, 3 treble, 1 plain); 5 single down the stem; then 9 chain for the

9th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the last long stitch of the 3rd division of the thistle leaf, 3 treble (1 plain); miss 1, 1 plain, 6 treble and 1 plain, twice); 4 single on the stem, 7 single down the centre stem; then ten chain for the

10th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 2nd stitch of the 7 single worked down the centre stem, 3 treble, 1 plain); miss 1 (1 plain, 2 treble, join to the last division of the 9th shamrock, 2 treble. Take another rose, join to the point of the 2nd small leaf of it, 2 treble, 1 plain); miss 1 (1 plain, 6 treble, 1 plain); then 5 single on the stem, 1 single on the centre stem; and to finish the 2nd shamrock, 3 treble, 1 plain, 6 single on the stem; and to finish the 1st shamrock, 3 treble, 1 plain; then 8 chain for the

11th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times); turn back (1 plain, 3 treble, join to the 3rd single stitch of the stem of the 2nd shamrock, 3 treble, 1 plain); miss 1 (1 plain, 2 treble, join to the 3rd division of the 10th shamrock, 2 treble, join to the point of the 1st small leaf, 2 treble, 1 plain); miss 1 (1 plain, 3 treble, 5 chain, join to the 6th stitch of the last division of the rose, miss 1, 2 single on the 5 chain). Take a third thistle sprig, and join to the last 3 chain of the 2nd thistle, 2 single, and on the shamrock, 3 treble, 1 plain; then 3 single on the stem, and on the 1st shamrock, 1 plain, 3 treble; join to the 1st 3 chain of the 2nd thistle, 3 treble, 1 plain; 6 single on the stem, join to the point of the 2rd thistle leaf; 1 single, and 1 single on the plain stitch between the 2nd and 3rd divisions of the rose; then on the 3rd division, work 8 single, 3 chain, join to the 3rd 3 chain of the 1st thistle; miss 1, 2 single on the 3 chain, 1 single on the rose. Fasten off.

Repeat from the commencement 3 times more, using two of the roses and three of the thistle sprigs each time: so that the work will be in four separate quarters, the other four thistle sprigs not yet being required.

Centre Star.

Commence with 6 chain, make it round.

1st round—Work 8 plain in the round loop.

2nd round—(5 chain and 1 plain, 8 times.)

3rd round—1 plain and 2 treble in the 5 chain, then 4 chain; 2 treble and 1 plain in the same 5 chain as before. Repeat 7 times more, then 3 single on the 1st stitches of the round.

4th round—1 plain, 1 treble and 1 long in the 4 chain, 1 chain; then take one of the quarters, and join to the last long stitch of the 3rd thistle leaf in the 3rd sprig; 1 chain, 1 long, 1 treble and 1 plain in the same 4 chain of the 3rd round as before; * 16 chain, turn, miss 8, 1 single to form a round loop; 1 chain to cross, then 3 plain in the round loop; join to the centre of the 2nd division of the thistle leaf, 3 plain in the round loop; then 12 chain for the

1st Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times in the round loop); turn back; 1 plain and 3 treble in the 5 chain, join to the 2nd treble stitch of the thistle leaf; 3 treble and 1 plain in the same 5 chain as before; and before finishing the leaf, work 10 chain for the

2nd Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times in the round loop); turn back; (1 plain, 3 treble, join to the point of the thistle leaf, 3 treble, 1 plain in the 5 chain); miss 1, and in the next 5 chain (1 plain, 1 treble, join to the last 3 chain of the 3rd thistle; 2 treble, join to the 6th stitch of the 4th division of the 2nd rose, 3 treble, 1 plain), miss 1 (1 plain, 6 treble, 1 plain); then 5 single down the stem, and in the next 5 chain of the 1st shamrock (1 plain, 6 treble, 1 plain); then 10 chain for the

3rd Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back; (1 plain, 3 treble, join to the last division of the 2nd shamrock, 3 treble, 1 plain); miss 1, and in the next 5 chain (1 plain, 3 treble, join to the centre of the 3rd division of the rose, 3 treble, 1 plain); miss 1 (1 plain, 6 treble and 1 plain), then 4 single down the stem, 9 chain, join to the last division of the 3rd shamrock; then 8 chain for the

4th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back; (1 plain, 3 treble, join to the 8th stitch of the 2nd division of the rose, 3 treble, 1 plain); miss 1, 1 plain, 3 treble; then 12 chain for the

5th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 4 treble, join to the 4th stitch of the 2nd division of the rose, 2 treble, 1 plain), then miss 1 (1 plain, 2 treble, join to the 9th stitch of the 1st division of the rose, 4 treble, 1 plain), miss 1, 1 plain, 3 treble; then 11 chain for the

6th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 2nd stitch of the 1st division of the rose, 3 treble, 1 plain), (miss 1, 1 plain, 6 treble and 1 plain, twice), 5 single on the stem, leaving 1 chain, then 9 chain, join to the 3rd division of the last shamrock; then 15 chain for the

7th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 2 treble, join to the 2nd division of the last shamrock, 2 treble, join to the point of the 4th small leaf, 2 treble, 1 plain), miss 1 (1 plain, 6 treble, 1 plain), miss 1, 1 plain, 3 treble; then 14 chain for the

8th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 2nd division of the last shamrock, 3 treble, 1 plain), 2 chain, join to the point of the 3rd small leaf; then 9 chain for the

9th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 4th plain stitch of the bud, 3 treble, 1 plain), miss 1 (1 plain, 2 treble, join to the point of the bud, 2 treble, 4 chain, join to the 2nd division of the 9th shamrock in the 1st part of the pattern, miss 1, 2 single on the 4 chain; then 3 chain, join to the 3rd long stitch of the thistle leaf, miss 1, 2 single on the 3 chain, 1 single on the 1 chain, and on the shamrock 2 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the 1st treble stitch of the thistle leaf, 3 treble, 1 plain), then 6 single on the stem, and on the 8th shamrock (1 plain, 5 treble, join to the point of the leaf, 1 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the last 3 chain of the thistle, 3 treble, 1 plain), 5 single on the stem; then 10 chain for the

10th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to 3rd 3 chain of the 3rd thistle, 3 treble, 1 plain), miss 1, 1 plain, 3 treble; then 8 chain for the

11th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back; 1 plain, 3 treble, join to the 4th 3 chain of the 2nd thistle, 3 treble, 1 plain; miss 1, 1 plain, 6 treble, 1 plain; miss 1, 1 plain, 3 treble. Take one of the 4 thistle sprigs, not used in the quarters, and join to the 1st long stitch of the 1st leaf, 3 treble, 1 plain; then 3 single on the stem, and on the 10th shamrock, 3 treble, 1 plain (miss 1, 1 plain, 3 treble, join to the last stitch of the sprig, 3 treble, 1 plain), then 5 single down the stem, 4 single on the 4 chain, and on the 7th shamrock, 3 treble, 1 plain, 3 single on the stem; then 10 chain for the

12th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the last division of the 7th shamrock, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the last stitch of the stem of the thistle sprig, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the last long stitch of the leaf, 3 treble, 1 plain), 5 single on the stem, and 4 single on the centre stem; then 8 chain for the

13th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 1st long stitch of the 3rd division of the thistle leaf, 3 treble, 1 plain), miss 1 (1 plain, 6 treble and 1 plain, twice), then 3 single on the stem, 3 single on the centre stem; and on the 5th shamrock, 3 treble, 1 plain, then 3 single on the stem; work 13 chain for the

14th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 8th stitch of the last 13 single, 3 treble, 1 plain), miss 1 (1 plain, 3 treble; join to the 3rd division of the 13th shamrock, 3 treble, 1 plain), miss 1 (1 plain, 6 treble, 1 plain, 3 single on the stem); then 11 chain for the

15th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 6 treble, 1 plain), miss 1, 1 plain, 3 treble; then 10 chain for the

16th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 2 treble, join to the 1st division of the last shamrock); 2 treble join to the last division of the 14th shamrock, 2 treble, 1 plain (miss 1, 1 plain, 6 treble and 1 plain, twice), 4 single on the stem; then 15 chain for the

17th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back, 1 plain, 3 treble, join to the last division of the 16th shamrock, 3 treble, 1 plain (miss 1, 1 plain, 6 treble, 1 plain), miss 1, 1 plain, 3 treble; then 14 chain for the

18th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), 1 plain, 3 treble, join to the 2nd division of the 17th shamrock, 3 treble, 1 plain; then 9 chain for the

19th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 2nd division of the 16th shamrock, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, 4 chain, join to the 2nd division of the 13th shamrock), miss 1, 2 single on the 4 chain, 3 chain, join to the 3rd long stitch of the thistle leaf (miss 1, 2 single, then 1 single on the 1 chain, and on the shamrock, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the 1st treble stitch of the thistle leaf, 3 treble, 1 plain), then 4 single on the stem, and on the

Digitized by Google

shamrock (1 plain, 5 treble, join to the point of the leaf, 1 treble, 1 plain), miss 1, 1 plain, 3 treble, join to the last 3 chain of the thistle, 3 treble, 1 plain; then 5 single on the stem, work 10 chain for the

20th & 21st Shamrocks—Repeat as the 10th and 11th shamrocks, joining to the thistle leaf of the 1st sprig in a second quarter; then 5 single down the stem, 4 single on the 4 chain, and to finish the 18th shamrock, 3 treble, 1 plain, then 3 single on the stem; work 13 chain for the

22nd Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times, turn back; (1 plain, 3 treble, join to the last division of the 18th shamrock, 3 treble, 1 plain), miss 1, 1 plain, 3 treble; join to the last stitch of the sprig, 3 treble, 1 plain; miss 1, 1 plain, 3 treble, join to the last long stitch of the leaf, 3 treble, 1 plain; 6 single down the stem; then 8 chain for the

23rd Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 1st long stitch of the 3rd division of the leaf, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, then 4 chain, join to the 5th long stitch of the leaf, miss 1, 2 single on the 4 chain, 3 chain, join to the 2nd division of the shamrock in the 1st part of the pattern, miss 1, 2 single on the 3 chain, 1 single on the 1 chain, and on the shamrock, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the point of the 2nd small leaf, 3 treble, 1 plain); 3 single on the stem, and 5 single on the centre stem, join to the point of the 1st small leaf, 5 single on the centre stem; then on the shamrock, 3 treble, 1 plain, miss 1 (1 plain, 3 treble, join to the last 4 chain of the rose, 3 treble, 1 plain); then 6 single down the stem, and 9 single down the centre stem; and on the 4th shamrock 3 treble, 1 plain, miss 1, 1 plain, 3 treble; then 10 chain for the

24th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 7th stitch of the 9 single, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the 3rd stitch of the stem of the 15th shamrock, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the 5th stitch of the last division of the rose, 3 treble, 1 plain), then 5 single on the stem, and on the shamrock, 3 treble, 1 plain; then 10 single down the stem; work 11 chain for the

25th Shamrock—Turn, miss 4, 1 single, turn back (5 chain and 1 plain, 3 times), turn back (1 plain, 3 treble, join to the 3rd division of the 4th shamrock, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the 7th stitch of the 4th division of the rose, 3 treble, 1 plain), miss 1 (1 plain, 3 treble, join to the 1st 3 chain of the thistle, 3 treble, 1 plain), then 4 single down the stem, join to the point of the thistle leaf, and 5 single down the centre stem; then on the 1st shamrock (1 plain, 3 treble, join to the 3rd treble stitch of the thistle leaf, 3 treble, 1 plain); then 7 single down the stem, and in the round loop, 3 plain; join to the 2nd long stitch in the 2nd division of the leaf, 3 plain in the round loop, 7 single down the stem; and in the last 4 chain of the centre star, 1 plain, 1 treble, 1 long; 1 chain, join to the 1st long stitch of the thistle leaf; 1 chain, 1 long, 1 treble and 1 plain in the same 4 chain as before, join to the last stitch of the sprig; and in next 4 chain, work 1 plain, 1 treble, 1 long; 1 chain, join to the last long stitch of the thistle leaf, 1 chain, 1 long, 1 treble, 1 plain. Repeat from * in the 4th round 3 times more.

1. Crochet D'Oyley or Headdress.

(Designed by Mlle. Riego de la Branchardière.)

---

2. Design for Alms-Bag.

THERE are many of our industrious readers, who love the Church and respect its festivals, who would only be too happy to make an offering of their own work on such occasions, if they but knew how to accomplish it in a way suited to the limited time and means at their disposal.

Aware of this, and of the popular supposition that every decorative appointment of the Church must not only be tedious but expensive, by way of correcting this error we give a design for an Alms-Bag, as a very necessary article of Church

2. Design for Alms-Bag.

Digitized by Google

The Lady's Work-table—*continued from page* 12.

furniture, which is neither an elaborate or costly work to undertake, and appropriate and elegant as a Christmas gift.

The material should be crimson velvet, the Monogram to be embroidered thereon in gold-coloured twist silk. A foundation, however, should first be prepared, that is to say, an exact copy of the design must be cut out in parchment or cardboard. A piece of stout holland of the required size having been strained tightly in a frame, the material for the Alms-Bag must be laid down upon it, and upon this the monogram must be evenly placed, and carefully sewn down at the edges, preparatory to commencing the embroidery. If to be worked in silk, a twist of the kind expressly made for the Church is the best, and in working, the stitches must be taken across the cardboard from side to side, the *edges* determining the length of each stitch. According to the design, so must be the inclination of the stitches, sometimes in a slanting direction, and at others straight. The Bag to be lined with crimson silk, and, to complete it, a fine gold-coloured silk cord should be neatly sewn round the edge.

The engraving shows the exact size of the Bag when made, with the Monogram in due proportion.

Only a *good silk* velvet should be used; and as little more than a quarter of a yard is required, it will be at once seen that the cost need not be a matter of consideration.

3. Knitted Over-shoe.

IN MOSS STITCH.

MATERIALS—1 oz. of black double Berlin wool, 1 ditto scarlet, ½ ditto light green, ½ a yard of white silk, ¾ of black ribbon, 1½ inch in width; a pair of cork soles 9½ inches in length; 3 steel knitting-needles, No. 19, Eagle-gauge, and a bone crochet-hook, No. 18.

With black wool, cast on 14 stitches, and knit 1 plain row.

2nd row—Knit 1, make 1, * purl 1, knit 1, repeat from * to the end. Always make the knitted stitch to come over the purled, and *vice versâ*.

3rd row—Purl 1, make 1, * knit 1, purl 1, repeat from * to the end.

4th row—Purl 1, knit 1, repeat to the end.

5th row—Same as 2nd.

6th row—Same as 3rd.

7th row—Join on the green wool; do not cut off the black wool, knit this row the same as the 4th.

8th row—Same as 2nd.

9th row—Same as 3rd.

10th row—Same as 4th.

11th row—Join on scarlet wool, knit the same as 2nd.

12th row—Same as 3rd.

13th row—Same as 4th.

14th row—Knit 1, purl 1, repeat to the end.

15th row—Same as 3rd.

16th row—Same as 2nd.

17th row—Black wool, same as 14th.

18th row—Same as 4th.

19th row—Same as 2nd.

20th row—Same as 3rd.

21st row—Same as last.

22nd row—Same as 2nd.

23rd row—Green wool, same as 14th.

24th row—Same as 3rd.

25th row—Same as 2nd.

26th row—Same as 14th.

27th row—Scarlet wool, same as 3rd.

28th row—Same as 2nd.

29th row—Same as 14th.

30th row—Same as 4th.

31st row—Same as 2nd.

32nd row—Same as 3rd.

33rd row—Black wool, same as 4th.

34th row—Same as 14th.

35th row—Same as 3rd.

36th row—Same as 2nd.

37th row—Same as last

38th row—Same as 3rd.

39th row—Green wool, same as 4th.

40th row—Same as 2nd.

41st row—Same as 3rd.

42nd row—Same as 4th.

43rd row—Scarlet wool, same as 2nd.

44th row—Same as 3rd.

45th row—Same as 4th.

46th row—Same as 14th.

47th row—Same as 3rd row.

48th row—Same as 2nd.

49th row—Black wool, same as 14th.

50th row—Same as 4th.

51st row—Same as 14th.

52nd row—Same as 4th.

53rd row—Same as 2nd.

54th row—Purl 1, make 1, then knit 1, purl 1, until you have 16 stitches on the needle; knit the next stitch, and pass the 16th stitch over the one last knitted; these stitches must be knitted very loose, so as not to contract the work; repeat until you have 14 stitches left on the left-hand needle and one on the right hand; take another needle, slip the stitch from the right-hand needle on to it; then knit and purl the remaining stitches. There will now be 15 on each needle.

55th row—Green wool, same as 4th.

56th row—Same as last.

57th row—Purl 1, make 1, then knit 1, purl 1, all but 3, pass the centre stitch over the first, then purl 1, knit 1.

58th row—Knit 1, purl 1, repeat to the end.

59th row—Scarlet wool, knit 1, make 1, then purl 1, knit 1, all but 3; pass the centre stitch over the first, knit 1, purl 1.

60th row—Same as 4th.

61st row—Same as 57th.

62nd row—Same as 58th.

63rd and 64th rows—Same as last.

65th row—Black wool, same as 59th.

66th row—Same as 58th.

67th and 68th rows—Same as last.

69th row—Same as 59th.

70th row—Same as 55th.

Green wool, knit 9 more stripes, without increasing, 3 green, 3 black, 3 scarlet; there are four rows in the green, 6 in the black, 6 in the scarlet, then make 2 rows of green, and cast off.

Join on the green wool to the black stitches, and knit the other side the same, and sew the two ends together.

Cut the silk the size and shape of the shoe, leaving a little piece for turning; place it on the wrong side of the shoe, and tack it, but not close to the edge; sew on the sole, taking care to keep all the pieces of wool on the wrong side; place a piece of the silk at the bottom of the shoe, then turn down the edges and sew it neatly all round; turn the shoe to the right side.

With black wool and the crochet-hook make a chain of 60 stitches, very loose; that is, sufficient to go round the upper edge of the shoe; join the ends together and cut off the wool. With green wool make 1 plain stitch in the first chain stitch, 1 chain, take the hook from the loop, and with the scarlet wool commence in the next stitch, 1 plain, 1 chain, take the hook from the loop, insert it in the green loop, and pull the scarlet loop through it, 1 chain, take the hook from the loop, insert it in the next black stitch, bring the green wool at the back of the scarlet, and draw it through, but do not make a stitch; then insert the hook in the scarlet loop and pull the green loop through, work one chain; now bring the scarlet through and work in the same manner, repeat all round; then work on the other side of the chain stitches in the same manner, taking care to make the scarlet stitches come opposite the green; sew this round the shoe, then make a bow with the ribbon, and sew on the front. The shape of the shoe will be improved by a piece of stout calico being laid between the silk and the shoe.

4. Knitted Counterpane.

KNITTING A COUNTERPANE in small pieces, to be sewn together when a sufficient number have been completed, is a sort of work which grows in favour and interest as perfect facility is acquired; and each separate part being added to the last as soon as completed, the accumulation displays itself more and more advantageously. The pattern which we are now giving is in squares, four of which being joined together show four raised leaves, composing a sort of flower in the centre. The cotton used is Strutt's three-thread knitting-cotton, No. 6, and the needles are No. 14, Bell-gauge. The letters "T. F." signify "thread forward."

Begin with 1 stich, leaving an end of cotton to tie the squares together by.

1st row—T. F., knit 1.

2nd row—T. F., purl 1, knit 1.

3rd row—T. F., knit 1, T. F., knit 1, T. F., knit 1.

4th row—T. F., knit 1, purl 3, knit 2.

5th row—T. F., knit 2, T. F., knit 3, T. F., knit 2.

6th row—T. F., knit 2, purl 5, knit 3.

7th row—T. F., knit 3, T. F., knit 5, T. F., knit 3.

8th row—T. F., knit 3, purl 7, knit 4.

9th row—T. F., knit 4, T. F., knit 7, T. F., knit 4.

10th row—T. F., knit 4, purl 9, knit 5.

11th row—T. F., knit 5, T. F., knit 9, T. F., knit 5.

12th row—T. F., knit 5, purl 11, knit 6.

13th row—T. F., knit rest of row (23 stitches).

14th row—T. F., knit 6, purl 11, knit 7.

15th row—T. F., knit rest of row (25 stitches).

16th row—T. F., knit 7, purl 11, knit 8.

17th row—T. F., knit rest of row (27 stitches).

18th row—T. F., knit 8, purl 11, knit 9.

19th row—T. F., knit rest of row (29 stitches).

20th row—T. F., knit 9, purl 11, knit 10.

21st row—T. F., knit rest of row (31 stitches).

22nd row—T. F., knit 10, purl 11, knit 11.

23rd row—T. F., knit rest of row (33 stitches).

24th row—T. F., knit 11, purl 11, knit 12.

25th row—T. F., knit rest of row (35 stiches).

26th row—T. F., knit 12, purl 11, knit 13.

27th row—T. F., knit 13, knit 2 together from the back, knit 7, knit 2 together plain, knit 13.

28th row—T. F., knit 13, purl 9, knit 14.

29th row—T. F., knit 14, knit 2 together from the back, knit 5, knit 2 together plain, knit 14.

Digitized by Google

30th row—T. F., knit 14, purl 7, knit 15.

31st row—T. F., knit 15, knit 2 together from the back, knit 3, knit 2 together plain, knit 15.

32nd row—T. F., knit 15, purl 5, knit 16.

33rd row—T. F., knit 16, knit 2 together from the back, knit 1, knit 2 together plain, knit 16.

34th row—T. F., knit 16, purl 3, knit 17.

35th row—T. F., knit 17, lift off a stitch, knit 2 together plain, pass the lifted stitch over it, knit 17.

36th row—T. F., knit rest of row (36 stitches).

37th row—Purl 2 together, purl rest of row (35 stitches).

38th row—Knit 2 together, knit rest of row (34 stitches).

39th row—Purl 2 together, purl rest of row (33 stitches).

40th row—Purl 2 together, purl rest of row (32 stitches).

41st row—Knit 2 together, knit rest of row (31 stitches).

Continue this, in ribs of 4 purl, and 4 plain, diminishing 1 stitch in each row, by purling 2 together, or knitting 2 together as the case may be, till you return to 1 stitch, then pull the cotton through, and cut it off, leaving an end.

In joining the squares, the four raised parts forming the flower must be knotted firmly together with the ends of the cotton left, then sewn on the wrong side through the open stitches at the edge. In joining the ribs care must be taken to make them correspond to each other.

5. D'Oyley (Tatting).

By Mlle. Riego de la Branchardiere.

MATERIALS.—Walter Evans and Co.'s tatting-cotton, No. 50; one ring and pin, No. 2, another, No. 3, and a small shuttle. This will make a fine D'Oyley the size of the engraving; but, if preferred coarser, tatting-cotton No. 30 or 40 may be used.

First Circle of Œillets.

Fill the shuttle with the cotton, and work the small œillets round the centre star as follows:

1st Œillet—Leave a few inches of the cotton; commence a loop and work 3 double stitches; take the ring and pin No. 3 and make a pearl loop with it; then 3 double stitches; draw the foundation loop quite close; turn this œillet down under the left thumb. For the second œillet, commence a loop close to the last, and work another œillet the same as the first; when finished, reverse the work so that the first œillet is at the top, and continue the same until 40 œillets are made, always reversing the work after each. Leave a few inches of the cotton.

Centre Star—Fill the shuttle, commence a loop and work 3 double stitches; then with No. 2 pin (make a pearl loop and work 3 double stitches alternately 9 times); take out the pin, and draw it quite close; then to form a 10th pearl loop place the end of the cotton and the one from the shuttle together, tie a knot with them, drawing it nearly close to the work, so as to correspond with the other 9 loops, the knot being in the centre.

1st Oval—Commence a loop, work 4 double stitches; then with No. 2 pin make a pearl loop; work 3 double stitches, take the small œillets and join to the pearl loop of the 1st of them; then 2 double, 1 pearl, 2 double, join to the 3rd small œillet, that is, the next which turns down; work 3 double, 1 pearl, 4 double, draw it close; join to the next pearl loop of the centre star.

2nd Oval—Commence a loop, work 4 double, join to the last pearl loop of the 1st oval; 3 double, join to the 5th œillet; 2 double, 1 pearl, 2 double, join to the 7th œillet; 3 double, 1 pearl, 4 double, draw it close; join to the next pearl of the centre star.

Repeat as the last Oval until 10 are made; in working the last of them it must be joined to the first to make it round; fasten off. The ends of cotton round the small œillets should also be knotted together.

Second Circle of Œillets.

Work as the 1st circle, making 80 small œillets instead of half that number.

First Circle of Rosettes.

1st Rosette—Take the centre star and join the cotton to the pearl loop of one of the small œillets of it. Commence a loop, work 2 double stitches, then with No. 2 pin (make 1 pearl and 2 double 3 times), take the 1st œillet of the 2nd circle and join to the pearl loop of it; then 2 double, 1 pearl, 2 double, join to the 3rd œillet as before; 2 double, 1 pearl, 2 double; then make 1 pearl, turning the cotton twice round the pin; 2 double, draw close; join to the pearl loop of the next œillet attached to the centre star. The last pearl loop will be twice the size of the others.

2nd Rosette—Commence, work 2 double; join to the last long loop; 2 double, 1 pearl, 2 double, 1 pearl, 2 double, join to the 5th œillet of the 2nd circle, 2 double, 1 pearl, 2 double, join to the 7th œillet; 2 double, 1 pearl, 2 double, 1 pearl, 2 double; make 1 pearl twice round the pin; 2 double; draw it close and join to the next œillet of the centre star.

Work 8 Rosettes more the same, and fasten off.

Stars for the Border.

Centre Rosette—Fill the shuttle, commence a loop, leaving a few inches of the cotton, work 3 double stitches; take No. 2 pin (make a pearl loop, and work 3 double stitches alternately 9 times); take out the pin and draw the foundation thread quite close; then to form a tenth pearl loop, place the end of cotton and the one from the shuttle together, and tie a knot with them, drawing it nearly close to the work so as to correspond with the other 9 loops, the knot being in the centre.

The Œillets.—Commence a loop, work 4 double stitches, make a pearl loop with No. 3 pin, then 4 double stitches, draw it close, join to the next pearl loop of the centre rosette. Work 9 œillets more the same, joining after each; at the end pass the cotton up to the pearl loop of the 1st œillet and join to it, so that the cotton may be in the centre.

1st Oval—Commence a loop, work 2 double, take No. 2 pin and (make a pearl loop and work 2 double alternately 8 times); then make a pearl loop turning the cotton twice round the pin; work 2 double; the last pearl will be twice the size of the others; draw it close; join to the pearl loop of the next œillet.

2nd Oval—Commence a loop, work 2 double; join to the long pearl loop: then 2 double (1 pearl and 2 double 7 times); 1 pearl twice round the pin; 2 double; draw close, and join to the next œillet.

Work 8 ovals more as the last: at the end it should be joined to the 1st oval. Fasten off.

Make 9 stars more the same, but in working the last oval the centre of it should be joined to the opposite oval of the previous star.

Small Rosettes—Commence a loop, work 2 double, then with No. 2 pin (make 1 pearl and 2 double 7 times); take a star of the border and join to the centre pearl loop of the oval next to those already attached; work 2 double, 1 pearl, 2 double; join to the next star at the centre of the oval; work 2 double, draw it close and fasten off, knotting the ends together. Repeat this rosette between each of the stars.

Second Circle of Rosettes.

1st Rosette—Join the cotton to one of the small œillets of the 2nd circle. Commence, work 2 double; then with No. 2 pin (make 1 pearl and 2 double 9 times), draw close; join to the next œillet.

2nd Rosette—Commence, work 2 double, 1 pearl, 2 double, join to the last pearl but one of the 1st rosettes; 2 double, 1 pearl, 2 double, 1 pearl, 2 double; take the stars of the border, and join the centre pearl loop of one of the small rosettes of it; 2 double (1 pearl and 2 double 4 times); join to the next œillet.

3rd Rosette—Work the same as the last, joining it to the centre of the next oval of the star.

4th Rosette—Work as the last, joining to the next oval of the star.

5th Rosette—Commence, work 2 double, 1 pearl, 2 double, join to the last pearl but one; 2 double (1 pearl and 2 double 7 times); draw it close, and join to the next œillet.

Repeat the 2nd and three following rosettes all round, and fasten off.

The Edging—1st Œillet—Commence, work 4 double, then with No. 3 pin work 1 pearl, 3 double, 1 pearl, 4 double, draw close; reverse the work.

2nd Œillet—Commence, work 4 double, take one of the stars, and join to the 3rd pearl loop of the oval nearest those joined together; then 4 double, draw it close; reverse the work.

1st Rosette—Commence, work 2 double, 1 pearl, 2 double, join to the last pearl of the 1st œillet; 2 double (1 pearl and 2 double 7 times), draw close; reverse the work.

3rd Œillet—Commence, work 4 double, join to the star, missing 3 loops between this joining and the last; 4 double, draw close, reverse the work.

2nd Rosette—Same as the 1st, joining to the last pearl but one of it.

4th Œillet, as the 2nd œillet—Repeat the rosette and œillet alternately 5 times more; and for the

10th Œillet—Commence, work 4 double, join to the last pearl but one of the last rosette, 4 double, 1 pearl, 4 double, draw close. Repeat from the 2nd œillet all round, and fasten off.

6. Crochet Trimming.

MATERIALS.—Walter Evans and Co.'s Boar's-head Cotton No. 16, and Walker's Uncotopic Needle No. 4.

Commence by working a foundation chain of the length required.

1st row—6 chain, miss 3, and 1 plain; repeat to the end and turn back.

2nd row—6 chain, miss 5, and 1 plain in the 6 chain of the last row. Repeat.

3rd row—Work the same as the 2nd row.

4th row—Work 1 chain and 1 treble 6 times, all in the 6 chain of the last row; then 1 chain and 4 plain in the next 6 chain. Repeat.

5th row—Work 3 plain on the 4 plain of the last row; then 1 chain, miss 1, and 1 treble in each one chain. Repeat.

6th row—Work 2 plain on the 3 plain of the last row; then 1 chain, miss 1, and 1 treble in each one chain. Repeat.

7th and 8th rows—Work as the 6th row, making 2 chain instead of 1 chain each time.

7. Lace Trimming (Crochet).

MATERIALS.—For a fine lace use Walter Evans and Co.'s Boar's-head Crochet-cotton No. 30, and Walker's Uncotopic Needle No. 4½. For a coarser, Cotton No. 18, and Needle No. 4.

Commence by making a chain of 19 stitches.

Foundation row—Miss the last 6 stitches of the foundation chain, and work 1 treble in the 7th stitch; then to form a dot, make 5 chain, put the needle in the 2nd stitch of these 5 chain, and work 1 single in it; then 1 chain to correspond with the other side; then on the foundation, miss 4 and work 1 treble, 3 chain, 1 treble in the next stitch. Make a 2nd dot as before; miss 4, and on the foundation 1 treble, 3 chain, 1 treble; turn the work on the other side.

1st row—Work 5 chain, 1 treble in the 3 chain; then 3 chain, and missing the dot work 3 treble in the next 3 chain; then 3 chain again, and 3 treble in the same loop of chain as before; 3 chain again, miss the dot and work 1 treble in the loop of chain at the end of the row; 5 chain, 1 plain in the same loop, turn back.

2nd row—Work 3 chain and 1 plain, 3 times, all in the 5 chain; then 3 chain, 1 treble in the same 5 chain. Make a dot as in the foundation row, then 1 treble in the loop of chain between the 6 treble; 3 chain, 1 treble in the same loop of

The Lady's Work-table — *continued from page* 15.

chain as before. Then make another dot, and work 1 treble in the loop of the chain at the end of the row; 3 chain, 1 treble in the same loop, turn back.

3rd row—5 chain, 1 treble in the 3 chain, then 4 chain, miss the dot and work 1 treble in the next loop of chain; then 3 chain, 1 treble in the same loop as before; 4 chain, miss the dot, 1 treble in the next loop; then (3 chain and 1 treble, 3 times more in the same loop of chain), turn back.

4th row—(5 chain and 1 plain, 3 times in the 3 chain;) then 5 chain and 1 plain twice in the next 3 chain; 5 chain, 1 plain in the next 3 chain; work 4 chain, 1 treble in the same 3 chain as before; then make a dot, and work 1 treble in the next 3 chain of the 3rd row; 3 chain, 1 treble in the same loop as before; make a dot, and work 1 treble in the last loop of the row; 3 chain, 1 treble in the same loop, turn back.

Commence again at the 1st row, and repeat until the length required is made.

8. Edging in Tatting.

MATERIALS.—For one inch deep use Walter Evans and Co.'s Boar's-head Cotton No. 12, Tatting-pin No. 2, and an Ivory Shuttle. For a finer edging, use No. 16 Cotton.

First Pattern.

1st Oval—Fill the shuttle, and commencing a loop, work 2 double stitches, then (1 pearl loop and 2 double stitches alternately, 6 times); draw the loop quite close.

2nd Oval—Commence a loop close to the last, work 2 double, join to the last pearl of the previous oval by putting the pin into the pearl loop, bringing the thread round the hand through it, and passing the shuttle through the loop; work 2 double (1 pearl and 2 double, 5 times); draw close.

3rd Oval—Commence a loop, work 3 double; join to the last pearl, then 3 double (1 pearl and 3 double, 6 times); draw close.

4th and 5th Ovals—Work them both the same as the 2nd oval; when they are finished, fasten off by passing the end of cotton left at the commencement into the space in the centre of the last oval, and then into the 1st oval, place the ends together and knot them firmly.

Second Pattern.

1st Oval—Commence a loop, work 2 double, then (1 pearl and 2 double, 3 times); take the 1st Pattern and join to the 4th pearl, counting from the end of it; then 2 double (1 pearl and 2 double, twice); draw close.

2nd Oval—Commence a loop, work 2 double, join to the last pearl; 2 double, 1 pearl, 2 double, join to the 2nd pearl of the next oval in the 1st Pattern; then, 2 double (1 pearl and 2 double, 3 times); draw close.

Repeat from the 3rd oval in the 1st Pattern.

9. Edging in Wavy Braid.

THIS SIMPLE LITTLE EDGING is formed by working seven stitches of *point de Bruxelles* on seven points of the braid, returning the thread through the loops of the stitches, drawing it up close in the centre, crossing the braid, and securing it with two or three stitches. Miss three points of the braid, work seven more points in the same way, repeating to the end; after which unite the points of the braid between each loop. The proper cotton for the *point de Bruxelles* is No. 20 of Messrs. Walter Evan's and Co.'s Boar's-head Crochet. The same pattern looks very pretty formed of a loop of nine points of the braid with the English rosette lace-stitch worked in the centre.

10. Frame for a Photograph or Small Looking-Glass.

WALNUT, or any other fancy wood will be suitable here; the square photographs with glass, or looking-glass, are to be fixed behind, so that the prettily shaped wood corner falls over it. This frame should be completed in fretwork, without carving, and has a very rich effect.

11. Letter Collector.

THIS WILL BE FOUND a very useful and elegant piece of carving to stand on a hall or entrance table, and collect letters in readiness for the post hour. The lower part requires a piece of wood 9½ in. long, 3½ broad, and 2½ deep, and a hollow is dug out underneath so as to make the branches and stems, lying on the hedge bank, round and pierced through. The foliage and flowers are those of the little wild convolvulus; the upright post should be five-eighths of an inch thick, and drops for about an inch into the hole in the lower piece. The rails are about half an inch before carving, and are fixed through with a little wooden pin, the hole for which is made by twisting a very fine gouge, such as is used for veining scrollwork round and round between the palms of the hands, as this is less likely to split the wood than a pricker. Much scope for taste and variety is given by this little article; the bank or lower piece may be carved all round if it is to stand upon a table instead of being simply upright behind, and the second set of rails behind the post may be omitted and a solid back introduced instead, and carved to imitate a paling, with a little creeping bit of ivy or convolvulus appearing here and there; the post also may be wider if more room is likely to be required for letters, but it should not be less than than the five-eighths. A shield for initials and a coat of arms may also be introduced in the centre, taking the place of the leaf that now occupies that position. Rather soft wood should be used for it, such as pear-tree, lime, or horse-chesnut.

12. Embroidered Note-Case.

THIS STYLE OF WORK has an exceedingly pretty effect. It is useful for a variety of purposes, and curious from the material on which it is worked. Although having the appearance of Indian embroidery, it is only done on ordinary linen bed-ticking, which makes it very strong, and well-suited for slippers, belts, &c.

It is worked in various coloured Netting or Berlin Silks; and in our present design a a narrow gold braid is run on the centre of the broad black line. We give an enlarged section as a guide for the embroidery, which is always worked on the broad white stripes.

The First Stripe is of crimson and light green. Work with one colour a row of herring-bone along half a stripe, and the other half with the other colour; then a row of chain-stitches in mauve down the centre

In the Second Stripe the little leaves are of green, and formed by a simple chain-stitch; and the flowers alternately of mauve and red, worked in button-hole, making three stitches close together.

The Third Stripe is of orange and dark green, a long stitch of each colour being alternately taken in a slanting direction from the edge to the centre of the stripe, the stitches on the other side being turned the reverse way. When worked make a row of chain-stitches down the centre with crimson.

The Fourth Stripe—For the Stars: first make a cross with crimson, and then recross this with blue; reverse the colours for the next star.

The Note-Case will require a strip of ticking about 6 inches wide and 10 in length. It is folded in the shape of an envelope, one end being rounded to fasten with a button. The lining should be of quilted silk, and a small gold cord sewed all round the outer edge.

13. Table-Cover Border in Braid and Beads.

THIS BORDER has a very pretty effect worked on a ribbon velvet, and laid on to the edge of a cloth table-cover. Supposing the colour to be crimson, the braid which forms the Grecian part of the pattern should be a rich maize, and that which is introduced between its divisions intertwining in a rich deep blue. The spots in the spaces of the Grecian pattern are beads which may be either black or steel. If intended for a round table, the top should be cut to fit it as exactly as possible, and this border sewn round with a silk cord at its upper edge. In this way, when slipped over the table, it will have the border hanging down, which, with a handsome fringe at its lower edge, has a very superior appearance. When the table-cover is square, the join of the ribbon velvet at the corner must be made and worked over in turning the pattern.

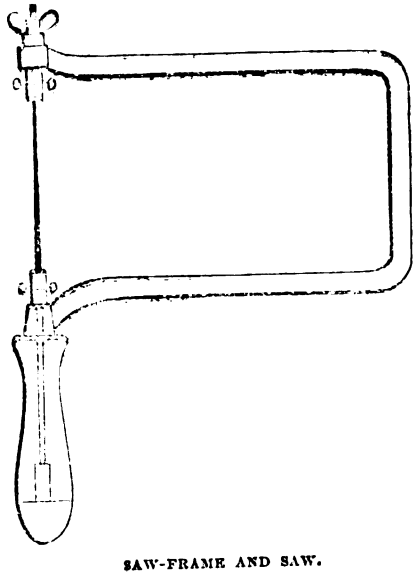
FRETWORK.

Chapter I.

FRETWORK has of late become so popular an occupation for ladies, that I trust the following observations, proceeding from practical experience, may prove acceptable to my readers. The first requisite is well-seasoned wood, rather under a quarter of an inch in thickness, for most purposes; for the ends of small bookstands, or if any carving is to be done afterwards, about three-eighths of an inch, or nearly half an inch, is preferable. Walnut is almost the best for the purpose. Mahogany, not much figured, is easy to cut, and sometimes more readily obtained; oak is generally rather hard; satin-wood and bird's-eye maple, as light woods, are very pleasant to work. The wood decided upon should be made quite smooth with a plane or scraper, but not touched with sand or glass-paper; this will generally be done by the carpenter before the wood comes home.

To transfer the pattern to the wood, I decidedly recommend tracing it on rather stiff paper, and then cutting it out with scissors. This may be rather troublesome at first, but in the end is much more pleasant than pasting it down on the wood, which almost always causes it to warp, and hinders the path of the saw from being seen and kept correctly to the lines. The cut-out design is to be laid upon the wood, secured in its place by a little weight here and there, and then pencilled round; on dark woods chalk might be used if the lead cannot be seen easily enough.

The little saws, made of watch-spring, are bought at sixpence to a shilling the dozen; they should be chosen with a slight shade of straw-colour on them; as, if

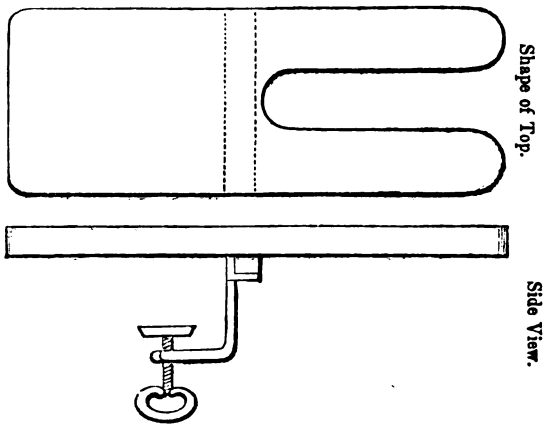


SAW-FRAME AND SAW.

Digitized by Google

of a blue hue, the steel is very likely to be too brittle. The buhl saw-frame is made in three sizes, of which the larger one is by far the most useful, it reaches over about 11 inches from the corners of the work and costs from twelve to sixteen shillings. I bought one, that has been some time in constant use, at Holtzapffel's 64, Charing-cross; the saws I have generally got from Buck's, 245, Tottenham-court-road; at 247 he has a second shop devoted especially to ladies' tools. His saws are numbered from treble nought—000, 00, 0, 1, 2, 3, 4, 5, 6. Nos. 3, 4, 5, are about the most useful sizes.

A sawing-horse to fasten to any table having a square edge, with a screw, will be found of great assistance. I have done much work without it, but no holding down obviates considerable vibration, and with the horse the saw can be left



SAWING-FRAME.

stretched for a short period if the work is interrupted. A village carpenter and blacksmith would be able to put one together; mine I got from Holtzapffel, and it cost 12*s.* 6*d.* The round piece at the top of the screw should rotate, in order that it may not injure the table.

The next requisite is some instrument for making a hole through the wood into which to insert the saw. A small drill is best; the "Continued Revolving Archimedean Drill-stock" best of all, but expensive. In place of this, I think the birdcage-makers' awl has the first rank. It is a small four-square tool, about three inches long, tapering to a point. A turned wood handle will serve for a succession of awls, as the point is apt to break if not held quite at right angles to the work whilst twisting backwards and forwards. A bradawl is liable to split the wood, though sometimes of use. And next to the birdcage awl, a fine gimlet is advisable. One or two files of different shapes are useful to beginners whose cuts may require such correction.

A small steel clamp is also often made use of to hold the wood down whilst any filing required is done, or if a drill is used whilst the holes are made; but it must be remembered always to place a little washer or loose piece of wood between the work and the head of the clamp, otherwise the pressure would mark the work. The price of this would be from one shilling to two-and-sixpence, according to size and strength.

Having enumerated the requisites for fretwork, I proceed to give instructions for commencing the work. First, unscrew the thumb-screw at the lower part of the saw, near the wood handle, two or three turns; insert one of the watch-spring saws, placing it in the jaws between the edges furthest from the bow, back against the screw, and as low down as the opening admits of, and fasten it firmly. It should reach to within about half an inch of the similar jaws at the upper part of the steel bow. To enable it to reach these, turn the lower part of the wood handle until the saw will move upwards about an inch. Open the upper screw as you did the lower one, and catch the saw quite firmly in the jaws. A small piece of wood with a square hole in it, like a stopper turner, or a pair of pliers will save the fingers during this operation. Now turn the wood handle the opposite way so as to screw it up, until the saw is quite tightly stretched. Experience is the best guide in this matter, but it is better to be too tight than loose, in which case it "jumps" when working—an unmistakable sensation, when once felt; and if properly tight, it sounds slightly like a harpstring when touched. The nut above the steel bow is not made use of in a common way.

This is all that is required when the outer edge only wants shaping, but if the internal pattern is to be the part worked at, the wood must have a hole made straight through with one of the implements above named, and after the wood handle has been unscrewed, the saw should be threaded through the aperture, the aperture, the wood passed down near to the handle, which is then pushed up, the saw fixed at the top and stretched. All this requires doing very smoothly, as when the wood is resting on the saw any jerk will break it. A little drop of olive oil may now and then be applied to the various screws about the saw-frame, which should also be carefully kept from rusting.

The hole should be made adjacent to the pencil line, but not encroaching on to it; and sometimes it can be made to form a small circle, if the scroll includes such a termination. In working, the saw must be held perfectly upright, at right angles to the wood as it is held down on the edge of a table, or over the openings of a sawing-horse; it is worked up and down, cutting on the downward stroke. (I forgot to mention that the saw should be stretched with the teeth in a direction pointing to the handle.) The saw should be kept nearly stationary, and the work moved round to meet it. A straight line is far more difficult than curves, and requires considerable practice. Holding the handle in the right hand, and keeping the work firm with the left, the lines of the pattern are to be followed by short, quick strokes of the saw, the work being twisted in and out to meet the saw.

When two lines meet with a sharp point, the saw should be carried in as far as one line requires, then brought back, without turning, along the line it has just formed, for perhaps half-an-inch, then out across to the other line which forms the point, and carry that in until it meets the first. By this means a more sharp and delicate join is made than by turning, which however cleverly it may be done, always makes a circle, though it may not be larger than the circumference of a large pin; still, there it is, where it ought not to be, to distress the eye. I think, even if the line cut be faulty, the attempt to correct it shows still more, unless very skilfully carried out. The saw should cut so as to leave its path rather loose; and when a piece is cut round, it should drop straight out of its place without any trouble.

Chapter II.

There is occasionally an inherent defect in the watch-spring saw itself—sometimes several dozen may be used without one being found faulty; and, occasionally, they recur with considerable frequency—and this is a twist in the substance of the saw material; perhaps about half-way in the length the teeth will slightly change their direction and resume it again before the plain piece at the end; sometimes the defect will occur close to the plain piece; but when it is really found to exist in the saw itself, that individual may as well be thrown away at once, as it will cause constant variations from the pattern going determinately in one direction when the saw frame is held in quite a different line. I am glad to say that this is the only real fault I have found in the saws, except their being sometimes too much blued and too brittle, as I have before mentioned. I should also strongly recommend the practice of working in gloves—stout garden gloves, sufficiently easy, almost loose, indeed, will be found very little impediment, and will save many a little scratch or abrasion of skin, besides the advantage of freedom from dirt, and the extra pinch to the screws that it would hurt the fingers to give without the protection of leather.

A capenter's gouge of a small size will be found useful to enlarge the holes for the heads of the screws, or countersink them, as it is technically called; also a chisel, about five-eighths of an inch wide, must be had, to make a hollow in the wood for the hinge to sink into—an examination of a workbox hinges will show how this is done; and a small-sized screw-driver should be at hand. I think the cost of these tools would be from eightpence to a shilling each.

Any one who has wood-carving tools, or may by my description be induced to get them, and try that delightful art for which fret-cutting is such a necessary preparation, will be able to use them instead of the gouge and chisel named above, or if the services of a carpenter can be secured, no doubt he, with his daily experience, will do the thing quicker and more neatly. Still, I wish to prove that it is by no means impossible for an amateur to finish off her own work, which is so satisfactory when no greater difficulty is to be overcome than hinges and screws.

To revert to the sawing. I must not omit a recommendation to cut one opening after another across the work, so as not to leave the centre to the last, as that would infallibly lead to a fracture, from its being insufficiently supported by the tracery already cut out, to stand the jar of the saw. Usually, I should first cut round the shape of the work; and if the pattern includes any slender-stemmed leaf or terminal scroll, the wood may be left near it, so as to strengthen it until everything else is finished, and then it may be correctly outlined.

I believe the delicate work often seen over the fronts of cottage pianofortes is made of three or four thicknesses of veneer, as the very fine slices of wood with which most furniture is covered are called. These are glued together, sometimes with the grain of the slices lying in opposite directions, as an extra security against warping; and this plan may often be made use of where wood is required thinner than it is easily procured. The glue must be used rather liquid and very hot; and the pieces tightly pressed or screwed together until it is quite firm, or "set" is the carpenter's word. As I have named glue, I may as well take advantage of the opening for a digression, and give some account of how it is made and used. The common dark glue is not suitable for light wood, or other neat work, and the better quality called Salisbury glue, about 1*s.* a pound, is even more adhesive, and can be used in any fancy work. A little tripod stand will be a great comfort, with either a little lamp or a night-light to burn under and keep the glue hot. A little tin pot fits on to this to hold hot water, and save the glue from burning; and either a second little tin drops about half-way down into the water and holds the glue, or, best of all, a pottery-ware jar of the same shape, with a lid, either of the same material or of tin. A small preserve-jar may be so arranged as to serve the purpose, by having the tin made to fit it. I use one that was got at Marchant's candle-shop in the Regent circus, and I believe was made to keep things hot at night in a nursery. However, with the little addition of a tin tray, with catches for the feet to enable it to stand firm whilst the glue-brush is rubbed against the rim to empty it of superfluous glue, it answers my purpose admirably. The sheet of glue, which should be transparent and about the colour of amber, is to be broken into pieces about an inch square, and soaked in cold water for perhaps four or five hours; then the water is poured off, the outer tin filled with hot water, and it is left a short time to dissolve. If too thick, a little hot water must be slowly added to it till it runs in a continuous fine stream (not dividing into drops) from the brush. When used it should be remembered that the firmness of the join does not in any way depend upon the thickness or quantity of the glue, but upon its being as much as possible pressed out from between the two edges of the wood or other substance to be joined, though when it is applied to the grain of the wood endways, which soaks it up very much, it must be put on a second time if it does not remain upon the face of the work; also the bits of wood should be warmed a little, and no cold draft of air come upon it to chill the surface. Anything glued should, if possible, be left some hours undisturbed, for all the watery part of the glue to evaporate.

Fretwork—*continued from page* 19.

If there is a knot in the wood that requires filling up, or a hole should be made in a wrong place, a little of the sawdust mixed with some glue will make an even surface; and when quite hard, it may be finished off with the rest of the work. When all cutting and filing has been completed, the glass-paper may be resorted to—using a coarser No. first, and then to end with No. 1, or ½ one, as it is called. A piece of smooth cork is required to fold the glass-paper over, about three inches square. The work is laid flat on the table or work-bench, and the piece of cork, round which the glass-paper is secured in the hand, is rubbed up and down lengthways until a smooth surface is produced. It should be glossy, and like satin to the touch. In some cases a whole sheet of glass-paper may be held on the table, and the work rubbed up and down upon it. After this, I think for dark woods, the best finish is to brush them with a hard brush that has had a drop or two of linseed oil spread evenly over it, but not sufficient to produce an oily surface. Or if the article is wished to be very dark in its appearance, it may have cold-drawn linseed oil freely applied, be left to absorb it for some hours, and then brushed with the hard brush, repeating this process several times, at short intervals. But I think the natural colour and state of the wood much the best; it is also a greater test of neat work. Light-coloured woods may be either glass-papered and French-polished (a little polish being prepared, with an extra quantity of shell-lac, and applied with a brush to the cut edges to make it match the polished face), or left with with a very fine face and washed when dirty, taking care not to use the water too freely. In London, or other smoky localities, I should prefer the French polish; but it can hardly be done at home, as the smell is rather too strong for most people, and the fingers get dirty from its adhesiveness. Varnishes I think very unsatisfactory; they are difficult to apply, and crack or peel off in all probability afterwards; but if it is intended to use any of them, it must be recollected that they will not adhere to any surface that is in the least degree oily or greasy. The edges of bookstands, &c., look more finished if both the sharp angles of the external shape are slightly rounded; and if there is no knowledge of the art of carving, this is most easily effected with a rifler file—that is, a file the face of which forms a segment of a circle, from the handle to the point—they are used by sculptors, but are kept at all large tool-shops.

In case any one should wish to make use of French polish, I ought to mention that the way of applying it is to have a piece of wadding, free from lumps, about the size of a walnut, and pour a few drops of the polish on it, then wrap it in a smooth piece of linen rag, holding the loose part of tha linen collected in the hand, touch it with a drop or two of oil, and begin rubbing the wood, which has already been glass-papered as smooth as possible; the rubbing should be in circles or figures of 8, to spread it evenly over the work, adding a little more polish or oil when required.

There is a brown polish used for dark, and also a pale, nearly white, composition of the same kind for light woods. It can usually be obtained from a druggist's or upholsterer's, if there is no varnish-shop near.

Chapter III.

The ornamental and useful articles that can be formed by fretwork are so many, that I only propose to pass in review a few of the greatest utility combined with easiness in making up, which it is often so difficult to find a workman sufficiently neat-handed to assist in doing. Mr. Sanders, of 59, Queen Ann-street, gives lessons in the art; makes designs, and is most obliging in helping his pupils to complete their work; but to those in the country who have no such resource in difficulties a little advice may be useful, and enable them to do much of what is required. Picture-frames can generally be made from one piece of wood, and then the opening for the enclosure must be cut out with the saw, and a little gilt moulding projecting half over the picture, and half resting upon the inner edge of the frame, makes a very good finish. A plain bead or half-round is best, and can be cut after it is gilt to fit at the corners in most cases with a strong knife or chisel, as the teeth of the saw would very likely shake off the gilding. If a larger frame is to be made, it must be with four strips of wood, cut at the ends to half a right angle, and fitted neatly before the pattern is commenced. If a little longer than the saw will pass round, it may still be accomplished by ingenuity in commencing the different cuts at the short end, going as far as you can towards the centre, unstretching the saw and recommencing in the same direction as the first cut.

In framing a photograph which has already a glass over it, the wood need not be cut away from the centre, but the photograph can be caught down by two or four screws passed through from the back, or simply fastened down with glue.

Book-stands are sometimes made so that the bottom part slides in and out, and adapts its length to the number of books it is to hold. This requires a carpenter's assistance, but a very useful and simple plan is to have a piece of wood for the stand a little wider than the end, and more than double the length; a moulding may be planed or carved round the edge, or it may be shaped with the saw; the ends are then jointed to it with hinges; two long hinges to each end so placed that one set of screws enter the ends crosswise, and the others are fastened into the solid stand. A strip of cotton velvet or cloth glued under the bottom near either end makes a nice finish, and prevents any danger of scratching the table. Another book-stand of very good kind is made with a broader base; a piece at each end, and a strip of pattern to match carried along from one end to the other, and running down into its place in a groove cut in the ends, which are hinged as in the first stand. Both these are adapted for travelling, as they fold up quite flat.

Table-easels and watch-stands are both very suitable for fretwork. In the easel a strip of wood is hinged on about an inch above the feet to form a desk, and a prop is also fastened on with a hinge to the back to keep it standing at a proper slope. This depends on cutting the head of the prop at a suitable slope; the hinge must then be screwed on inside or below the sloped bit, and also screwd to he back of the easel or stand—not an easy thing to accomplish as I know by experience, and involving the destruction of an old knife, the edge of which has the best chance of reaching the screw-heads, which the approximation of the two parts prevents any ordinary screw-driver from doing.

The watch may be retained in its place on the sloping stand either by a little hook of wire passed through a hole in the wood and fastened on the wrong side, or by a circular rim of wood cut with the saw, fastened down with screws, and with an aperture for the handle of the watch to pass through. Indeed. I think it would be advisable to make use of both these plans for greater security. Another way is to take the lid of a little circular pasteboard box, cut an opening in the rim for the watch-handle, and cover it with velvet inside, and sew neatly a narrow strip of the same round the edge. This is to be glued on to the centre of the stand, and its greater firmness may be insured by allowing the screws of the hinge to catch hold of it. Finishing off some articles in a hurry, I found this a very serviceable device. If able to use carving-tools, a slight depression for the back of the watch makes the stand look less heavy, as it does not entail the necessity for such a deep rim as must otherwise be made use of.

Of card-racks there are two kinds—one to hang against a wall, the other to stand upon the writing table. The first requires as a back a piece of wood about ten inches long, and four or five wide; this can be ornamented at the top, bottom, and sides; about five small pieces are affixed to it with screws at a small angle, and should be about three and a half inches wide by three deep, with a pattern cut on each. The description of the second will be found with the accompanying pattern. To make a stool-rack, a piece of wood about six inches deep, and twelve or fourteen long, as a pattern, cut above and below, so that a plain piece about half an inch wide runs along the middle; to this is fixed by hinges or screws a piece about an inch or rather more in width, with holes cut at intervals of about an inch; and this arrangement is found most useful for hanging up tools against a wall, and forms a very safe place in which to keep the saw itself. The idea was taken from one made in Germany for a pipe-rack, to which use a gentleman would probably convert it.

A box to contain letters ready for the post is very convenient, as, through the open sides, it can be seen whether any are there or not; there should be an opening in the centre of the lid for them to be dropped in through. I think the most simple way to make the box is to have the sides ten inches by six (this will take in most newspapers), the ends six by six and three-quarters, and dove-tailed together before the fretwork is done, to be glued up afterwards, the bottom fitted in, and the top overhanging about three-eighths or half an inch all round, and bevilled off. If sufficiently neatly done, the dove-tailed edges can scarcely be considered objectionable; but if it should be desirable to conceal, they can be arranged in that manner by a workman, or a narrow moulding can be carried up at the corners to cover them.

Brackets can be made in many varieties. If the shelf is put on with hinges, to fold up against the piece above, it is more useful for travelling, and then there is generally a projecting piece in the centre, underneath, that also folds on one side, and when open, if seen sideways, shows off the work upon it. The shelf looks much lighter if an open pattern is cut round the edge, or even all over the surface. If no back is wished for above the shelf, the lower part is generally longer in proportion, and the projecting piece, the pattern on which is often half that against the wall, can be made with coincident openings, so that the patterns run from one to the other. A small frame, with the upper corners rounded, is often carried on above such a bracket, and can either have a piece of velvet in the centre (if a light object is to stand upon it), or a piece of looking-glass, should it be used for lights, or for any vase, &c., of which both sides are equally worthy of admiration.

Thermometers look well framed with fretwork. If a metal one is to be mounted, a moulding may be arranged to hold it, and the wood left solid behind; if a boxwood one is to be mounted—and the yellow shade of the boxwood suits very well with walnut—an opening is better cut the exact size, and a plain slip round the aperture will prevent its coming too far forward; a nail or two, or some buttons of wood, will suffice to keep the thermometer in its place.

There are many varieties of baskets and trays that can be formed by the saw. Square baskets are made with projecting tongues round their outline, that are passed through the corresponding pieces at right angles, the whole being kept together by little wedges of wood, pushed through openings made in proper places in the projecting processes.

Six-sided baskets are also very pretty in form. They require a hexagonal centre, and six pieces round, the dimension of the bottom at one edge, and rather wider at the other; to allow them to slope out gracefully, about three inches is the ordinary depth of the sides. They are best secured in their places by two corresponding holes drilled in adjacent pieces, and tied together with ribbon, either in an ornamental coloured bow, or as invisibly as possible. This seems, on the whole, the best plan for trays for pens or toilette articles; but if they are preferred more substantial than they can be made with ribbon, the dove-tailing plan must be resorted to, or the ends left with the projecting pieces described above, or, thirdly, the sides may be arranged to overlap the ends, if made in wood, nearly three-eighths thick, and a couple of screws in each join will make the whole as firm as can be desired.

H. L. B. in *The Queen*.

MENDING NETS AND NETTING.

Of the thousands of ladies who know how to make a net, how many know how to mend one when torn? So little is this art known, that one the learned author adduces as a proof of the truth of the sacred writings the statement that

Digitized by Google

the apostles Simon and Peter were described as mending their nets—the writer maintaining that a forger would have been ignorant of it, and would have described them as making, and not as mending nets.

The majority of netters, though, perhaps, perfectly competent to make nets, are utterly unable to mend them. The first step towards acquiring this power consists in learning to make a bend knot. To accomplish this, bend a piece of twine into a loop *a*, *a*, Fig 1; pass a second piece of cord, *b*, through the loop from the further side; carry *b* round behind the two legs of the loop, then bring it forward and pass it under itself as at *c*; pull the ends tight and the knot is completed. There is a quicker way of making this knot, when two loose ends of string are used, but the above illustrates the mode of making it on a loop.

Fig. 1.

A slight degree of attention will show that it is precisely the same knot as that which unites together the loops in a net.

In mending a torn or damaged net the first operation is to spread the net out as flatly as possible, *with the loops in the same position with regard to the mender, as they were to the netter when the net was made.* The damaged or torn part must then be cut away in regular rows, as shown in Figure 2, where the whole of that part represented by dotted lines is supposed to have been removed. The knots at 2, 3, 4, 5, and 6 must be unpicked, when those loops will remain uninjured; and the knots at 14, 15, 16, 17, and 18 must also be unpicked, so as to liberate the loose ends of those loops that have been cut away. The mender should then take a short needle (one of those alike at both ends is most convenient for mending), fill it, but not overfull, with twine of the same size as that used for the original netting; or twine slightly finer may be employed, as being

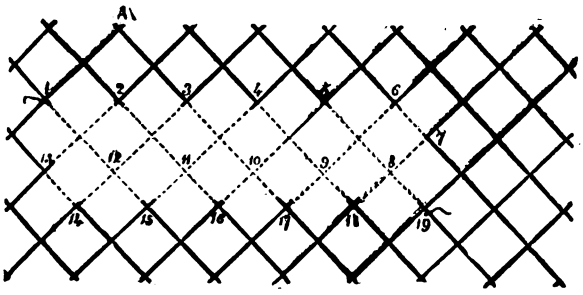

Fig. 2.

new, it will be stronger than the old. The end of the twine should then be fastened by a bend knot to the loop 1, the needle passed through loop 2, then the twine should be taken between the thumb and forefinger of the right hand, and a length measured equal to the distance from the knot at 1 to just beyond the knot at A—this gives the exact length of twine required to form the new loop from 1 to 2; this new loop is caught on the little finger of the left hand, and pulled back; the point of the old loop 2 and the cord passing through it are held by the thumb and forefinger of the left hand, the loose twine thrown over to the left, the needle brought to the right, and the knot completed by passing the needle under the loop 2 from right to left. In short the loop 2 is made on the little finger instead of on a spool, the length of the twine required to form the new loop being ascertained by measuring from 1 to A.

When there are a large number of meshes to be filed in, a spool may be used, but when there are only a few, it is neither necessary nor desirable to employ one.

The new loops from 2 to 3, 3 to 4, 4 to 5, and 5 to 6 are made in the same way, and then the side 6, 7 must be made by netting into 7 as into a loop. This completes the first row of new loops.

The second row has now to be netted into the first. If performed as recommended, without a spool, it may be worked backwards from right to left with great facility; or the netting may be turned over on to the other side, when the second row can be completed in the usual direction, from left to right.

In this manner the whole space cut away must be filled up, until the last row is reached; this requires different treatment. In Fig. 2 three rows of loops only are shown as having been removed. When the second has been entirely replaced the twine will be attached to the knot at 13; to complete the repair pass the needle through the loop 14, and secure it by a bend knot, taking care that the side 13, 14 is of the proper length; then net into loop 12 from 14, return to 15, and so on, connecting the whole in the following order:—11, 16, 10, 17, 9, 18, 8, and 19, which completes the repair. Of course the reparation of larger rents and more extensive damages is only an extension of the same proceeding as is here described with reference to three rows of loops.

The description of this process doubtless appears tedious, but the performance is, with a little practice, sufficiently easy.

To Remove Grease from Silk.—Powdered French chalk is very useful to remove grease from silk. If the powder is applied quickly after the grease has fallen upon the silk, the latter will be speedily absorbed; the powder may shortly afterwards be dusted off, when the spots will be found to be entirely obliterated.

Dress and Fashion.

MOVEMENTS OF FASHION, 1865-66.

AFTER a careful survey of the cut and make of ladies' toilettes during the past year, no one could fail to observe the marked retrogression towards the style of the First Empire. This is notably the fact with those important items, bonnets and dresses. We began the new year with *Fanchon* bonnets on our heads—we are now sporting Empires. Last January saw us with skirts pleated round our waists; the coming January will witness the fronts and sides of skirts without any fulness whatever. These together with the broad belts and massive fastenings, the huge buttons, the low square-cut bodices, the looped-up drapery, the flowing veils, the floral necklaces, the cluster of high curls on the forehead, all serve to recall the portraits of our great grandmothers.

Ladies' dress has become so costly and extravagant, that during the year it was once the subject of grave comment among French senators. These protests have availed nothing; they have achieved about as great results as all the sermons against crinoline. Frenchwomen spend large incomes annually in arraying themselves, and Englishwomen are not slow to follow their example. Out-of-door costumes have been positively gorgeous, and all that is showy and shimmers and glitters has found favour with the fair sex. Toilettes *en suite*, which answer to a man's "suit of dittoes," have been, are, and are likely to continue the most fashionable style for outdoor toilettes. Every item which goes to the make-up of these toilettes must match and harmonise; the bonnet must be made to agree with the paletôt, and the paletôt with the dress. Petticoats, boots, parasols, stockings, and gloves must all be selected with an eye to their appearance at the same "get-up." This is good taste, but the purses suffer for indulging in it, as it is, undeniably, a very costly style of dressing.

Whether it is a good sign of the times we live in, we know not; but it is admitted on all sides that on fashionable racecourses, both in England and France, and even in Germany, are to be seen the greatest display of toilettes during the year. At Goodwood we saw entire toilettes of Honiton lace over pink silk; at Baden, entire suits of Valenciennes lace over both mauve and white silks; and in Paris, white silk suits embroidered in gold, in straw, and in silks of various hues were very general. Gold and cameo ornaments in the bonnets, diamonds and other precious stones in the hats, have also been no uncommon sights at these gay gatherings; and even at the Sunday promenades in the Zoological-gardens in Regent's-park—which, by the way, were *the* thing last season—such apparel as pink silk dress, white lace tunic edged with gold fringe, white lace paletôt, white lace bonnet thickly studded over with gold spangles, has not been an unfrequent style. At Ems, and Baden, and Biarritz, and Trouville, and other fashionable summer and autumn resorts, the dressing has been unparalleled—the visitors have walked about more as if they had got themselves up for a fancy ball than for a promenade in open daylight. The *tricornes*, or three-cornered felt hats, with their upright, jaunty little feathers; the close-fitting short paletôts, with a waist-band—the former more frequently made of scarlet flannel than anything else; dresses with stripes of all width slooped up over the smartest of frilled petticoats; gold spangles, steel spangles, beads of all sizes and hues worked thickly on veils, on laces, on sashes, on jackets, and even on shoes, have been and are still very fashionable. Gimps and fringes are made up of beads; and foil-papers are one of the principal elements in artificial flowers. The leaning towards tinsel has been most apparent during the past year.

The introduction and changes during the year 1865 have been Empire bonnets with round crowns and narrow bands for curtains, long veils, and humming birds for trimming; the hair, which is arranged higher at the back and fuller at the sides, has changed colour. Brown locks have been dyed and otherwise tampered with to appear with golden hues, or, in some instances, even as bright red. False hair, whether curls for the forehead or *chignons* for the nape of the neck, are universally worn, and the strange fact is no one is ashamed to confess the adoption; on the contrary, that all own to it—nobody makes a secret of it. Crystal ornaments, necklets, brooches, and earrings are popular; the graceful drapery of a shawl is rarely seen; paletôts cut to shape with the figure are universally patronised in their stead; belts, although of medium width, are very fancifully made. Cluny guipure predominates as a trimming over any other sort of lace; stripes have been, and still continue to be, the popular pattern on materials of every description, from linsey to gauze. Crinolines have decreased in front, and slightly narrowed in circumference; but are by no means "out." Skirts are worn inordinately long, and are looped up for outdoor promenades. Petticoats are trimmed more elaborately than ever; stockings are striped with colour, and great attention is paid to their clocks. Shoes and boots are extremely dainty; the former are made of patent leather, and fastened in front with ornamental buckles; the latter, besides matching in some measure the rest of the toilette, are much ornamented with elaborate stitching.

We give a few illustrations of different articles of dress which are in vogue at the present moment.

No. 1 represents the fashionable style of basque for winter dresses. The material may either be linsey, reps, serge, patent velvet, or *faille*, which last-named fabric is unwatered moire. The trimmings must depend on the material, but either braid and fringe, or narrow bands of fur, would be suitable for morning dress, and fringe formed with crystal drops for afternoon wear.

No. 2—A Tricorne hat of Belgian straw, ornamented with a white curled ostrich feather, and bound with black velvet.

No. 3—A gray straw toque, the turned-up brim of which is lined with black velvet; a blue feather at the side, fastened down with a steel star; loops and ends of blue velvet at the back.

Movements of Fashion—*continued from page* 23.

No. 4—A Polish toque, made of black straw, and trimmed round with peacocks' feathers; an *aigrette* at the side.

No. 5—A demi-toilette afternoon cap, made of white Cluny lace, and ornamented with white daisies and straw drops. A green velvet bow is arranged at the top of the head; Cluny lace lappets at the back.

No. 6—A headdress for an evening demi-toilette. The crown is netted with black or brown purse silk and large crystal beads; the edge is trimmed with a deep fall of black lace; the front is ornamented with loops of bright blue velvet and a rosette of blonde; one loop and two ends of black velvet are added underneath the back-hair at the right side.

No. 7—An evening headdress, suitable for a young lady. It is composed of black velvet and imitation coral beads; sprays of grass, tipped with coral beads and dewdrops, rise from the black velvet bow in the centre of the forehead.

No. 8—A Neapolitan headdress, made of a square of Cluny lace-insertion, edged with Cluny lace. A row of mauve velvet is placed over the joining of the different rows of insertion; a cluster of loops of mauve ribbon-velvet, edged with crystal peardrops, in the centre of the forehead.

No. 16—A little girl's frock, made of either white book muslin or cambric. The skirt is turned up at the edge with broad blue ribbon. *Chevrons*, formed either of Valenciennes lace and embroidered muslin insertion, or entirely of Cluny lace, are placed upon the ribbon to simulate a hem. The waistband and sleeves are of blue ribbon, and are trimmed to correspond.

These illustrations will serve to convey to our readers a few of the prevailing styles of some of the accessories of the toilette. In conclusion, we may add that the favourite colours during the year 1865 have been, in the early part of it, greys, stones, and neutral tints; during the London season, black and white stripes; for autumn, mauve and sailor-blue; and at present, and for the forthcoming three months, the old-fashioned *raisin de Corinthe* (a sort of beetroot colour), and the ever-favourite *cuir*, or Russian-leather colour—such are the favourites. The popular colour throughout the year for trimming bridesmaids' white dresses has been unmistakably *blue*.

ORNAMENTS FOR THE HAIR.

ALTHOUGH it may appear somewhat presumptuous and out of character for one of the opposite sex to offer advice on such a delicate subject as the arrangements

1. A BODICE WITH A BASQUE. (See p. 23).

No. 9—A Spanish headdress, made of Maltese lace. A bandeau of scarlet velvet is worn round the head underneath the lace; this is tied at the side and finished off with two very long ends. A gold star is placed in the centre of the forehead, and a spray of roses and lilies of the valley at the left side.

No. 10—A full-dress cap, made of white blonde, and ornamented at the back with a bow and very long ends of black velvet and gold ribbon.

No. 11—A collar and cravate ends, composed of lace insertion and edging; both collar and ends are lined with ribbon.

No. 12—Sleeve to correspond with collar and habit-shirt No. 11.

No. 13—Sleeve formed with Cluny lace; black ribbon velvet is passed in and out of the insertion. A black velvet bow with ends terminates the insertion towards the elbow.

No. 14—A berthe with basque. It is formed with puffings of tulle separated by rows of white blonde worked with white satin beads. It is further trimmed with ruches and satin ribbon.

No. 15—A Garibaldi bodice, made of white muslin, tucked both in front and at the back. Stripes of black velvet are arranged upon the bodice in the form of a corslet, and Cluny guipure insertion is sewn upon the velvet; the shoulder-seams are ornamented to correspond. Round the throat there is a dog-collar necklet made of guipure lined with black velvet. The sleeves, which are tucked on the cross, are fastened at the wrists with black velvet and Cluny guipure.

of ladies' hair, I make bold to offer a few suggestions. I have been struck by the marked resemblance of some of the *coiffures* adopted by my lady friends to the designs portrayed in several books of Greek and Roman antiquities. The arrangement of the hair in large curls and bows on the top of the head is decidedly classical, as may be seen in the illustrations of Visconti, Zoëga, Tischbein, &c., and especially in collections of ancient gems and coins.

In one of these collections, which I remember to have perused at the public library at Caen, there are illustrations of more than two thousand different methods of arranging the hair, as adopted by the ladies of antiquity; so it appears that whatever progress our modern ladies may have made in "putting on of apparel," they have scarcely outstripped the ancients in the matter of "the plaiting of the hair," equally discommended by the Apostle. It is true that in many of these illustrations we see the hair built up into a towering edifice with, probably, the addition of artificial hair, in the mode described by Sir E. L. Bulwer in the "Last Days of Pompeii," and as reproduced in Paris, we understand, some short time since; but the prevailing type is what we have come, by common consent, to call the "classical" in which the harmony of natural proportion, and the true lines of beauty, are most nearly followed.

The adoption of the butterfly as an ornament for the hair is both classical and appropriate; the butterfly being classically the emblem of the soul (ψυχη), and

Digitized by Google

2. (See p. 23.)

figured thus in the illustrations of the tale of Cupid and Psyche. In modern *parlance* I fear the butterfly is rather an emblem of coquetry and frivolity, perhaps even of *légèreté*, in which sense no lady would willingly wear a *papillon* as her emblem.

5. (See p. 26.)

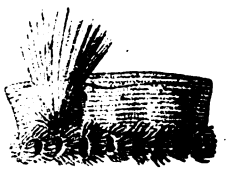
There is also good classical authority for this disposition of the hair in Thucydides, lib. i. cap. 6, who tells us that the most wealthy and aristocratic of

6. (See p. 26.)

3. (See p. 23.)

the Athenians and Ionians, a little before his time, wore their hair tied up in a bow on the top of the head and fastened with a golden grasshopper: *χρυσῶν τεττίγων ἐνίεσαι κρωβύλου ἀναδούμενοι τῶν ἐν τῇ πρόσθ τριχῶν.*

The grasshopper was worn as an emblem of *αὐτοχθονια*, i.e., to show that the wearers were the original lords of the soil—indeed, sprung from it, like the grasshopper. The Arcadians, in like manner, are said to have worn *lunula* or crescents on their heads, to show that they were *προσελήνοι*, more ancient than the moon.



4. (See p. 26.)

If this fashion is adopted by ladies of the present day, although few will have a right to bear the grasshopper or the crescent from the antiquity of their descent (not a few, indeed, should wear the *champignon*), still many other classical and poetical emblems might be borne significant of race or country. The harp of Erin, the thistle of Scotland, and even Cambria's leek would not disfavour their respective wearers more than the rose of England; while every grace and virtue might have its appropriate emblem, and a lady's headdress, instead of being a meaningless decoration, should image forth her character and sentiments.—J. H.

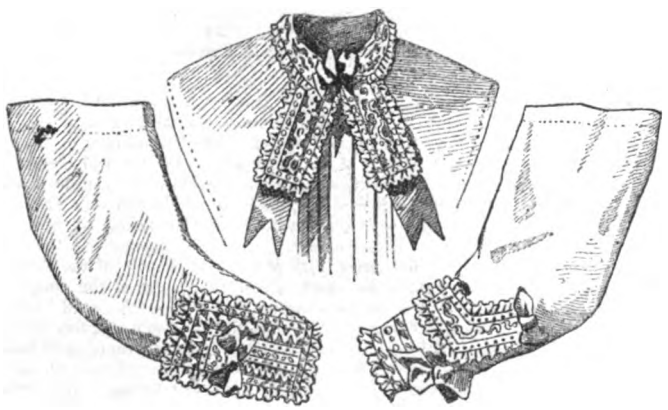
Skeleton Leaves.—The leaves, calyces, and seed-vessels of plants, when anatomised, form exceedingly interesting objects, and with patience and care the dissecting process may be carried out by any one. The leaves should be gathered when at their prime (that is, when the earliest leaves begin to fall from the trees), and all that are broken or damaged by insects should be rejected. For the seed-vessels you must of course wait until they are fully developed. Having obtained

10. (See p. 26.)

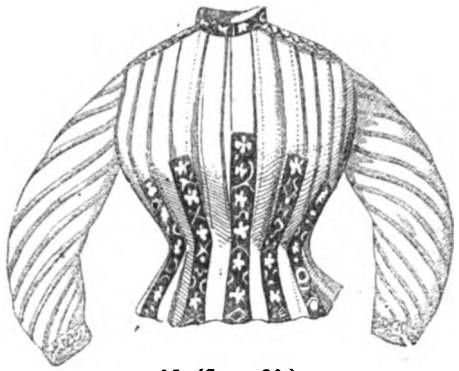
your stock of leaves, &c., take an open earthen pan which will hold a gallon or more, put in the leaves, and pour over them sufficient rain-water (which some operators prefer to use boiling) to cover them. Let the pan remain exposed to sun and weather, without changing the water (but gently and carefully stirring now and then) until decomposition is carried to the requisite extent—that is, until



12. 11. 13.
(See p. 26.)

14. (See p. 26.)

the cuticle and cellular tissue are easily removable from the fibre. That will depend upon the water, the weather, and the leaf; some leaves require several months, and others a very few weeks only; so that if a good assortment be put into soak at the same time, there will soon be a constant supply to operate on. When the soft parts of a leaf are decomposed, take it out, and laying it on a white plate or card, remove carefully, with a camel-hair pencil or a pair of pliers, and a gentle current of water, all the green matter that clings to the fibres. When perfectly cleared from cuticle, &c., bleach the leaves in a solution of chloride of lime—one teacupful of the solution sold at the shops added to a gallon of



15. (See p. 26.)

water will be about the strength required. It ought to be no stronger than will suffice to whiten the leaves; if it is too strong, they will have a hard, thick appearance, and look shrivelled up. It is well to take the leaves out of the bleaching liquid and put them into clean water for a short time before they become quite white. They may remain in the solution for six or seven hours, and then the same length of time in clean water, putting them back again into the chloride of lime solution if necessary. Chloride of lime powder answers as well as the solution for the coarser sorts of leaves; about 4oz. of the powder being added to a gallon of water. It may, indeed, be made to suit leaves of all kinds, if, after

16. (See p. 26.)

Digitized by Google

the powder has sunk to the bottom, the liquid is carefully decanted; and the cost is much less than that of the solution sold at the chemist's. When the leaves, &c., are sufficiently whitened, they must be again soaked in clear water, and then carefully dried, either between blotting-paper, before the fire, or in the sun, after which they may be pressed flat for preservation in books, or tastefully arranged as bouquets for exhibition under glass-shades. The following is a list of names of some of the leaves, &c., that will anatomise: Butcher's broom, stercular, Indian-rubber, pyrus, lemon, vine, orange, apricot, apple, pear, lime, poplar, tulip, robinia, ivy, holly, box, St. John's wort, scarlet passion-flower, pepul tree, rose, westeria, eryngium maritimum, carduus benedictus, magnolia (ten sorts), lathyrus, alstræmeria, thistles, barberry, banisteria fulgida, and several of the nettles. Seed-vessels: Woolley germander, alkekengi nicondra physaloides, stramonium, campanula, carthanus tinctoria, sea-tree mallow, honesty, hyoscyamus, lavatera, malope, Canterbury-bell, and poppy-heads. The calyx of the hydrangea will also anatomise. But in making a selection, carefully avoid all leaves, &c. of a resinous nature, as those of the fir tribe, camphor-tree, laurel, bay, and most of the evergreen shrubs; and it is useless to try leaves of the oak, chesnut, elm, willow, sycamore, walnut, hazel, and some others, which contain much tannin, as not only do they not decompose themselves, but the tannin impregnates the water, and prevents the decomposition of any other leaves which may be under maceration at the same time.

Moths.—Clothes that are in constant use, or that are often beaten or shaken, are not attacked by moths; and the best plan with those articles which are not likely to be wanted for any length of time is to sew them up in calico, or pack them in paper, so as to exclude the parent moth, and thereby prevent her laying her eggs, the larvæ from which do the damage. Spirit of turpentine and benzine collas will also keep away moths, but the remedy may in many cases be thought as bad as the disease. Pepper, tobacco, and other things, are also used; but nothing, we think, equals properly packing for clothes, rugs, carpets, &c., not in use.

To Renovate Black Silk.—Rub the silk all over on the right side with a solution of ammonia and water (two teaspoonfuls of powdered ammonia to quarter of a pint of warm water), and smooth it on the wrong side with a moderately hot iron, and the silk will regain a bright black appearance.

Tussore Silk.—The best way to wash Indian silk is to make a good lather of soft water; it should be mangled while quite wet, and then immediately ironed. This quick process prevents the spotting, caused by ironing when partially dry. The dress should be washed before it is made up, for two reasons: first, because it shrinks considerably; second, because as long as the dress remains in the material it shows every spot of rain; besides which, the oftener it is washed, the more silky it becomes in appearance.

Waterproofing for Cloth.—The following is a useful receipt for waterproofing coats and similar articles: Dissolve 2oz. of sugar of lead in 2½ gallons of boiling water, and 4oz. of alum in another 2½oz. of water; when cold dip the article in the first solution and hang it up until it has dripped nearly dry, and then dip in the second solution. Let it dry without fire heat. This will resist the heaviest rain so long as there is nothing (as a belt, &c.) rubbing on the surface exposed to the wet; and it will not keep in the perspiration.

Restoration of Ostrich Feathers.—To restore the curl to ostrich feathers requires a little time and patience, but it is as good an occupation for winter evenings, while talking is going on, as knitting, crochet, or any other tiresomely idle work. Take an old penknife, no longer very sharp, and holding the feather in your left hand, draw its fibres (not more than two or three at a time) under the blade of the penknife, pressed against the ball of the right thumb. This causes them to curl at once; but until the knack is acquired, it is best to draw the fibres one by one, if the performer has sufficient patience.

How to Dress for a Photograph.—It is a natural consideration with all persons who desire to have their photographs taken, how to be dressed so as to appear to the best advantage. Attention to the suitability or otherwise of various colours is of the greatest importance in this respect. Orange colour, for certain optical reasons, is black in a photograph; blue is white; other shades or tones of colour are proportionally darker or lighter as they contain more or less of these colours. The progressive scale of photographic colour stands thus, commencing with the lightest: White, light blue, violet, pink, mauve, dark blue, lemon, blue-green, leather-brown, drab, cerise, magenta, yellow-green, dark brown, purple, red, amber, morone, orange, dead black. Complexion has to be considered in connection with the dress. Blondes can wear much lighter colours than brunettes; the latter always present better pictures in dark dresses, but neither look well in positive white. Violent contrasts of colour should be especially guarded against. In photography, brunettes possess a great advantage over their fairer sisters; the lovely golden tresses lose all their transparent brilliancy, and are represented black; the "bonnie blue e'e" almost entirely disappears. By powdering yellow hair nearly white, it is brought to about the same tint in photography as in nature; and the same rule applies to complexions. A freckle quite invisible at a short distance is, on account of its yellow colour, rendered perfectly distinct when photographed. The puff-box must be called in to the assistance of the camera. This allusion to freckles suggests one word of general advice. The cause of freckles is nothing more than the darkening of the salts of iron contained in the blood by the action of light. Blue, as we have seen, is the colour most readily affected by light, and yellow the least. If, therefore, you would keep the complexion clear and free from tan and freckles whilst rambling by the seaside, reject the blue veil, and substitute a dark green or yellow one in its stead. Blue tulle offers no more obstruction to the actinic rays of the sun than white. Half a yard of yellow net, though not very becoming, would be found very efficacious for this purpose.

How to make Ladies' Dresses Fireproof.—Muslins and similar fabrics, steeped in a seven per cent. solution of sulphate of ammonia, or a twenty per cent. solution of tungstate of soda, and then dried, may be held in the flame of a candle or gas-lamp without taking fire. That portion of the stuff in contact with the light becomes charred and destroyed, but it does not inflame, and consequently the burning state does not spread to the rest of the material. Both solutions are employed by dipping the clothes into the solution after they have been washed and rinsed. Tungstate of soda is used in the Queen's laundry. It is rather more expensive than the other; but it is preferable, as it does not in any way interfere with the "getting-up" of the articles.

Glossing Linen.—Inquiry is frequently made respecting the mode of putting on collars and shirt-fronts a gloss like that on new linen. This gloss, or enamel as it is sometimes called, is produced mainly by friction with a warm iron after it has been ironed in the ordinary way. The linen to be glazed receives as much strong starch as it is possible to charge it with, and then is dried. To each pound of starch a piece of sperm, paraffine, or white wax, about the size of a walnut, is added. When ready to be ironed the linen is laid upon the table, then moistened very slightly on the surface with a clean wet cloth, and ironed in the usual way with a flat-iron. It is then ready for the glossing operation, for which purpose a peculiarly heavy iron, slightly convex on the surface, and polished as bright as a mirror, is used. It is pressed firmly upon the linen and rubbed with much force, and this frictional action puts on the gloss. "Elbow-grease" is the principal secret connected with the art of glossing linen.

How to Make Green Leaves.—Procure, if possible, a natural leaf of a camellia, rose, or geranium; take it with you to a shop where coloured paper is to be had, and purchase a large sheet of green paper as near as you can get it to the colour of your natural leaf. For a camellia, for instance, the paper sold is very thick, and of a beautiful bright green. *Two* shades are necessary, one darker than the other, as the *under* side of the leaf is always *lighter* than the *upper*. When you proceed to make your leaf, lay your two sheets of paper together, and put the real leaf (or *shape* of leaf) on the top, and, with a pair of scissors, cut the exact outline of the leaf; then separate the two pieces of paper. Spread the *under* side of the darkest sheet over with gum, then lay on a piece of small wire *straight* up the middle of the leaf for the centre vein (leaving a bit of wire for the stalk); and next put on the lighter bit of paper, observing that it fits exactly at the edges (that is the reason why the lining of all leaves should be cut along with the piece intended for the leaf). *Next*, press the wire gently with your finger, and see that it is quite straight; then catch hold of the end of the wire next the stalk between a pair of scissors, and draw the scissors *up* the wire, which, if neatly done, gives exactly the appearance of the vein of the leaf. The side veins are made simply by drawing sloping lines at each side of the centre vein. After the leaf is finished, give it a turn with the scissors into the natural shape.

Blackbeetles or Cockroaches.—To destroy these pests, mix together equal weights of red lead, sugar, and flour, with either water or milk, so as to form a stiff paste, pieces of which, of the size of a nut or walnut, may be laid about in the localities they frequent. Oatmeal or Indian meal may be substituted for the flour, and treacle for the sugar; and if the paste be rolled out thin, it will form the "beetle wafer" as sold at shops for killing these insects. Other methods for destroying or driving away beetles are the following: Strew about their haunts, or thrust into their holes, a plentiful supply of unslaked lime or of chloride of lime. There is, however, one disadvantage—namely, that the odour of the lime is offensive to many bipeds as well as to the beetles. A deep dish or earthen pan, containing a little sugared beer, by way of attraction, will entrap these insects in vast numbers, if a few pieces of wood are inclined against the sides to serve as ladders. They will tumble in when they reach the edge, quite regardless of any thought of getting out, which the glazed sides will prevent their doing; and a kettle of boiling water will settle their business. A mixture of plaster of Paris and oatmeal, and the phosphorous paste sold at shops will kill beetles, as also will hedgehogs, if kept in the kitchen or other place which they frequent; but do not try poison and hedgehogs at the same time, or you may kill Master Urchin by mistake, notwithstanding popular belief to the contrary; and, on the other hand, do not leave within reach of the hedgehog any birds, living or dead, or any meat or other viands, or he will most probably devote his attention thereto, to the exclusion of the beetles. The hedgehog's method of proceeding is very business-like, and amusing too, if you care about watching him. When all is very quiet, and the insects are roving over the floor, he will suddenly, and as nimbly as a cat, pounce out upon them, and kill all that he can "lay hands" on, never ceasing until all that are not killed have escaped. He will then return to his victims and devour them at his leisure.

Facts worth Knowing.—The word "and" occurs in the Old Testament 35,543 times. The word "Jehovah" 6855 times. The 21st verse of the 7th chapter of Ezra has all the letters of the alphabet. The 19th chapter of the 2nd book of Kings and the 37th chapter of Isaiah are alike. Of the Old Testament the middle book is Proverbs; the middle chapter is the 29th of Job; the middle verse is the 23rd of the 20th chapter of the 2nd Book of Chronicles. The least verse is the 1st of the 1st chapter of the 1st Book of Chronicles. In the New Testament the middle book is Thessalonians; the middle chapters are the 13th and 14th of Romans; the middle verse, 17th of the 17th chapter of the Acts of the Apostles. The least verse is the 35th of the 11th chapter of the Gospel of St. John. The Book of Esther has ten chapters, but neither the word "Lord" nor "God" in it. The Old Testament contains 39 books, 929 chapters, 23,214 verses, 592,439 words, 2,728,100 letters. The New Testament contains 27 books, 260 chapters, 7959 verses, 181,253 words, 838,380 letters. Total: 66 books, 1189 chapters, 31,173 verses, 773,692 words, 3,566,480 letters. Apocrypha: 383 chapters, 6081 verses, 152,185 words.

Last Quarter on the 8th, at 9.37 p.m.
New Moon on the 16th, at 9.37 p.m.
First Quarter on the 23rd, at 8.54 p.m.
Full Moon on the 30th, at 8.29 p.m.

NOTES ON THE MONTH.

This month received the name of January from the ancient Romans. It was adopted and retained by the early Christians, and has ever since been computed as the first month of the year in all the calendars and almanacs of Christendom. It was not originally in the calendar of Romulus, but introduced into it by Numa Pompilius, in the place which had been previously assigned to March. It was so called from a double-faced deity, named Janus, who was presumed to look both into the old and new year, and in this month a great festival was held in his honour. At this period the Romans laid aside all old grudges. Clients and freedmen sent presents to their patrons, slaves to their masters, and friends and acquaintances to each other; whence the custom of New Year's Gifts was originally derived.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during January is 29·907 inches; the mean average temperature 38°; the amount of rain 1·9 inches. The prevalent winds are south-west, west, and north-west. The temperature during this month is very variable, and frost is to be expected whenever the wind veers towards the east.

HINTS ON HOUSEHOLD MATTERS.

Broiling.

THERE are few circumstances which make a stronger impression on the minds of intelligent foreigners visiting England than the extreme goodness of our meat and the equally extreme badness of our cooking.

The first is easily accounted for. We are lovers of animals, and have devoted more pains than any other nation to producing the best varieties of oxen, sheep, pigs, and poultry; hence our live stock stands pre-eminent in quality, being unequalled in any part of the world. It is not so easy to account for the badness of English cooking. We have heard it suggested that the very goodness of the meat, which can be rendered eatable by the crudest methods of procedure, is perhaps the cause; and, on the other hand, that the abundance and consequent cheapness of our mineral fuel has given us so great a command of firing that we have adopted a system of cooking which proceeds on the supposition that everything can be accomplished by heat—whereas time is a much more important ingredient in all *good* cooking.

On the Continent, the most luxurious dinners are served, having been cooked with a mere handful of fuel, consumed in a cooking stove; in England, bushels of fuel are burnt in an extravagant open range, the whole effect being probably the roasting of one joint and the boiling of a second. The nations that we regard as but semi-civilised look upon our cooking as coarse and repulsive. The Chinese say, with great truth, that we cut up our joints on the table—an operation which *they* leave to their butchers and slaughtermen; and we must confess that the serving up of animals so as to resemble as closely as possible the living form, as is done in the case of hares, rabbits, roasted pigs, &c. &c., and then dismembering them by physical force, is really only one degree removed from the barbarism of the carnivorous savage who roasts his prey on a wooden spit over a fire of twigs, and then tears it limb from limb with his hands and teeth.

Let us take one of the most simple operations—that of cooking a chop. No man who has ever dined at a really good chop-house, such as are to be found in the haunts of the business men in the city of London, or at one of the best commercial hotels in any of the great towns of the North of England, need be told of the difference between a well-cooked chop and another indifferently served; the one, thick, plump, succulent, juicy, sapid, and tender; the other, thin, scraggy, fat, dry, hard, and tasteless. Yet both may have been cut off the same animal, the difference being entirely dependent on the cooking.

To have a chop in perfection, it should be cut from a loin of prime quality, which has been hanging a sufficient length of time to have become tender, and it should be of a uniform thickness of one inch and a half—which can be better secured if the chop is cut with the saw instead of with the cleaver. The fat should be trimmed away till no more remains than will be eaten; the fire should be bright and clear, and the gridiron clean and hot. Toasters with hooks to run into the meat must be avoided, but a hanging gridiron is in no way objectionable. The chop, when put down, should scarcely have been a minute at the fire before it should be turned, and it should be quickly turned again and again, until the heat has slowly penetrated to the middle, and the cooking is consummated. The advantage of these repeated turnings is easily explained. Meat consists largely of a substance termed fibrin, which contracts when heated. This contraction has a tendency to force out the nutritious gravy, and leave the chop dry and tasteless; but, fortunately, there is also in meat an element similar to the white of an egg, and hence termed albumen. This solidifies at a gentle heat, closing up the pores, and so forms an impervious layer on the outside of the heated chop, through which the gravy cannot pass; but if the meat be only heated on one side, the gravy is forced out on the other, and the cooking is consequently inferior.

Another evil results from the overheating if the chop be not constantly turned; the fibrin hardens at a high temperature, and thus the tenderness of the viand is destroyed.

If, during the process of cooking, a fork be thrust into the lean of the chop, or a knife be employed to ascertain if it be done, the chop is hopelessly spoiled. These instruments penetrate below the layer of hardened albumen, and the contraction of the fibrin consequently forces out the gravy.

Those who wish to take a lesson in broiling should go to one of the great chop-houses in the city, where hundreds of chops are broiled daily. There they will see, perhaps, a score or more of chops on a huge gridiron; these are turned rapidly in succession, by the aid of a pair of tongs, and served up to the hungry and impatient customers reeking from the gridiron.

To those ladies who wish to prove to their husbands that as good a chop can be had at home as in the coffee-room of "that *abominable* hotel," let us commend the three great essentials of chop-cooking: 1st, a good thick prime chop; 2nd, a bright, clear, but not fierce, fire; and, 3rd, constant turning. If to these we add a hot plate and quick serving, a little Worcestershire sauce, and a well-baked large potato—which should be opened, not by cutting, but by squeezing out the floury interior—and, lastly, a pat of fresh butter, the whole will form a meal fit for the delectation of Apicius in his highest prosperity. Had he known of such an economical and sapid dish, we do not think he would have poisoned himself, for fear of starvation, when he found his originally gigantic fortune reduced to 250,000 crowns.

White Wine Whey.—Make a pint of milk boil, put into it a glass of white wine, just boil it up again, then place it on one side until the curd has settled; pour off the clear whey and sweeten.

Sweet Lait de Poule.—The following is a French remedy for colds: Put two eggs into a very large teacup, with two teaspoonfuls of powdered sugar, a few drops of orange-flower water, or the eighth part of the rind of a lemon grated; beat the whole well together for ten minutes, and then pour boiling water gradually over, stirring briskly until the cup is full; this is to be drunk very hot, when in bed.

PHASES OF THE MOON.

Last Quarter on the 7th, at 7.39 p.m.
New Moon on the 15th, at 10.13 a.m.
First Quarter on the 23rd, at 4.48 a.m.

NOTES ON THE MONTH.

Numa Pompilius altered the Roman calendar, by adding January and February to the year, assigning twenty-nine days to the latter. Julius Cæsar did not make any alteration in the calendar of Numa, but Augustus Cæsar subtracted one day from February and added it to his *own* month of August. Every fourth year an additional or twenty-ninth day was *intercalated* between the twenty-third and twenty-fourth of this month, and was unnoticed; but now the intercalated day occurs every fourth or *leap* year, and is placed after the twenty-eighth; it is therefore the twenty-ninth or last day of February. Every leap year is readily discovered by dividing the year by four; and if there is no remainder, as in 1852, then February contains twenty-nine days.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during February is 29·945 inches. The mean average temperature is 38½°; the amount of rain 1·5 inches. February is a very uncertain month; frosts and storms are frequent. The prevalent winds are south-west, west, and north-west. The range of temperature during February is very great.

HINTS ON HOUSEHOLD MATTERS.

Facts about Eggs.

WHEN exposed to the air an egg soon loses its original freshness, in consequence of the escape of part of its moisture, and the consequent entrance of air. This evil may be prevented in several modes. One of the least troublesome is to grease the surface of fresh eggs, and so close the pores. It is not very material what grease is employed, so that it is fresh and sweet. Butter, however, is the least desirable, as it contains curdy matter, which becomes tainted after long exposure to the air. Lard or melted suet is better; and, in France, a proposal was lately made to use melted beeswax and olive oil, which is said to answer remarkably well. Another mode of preventing the access of air is to plunge the eggs into a thin creamy mixture of freshly slaked lime and water, in which they will keep good, for pastry purposes, for many months.

The uses of the white of the egg in household economy are manifold; it is employed in pastry, in clarifying liquids, and as a kind of varnish for leather, &c. The whites of eggs beaten up so as to destroy their structure, forms the *glaire* of the bookbinder, with which he gives the shining appearance to the newly bound books. If any persons are desirous of renovating the appearance of some of their old library favourites, they may clean off the dirt and fly-marks with a slightly damp cloth, and then rub the covers over with a small piece of rag dipped in glaire, and they will be surprised and pleased at the improvement in their appearance.

There is another employment of glaire which is even more useful in the household. When the fruit-preserving season comes on the difficulty of procuring skin or bladder for tying down the pots of jam is often experienced. If, however, a sheet of tough fibrous paper be taken, glaired on both sides and tied over the pot, it shrinks and tightens as it dries, and forms a layer quite as impervious as, and fully equal to, bladder, provided the preserves are kept, as they always should be, in a dry situation. Another use of glaire is perhaps worth remembering. It is the best antidote to the poisonous preparations of copper, lead, silver, or mercury, as it forms insoluble compounds with these metals.

The use of white of egg in clarifying is well known. A small quantity of glaire mixed with any turbid or thick solution coagulates when it is heated, and, entangling all the small particles that cause the turbidity, leave the liquid bright and clear as it boils up to the surface in the form of scum. Whisked white of egg is often added to wines to clarify them. In this case the coagulation is caused by the spirit of the wine, and heat is not required. In all cases where eggs are employed for clarifying, the white only should be used, as the oil of the yolk interferes materially with the clearness of the liquid to be purified.

The employment of eggs in pastry depends greatly upon the glairy property of the albumen. This renders the dough much tougher and more impervious to the gases liberated by the heat of the oven, consequently the pastry is much lighter than when eggs are not employed. In order to produce the full effect of the eggs they are often beaten or whisked to such an extent that they form a froth consisting of air-bubbles entangled by the glairy albumen, and constitute the basis of *meringues*, *soufflets*, &c.

It should be remembered that eggs not only render pastry light, but that they also add greatly to its nutritive value. In this respect they are infinitely superior to the so-called egg or baking powders, which consist of chemical ingredients that give out gases when heated in the oven, that render the dough light without adding any nutritious material. As our readers may like to try these egg-powders, we append the following directions, which will be found to make a baking powder equal to any in use: Bicarbonate of soda, two ounces; tartaric acid, one ounce; starch, or corn-flour, two ounces; turmeric (added to colour) two or three grains. These materials should be gently dried before mixing—which is best done by passing them twice through a coarse sieve—and then kept in a tightly closed bottle in a dry place.

The common method of boiling an egg by placing it in boiling water, and then boiling for three or four minutes, is not to be recommended on scientific grounds. The temperature of boiling water coagulates the white into a firm solid mass, which is digested with extreme slowness, and is therefore not a desirable article of food for persons of weak digestion. A much better plan is to put the eggs in cold water, and place the boiler where it will be about six or seven minutes before it is raised to the boiling point; in fact, the eggs should be coddled, not boiled, so that the albumen may not be hard set. The table egg-boilers, in which the eggs are cooked in the steam rising from a small quantity of water placed in the bottom of the vessel, are objectionable, as the steam heats the eggs to the boiling point

Poached eggs are better cooked if the temperature is not allowed to rise to the boiling point. The best mode of doing them, one which has the advantage of pleasing equally the eye and the palate, is by buttering the inside of as many shallow teacups as eggs are required. One egg is broken into each, and they are then placed in a shallow stewpan, partially filled with boiling water. This is kept boiling for ten minutes, care being taken that no water boils into the cups. The eggs are then turned out on buttered or wetted toast; from the heat in the interior of the cup never having reached the boiling point, the eggs will be found to be far superior to those in which harder coagulation has been produced by the ordinary mode of poaching.

In making omelets, a small quantity of milk or cream should always be added, and the whole beaten up well; this insures the admixture of the yolk and white, and the milk renders the coagulation less solid, and consequently the whole becomes infinitely more sapid and more digestible.

Buttered eggs are a very ready and savoury dish. A piece of butter is put into a saucepan and warmed; the eggs are then broken in with pepper, salt, or other seasoning. They are then stirred very quickly with a fork over the fire, and taken off *instantly* they begin to set, the stirring being continued for a minute, when the whole is served on buttered toast.

PHASES OF THE MOON.

Full Moon on the 1st, at 11.52 a.m.
Last Quarter on the 9th, at 3.53 p.m.
New Moon on the 17th, at 9.37 p.m.
First Quarter on the 23rd, at 1.3 p.m.
Full Moon on the 31st, at 4.31 a.m.

NOTES ON THE MONTH.

This month was named by Romulus, in honour of his supposed father, Mars, the heathen god of war. Until January and February were added to the calendar, the Romans made it the first month of the year, and it was not even reckoned as the third month by the English until 1752. "The Saxons," says Verstegan, "called the month *Rhede Rethe-Monath*, to denote its general boisterousness of character, *Rhede* signifying, in their interpretation, *rough* or *rugged*. Many antiquaries contend that the month having been dedicated to the idol *Rheda* before the conversion of the Saxons to Christianity, the etymology of it thus given is more correct. The name was afterwards changed to *Lenet-Monath*, or length month, because in this month the length of the day begins to exceed that of the night."

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during March is 29·984 inches. The mean average temperature is 41½°; the amount of rain 1·4 inches. The prevalent winds are north-west and north-east, the latter being the most frequent. South winds are of rare occurrence. The variation of temperature is very great.

HINTS ON HOUSEHOLD MATTERS.

Cheese-Making.

THE following is an outline of the process recommended by the Agricultural Association of Ayrshire, who sent a deputation to inquire into the plans adopted in those counties of England which produce the best cheese. The method most strongly recommended by the deputation was that followed in the Cheddar district, where the very best cheese is produced with the least amount of labour. Immediately after the morning milking, the evening and the morning milks are mixed together, and the temperature of the whole is raised to 80 degrees by heating a small quantity of the evening's milk; the temperature should be ascertained by the use of a thermometer, as it is found that the most experienced persons cannot detect a difference of several degrees without its employment. The requisite amount of rennet is added, and in an hour the whole of the milk is found to be coagulated; the curd is then slightly broken, so as to allow a portion of the whey to be removed; this whey is immediately heated by placing the vessel in which it is contained in a boiler of very hot water; the whole of the curd is then minutely and most carefully broken by passing instruments, termed shovel-breakers, repeatedly through it: after it is thus broken, as much of the heated whey is added as will raise the temperature to 80 degrees. It is then left undisturbed for an hour, at the end of which time the whey is drawn off and heated to a rather higher temperature than before, when the curd is again minutely broken, and pailfuls of heated whey are poured in, so as to raise the temperature to 100 degrees; the whole is constantly stirred during the time, so that the curd becomes somewhat consistent; it is then left half an hour, in order that it may settle, when the whey is dipped out, and the last portions drained off, without any pressure, by a spigot. The curd is next heaped up in the centre of the tub, so as to drain for an hour by its own weight; it is then cut into large slices, turned, and allowed to drain, without pressure, for half an hour; when it has drained, and its temperature has fallen to 60 degrees, it is put into vats and subjected to moderate pressure for half an hour; at the expiration of this time the curd is broken fine in a curd mill, and the best refined rock salt is added to it in the proportion of two pounds to one hundredweight of curd. It is then made into cheeses, and placed in the cheese-press. The next morning the cheeses are turned and pressed again; and the third morning they are laid upon the shelf in a well-aired cheese-room, having been previously laced up in a piece of canvass to preserve their shape whilst drying. At first they are turned daily, the room being kept at a temperature of 55 to 60 degrees—in winter a stove is used for this purpose.

It is considered that the inferior character of the worst cheese depends on a rapid coagulation, caused by the use of too much rennet and a high temperature of the milk. By the Cheddar plan, a low temperature in the early stages give richness of taste, and the higher temperature afterwards renders easy the separation of the whey.

The most absolute cleanliness is indispensable in cheese-making; the spilling of a small quantity of whey on an absorbent floor will cause the production of many sour cheeses during the season. The plans here recommended are remarkably simple; and as it is regarded as an established fact, that difference of management is the great cause of difference in the quality of cheese, they are strongly recommended. When successful they yield cheese worth 65*s.* to 75*s.* per hundredweight, or nearly double the price of inferior kinds.

Treatment of Cases of Vegetable Poisoning.—In all cases of poisoning by vegetable substances, the best treatment is the immediate removal of the poison from the stomach by means of the stomach-pump, or by emetics, and, in the absence of medical aid, not a minute should be lost in the administration of the latter. One of the best emetics to be used in such cases, because one of the most rapid in its action, is half a teaspoonful of sulphate of zinc dissolved in water. A large dessert spoonful of good flour of mustard, in water, is also a very rapid emetic, and has the advantage of being usually at hand; or a large tablespoonful of common salt may be taken in the same manner, the dose in either case to be repeated, if the desired effect of emptying the stomach freely is not soon produced. The emetic action may be aided and increased by irritating the back of the mouth with the thin end of a quill feather, or even with the fingers, and the action should always be assisted by copious draughts of warm water. It should be remembered that there is no antidote to vegetable poisons, and that the safety of the patient depends on their being instantly removed from the stomach. Ipecacuanha is not a desirable emetic to employ, as fifteen or twenty minutes are required to produce its action, during which time the poison may produce fatal effects, nor is tartar emetic desirable for the same reason; both are objectionable also as producing nausea and sinking, which tend to increase the activity of the poison.

To beat Eggs.—To beat eggs to perfection it is necessary that the greatest cleanliness should be observed, as a very small portion of grease will render useless every endeavour to produce lightness, which may be obtained by the most inexperienced person, if cleanliness be particularly observed. In those recipes where butter, cream, or other greasy things are used, it will be found desirable always to beat the eggs by themselves, or with those ingredients such as flour and sugar that are not greasy, otherwise the desired lightness is not easily produced. The whisk employed should always be washed immediately after using, otherwise the mixture that is left upon it becomes dry and cannot so easily be cleaned. The circular whisks, now so much in use, can easily be cleaned by working them rapidly in two or three waters, and wiping them dry before putting them aside. In all operations requiring the use of whisked eggs, the ingredients should always be got ready before commencing the operation; the oven should be hot, the baking-plates and cake-tins buttered or papered as required, otherwise delay occurs. When the mixture is ready and it cannot be put into the oven immediately, this is fatal to success.

NOTES ON THE MONTH.

Since the time of Numa Pompilius, this month has retained the same place in the calendar that it does now. Romulus assigned thirty days to the month, but Numa reduced it to twenty-nine. Julius Cæsar, however, restored it to its original length, which has not been altered since. The name of the month is derived from the Latin word *Aperio* (to open), and was no doubt bestowed in allusion to the season, for the earth opens her bosom, and sends forth her riches, and the young buds open under the influence of April showers. The first day of this month is called All Fools'-day, from the practice of sending persons on some foolish errand, or playing a variety of practical jokes upon them in order to apply the epithet "April fool," in England; a gowk, in Scotland; and *un poisson d'Avril*, in France.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during April is 29·921 inches; the mean average temperature is 46½°. The amount of rain is 1·6 inches. The prevalent winds are north-west and north-east. Sleet and freezing rains are rather common, with sharp night frosts and sudden outbursts of hot weather.

HINTS ON HOUSEHOLD MATTERS.

How to Manage the Children's Bedrooms.

THE greatest requisite in a bedroom is an abundant supply of pure air. If we will only recollect that fifteen or sixteen times every minute we require to take in nearly three-quarters of a pint of fresh air in order to purify the blood, without which we should soon cease to live, we shall see how important an abundant supply of air really is. The air that has once been breathed is no longer fitted to support life, and if we shut ourselves, or our children, up in close rooms, where the air has to be breathed over and over again, unrefreshing sleep and ill health are the certain consequences.

No ordinary bedroom, however large, can be wholesome if there is no means by which the air can be changed during the night. In rooms that are not overcrowded the requisite change of air is easily managed. If there is a fireplace in the room there is always a current of air up the chimney, and if the door is left a little way open the air in the room never gets very impure.

There is another very excellent and inoffensive plan that may be used in children's bedrooms, so as to give them a supply of pure fresh air without a draught. A piece of thin board, about three inches wide, is cut as long as the full width of the window, and this is made to fit in under the bottom sash, so that when it is placed there on edge it prevents the bottom sash coming down to the window sill, so that an opening is left between the two sashes at the middle of the window, through which a supply of fresh air constantly passes in. As this is directed towards the ceiling, there is no down draught on the beds. It is astonishing what is the effect of this simple contrivance, which ought not to cost sixpence, on the purity and healthiness of small bedrooms. If it were generally adopted there would be much less disease arising from overcrowded and ill-ventilated bedrooms than there is at present. If there is no chimney, or other such means of ventilating a bedroom, the door ought to be left wide open the whole night, during winter as well as summer.

There is another point of great importance in childrens' sleeping-rooms, and that is, the injury that many children suffer from having their beds surrounded with close curtains; these retain the foul air, charged with animal impurities, around the sleepers, and are especially injurious. Even close curtains to the windows are unnecessary, and tend to prevent the admission of light and air.

With respect to washing the rooms, many persons are in the habit of having the bedrooms washed on a particular day in the week, without any regard to the state of the weather. On a fine sunny day they dry quickly, and are free from all moisture by the evening; but in wet weather they do not dry for many hours, and are cold, damp, and unhealthy in the evening. Many cases of illness, especially in children, may be traced to the foolish plan of washing and scrubbing bedrooms on wet days.

Another very objectionable custom which some over-neat people practise is that of having the beds made early in the morning. At that time the moisture which has escaped from the skin during the night is contained in the bedclothes, which ought to be turned down over the foot of the bed, to air, for some time before the bed is made. If this is done the bed is drier, warmer, and more comfortable at night, and is consequently a great deal more wholesome than if made early in the morning.

Children should never be allowed to sleep in feather beds, as they enjoy much more refreshing and less enervating repose upon mattresses; nor should they, however young, wear nightcaps. If the children are running about all day without caps in the house, what can they possibly want with them when they are asleep at night? They are objectionable on account of the great importance of keeping children's heads cool.

Such baneful poisons as syrup of poppies, Godfrey's cordial, or any other preparation of opium should never be given to children. These dreadful drugs are slow poisons, and cause the death of hundreds and the ill health of thousands of children annually.

The amount of bedclothes used for children is a point of some importance. During the warmth of summer the quantity may be as small as is consistent with the comfort of the children, but in winter they should be well covered, especially those that are very young. A great increase in their comfort may be secured by using a small fine blanket, or flannel, instead of the cold linen sheet which renders going to bed so distasteful to children during the cold weather.

Bread-Making.—The following receipt furnishes bread greatly superior to that ordinarily made in private families: To make a half-peck loaf, take three-quarters of a pound of well-boiled mealy potatoes, and mash them through a fine cullender or coarse sieve; add to them one-eighth of a pint of yeast (about two tablespoonfuls), or three-quarters of an ounce of German dried yeast, and one pint and three-quarters of lukewarm water (88° F.), together with about a quarter of a pound of flour, to render the mixture the consistence of a thin batter; this mixture should be set aside in a warm place for six or eight hours, in order to ferment; at the end of this time it will be found (if it has been warmly and closely covered over) to have risen considerably, and, except as to colour, to resemble yeast in appearance. The sponge so made is then to be mixed with one pint of water nearly blood-warm (viz. 92° F.), and poured into half a peck of flour, which has previously had one ounce and a quarter of salt mixed with it. The whole should then be kneaded into dough, and allowed to rise in a warm place for three or four hours before baking. After the dough has risen, it should be handled as little and lightly as possible whilst making into loaves. In making large quantities, it will be found convenient to set the sponge over night, and make the dough very early in the morning; or the sponge may be set very early, and by keeping it and the dough rather warm, the loaves will be ready for baking in the afternoon.

Full Moon on the 29th, at 1.18 p.m.

NOTES ON THE MONTH.

This is the third month of Romulus's year; but the fifth month as reformed by Numa and Julius Cæsar. Romulus assigned thirty-one days to this month; Numa reduced the number to thirty; and Julius Cæsar restored it to the original length, which it now retains. There is some doubt about the origin of the name of this month: because, although the Romans offered sacrifices to Maia, the mother of Mercury, upon the first day of this month, yet it appears pretty evident that the name was fixed long before the time of Romulus. Among our British and Saxon ancestors this month was hailed as the genial harbinger of approaching summer, and celebrated sometimes with religious observances, and at others amid general festivity. On May-eve the Druids made large fires in honour of Beal.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during May is 29·934 inches. The mean average temperature is 53°; the amount of rain-fall is 1·9 inches. The prevalent winds are north, north-west, and north-east. Sharp night frosts are still to be expected whenever the wind veers towards the east. There is a great increase of sun heat this month.

HINTS ON HOUSEHOLD MATTERS.

Salting Vegetables.

On the Continent salt is largely employed in preserving fresh vegetables for the winter, and it might be very advantageously used in this country for the same purpose. Scarlet-runners, for example, are readily kept by cutting them in the same manner as if for immediate use, packing them in a jar with alternate layers of salt, and pressing them down so that no portion is above the salt brine, which is rapidly formed by the extraction of their juice. If tied over and placed in a cool situation they will keep without change for many months, and are ready for use on being washed to remove their saltness.

Cabbages are extensively preserved in a similar manner, furnishing the well-known substance termed sauer-kraut. It is usually prepared according to the following directions, and furnishes so valuable an article of diet, that its employment is regarded as equally efficacious with that of fresh vegetables, in preventing scurvy in ships' crews on long voyages.

Cut some large white-heart cabbages into thin slices of equal thickness. Have ready a cask sufficiently large to contain the quantity of cabbage you intend to prepare; open it at one end, put a layer of salt at the bottom, on which lay some slices of cabbage; on this put another layer of salt, and a little pepper; then another layer of cabbage, and so on alternately till the cask is nearly full: put it in a cellar or some other cool place. Place a lid, just large enough to enter the cask, on the cabbages, and a very heavy weight on the top of it. In a short time the water, extracted by this pressure, will rise above the lid; and then it is that the kraut is fit to use. Be careful, when any of the sauer-kraut is taken out of the cask, to use a wooden spoon, and to put the lid and the weight on again, leaving also sufficient brine to cover the sauer-kraut which remains. Sauer-kraut should be steeped some hours before it is used, to take out the salt. It may be either plain boiled or fried afterwards, and served with bacon, ham, or sausages.

Clotted Cream.—In some parts of this country, particularly in Devonshire, the milk, after standing ten or twelve hours in a flat metal milkpan, is placed, with as little disturbance as possible, over a stove or clear fire until a scum rises to the surface; a small portion of this scum is gently removed with the finger from time to time, and when a few small air bubbles are seen underneath, the whole is immediately removed from the fire, and allowed to stand twenty-four hours. The cream thus obtained is much more solid than usual, and butter is readily produced from it by a few minutes' stirring with the hand. This cream, which is called scalded or clotted cleam, possesses also the advantage of keeping some days without turning sour. The operation, however, requires to be carefully conducted; for if the milk is allowed to remain on the fire after the bubbles appear beneath the scum, there is great risk of failure.

Meringues.—The whites of half a dozen eggs and one pound of sifted pounded white sugar. Procure a board about an inch in thickness, and of a convenient size for the oven. Cover this with foolscap or thin cartridge paper; proceed to beat the whites of eggs to a substantial froth, remove the whisk, and stir the sugar in lightly with a spoon, do not stir it too much, as it would lose its firmness. With a dessert spoon drop the mixture out on the papered board in masses about the size of an egg, about an inch and a half apart; in dropping them turn the spoon over as they fall, so as to produce as round an appearance as possible; then dust them over with sifted sugar, and blow off the loose sugar from the paper. Put them in a moderately heated oven, and bake a very light brown colour. When done, each piece must be carefully removed from the paper, the inside scraped out with a dessert spoon, leaving the shell about a quarter of an inch thick; place them in order on a papered baking sheet, the hollow side upwards, and put again in the oven, taking care they do not acquire any more colour; they should be dried, so as to be quite crisp. They may be put in the oven at night when the fire is out and the heat subsided, and remain until the morning, when they may be packed in a tin box and used when required.

Easy Mode of Disinfecting.—After the recovery of the patient from any infectious disease, the room should be purified by lime-washing the ceiling (with freshly slaked lime, not whiting), and scouring or re-papering the walls, if practicable; the floor should be scoured with with chloride of lime and water, that portion of the bedding and the clothes unable to be scalded should be loosely arranged in the room, and disinfected by placing on the floor a saucer containing an ounce of manganese, and pouring on it a large wine-glassful of spirits of salts (muriatic acid). This mixture will continue to give out a powerful disinfecting gas, termed chlorine, for several days, which, if the doors and windows are closed, will infallibly destroy any infection. The same gas is given out slowly when saucers containing chloride of lime are exposed to the air, or it may be set free rapidly and in large quantities, by pouring any acid, as vinegar, &c., on chloride of lime; but it must be remembered that this gas, when liberated suddenly and in abundance, is extremely irritating to the lungs.

Almond Milk.—Sweet almonds blanched, half an ounce; powdered gum arabic, one drachm; white sugar, two drachms; and water, six ounces and a half; beat the almonds with the sugar and gum, and add the water gradually. Almond milk agrees with animal milk in many of its properties, is agreeable and nutritious.

Syrup of Lemons.—To a pint of fresh lemon-juice, add one pound and three-quarters of sugar; dissolve by a gentle heat, and skim the surface, add an ounce of the peel cut or grated very thin, simmer for a few minutes, strain, and bottle. If the flavour of the peel is not required, it may be omitted.

PHASES OF THE MOON.

Last Quarter on the 6th, at 7.13 a.m.
New Moon on the 12th, at 10.7 p.m.
First Quarter on the 19th, at 11.45 p.m.
Full Moon on the 29th, at 33,5 a.m.

NOTES ON THE MONTH.

This was the fourth month of the old Roman year, but the sixth month as reformed by Numa and Julius Cæsar. Romulus assigned to it thirty days as the proper limit, thereby increasing it four days. Numa Pompilius reduced the number of days to twenty-nine; but Julius Cæsar confirmed its position, and restored the day which Numa had taken away from it. Divers opinions exist as to the origin of the name of this month. Some derive it from Junius Brutus, who expelled the Tarquins from Rome on the first of this month, and settled the Government upon the people; others assert that it is derived from the Latin word *junius*, because it is considered as the month for young persons. The general opinion is, that it derives its name from Juno, in honour of whom a festival was celebrated in this month.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during June is 29·973 inches; the mean average temperature is 58½°. The prevailing winds are westerly, but they are liable to frequent changes. The nights are often cold, and the first half of the month is as variable as May.

HINTS ON HOUSEHOLD MATTERS.

Coffee.

THE coffee-plant is a native of Arabia and Ethiopia, but is now extensively cultivated in Asia and America. The native Arabian, or Mocha coffee, is small, roundish, and dark yellow in colour; the Java and East India kinds are larger in size and paler; the Ceylon, and West India, and Brasilian kinds, are of a blueish or greenish grey tint, and the largest in size. When coffee-berries are roasted, they suffer some remarkable changes, losing considerably in weight, but increasing to nearly double their original size; during the roasting the aromatic flavour is developed, but in a chemical point of view, the exact nature of the changes undergone are not clearly understood. It is remarkable that coffee contains a peculiar substance called Caffein, which appears quite similar to the Thein contained in tea, and on which much of the use of coffee as a beverage depends.

Roasted coffee when ground is much adulterated with chicory: this fraud is easily detected by dropping some of the suspected coffee in a wineglass with cold water; if the coffee is pure it swims on the surface, and scarcely colours the water; if it contains chicory, the latter sinks to the bottom and stains the water of a deep red tint. The presence of roasted corn is not so readily detected by unprofessional persons, but it may be immediately discovered by adding to some cold clear boiled coffee, a few drops of the tincture of iodine, which immediately strike a deep blue with the starchy matter of the corn; this change does not occur when the coffee is unadulterated, as it does not contain any starch.

Infusion or decoction of coffee is a wholesome and nutritive beverage; it diminishes the disposition to sleep, and hence it is used by those who require to keep awake for study or other purposes. Medically it is found, like tea, useful in some forms of headache, where there is not any determination of blood to the head; and it is also especially useful in some cases of spasmodic asthma, when taken strong. Liebig and the present race of physiological chemists attribute very considerable nutritive powers to the caffein contained in coffee; their theories are partly borne out by the following facts, which so fully set forth the value of coffee as a beverage, that we are induced to copy them. At the Academy of Sciences at Paris, M. Gasparin read a paper, in which he showed that the miners of Charleroi preserve their health and bodily vigour on a diet containing scarcely half the amount of nourishment of that of any other class of labourers in Europe. This diet consists daily of about three pints of coffee, two pounds of bread, two ounces of butter, about a pound and a half of potatoes and leguminous vegetables, such as peas, beans, haricots, or lentils; and once a week—on the sabbath or holidays—about three-quarters of a pound of meat, and from two to three pints of beer. The possibility of maintaining health, and working under these circumstances, on so low a diet, is attributed by M. Gasparin to the energy of the coffee in promoting the activity of the digestive functions, or perhaps in its retarding the nutrition of those organs which do not demand a large consumption of material for their repair.

This explanation, M. Gasparin observes, is borne out by the habits of the Arabs, of caravans, and of the French army in Africa, by all of whom great fatigue has been endured under the use of coffee alone as a beverage. The mining population referred to enjoy easy circumstances compared with many other classes of labourers, and poverty is unknown among them, except from accidents and other unforeseen causes which incapacitate them for labour.

The making of good coffee is a very rare thing in this country; most persons boil it, so making a decoction instead of an infusion: this effectually gets rid of the delicate and agreeable aromatic flavour, and leaves a comparatively tasteless beverage. The following particulars will be found worth attention: Never buy your coffee ground, but grind it yourself immediately before using it; keep your coffee-pot, whatever kind you may use, wiped clean and dry inside—a damp tea or coffee pot acquires a musty flavour that spoils the best tea or coffee. The cheapest, and perhaps the best, coffee-pots are those made on the French plan, called *cafetières;* if you have not one of these, adopt the following plan: Put your freshly ground coffee into the coffee-pot, previously made warm, and pour upon it water *actually boiling;* set the pot by the side of the fire for a few seconds, and do not let it boil up, then pour a cupfull out and return it back again to the pot, in order to clear it; having done this, let it stand on the hob or fender to settle, and in less than five minutes a transparent, strong, aromatic cup of coffee may be poured out. The proportions of coffee (which should not be too finely ground) recommended are, an ounce to a pint or pint and a half of water.

The milk used with coffee should always be boiled and used as hot as possible; the boiling of milk imparts a peculiar and exceedingly pleasant flavour to the coffee. White sugar is recommended, as the treacle-like flavour of moist sugar quite overpowers the delicate aroma.

Cocoa.—Cocoa, when genuine, is prepared by simply grinding the cocoa nibs: in general the husks are ground up with the kernels, and those separated in the manufacture of chocolate are added. In the cheaper kinds the adulteration is carried much further, a very large quantity of potato starch and red ochre being added. Some idea may be formed of the extent to which this practice is carried from the fact that the common kinds of cheap cocoa are sold retail at less than half the price that genuine cocoa nibs command wholesale. From the difficulty of obtaining genuine cocoa, many persons use the bruised cocoa nibs, boiling them for about three hours, so as to extract all the nutritious portions. This plan yields a pleasant beverage, which is light, well-flavoured, and free from the clogging, thick, mucilaginous substances contained in the cheaper kinds. If the oil should disagree, it may be made some hours before it is wanted, allowed to cool, and, after the solid oil is removed, may be rewarmed for use.

First Quarter on the 19th, at 3.44 p.m.
Full Moon on the 27th, at 4.12 p.m.

NOTES ON THE MONTH.

In the ancient calendar of the Romans this month was called *Quintilis*, to denote its numerical position—being, in fact, the fifth month of the old Latin year; whereas now it is our seventh. It was sacred to Jupiter, and consisted of thirty-six days, which Romulus reduced to thirty-one, and Numa Pompilius to thirty; but Julius Cæsar restored the day which Numa had taken away from it. In consequence of the alterations made in the calendar by Numa, July became the seventh month in the year, but retained the name of Quintilis until Mark Antony changed its name to *Julius*, as a compliment to Julius Cæsar, who had done so much to improve the calendar. July is usually very hot, especially during the first fortnight of the dog days; but this excessive temperature often gives way to the festival rains, which begin about St. Swithin's-day.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during July is 29·970 inches; the mean average temperature is 61½°. The amount of rain fall is 2·7 inches. The prevalent winds are north-west and south-west. When the wind veers to west rain may be expected, and if from east to south-west suddenly, thunder also. The range of temperature during July is comparatively limited.

HINTS ON HOUSEHOLD MATTERS.

Washing Materials and Washing.

WATER.—For washing purposes we may regard water as being either hard or soft. Hard water owes its peculiar properties to the presence of earthy substances (usually lime or chalk) which are dissolved in it. On boiling, it happens (except in a few rare cases) that a very considerable part of these chalky matters are thrown down in a solid form, and settling upon the bottom and sides of the kettle, form the well-known rock or *fur*, which is not dissolved up again by boiling for any length of time. It is found that boiling for twenty minutes or half an hour throws down as much lime as can be got rid of in this manner. This fact is one which is of the greatest importance in washing. If we put dirty clothes in cold or merely warm water, and then boil, the fur is precipitated upon them; and as it takes down with it all the dirt of the water, and fixes itself firmly into the cloth, it produces stains and a bad colour which it is extremely difficult to remove by any means which can be employed. And not only is a bad colour produced by the lime settling on the clothes, but the dirt which was in them is also fixed; so that by boiling in hard water the dirt is absolutely *boiled in* instead of being *boiled out*. This evil may be avoided by several means—by boiling clothes in rain-water, which is perfectly soft, being quite free from lime or any other earthy substance; by the use of soda, the action of which we shall speak of under that head; or by boiling the water by itself for half an hour before putting the clothes in—this throws down the lime on the sides of the vessel and thus lessens the evil. Another great disadvantage in using hard water is the large quantity of soap destroyed by it before a lather can be made, and the harder the water the greater the loss. Some idea of the immense waste of soap caused by washing in hard water may be gained from the fact that fifty gallons of Thames water, before boiling, utterly destroys one pound of soap before the slightest lather can be raised; and even after boiling for twenty minutes, that quantity of water would still retain enough hardness to cause a waste of six ounces. This loss of soap may be partly prevented by boiling the water before it is used; or by softening the water by the employment of a little soda, which has the effect of throwing down the chalk that is dissolved.

SODA is another substance of great importance in the list of washing materials. It possesses great cleansing properties, loosening stains and dirt, and rendering much less scrubbing requisite than would be otherwise necessary. Even in cases where the water is absolutely soft it is found of great advantage in the first boiling, as it does not corrode, in the slightest degree, either calicoes or linens. Yet there are certain disadvantages attending the employment of this substance; one is, that it changes many colours; in fact, all except those which are termed fast colours by the drapers. But a still worse evil attends the use of soda unless great precautions are taken to thoroughly rinse the articles after they have been washed with it; for if the slightest quantity of soda remains in the clothes, and is dried in, it gives a yellow tinge when exposed to heat, as in ironing, or even in airing; this yellow colour is quite permanent, not being removed by repeated washings; in fact, every laundress knows how difficult it is to get clothes of a good colour after they have once become of a bad one. Besides all this, another evil of not thoroughly rinsing out the soda is, that the strength of the cloth is very materially injured, even in linen, when it is thus allowed to dry in, and is heated by ironing.

The soda, as sold in the shops, is in the form of crystals, which consists of one-half water; if placed in a dry warm place the water flies off, leaving the soda as a white powder, in using which it should be borne in mind that, if taken in equal weight, it is twice the strength of the crystals. The best soda only should be used.

LYE, which is obtained by pouring water on wood ashes, and then straining through a cloth, is still used in those parts of the county where wood is burned for fuel; its power of softening water and of cleansing are entirely owing to the pearlash that it contains, and it may therefore be employed for the same purposes, and with the same precautions, as those mentioned in treating of the use of soda.

SOAP.—The action of soap depends upon the fact that it possesses the power of rendering greasy stains capable of being dissolved by water, whilst it is totally free from any corrosive action upon either animal or vegetable substances. As in this country it is always bought ready made, it is not necessary to say anything respecting its manufacture. When fresh made, the best soap contains at least a quarter of its weight of water, and the commoner kinds nearly one-half; this water renders it very soft, and makes it dissolve very rapidly. It is by far the most economical plan to buy it in bars, and cut it into squares by a loop of fine twine or wire, keeping them in a dry warm place until wanted: from the commoner kinds containing so much water, the best will, as usual, be found the cheapest.

WASHING PREPARATIONS.—Within the last few years, several washing preparations have been highly recommended as substitutes for soap and labour in washing, and have been set forth as enabling washing to be accomplished without labour.

In these preparations soda is the active ingredient, being however rendered caustic by the quicklime. There is no doubt of the efficacy of these preparations; in fact they are too active, not only dissolving the dirt, but weakening the fibre of the cloth by its corrosive action.

In addition to these substances, others are sometimes used in the laundry. Thus bleaching-powder, or chloride of lime—the most powerful bleacher known—is frequently used in the larger establishments; and its action is sometimes rendered more active by the addition of a little acid to the water which contains the substance to be whitened. The occasional use of bleaching-powder may be requisite, but its continued action is decidedly very injurious to the strength and durability of the fabrics. All colours obtained from vegetable dyes, and many mineral ones also, are destroyed by its application.

PHASES OF THE MOON.

Last Quarter on the 2nd at 7 16 p.m.
New Moon on the 10th, 2.36 p.m.
First Quarter on the 18th, 8.1c a.m.
Full Moon on the 26th, 3.31 a.m.

NOTES ON THE MONTH.

August is said to have derived its name from the Roman Emperor, Augustus Cæsar, to whom it was dedicated in honour of his being created consul in this month, and having triumphed three times in Rome, subjected Egypt to the Roman power, and put an end to civil wars. It was called *Sextilis*, or the sixth month, in the Album Calendar, in which it had only twenty-eight days assigned to it. Romulus added two days and Augustus Cæsar a third, which number it has since retained; and from the time that Numa Pompilius revised the calendar, it has continued as the eighth month of the year. The Anglo-Saxons called it *Arn-monath*, *Barn-monath*, alluding to this being the period when their barns were commonly filled, the Saxon word *Arn* signifying harvest.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during August is 29·973 inches; the mean average temperature is 61°. The amount of rain is 2·5 inches. The prevalent winds are south, north-east, and south-west. Night frosts are of very rare occurrence. Rain usually comes with a change of wind to the south-west.

HINTS ON HOUSEHOLD MATTERS.

Washing Materials and Washing.

BRUSHES made of vegetable fibre are much employed in laundries near London. From the coarseness of their substance, their action is injurious to fine linen.

Having now gone over the chief materials used in washing, we may conclude with some directions as to washing the various fabrics used as materials for clothing.

WOOLLEN ARTICLES.—The shrinking and discolouring of woollen articles may be in great part prevented by care in washing them. They should never be washed in hard water, nor in water softened by soda, nor should they be rubbed with soap. The fibres of wool are covered with little points, all directed one way; as the woollen is rubbed, these become tangled together, and form a kind of thick felt, by which means the article is shrunk and thickened. For the same reason, it is not desirable to wring woollen things. Before washing, woollen things should be well brushed and shaken, to get rid of the dust. Rain, or soft river water, should have a strong lather made in it with soap, or if the things are very greasy, ox-gall should be added, in the proportion of half a pint to six quarts of water; then boiling water should be added to the lather, to make it as hot as it is possible to bear the hand in, and the dirty woollen should be put in, and dipped and raised repeatedly, for several minutes. It should then be squeezed (not wrung) as dry as possible from the dirty, slimy liquor, and the process, if necessary repeated, with some clean lather. If the article is not very dirty, and becomes quite clean in the first washing, the second washing may be in hot water only, without soap, and, in either case, a blue-bag should be used in the last water. When gall has been used, a third water is necessary, to take off the bad smell. When the article is finished, it should be squeezed as dry as can be, and dried as quickly as possible in the open air, if the weather is fine.

WHITE SILK is best cleaned by dissolving curd-soap in water as hot as the hand can bear, and then passing the silk through and through, handling it gently, and rubbing any spots till they disappear. The silk should then be rinsed in lukewarm water, and stretched by pins to dry.

FLOWERED WHITE SILK is best cleaned by bread-crumbs, rubbed on with the hand.

BLACK SILK is best cleaned by some ox-gall, put into boiling water. The silk should be laid out on a table, and both sides sponged with the gall-liquor, then rinsed with clear water. A very little gum-arabic or gelatine may be dissolved in water, and passed over the wrong side of the silk, which should then be stretched out on pins to dry.

COLOURED SILKS are cleaned with so much risk that it is better to send them to a scourer.

Wash as often as convenient. Dirty clothes put by for three or four weeks, are more difficult to clean the longer they remain dirty; they acquire a permanent bad colour, and are apt to become mildewed and rotten.

Remove all stains as soon as possible; leave nothing long enough to fix itself thoroughly to the cloth; wash out grease, gravy, and fruit-stains, &c., before putting anything on one side for the wash. Fruit-stains yield readily to bleaching-powder—especially if, after being put on, it is moistened with a drop of some acid, as vinegar or lemon; but never use acids to coloured things. Ink-stains should never be put into soapy or soda water, or lye, as they directly become iron-moulds; but should be instantly wetted with clean water, and may be at once removed by the application of a little lemon-juice or salt of lemon.

After making starch, cover it with a plate, to prevent its forming a useless skin on the top. To prevent starch sticking to the irons, a piece of the best lump sugar will be found more cleanly and efficacious than wax or tallow.

When the water has once been made to boil, the fire in the copper or grate may be very much lessened, as but little heat is required to keep it at the boiling point. There is no advantage whatever in making water boil furiously, for it is not in the slightest degree hotter than when merely simmering. All the extra heat given to boiling water goes off in the steam, without affecting the heat of the liquid, and the only effect of a large fire is to fill the house with steam unnecessarily.

Summer Fruits.—Acids promote the separation of the bile from the blood, and its removal from the system, thus preventing fevers, the prevailing diseases of summer. All fevers are more or less "bilious"—that is, the bile is in the blood. Whatever is antagonistic to fever is "cooling," which is the quality commonly ascribed to all summer fruits, and results from the purification of the blood by this separation of the bile. Hence the natural desire for salads of all kinds in the spring and early summer, and the peculiar gratefulness of the summer fruits. But we nullify the good effects of the fruits in proportion as we eat them with sugar, or even sweet milk or cream. If we take them in their natural state, fresh, ripe, and perfect, it is hardly possible to eat too many, especially if we eat them alone, not taking any liquid whatever with them.

The Use and Misuse of Ice.—No one, in health, should drink iced-water to allay the thirst, for it has been known to produce serious, and sometimes fatal, inflammation of the stomach and bowels. To use it at all with safety, only a sip should be taken at a time; it will be found to become disagreeable after a few mouthfuls. On the other hand, ice itself may be taken freely, not only without injury, but even with positive advantage. If broken into pieces the size of a pea or a bean, and swallowed without crushing between the teeth, it will often be found efficient in checking diarrhœa, and has even cured cases of Asiatic cholera. A kind of cushion of powdered ice kept to the entire scalp has allayed violent inflammation of the brain, and arrested fearful convulsions. All inflammations, internal or external, are subdued by the application of ice, which rapidly conveys away the extra heat, and diminishes the quantity of blood in the vessels of the part. A piece of ice laid on the wrist will often arrest violent bleeding at the nose.

First Quarter on the 17th, at 3.28 a.m.
Full Moon on the 24th, at 2.6 p.m.

NOTES ON THE MONTH.

This is literally the seventh month of the year according to the ancient Roman calendar, as established by Romulus, but the ninth of Numa's year. It derives its name from *Septem*, seven, and *imber*, a shower of rain, as this is generally the commencement of the rainy season. The Senate of Rome would have named it Tiberius, in honour of that emperor, but he rejected the compliment. It was also named Antonius, in honour of Antoninus Pius; and Commodus called it Herculeus; but the name of September, though improper if we consider its place in the number of months, has outlived every other appellation. The month had only sixteen days assigned to it in the old Alban Calendar; but were increased to thirty by Romulus, to thirty-one by Julius Cæsar, while Augustus reduced the number of days to 30.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during September is 30·019 in.; the mean average temperature is 56½°; the amount of rain 2·1 inches. The prevalent winds are south, south-west, and south-east. The weather is usually settled, often with very great sun heat. Towards the end cold nights are common, and occasionally slight night frosts occur.

HINTS ON HOUSEHOLD MATTERS.

Pipkin Cookery.

THERE is a method of cookery practised in those countries where fuel is scarce and dear which is worthy of a much more extensive employment in England than it has hitherto received. For the want of a better, it may be termed pipkin cookery, because it is usually conducted in an earthenware vessel, which is exposed to a moderate heat.

The great secret of the excellence of pipkin cookery consists in the fact that the meat, without water, is exposed for a considerable to the action of a low temperature, which is sufficient to cook it thoroughly, without hardening the fibre. Jugged hare is the only common English dish so prepared, but in other countries the plan is sufficiently common.

Perhaps a few examples would be much better than many precepts to illustrate and enforce the advantages of this admirable plan. First, then, let us borrow a dish from the sunny land of Spain.

Take a pipkin, or, if you have not got one, take a stewpan, but be sure the lid fits closely; or, what is better still, take an earthenware jar, with a tolerably tight-fitting cover; then take a couple of rabbits, and cut them up into small joints; then four large Spanish, or an equivalent number of English onions (but the Spanish, being milder, are best). Slice these onions thinly, place a layer at the bottom of your vessel, then a layer of rabbit, having rubbed each piece in a little flour, pepper, and salt, as seasoning; then another layer of onion, then rabbit, and so go on piling up alternate strata, until all your rabbit is used up. Throw your remaining onion on the top, put on the lid as tightly as you can, and expose the whole to a moderate heat for a couple of hours, or more, if your rabbits are old and tough. This moderate heat may be given by letting your vessel stand plunged in a saucepan of boiling water, or by the side of the fire, or in a *very slack* oven. Two things, however, you must avoid as you value the goodness of the dish,—one is that you do not let one drop of water into the jar; and, secondly, that your heat never rises so high as to make the contents boil. At the end of the time, turn out your dish, eat, and be thankful for having learned how to cook rabbits without trouble, and to produce a dish fit for a king.

This is just one illustration of the merits of pipkin cookery; but you may employ any tough joints you like, and make them eatable in the same way. Try some clods or sinewy bits of beef; put them into an earthen pot, just dipping each piece in vinegar; add vegetables, as carrots, turnips, or onions, if you like; stew as directed in this close vessel, for four to six hours for these tougher joints, and you will have a delicious dish from an almost worthless joint.

Recently we were treated to a Liverpool dish of the same kind—the directions for which appeared in THE QUEEN newspaper—and they are so admirable, and afford such an excellent illustration of the advantages of pipkin cookery, that we subjoin them. The dish is known by the name of HOT-POT:—"The article of primest necessity in the composition of hot-pot is *the pot*. A brown jar, with a closely fitting lid to it, and glazed outside, is the commonest form. In hot-pot countries such pots are made for the purpose. Some of the more ambitious amateurs have dishes specially made, modelled, according to their fancies, into more or less appropriate devices. For the materials of a hot-pot sufficient for five convives, take a steak of three pounds, cut out of the centre of a leg of mutton all across it; remove every particle of fat, skin, and bone, and cut it up into slices; take three-quarters of a pound of rump-steak, and treat it in a similar manner; clean and cut up three mutton kidneys; clean and trim a punnet of fine mushrooms; take eighteen large oysters, and strain them from their liquor; boil three pounds of potatoes, peel and break them; cut up two large Spanish onions into slices; add to the strained liquor of the oysters about a pint of water, six tablespoonfuls of mushroom ketchup, and one tablespoonful of tarragon vinegar, for gravy. Mix, upon a plate, two tablespoonfuls of salt, one of pepper, a pinch of Cayenne, and half a nutmeg, grated, for seasoning. Now take the pot, and proceed to build up the hot-pot as follows: A layer of onions, a layer of the meat (with small pieces of butter intermingled, to compensate for the fat which has been removed, and with some of the seasoning sprinkled over), a few mushrooms and oysters, and a layer of broken potatoes; then a layer of onions, &c., proceeding in this manner until the pot is filled, or the materials exhausted—taking care always to have a closely packed layer of mashed potatoes on the top. Before putting on this layer, however, pour in the gravy, and let it soak well into the dish. Put on the top, and *lute it well round the margin with a stiff paste made of flour and water.* Set it in a slack oven (a baker's, if possible), and let it stew for at least four hours. Then take three or four raw potatoes, cut them into quarters, and roast them well in a Dutch oven until they are quite brown. When the hot-pot is withdrawn from the oven, remove the top, and pop in these browned potatoes, packing them as close as possible. Bind a clean table-napkin round the pot, and serve it up without delay."

No housewife who tries this receipe once will fail to resort to it many times afterwards.

Use of the Saute-Pan.—On the Continent, frying is generally performed in a much less objectionable manner than in this country. In England, a small quantity of fat is placed in a shallow pan, and put over a fierce fire, when it is decomposed, and fills the house with disagreeable vapours, at the same time rendering the food irritating and indigestible. On the Continent, a vessel termed a *saute-pan* is used, resembling a shallow stewpan in form. A sufficient quantity of fat is employed to cover the meat to be cooked, and it is heated to a moderate temperature over a cooking stove; the proper degree of heat being ascertained by noting whether it renders a crumb of bread of a pale brown. The advantages of this plan are, that the meat is neither sodden in fat at too low a temperature, nor hardened and rendered unwholesome by one too high. Neither is it as expensive as might appear, the fat being reserved for repeated use.

PHASES OF THE MOON.

Last Quarter on the 1st, at 6.9 a.m.
New Moon on the 8th, at 4.58 p.m.
First Quarter on the 16th, at 9.24 p.m.
Full Moon on the 24th, 0.13 a.m.
Last Quarter on the 30th, 7.45 p.m.

NOTES ON THE MONTH.

This was the eighth month of Romulus's year, as the name implies, being derived from *Octo*, eight, and *imber*, a shower of rain; but in the calendar of Numa, and of Julius Cæsar, it was classed as the tenth month of the calendar, as at the present time. The Senate of Rome gave this month the name of Faustinus, in compliment to Faustina, the wife of the Emperor Antonius; and Domitian called it after himself; but, in spite of all attempts to alter the name, it has continued to preserve the one originally given by the old Romans. The number of its days, in the time of Romulus, was the same as at present. Numa Pompilius reduced them to twenty-nine; but Julius and Augustus Cæsar each added one day, so that the original number of days was restored, and has not been altered since.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during October is 29·859 inches; the mean average temperature is 50°. The amount of rain is 3·3. The prevalent winds south, south-east, and south west; sometimes north-east winds prevail, with night frosts. October is the wettest month in the year, and the weather is generally unsettled.

HINTS ON HOUSEHOLD MATTERS.

Rules for Flowering Hyacinths in Water.

1. If you choose your own bulbs, look for weight as well as size; be sure also that the base of the bulb is sound.

2. Use the single kinds only, because they are earlier, hardier, and generally preferable for glasses.

3. Set the bulb in the glass, so that the bulb is almost, but not quite, in contact with the water.

4. Use rain or pond water.

5. Do not change the water, but keep a small lump of charcoal at the bottom of the glass.

6. Fill up the glasses with water, as the level sinks by the feeding of the roots, and by evaporation.

7. When the bulb is placed, put the glass in a cool, dark cupboard, or in any place where light is excluded, there to remain for about six weeks, as the roots feed more freely in the dark.

8. When the roots are freely developed, and the flower spike is pushing into life (which will be in about six weeks), remove by degrees to full light and air.

9. The more light and air given from the time the flowers show colour, the shorter will be the leaves and spike, and the brighter the colours of the flowers. Remember that the better single-flowered kinds succeed better in glasses than the double ones, and that the single are, if anything, the most beautiful.

White-washing and Lime-washing.

THE wholesomeness of dwellings and outhouses is much promoted by their being frequently lime or white-washed; the latter process is adapted only for in-door use. White-wash is made by pouring water on cakes of whiting, and stirring the whole together until the liquid is of a thin, creamy consistence; a small quantity of warmed size, or dissolved glue, is then added, sufficient to prevent the colour from rubbing off when dry. White-wash is applied with a broad, flat brush, working in a uniform direction, up and down the wall. Should the surface have been previously white-washed, it is requisite first to remove the dirt by washing it with a brush and abundance of clean water.

Lime-washing is, from the cleansing action of the quick-lime, much the more effectual mode of purification, but is less frequently had recourse to, from the general ignorance respecting the proper mode of preparing the lime-wash. If glue is employed, it is destroyed by the corrosive action of the lime, and, in consequence, the latter easily rubs off the walls when dry. This is the case also if the lime be employed, as is often absurdly recommended, simply slaked in water and used without any fixing material. Lime-wash is prepared by placing some freshly burned quick-lime in a pail, and pouring on sufficient water to cover it; if the lime is fresh, great heat is given out, and the liquid boils; boiled oil (a preparation of linseed oil, sold by all oilmen) should then be immediately added, in the proportion of a pint to a gallon of wash. For coarser work, any common refuse fat may be used instead of the boiled oil. The whole should then be thinned with water to the required consistency, and applied with a brush. Care should be taken not to leave the brush in the lime-wash for any length of time, as it destroys the bristles.

Should coloured wash be required, the addition of one pound of green vitriol (sulphate of iron) to every two gallons of wash gives a very pleasing drab.

Lime-washing cannot be too strongly recommended as a means of purification, especially in seasons when any infectious disorders are prevalent.

The Pot au feu.—Speaking of the general mode of cooking in France, which consists in the employment of the *pot au feu*, or stewing pipkin, Dr. Brinton, in his admirable treatise on "Food and its Digestion," says: "The *pot au feu*, from its great saving of fuel, food, time, and skill, is the climax of cookery; to roast aright demands a large fire, a good cook, perpetual attendance, and excellent meat; to boil meat affords a broth too good to waste, yet hardly good enough to form a soup. The French *pot au feu*, or stewing pipkin, gives us broth and meat of almost equal excellence, and these can be produced, with little fuel, from indifferent, tough, sinewy joints, by an unskilled cook, almost without attention. The meat, barely covered with cold water, is raised gradually in one or two hours to nearly the boiling point, and then is maintained there for a time, which may be roughly stated as an hour for each pound of meat; the water which is lost being replaced. If this process is properly carried out, the result is, a meat thoroughly tender and well cooked, a broth pure, clear, strong, and fragrant, whilst the time employed is sufficient to cook the various vegetables which are thus prepared withthe meat, whilst their soluble flavoury materials constitute a pleasant addition to the broth."

Value of Vinegar in Cookery.—The value of vinegar in economical cookery may be tested by the following recipe: Take some meat from the coarsest joints of the ox, such as the leg, shin, or sticking-piece, cut it in slices of two or three ounces each, dip each piece into good vinegar, and then pack the whole in a stewpan, with onions, turnips, or other vegetables, cut small, without water; cover it *closely*, and let it stand by the side of the fire for six or eight hours; it will then be found to be thoroughly done, and to have yielded abundance of gravy, being at the same time remarkably tender. The only precaution necessary is that the heat should never be suffered to approach the boiling point. Or the meat, vegetables, and flavouring materials may be placed in an earthenware jar, which can be closely tied down, and then placed in a large saucepan of *water*, or *very* slow oven. This mode of cooking is applicable to any kind of meat, and will be found exceedingly economical, giving little trouble, and furnishing a very nutritious, digestible, and delicious food. The acid of the vinegar, being volatile, is entirely dissipated during the process.

First Quarter on the 15th, at 7.7 p.m.
Full Moon on the 22nd, at 10.15 a.m.
Last Quarter on the 29th, at 3.5 a.m.

NOTES ON THE MONTH.

November was so called from being the ninth month of Romulus's year, which began with March; but according to the altered calendar of Numa and Julius Cæsar, it was the eleventh month of the year, as it now stands. As the ninth month, it was derived from the Latin words *Novem*, nine, and *imber*, a shower. Our Saxon ancestors called this month *Blot-Monath*, or slaughter-month, because, as food for cattle was scarce during the winter season, it was customary for them to kill and salt most of their winter meat during this month. The name is derived from the Saxon word *Blotan*, to kill or slay. They also call it *Wint-Monath*, or wind month, on account of the tempestuous weather which prevails at this period of the year, when the wind strips the trees of their few remaining leaves.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during November is 29·923 inches; the mean average temperature is 43½°. The prevalent winds are chiefly south and west. Showers are frequent. The temperature is more constant than in any other month of the year. Storms are frequent, and there is much atmospheric moisture.

HINTS ON HOUSEHOLD MATTERS.

Tea, and Tea-Making.

THE shrub or shrubs yielding tea are very closely allied to the beautiful *Camellis Japonica*. The precise action of tea on the constitution is not thoroughly understood; we know, however, that it is astringent, and that it contains a volatile oil, which has a peculiar effect upon the nervous system, occasioning watchfulness and sleepiness, whilst, at the same time, it has a soothing sedative action on the heart and circulation, to which latter effect may be ascribed the benefit often following its use in cases of headache. In colds, and sligh, rheumatic cases, warm weak tea is advantageously employed as a diluent and a promoter of perspiration. On some nervous constitutions, strong green tea produces severe effects; tremblings, anxiety, wakefulness, and other distressing symptoms occur, which can only be referred to the decided influence it possesses over the whole nervous system. Weak tea on the contrary, rarely disagrees even with invalids, and it is found to be refreshing and agreeable in a variety of maladies. In addition to the substances described, tea also contains a peculiar substance called Thein, which according to the theory of the celebrated German chemist, Liebig, plays an important part in the nutrition of the system.

The making of tea is a subject every one is so well practised in, that it is scarcely necessary to give directions; the essential requisites are: 1. Good tea. 2. A good teapot, that is, one of a plain shape, free from ornaments, which give a larger surface to throw off the heat, or from flutings and mouldings, which prevent the inside being wiped clean and *dry* after use. 3. Boiling soft water. When soft water cannot be obtained, a small portion of carbonate of soda is often used to correct the hardness of the water, but in general it is employed in great excess, when it renders the tea soapy and mawkish; for a large teapot a quantity the size of a pea is amply sufficient.

As the making of tea is a subject in which almost every one is interested, we add the directions of two men, one celebrated as a poet, the other as a *cuisinier*. Leigh Hunt writes: "Dear reader, male or female (very dear if the latter), do you know how to make good tea? because, if you do not (and we have known many otherwise accomplished persons fail in that desideratum), here is a receipt for you. In the first place, the teapot must be thoroughly clean, and the water thoroughly boiling. There should not be a leaf of stale tea left from the last meal. The tests of boiling are various with different people, but there can be no uncertainty if the steam come out of the lid of the kettle; and it is best therefore to be sure upon that evidence. No good tea can be depended upon from an urn, because an urn cannot be kept boiling, and water should never be put upon tea but in a thoroughly and immediately boiling state. If it has done boiling, it should be made to boil again. Boiling, proportion, and attention, are the three magic words of tea-making. The water should be soft, hard water being sure to spoil the best tea; and it is advisable to prepare the teapot against a chill by letting a small quantity of hot water stand in it before you begin, emptying it out of course, when you do so. These premises being taken care of, excellent tea may be made for one person, by putting into the pot two or three teaspoonfuls, and as much water as will cover the quantity; let this stand five minutes, and then add as much more as will twice fill the cup you are going to use. Leave this additional water another five minutes, and then, *first* putting the sugar and milk into the cup, pour out the tea; making sure to put in another cup of boiling water *directly*. Of tea, made for a party, a spoonful for each, and one large one over must be used, taking care *never to drain the teapot*, and always to add the requisite quantity of boiling water, as just mentioned. Now have a cup of tea thus well made, and you will find it a very different thing from the insipid dilution which some call tea, watery at the edges, and transparent half way down; or the syrup into which some convert their tea, who are no tea drinkers, but should take treacle for their breakfast; or the mere strength of tea, without any one qualification of other materials—a thing no better than stewed tea-leaves. In tea, properly so called, you should slightly taste the sugar, be sensible of a balmy softness in the milk, and enjoy at once a solidity, a delicacy, a relish, and a fragrance in the tea. Thus compounded, it is at once a refreshment and an elegance, and, we believe, the most innocent of cordials; for we think we can say, from experience, that when tea does harm it is either from the unmitigated strength just mentioned, or from its being taken too hot, a common and most pernicious custom. The inside of a man, dear people, is not a kitchen copper."

The late Alexis Soyer recommended the following plan, and from repeated experience we can speak very decidedly in its favour: "Put the tea into a perfectly clean and dry teapot ten minutes or a quarter of an hour before it is required, warm both the pot and the tea by placing them in the oven or before the fire; then fill the teapot with boiling water, allow it to stand for five minutes and it is ready." This method improves the fragrance of the tea very considerably, slightly but pleasantly altering the flavour; it appears to act by removing any trace of moisture or dampness from the tea, and by developing the aromatic principle. It will be found well worth a trial.

Mutton Broth.—Half-pound of Scotch barley; two pounds of breast of mutton; put on the fire with six quarts of cold water. Turnips and carrots, two onions or leeks (all cut up small), and half a pint of dried green peas to be added half an hour after the meat and barley have boiled. The whole to be simmered for two and a half or three hours longer.

Waterproofing Boots and Shoes.—For persons much exposed to wet, using leather boots and shoes, the employment of the following composition is recommended in the *Colonization Circular*, issued by Her Majesty's Government: "Linseed oil, one gill; spirits of turpentine, one ounce; beeswax, one ounce; Burgundy pitch, half an ounce; to be melted together, and rubbed into the leather, when quite dry, before the fire or in the hot sun." This composition will be found very effectual in preserving the shoe leather from the injurious action of sea-water.

PHASES OF THE MOON.

New Moon on the 7th, at 5.39 a.m.
First Quarter on the 13th, at 4.43 a.m.
Full Moon on the 21st, at 6.34 p.m.
Last Quarter on the 29th, at 7.33 p.m.

NOTES ON THE MONTH.

According to the calendar of Romulus, this was the tenth month, as the word implies; but by the Julian calendar it was made the twelfth. Among the Romans this month was devoted to various festivals. On the 5th they kept the Faunalia; on the 17th, the Saturnalia; on the 22nd, the Lararia; and on the last, the Juveniles Ludi. The peasants also kept the feast of the goddess Vacuna, after having got in the fruits and sown their corn. During this time all orders of the community were devoted to mirth and festivity. Masters and slaves were all on an equal footing. Friends sent presents to one another, and feasted together at the same table. The schools kept a vacation, and nothing was to be seen in the city but mirth and freedom. Our Saxon ancestors, after their conversion, called it *Helig-Monath*, Holymonth.

AVERAGE WEATHER OF THE MONTH.

The average height of the barometer during December is 29·994 inches; the mean average temperature is 40°; the amount of rain 1·5 inches. The prevalent winds are south, south-east, and south-west. The weather is changeable, the frosts of short duration Damp prevails when the wind is in the south-west.

HINTS ON HOUSEHOLD MATTERS.

Lighting a Fire.

IN LIGHTING A FIRE in an open grate, care should be taken to clear out the ashes, which, if left in, would obstruct the draught. The cinders should remain; a few pieces of fresh coal having been placed on them, some loosely crumpled small pieces of paper should be added; the wood should be placed lightly on the latter; some half-burned cinders and fresh coal should then be placed above, before the light is applied. The general cause of failure in fire-lighting is employing a large quantity of paper spread out flatly, and pressing the wood on it so as to prevent a draught of air passing through the fuel.

It sometimes happens, when a fire has not been lighted for some time, that it will not draw up, owing to the want sometimes of an ascending current of air up the chimney. This may be remedied by lighting a piece of paper, and holding it in the chimney so as to warm the air above the fire. This course is also frequently useful when lighting a fire where the chimney is ordinarily disposed to smoke.

When a fire is only required for warming the room, and not for cooking, a very slow and uniform rate of burning may be insured by the following arrangement: Cover the bottom of the grate with a sheet of iron or tin plate, accurately fitted, so as to exclude the draught (a sheet of stout paper or paste-board may be employed as a temporary substitute). This prevents the air entering except at the front, and a much more economical rate of burning results. Place fresh coals on the iron or paper until the grate is perfectly filled; on the top place the wood, with a few half-burned cinders to take fire in the first instance; if the wood is then set on fire the combustion passes very slowly downwards through the coals in the grate. The advantages of this plan are, a very slow and economical rate of burning; the almost entire prevention of smoke, which is consumed by passing through the heated coals; and lastly, a fire which will continue to burn many hours without attention—in fact, the entire benefit is destroyed if the fire is stirred.

Care of the Health in Cold Weather.

IN this country, the chest complaints of winter and spring are more serious and fatal than the bowel complaints of summer and autumn; and the whole number of deaths in the course of the year is greatest in January, February, and March, unless there arise any wide-spread summer epidemic, and least in June, July, and August. It is well, therefore, to know how the health is best protected in cold weather.

The popular idea of cold being most dangerous when the body is hot, is not quite true. In a healthy person said to be over-heated, so long as *the heat is kept up*, no contact of ordinary cold is dangerous. But, if a person be exhausted and weakened by exercise; if he be sweating and cooling rapidly, and, especially, if the exercise be over, and he remain at rest in cold air or a draught, then there is peril. The same rule holds good with regard to the taking of cold things into the stomach. Internal inflammation, even death, has followed upon a copious drinking of cold water. That has happened when the body was at rest, enfeebled by exertion or some other cause, and already pouring out excess of heat with a profuse perspiration. On the same principle it may be understood that wet feet or a wet skin do not matter while active exercise is being taken; but the clothes must be changed at once after the exercise is over. This has to be borne in mind throughout the year. Thus, one of our best physicians points out that the bather on a hot day had better *not* wait to cool himself before he takes his plunge, but bathe, jump out, dress rapidly, and trot home briskly. The young lady after a ball, or any one after attendance at a crowded meeting, had better *not* stand still to cool in the draughts of the entrance-hall, but walk briskly home, well shod and well wrapped up; or, next best, slip at once, warmly cloaked, into a carriage, and make haste to bed. Whatever lessens the vigour of the circulation, lessens the power of producing heat, and increases the risk of suffering from cold. Danger is greater because heat is more rapidly carried off under a current—or draught—of cold air; it is greatest when the body is exposed, not only to cold, but also to damp, in the shape of fog or rain. The well-known power of habit in enabling the body to endure what should fairly be considered dangerous exposure, has led some to a practice of hardening their children by unwise exposure from the first. This kills the delicate, and subjects to much risk the strong. Healthy children are best hardened against cold, and strengthened bodily, by the use of the cold bath every morning, all the year round, or even of the shower-bath; but in the case of a child in any respect sickly, the cold bath may possibly do harm, and the shower-bath ought never to be used without medical advice.

Sponge Cake.—Five eggs, half a pound of sifted sugar, six ounces of flour. Break the eggs into the pan, then add the sugar; work the whisk at a moderate speed for four or five minutes; remove the whisk, allowing it to drain a little, and stir in the flour with a spoon. Care should be taken not to stir the mixture more than is necessary to mix the flour with the batter—to overdo it would destroy its lightness. If all this mixture is baked in one cake, it would take about three-quarters of an hour to do; but this may be more correctly ascertained by lightly pressing the finger on the top of the cake. If elasticity is produced, or if the cake cracks on the top, and the protruding part has become brown, these are sure signs of its being done. This rule applies to all kinds of cakes. The tin the cake is baked in should be lined with paper, and a piece cut the size of the bottom. If baked in a mould, it should be buttered with a brush, the butter being previously melted; then some sifted sugar thrown into the mould before the butter hardens, and shaken about in it, and the superfluous sugar knocked out. Tie a band of paper round the top of the mould to prevent the cake baking over. If the mould will not stand by itself, it may be placed in some suitable tin to keep it upright.

Pastimes for Ladies.

ARCHERY.

Events of the Past Season.

ARCHERY has now become a recognised pastime among the ladies of the three kingdoms. Societies which a few years since were struggling into existence, with small groups of members, meagre attendances at practice meetings, and very minor scores, are now occupying prominent positions in the annals of the pastime, and displaying so much proficiency that the names of their best shooters are among the most distinguished prize-holders of each succeeding season. This cannot be without its encouragement, both to young shooters who may indulge in day-dreams of belonging at some time to the "upper ten" of the Grand Nationalists, and to more experienced archers who may be engaged in organising new societies and opening up fresh fields for a recreation as greatly admired as it is thoroughly adapted to the habits of English ladies, and conducive to the purposes both of pleasure and health. Some societies, whose origin dates from a period about which many of their members have very misty and unreliable recollections, are undergoing a process of revival, and contributing reports of their prize-doings to those columns from which the readers of The Queen and Field may form for themselves a tolerably correct estimate of the position which archery now occupies as a national pastime.

Among the new societies of which the past season furnishes inaugural records may be enumerated those of the Isle of Ely, the Sligo Archers, the Munster Archery Club (in place of the Castle Connell Archers), and the Ulster Club; the latter already numbering 100 members, and enjoying the patronage of the Marquis and Marchioness of Donegal, the Earl and Countess of Antrim, Lord and Lady Dufferin, Sir H. M. Cairns, M.P., &c. &c. This society has sprung out of the Belfast Military Archery Club, which has not met this year, and may probably be considered a thing of the past, inasmuch as its leading members originated the new association, which, in the first year of its existence, has acquired fame throughout Ireland by sending to the lists a lady who vanquished the Championess of Great Britain, upon actual score, at the Grand Leinster Meeting—a meeting that recently made its appearance for the second time among the public matches of the archery season. A few passing remarks upon this defeat suggest themselves, and take shape as follows: Miss Betham was debarred three rings, and could only count, for prizes, her golds and reds. That she would obtain a score prize under such circumstances was an achievement beyond the range of probability; still, on the termination of the first day's shooting, she was 33 ahead of all competitors; but the second day saw her beaten by 79 at the 60 yards distance by Miss Macpherson, of the Ulster Club, who exceeded her also by 50 at 50 yards; the result being that Miss Macpherson's gross score was 563, and Miss Betham's 490. Miss Macpherson had sixth place only when the first Round was shot, and Miss Betham third when the match was finished, Miss Hendley, of the Fermoy Archers, being second, with a score of 492. Some fine shooting was also made by Miss Newton, who represented the Carlow Archers, and Miss Tarleton and Miss Radcliff, who, with equal honour and success, did the same kind offices for the King's County and the Meath Archers.

That old antagonist of archers, the weather, was singularly well-behaved during the past season, the second day's Irish National Meeting being the only one at which the shooting was interrupted by summer showers. On every occasion—the Leamington, the Crystal Palace, the Grand National, the Scottish National, and, lastly, the Grand Leinster—the same propitious state of things existed, intense heat or adverse winds only testing the skill and trying the temper of those engaged in these several contests. Deprived of their ancient source of complaint, the archers who made inferior scores could only attribute want of success to their own shortcomings; notwithstanding which some shooters set about explorations in the realms of fancy, and ascribed their small scores to some such reasons as the following:

No. 1.—"The heat is *too* relaxing."
No. 2.—"The targets are *all* crooked."
No. 3.—"The distances cannot have been properly measured."
No. 4.—"The sun blinds me."
No. 5.—"There is always a wind when *I* shoot."
No. 6.—"I cannot shoot when people are crossing at the back of the targets."
No. 7.—"I am sure there is something wrong with my bow."
No. 8.—"I'll never use those Alexandras any more."
No. 9.—"I had no luncheon, and I feel *so* weak."
No. 10.—"That *one* glass of sherry has made my head ache."
No. 11.—"Oh, dear! what *am* I doing? And so well as I shot at the 'Grand Western!'"
No. 12.—"I never can shoot at the public meetings."
Chorus.—"My bow is too heavy—mine is too light—mine is too long—and mine is too short."

There were, however, some good scores registered during the summer, Miss Betham making the highest of the season—namely, 714, at the Scottish National. There were, too, some close and interesting struggles for victory—between Miss Betham and Miss S. Dawson, at Leamington, between the same ladies at Clifton, and between Mrs. Horniblow and Miss Betham at Stirling No little sensation was created at Leamington by Miss S. Dawson scoring a higher total than Miss Betham on the first day, thus inaugurating the English season with the temporary prospect of the Championess being beaten; but the half of the second day's Round, shot during an intense heat, brought the two ladies to an equality in score, whilst the last two dozen arrows, every one of which Miss Betham counted, terminated the contest in favour of the Championess—their respective scores being 671 and 645, the latter taking the first prize, owing to Miss Dawson escaping the loss of rings, to which Miss Betham's previous successes had rendered her amenable. At Clifton, again, there was close scoring. Miss S. Dawson commenced by taking the lead upon the opening Round, Mrs. Lister ranking second, and Miss Betham third: still, the bracer was not to be Miss Dawson's—it was not to change hands. Miss Betham, as at Leamington, proved herself equal to the emergency, and, half-way during the second Round, came again to the front, and finally bore away the honours of the meeting with a score of 606, approached only by Miss S. Dawson's 581, which narrowly escaped defeat from Mrs. Lister's 580. At Stirling, where a genuine warmth of welcome, generous hospitality, and keen zest of enjoyment, made the Scottish National the most agreeable meeting of the season, there occurred what may not, I hope, be improperly termed the great toxophilite fight of 1865. Targets were not numerous at this meeting, but among the shooters were some young ladies from Edinburgh and Glasgow, who had evidently been well taught, and whose style was much admired. So perceptible was this that one could not help regretting that female archery was not more largely practised in Scotland where anything like a passionate devotion to the pastime is only, I think, in its infancy among ladies. At the Stirling meeting, Mrs. Horniblow at the end of the first four dozen arrows had surpassed Miss Betham by 14 points, and just before adjourning to the cozy tea at the Golden Lion Hotel, Miss Betham had regained her lost laurels by one point only—their scores being 328 and 327. The next day Miss Betham had an advantage of 6 on the gross score at the termination of the 60 yards shooting, but at the shorter distance, which concluded the match, she made three consecutive golds at one end, thus counting 27 out of the 29 with which she ultimately distanced Mrs. Horniblow. The scores made by these ladies—viz., 714 and 685—were the best of the season, and much superior to those made by Miss Betham at either the Grand National, where she retained the Championship, or at the Irish National, the Leamington, or Crystal Palace Meetings.

Among the gentlemen there has been a change of Champion. Mr. G. Edwards has been defeated by a young Norfolk gentleman, Mr. E. Holmes, of the Waveney Valley Archers, who, with the fourth best score of the year (788), thus won his way to distinction at Clifton, having previously carried off the first prize at the Crystal Palace with a score of 711. The best scores made by bowmen during the season of 1865 were: Mr. G. Edwards, at Leamington, 908; Mr. Peter Muir, at Stirling, 820; Mr. G. Edwards, at Dublin, 810; Mr. Boulton, at Clifton, 765; Mr. Coulson, at Leamington, 762; Mr. Betham, at the Irish National, 758; ditto, at Leamington, 753; Mr. Walters, at Leamington, 749; Mr. Peter Muir and Mr. G. Edwards, at the Grand National, an equal score of 719, with a superiority of four hits on the part of the Scottish Champion; and Mr. R. W. Atkinson, at the same meeting, 712.

Without burdening my retrospect with additional figures, I may remark, *en passant*, that some half-dozen ladies have this year, by energy and perseverance, taken their stand in the front ranks of archery, not only rivalling, but excelling, the finest scores made in previous seasons, and unexpectedly carrying off some of the highest of public prizes. In the more private contests for club honours only, to which it is not my intention to make more than a passing allusion, we find another and a very young shooter of some promise in the person of Miss Ada Betham, whose *début* at the County Dublin Society's Annual Meeting was marked by her obtaining the first prize for highest value on gross score, 239, with 6 golds; her cousin, the Championess, making 351, subject to deductions, which resulted in giving Miss Ada Betham the first place on the prize-list.

ORIGIN OF CROQUET.

IT IS CURIOUS that the game of Croquet, which has in a short time sprung into almost universal favour amongst us, is little more than the revival of an old and almost forgotten English game, which was held in the highest repute by the gentry and the Court. That well-known metropolitan avenue, *Pall Mall*, owes its name to a game very much resembling croquet, which was frequently played in the neighbouring park, and which, as we are informed by Pepys, was a favourite pastime with King Charles II. and his courtiers. We have no record of the rules of this game, or the precise mode of playing it; but a set of the implements with which it was played is now in the British Museum, and their great resemblance to those now in use for croquet may be judged by an extract from Mr. Timbs' "Curiosities of London." The author tells us that "in 1854 were found in the house of the late Mr. B. L. Vulliamy, No. 68, Pall Mall, a box containing four pairs of the mailes, or mallets, and one ball, such as were formerly used for playing the game of Pall-mall in the Mall of St. James's Park. Each maile is four feet long, and is made of lancewood; the head is slightly curved, and measures outwardly five and-a-half inches, the inner curve being four and-a-half inches. The diameter of the maile end is two and-a-half inches, each shod with a thin iron hoop; the handle, which is very elastic, is bound with white leather to the breadth of two hands, and terminated with a collar of jagged leather. The ball is of boxwood, two and-a-half inches in diameter." In some parts of France, a game called *Jeu de mail*, extremely like the modern croquet, has been played for centuries. An Englishman who saw this game played forty years ago describes it as follows: "Along the smooth and sandy, but firm surface of the avenue, was fixed a line of iron arches, terminating at either extremity with a pin or post of iron, and the game consisted in driving wooden balls with wooden mallets from one end to the other and back again; the fun of cannoning your adversary, and driving him out of his course, adding zest to the triumph of your skill, if you first reached the winning-post." It is sufficiently clear from this, that what was termed on its recent introduction the "new" game of croquet, possessed no claim whatever to the title.

"THE QUEEN" RULES OF CROQUET.

1. The game is played by each player having a ball, or by each player having two, three, or four balls, as the case may be, and they, playing alternately, endeavour to pass through all the hoops in their proper succession (striking also the post at the turning-point), till they return to the starting-post, and the game shall be won by whichever player first strikes the starting-post on his return.

[In case of sides playing, or two players playing each having more balls than one, *all* the balls on one side must strike the winning-post before the game is won.)

2. The players shall play their first ball from a circle round the commencing-post, such circle to be of the diameter of one mallet's length, and the player is permitted to play from any point in that circle.

[The length of a mallet is a convenient measure. If a mallet's length in front of the post is used, it makes the starting-point too near the first hoop, and a foot from the post is inconvenient, as a measure is not always at hand. By drawing the circle the player starts half a mallet's length in front of the post.]

3. When a player strikes another player's ball (both of them having passed the first hoop) he obtains the privilege of the croquet, or of "taking two strokes," which may be explained as follows:

In the croquet, the player places his ball alongside of and touching the ball struck, and, placing his foot on his own ball, strikes it a sharp blow, driving the other ball in any direction he pleases.

In taking two strokes, having placed his ball as before described, he may strike it away in any direction, and may further play a second stroke afterwards.

[Be it here understood that the player may, in taking two strokes, either by a *following* stroke, drive his ball and the other player's together in any direction, or may strike his own ball away only. In either case he gets a second stroke.]

4. A player may strike another ball with his, previous to either, or one only of them, having passed the first hoop, but such striking shall not convey any further privileges, or give the player a second stroke.

5. In the case of the croquet it shall be deemed a stroke if the ball not the player's is moved the length of a mallet's head.

6. In all other strokes the stroke shall be deemed played if the ball played with shall move the length of a mallet's head.

7. If the player pass through a hoop, and his ball strikes another after passing the hoop, such striking shall convey the privilege of the croquet, and the hoop shall also be considered as passed.

8. If the player strike a ball, and his own ball glancing off shall pass through a hoop, such passing of the hoop shall not reckon, but the player shall place his ball by the side of the other, and continue according to Rule 3.

9. If the player strike a ball, and drive his own and the ball struck through a hoop, such hoop shall be counted as passed, and he shall further continue according to Rule 3.

10. If the player strike a ball, and his ball glancing from it strike others, such other balls are not reckoned as struck, but the player has only the privileges accorded by Rule 3 in connection with the ball first struck.

[If by the glancing stroke above mentioned any balls are moved, they are to be left, and not replaced in their original positions.]

11. Striking the turning-post reckons, in all cases, as the passing of a hoop.

12. To decide whether a ball is through a hoop or not, the following measure must be adopted: If the mallet be pressed against the hoop *behind*, and can pass up and down without touching the ball, such ball is to be considered through the hoop. Should the mallet touch the ball, the ball is not through.

13. If a player play out of his turn, it shall be optional to the adversaries to cause the balls to be replaced, or to be left in the places to which they have been struck.

14. If the fact of a player playing out of his turn is not discovered till after another player has played a stroke, no notice can be taken of his error.

Digitized by Google

15. The hoop which each ball has next to go through shall be marked by a clip of the same colour as the ball.

16. A player cannot croquet or take two strokes from the same ball twice in one turn. He may *strike* the same ball twice, but must pass through a hoop before obtaining any privilege for the second striking.

17. A ball striking the winning-post is considered dead then and there, and has no further connection with the game from that time.

18. If any hoop or post has been moved, or has fallen from the perpendicular, it shall be lawful for any player to restore it to its proper position, but on no account may a player move a hoop or post from its correct position in order to facilitate his play.

19. When the striker plays, a click must be heard from the mallet striking the ball sharply, it not being lawful to *push* a ball.

[An exception to this rule is when a ball is so close to a hoop that there is only just room for the mallet to be inserted between the hoop and ball, and no room for the striker to draw the mallet back, and give the click.]

20. When a ball has passed through all the hoops, and has not yet struck the winning-post, he becomes a rover, retaining all the privileges he before had; but once he strike the winning-post, no matter from what cause, in lawful play, he is dead, and must be at once removed.

[In the above twenty rules is contained the base of all true scientific croquet, and a game can be played from these rules alone.

We would intimate our opinion that it is not advisable to cramp the game by rules on the position of the mallet or hands in striking the ball; it signifies little, if the game is properly played, whether the mallet is played from the front or from the side. We ourselves, nevertheless, prefer and recommend the play from the side.]

ELEMENTARY WHIST.

BY CAVENDISH

(Author of "The Laws and Principles of Whist," "The Pocket Guide to Whist," "The Pocket Laws of Whist," "Pocket Rules for Leading at Whist," &c. &c.)

DURING the last five years we have witnessed what may almost be termed a whist "revival." For a long time past it had not been the fashion to play at cards; but now one hardly ever spends an evening with friends without the card-table being put out. It is satisfactory to observe that round games, which require next to no head, have given way in many places to the superior claims of whist.

Simultaneously with this revival have appeared, as might be expected, several new treatises on whist. It would not become the writer to recommend his own publications on the subject; but reference may be made to two other authors whose works may be advantageously perused—viz., "Professor P." and "J. C." The latter is well known as the most finished player of the day.

Enough has been said to show that at this present time whist is, in this country, the most popular of all card games; but, strange to say, though it is almost universally practised, it is but seldom thoroughly understood. Except at the clubs, it is quite the exception to sit down with a set of really good players. Two or three there may be, but the rubber is, more often than not, spoiled by the admission of a couple of muffs who cut in to make up the table. They sit down to play for "amusement," and fine amusement it is for their unfortunate partners! Did the majority of domestic players only know how greatly their interest would be increased by learning the principal rules of the game, they would at once set to work to master them.

In hopes of promoting this devoutly to be wished for consummation, we have brought together a few maxims, which will, we think, be found generally useful. For a further explanation of them than we have space for here—for the reasons which have led most authorities to abide by them—and for the exceptions to which they are subject (beyond those specified), some more complete treatise on the game must be procured.

THE MORE IMPORTANT RULES OF THE MODERN SCIENTIFIC GAME OF WHIST.

THE LEAD.

CHOICE OF SUIT.

Lead first from your best suit; that is, from the suit of which you hold the greatest number of cards.

If you have two suits, each containing more than three cards, lead the one which has the most high cards. But rather lead from a suit of four small cards than from a suit of three bigger ones.

CHOICE OF CARD.

Lead the lowest card of your suit, *except* you hold

Ace, king, &c., when lead	King.
Ace, queen, knave, &c., when lead	Ace, then queen.
Ace, and four small ones, when lead	Ace.
King, queen, &c., when lead	King.
King, knave, ten, &c., when lead	Ten.
Queen, knave, ten, &c., when lead	Queen.
Knave, ten, nine, &c., when lead	Knave.

SECOND ROUND OF A SUIT.

If you have the winning card, lead it. If you have the second and third best, lead the second best. In other cases, the lowest.

RETURNED LEADS.

Return your partner's lead, not your adversaries'. If, however, you have a very good suit of your own, lead that before returning your partner's. When returning your partner's lead, if you have but *two* cards of the suit remaining in your hand, return the highest; if *more than two* the lowest. *Except*—If you have the winning card, play that in the second round of the suit, whatever number of small ones you hold.

LEADS LATE IN A HAND.

Persevere with the strong suits originally led by yourself or your partner. But

If from an untoward fall of the cards you deem it necessary to change your suit, choose a suit in which you have reason to believe your right-hand adversary is weak, or your left-hand strong. And

If the suit that you are now obliged to open contains only two cards, lead the best. Lead also the best if you have only three cards, none being higher than the knave.

If both adversaries have trumps, do not lead a suit of which they have none.

SECOND HAND.

Play your lowest card second hand, *except* you hold

Ace, king, when play	King.
Ace, king, queen, when play	Queen.
Ace, queen, knave, when play	Knave.
Ace, queen, ten, when play	Queen.
King, queen, knave, when play	Knave.
King, queen, when play	Queen.
King, knave, ten, when play	Ten.
Queen, knave, ten, when play	Ten.
Queen, knave, and one small one, when play	Knave.
Knave, ten, and one small one, when play	Ten.

Also, if king, queen, or knave is led, put on ace; and if you have not more than *three* cards in the suit, put king on queen, and king or queen on knave led.

SECOND ROUND OF A SUIT.

Play the winning card, if you have it, unless the previous round has shown your left-hand opponent to be weak in the suit, when it is often right to leave the chance of the trick to your partner.

WHEN NOT ABLE TO FOLLOW SUIT.

Throw away from your worst suit.

With *four* or *more trumps* do not trump second hand unless you are certain, from previous fall of the cards, that your partner cannot win the trick. But

With *less than four trumps* (none being higher than the knave), trump second hand, unless you are certain from the previous fall of the cards that your partner can win the trick.

THIRD HAND.

Play your highest card, *except* you hold

Ace, queen, knave, when play	Knave.
Ace, queen, when play	Queen.

And also, if your highest cards are in sequence (*e.g.* king, queen, knave, &c.), play the lowest of the sequence (in this case the knave).

SECOND ROUND OF A SUIT.

If you hold the second and fourth best (*e.g.* queen, ten, &c., king being out, but ace remaining in), play the fourth best (in this case the ten). And

If the previous round has shown your left-hand opponent to be weak in the suit, do not waste a higher card than will suffice to win the trick.

MANAGEMENT OF TRUMPS.

TRUMP LEADS.

Having *five or more trumps*, lead a trump at the first opportunity.

Having *four trumps*, do not lead them unless your strong suit having been led is partly cleared, and you hold the winning cards of it.

Having *less than four trumps*, do not lead trumps unless you are very strong in all the other suits.

Do not lead trumps merely for the purpose of leading, through an honour turned up, nor refrain from leading them merely because an honour has been turned up to your right. Either course is proper if the other circumstances of the hand require a trump lead; but neither otherwise.

RETURNED TRUMP LEADS.

Return trumps at once if your partner leads them, and return the highest if you have but two remaining in your hand, as explained under the head of *returned leads*.

TRUMPING.

When weak in trumps, make them by trumping whenever you can (as explained under the head of *when not able to follow suit*.)

Do not lead a card for your partner to trump, if you have less than four trumps. On the other hand

If you have reason to suppose that one of the adversaries is strong in trumps, whenever you can, lead cards which force him to trump in order to win the trick (*forcing* cards).

If in doubt whether to lead trumps or to lead a forcing card, remember that when you are not strong enough to lead trumps (as explained under the head of *trump leads*), you are weak enough to force the adversary.

GENERAL RULES.

SEQUENCES.

If not leading, always play the lowest of a sequence.

Digitized by Google

COMMAND OF SUITS.

Do not lead out the winning cards of suits led by your adversary. On the other hand,

Get rid of the commanding cards of your partner's suit.

DISCARDING.

When not able to follow suit, throw away from your weakest suit; *except* you should keep guards to honours or second-best cards in suits led by your adversaries.

When throwing away small cards, do not mislead your partner by carelessly throwing bigger ones before smaller (as a three, holding the two in your hand).

THE SCORE.

Keep your eye on the score. For example, always play a winning card when one trick wins or saves the game.

When you are near winning the game, or when in danger of losing it, keep constantly in mind how many tricks you require to win or save it, and play accordingly (see preceding rule).

The odd trick is twice as valuable as any other, as it makes a difference of two to the score.

THE FALL OF THE CARDS.

You should watch the cards as they are played, and try to infer from them where the others lie.

The following table of some of the principal inferences to be drawn will assist beginners:

[NOTE.—The table is to be read thus: "During the play of the hand, the first or original lead of any suit by any player, should cause us to draw the inference that the suit led is the best in the leader's hand," and so on. By referring to the rules for "choice of suit" (given above), the reason for this inference will be found.]

PLAY.	INFERENCE.
ORIGINAL LEAD.	
Any suit led	Is the best suit in the leader's hand.
If a trump	Has five trumps or more; or a very powerful hand.
Leader of ace, then queen	Has knave.
" ace, then a small one	" three more at least.
" king	" ace or queen.
" queen	" knave and ten, but not ace or king.
" knave	" ten and nine, but not ace, king, or queen.
" ten	" king and knave.
RETURNED LEADS.	
Does not lead the winning card	Has not got it.
Leader of any card afterwards playing a higher one of same suit	" more.
Leader of any card, afterwards playing a lower one of same suit	" no more.
LEADS LATE IN A HAND.	
Leader changes his suit, leading a high card, and afterwards dropping a low one of same suit	Has opened a weak suit.
SECOND HAND (FIRST ROUND OF SUIT).	
Player of ace to small card led	Has no more, or has a special object in getting the lead.
" king "	" ace also, or no more; or wants the lead.
" queen "	" king also, or ace, or both; or ace, queen, ten; or no more.
" knave "	" higher ones, or queen, knave, and one small one; or no more.
" ten "	" higher ones, or knave, ten, and one small one; or no more.
" any smaller card	" none lower.
WHEN NOT ABLE TO FOLLOW SUIT.	
Player of any suit	Is his weakest suit.
" a trump to a suit of which partner may hold the best	" weak in trumps—most likely has only three.
" any suit not a trump, to a suit of which he is not certain that partner holds the best	" strong in trumps.
THIRD HAND.	
Player of any card	Has none higher, unless in sequence.
" ace	" neither king nor queen.
FOURTH HAND.	
Player does not win the trick	Has no higher card than the one against him.
" wins it	" no card between the one he plays and the one against him.
MANAGEMENT OF TRUMPS.	
Leader of a trump	Has five or more, or a very powerful hand; or four trumps and an established suit.
" plays a card his partner must trump	Is strong in trumps.
" might play a card his partner must trump, but leads some other suit	" weak "
Player does not trump a trick certainly against him	Has no trump; or is strong in trumps and wants them led.
SECOND, THIRD, OR FOURTH HAND.	
Player of any card	Has not the one next below it.
" any card not following suit	The suit he throws away is his weakest suit.

Many more inferences might be added, but enough are given to direct a young player as to the main points of play. When it is considered that every card played gives the opportunity of drawing several inferences, we cannot be surprised that towards the end of a hand skilful players know pretty well where all the remaining cards lie.

RIDDLES AND CHARADES.

IF Cupid insists upon coming to a lady's door, how would she like him to come?—With a *ring*, but not without a *rap*.

Why should the letter S enable milliners and tailors to dispense with their tools?—Because it makes needles *needless*.

What is the best way to keep a gentleman's affections?—Not to return them.

Why is a cross old bachelor like an ode on marriage?—Because he is *a verse* (averse) to matrimony.

Why are old maids about to be married like convicts?—Because they generally go off in *transports*.

Why are poultry the most profitable stock to keep?—Because for every grain they give a *peck*.

Why are the birds likely to feel depressed early on summer mornings?—Because their *bills* are over *due* (dew).

Why is a man likely to be better off with two wives than with one?—With one he may be happy, but with two he may be *transported*.

What three words, which read the same either backwards or forwards, did Adam use when he introduced himself to Eve?—*Madam, I'm Adam.*

Well employ my second, and you will never regret my first?—Past-time.

Why is love like a potato?—Because it shoots from the eyes.

Why are ladies like parish churches?—Because there is no *living* without them.

What striking resemblance is there between a shrimp and a Member of Parliament?—Each has M.P. at the end of his name.

My first I hope you are; my second I see you are; and my whole you always will be.—Well-come.

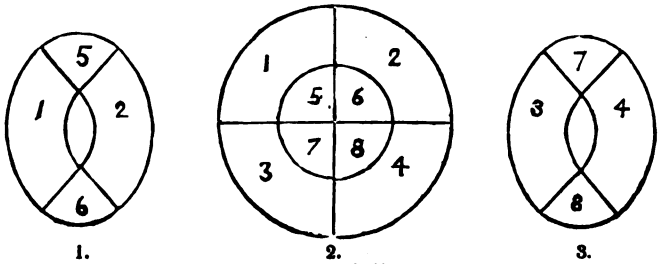
My first two letters point to man;
My first three to a woman;
My first four to a great man;
And my whole to a great woman.—HEROINE.

My first does affliction denote,
Which my second was born to endure;
And my whole is the best antidote,
That affliction to soften and cure.—WO-MAN.

You eat it, you drink it—deny it who can;
It is sometimes a woman, and sometimes a man.—A TOAST.

Pharoah's Serpents.—This is the name given to a very curious and ingenious source of amusement, which has recently been much in vogue in Paris, and is now being introduced into this country. Little cones of tinfoil, about an inch in height, and resembling a pastille, are made to contain a white powder, known to chemists as sulphocyanide of mercury. One of these cones is lighted, like a pastille, at the top, when there immediately begins issuing from it a thick, serpent-like coil, which continues to twist and increase in length to a surprising extent. Although the cone is so small, the coil which thus issues from it is nearly a foot long, and about two inches in circumference. It is, moreover, solid enough to handle, although very light and somewhat fragile. A Paris correspondent writes: "Last night I happened to be present at a *réunion de famille*. A kitchen plate was asked for, on which twelve silvered cones were placed in a circle. The tops were cut off, and the cones set fire to, whereupon each emitted slowly, and with a spurting, hissing sound, serpents, which gradually grew to the size above mentioned. The effect is miraculous." The sulphocyanide of mercury, when heated to a temperature below redness, undergoes decomposition, and swells and grows in this remarkable manner, while the serpent-shape results from its being burnt in the cone of tinfoil. The experiment is perfectly harmless, but a caution has been given that children, in whose presence it may be performed, should be prevented from touching or playing with the "serpents," as the substance of which they are composed is a deadly poison.

A Lady's Problem.—The following is ingenious as a puzzle, and useful besides, as affording the clue to overcome a difficulty which is sometimes met in various departments of ladies' work: Given, a circular piece of any kind of material—how to make from it two ovals, exactly the same in size, and without the loss of any portion of the stuff. It may be done in the following manner: Find the exact centre of the circle, and then draw within it another, half the diameter of the first. Then cut the piece into equal parts, as shown by the lines in figure 2. These pieces must



1. 2. 3.

then be placed together in the manner indicated in diagrams 1 and 3, and there will be formed two ovals, perfect with the exception of a small aperture in the middle of each, which may be filled in with another piece of the same material. Where it is desired to use material in this way, the experiment may readily be tried with paper in the first instance.

LIFE ASSURANCE.

THE TWO WIDOWS: A STRIKING CONTRAST.

A LABOURING MAN who had accumulated a little money, invested his "all" in a small concern in the trade at which he had been working. In order to provide for his family in the event of his early death, he resolved to insure his life for 500*l.* He was accepted by the office, and paid the usual comparatively small premium. In the following May he resolved to propose another 500*l.*, which was also accepted by the office and the premium paid as before. *Next month*—the second policy only having been in force some three weeks—he met with a severe accident from his own machinery, from the effects of which he died, having the consciousness that by his own prudence he had left his family a comfortable provision, of which—had he died a few months earlier—they would have been totally destitute. The widow was thus enabled to purchase a well-established business which she could manage herself, and with the income so derived afford a good education to her two sons.

A small tradesman in Devonshire decided on assuring his own and his wife's lives for 200*l.* each, when he suddenly bethought himself that his birthday was only three months off, and that if he deferred signing the proposals for a couple of months that he would still have to pay the same premium to the insurance office. Alas! how true is it—that as the poet says—

"All men think all men mortal but themselves."

Typhus fever visited the district, both he and his wife were in their graves six weeks after. Their two sons were orphans. They were committed to the tender mercies of the parish authorities, and with a parish education entered upon life as a couple of day labourers.

Reader! profit by this narrative of two facts, and see to it that in the event of your sudden death your family is provided for.

WHAT MIGHT HAVE BEEN DONE BY LIFE ASSURANCE?

The tattered beggar who hastens with the few pence you give him to the next alehouse; the labourer who spends half his week's earnings in the same locality; the mechanic, who must take his Sunday trip in a steamboat; the tradesman, who enjoys his month at the waterside; the small gentleman with his evening parties, and the larger one with his champagne dinners, act under the same common feeling—all, with few exceptions, living up to the last farthing of their income and some, unhappily, a good deal beyond it. How frequently do we hear of the decease of persons who had occupied a respectable station in this life, whose families have been left wholly unprovided for! An instance of the kind occurred within our own circle of acquaintance, not many years ago,. The deceased was a gentleman connected with the press, whose income was 300*l.* a-year—by some it was supposed to be a great deal more. He was an intelligent, agreeable person, and his company was accordingly much sought—in fact, he was a great diner-out. His connection with the press gave him facility of access to theatres; and both he and his wife had a dramatic turn. The consequence was, that a considerable sum was spent every year in flys and cabs, and other conveyances to these parties and scenes of amusement—to say nothing of the costs of return dinners, &c. It was only a fortnight before the gentleman's death that we heard the lady exclaim, "Oh! we had such a delightful party last night; why didn't you come?" The delightful party, no doubt, cost several pounds; and within fourteen days typhus fever had seized upon another victim, and the lady was a widow, without a shilling in the world. Indeed, the expenses of the funeral were defrayed by the hand of private friendship, and the lady and her children were, for some time, supported from the same source. Being an accomplished woman, endeavours were made to find employment for her as a teacher of music; but the effort failed, and eventually—wearied and heart-broken at the distressing position of living upon the bounty of friends—she sank beneath the pressure of her sorrows, and was conveyed to the same grave that held her late improvident partner in life. This was a case where life assurance was imperative, as indeed, all cases are where income is wholly dependent upon personal exertions or the tenure of a single life. If this unfortunate gentleman could have been content with two or three parties less in the year, if he could have smoked fewer cigars, if he could have walked occasionally from one part of London to another, instead of taking a cab or omnibus, it will be seen how easily he might have lessened his expenses some 30*l.* a-year, a sum which, according to the ages of himself and his wife, would, if invested in a life insurance office, have provided for the latter a sum of 1000*l.*, or an annuity of 100*l.* a-year. The position of this individual, during his life, will be the present position of thousands whose consideration we would most earnestly invite to the subject of life insurance. We might furnish a more recent instance than the one we have cited, in the case of a distinguished writer—the editor of a well-known newspaper—whose income must have been considerable, but whose family is left without any other inheritance than the gratitude of the public and the affectionate recollection of an extensive circle of literary friends.—*Post Magazine.*

A WORD TO LADIES ABOUT LIFE ASSURANCE.

One hears, in these days, a great deal about woman's mission. We are told that she is unjustly made the servant of man—that is, she is denied her equal rights—that she is compelled to waste her life in household drudgery—that the gates of employment and advancement are shut against her. And, probably, there is some reason in that protest, albeit life is somewhat thorny for man as well as woman, and, if their lots be unequal, so also are their compensations. But whatever their deprivations, it is certain, we think, that women enjoy large capacities of happiness, and wield a great influence in society. It is theirs to make home happy; to train up children; to encourage the workers of the world; to smile away care; and thus to hallow and beautify life. Nor, in the fulfilment of this, their province, can it be said with justice that they are at all remiss. In this belief, and because we feel that the suggestion of a way in which good may be accomplished will be acceptable to thoughtful women, we would point out that life insurance offers a fair field for woman's beneficent influence. If every wife would but persuade her husband to insure his life, and her own, for the benefit of their children, what blessings might thus be secured! The cost of procuring life insurance is comparatively little. How easy it would be for an economical woman to save that little from her husband's expenses, and so invest it as to give security to their lives and to the future of their offspring! Once procured, the policy of life insurance begins immediately to work its good work. It makes the toiling husband easier in his mind. It removes that mental anxiety for the welfare of his wife and his little ones which is more wearing than toil, and which, surest of all evil influences, opens the way to disease and death. He works now with a free heart, and his work is lighter. For her part, the wife, too, feels this change, in seeing the clouds lessen around their home. Life grows brighter to both, when the lives of both are thus insured. They know, as everybody knows, the uncertainty of life. They also know how cold is charity—how hard is the lot of the poor. But, having made this provision for the future, they feel that their children will not be left at the mercy of circumstances, should death snatch away their natural protectors. It is woman's privilege to influence man, more strongly than aught else, whether for good or for evil. In this particular it is possible for her to do great good—to herself as well as to him. We trust that wise women will think of this. Would that our words could reach them all! We would plead with them, to urge upon their husbands, brothers, sons, and friends, the obligation of life insurance. It is a duty which husbands owe to their wives, since the wife who inherits from her deceased husband a policy of life insurance is thus placed at once above want and the vicissitudes of fortune. It is a duty which parents owe to children, because these innocent and helpless beings ought never to be left unprovided for in a selfish world. It is the best evidence of considerate and far-seeing affection. And it is a duty that ought to be fulfilled *at once*. Delay is not merely dangerous, it is often fatal. Sickness comes without warning. Poverty treads hard upon the heels of wealth. Death is around us, in a thousand forms. Let then, the warning voice be prompt and decisive. Let woman's gentle, but sure, influence be exercised in time. Whatever she so proposes she can assuredly accomplish; and the work thus accomplished will be one of lasting beneficence. To her tact, her affection, her management, we are all indebted beyond the possibility of adequate return. May the obligation—individual and social—be increased! Let every woman resolve that no one, within the scope of her influence, shall neglect the obligation and the blessings of life insurance, and she will be the instrument of incalculable blessings.—*Insurance Gazette*, Oct. 1865.

WHAT IS LIFE ASSURANCE?

1. It is the exercise of prudence, of benevolence.
2. It secures independence, domestic happiness, to the widow and orphan.
3. It is more efficacious in its operation, as regards the moral and domestic comfort of the people, and in its tendency to reduce taxation, by its reduction of pauperism, and possibly of crime, than the legislation of our wisest statesmen, and, if universally adopted, would be a national blessing.
4. It affords to persons of every class, and in every station of life, the means to avoid much future misery to their families, and to render them independent of public or private charity.
5. It is a scheme by which any sum of money may be secured at death, whenever that event may take place, or to be received at any given age of the life assured.—*Jenkin Jones.*

WOMAN'S MISSION: A NEW FIELD, AND A GOOD IDEA.

Ladies are bound by every tie of interest to approve *and promote* life assurance. On married ladies, particularly, the claims of life assurance are strong, whether with reference to themselves or their children; and, whether married or single, ladies might make a material addition to their incomes, and at the same time be promoters of a great and good cause, by enforcing the practice of life assurance. Nor is there any reason why a lady should not openly undertake the duties of an agency, which are far less laborious than those which the fair sex frequently perform; such duties are free from the degradation which is often involved in accepting situations. Any sensible life assurance agent, moreover, would willingly share commissions on Insurances resulting from the influence of ladies who desired to remain unseen in the business.—LANGLEY.

[Life assurance agents, even in comparatively small towns, by dint of perseverance, very frequently derive handsome sums in the course of a year by way of commissions. Instances are on record of agents deriving as much as 300*l.* to 500*l.* a-year from the ordinary commission on the life policies effected through their agency; and it is no uncommon thing for them to earn 100*l.* to 200*l.* per annum in addition to their incomes from other sources. Why should not ladies, therefore, lend a helping hand to those already engaged in this benevolent work, and also take an active part in OCCUPYING THE FIELD THEMSELVES? We commend these thoughts to the earnest attention of our readers, and trust many may be led to act upon the suggestions we have made.]

Modes of Addressing Persons of Title.

To insure correctness, in addressing the nobility or other personages of rank, it is necessary to ascertain if the person to be addressed has any hereditary or official distinction by which the mode of addressing must be regulated.

THE SOVEREIGN.—In writing to the Sovereign, it is proper to address all letters and documents "To the Queen's Most Excellent Majesty," and to commence them with "Madam." When personally addressed, "Your Majesty."

The Prince of Wales.—"His Royal Highness the Prince of Wales." Letters commence "Sir." When personally addressed, "Your Royal Highness."

The Princess of Wales is addressed in the same manner, the word "Princess" being used instead of "Prince," and "Madam" in place of "Sir."

Princes or Royal Dukes.—"His Royal Highness Prince ——," or, "His Royal Highness the Duke of ——." Letters commence "Sir." When personally addressed, "Your Royal Highness."

Princesses or Royal Duchesses.—"Her Royal Highness the Princess," or, "Her Royal Highness the Duchess of ——." Letters commence "Madam," and the style is "Your Royal Highness."

Lord-Lieutenant of Ireland.—"His Excellency the Lord-Lieutenant;" if a Duke, "His Grace the Lord-Lieutenant." Letters commence according to his hereditary rank.

Archbishops.—Documents are addressed "To the Most Reverend Father in God, by Divine Providence Lord Archbishop of ——." Letters, "To His Grace the Lord Archbishop of ——;" commencing with "My Lord Archbishop." The Archbishop of Canterbury only is styled "By Divine Providence;" the other Archbishops and the suffragan Bishops are styled "By Divine Permission." The Archbishop of Armagh is usually addressed "His Grace the Lord Primate of Ireland." In conversation, an Archbishop is addressed "Your Grace." The wives of Archbishops and Bishops have no title in right of their husband's official appointments.

Dukes.—"His Grace the Duke of ——." Letters commence, "My Lord Duke." When personally addressed, he is styled "Your Grace."

Duchess.—"Her Grace the Duchess of ——;" commencing with "Madam."

Duke's Eldest Son is addressed by courtesy by the second title of his father, and in all respects as if his title were that of a Peer.

Duke's Younger Son.—"The Lord John ——," or on more formal occasions, "The Right Honourable Lord John ——." Letters commence "My Lord." When personally addressed, "Your Lordship." The wife of a Duke's youngest son is addressed "The Lady John ——," and commences "Madam." When personally addressed, "Your Ladyship."

Duke's Daughters.—"The Right Honourable Lady Mary," or less formally, "The Lady Mary," commencing with "Madam." When personally addressed, "Your Ladyship."

Marquis.—"The Most Honourable the Marquis of ——." Letters commence "My Lord Marquis." When personally addressed, "My Lord," or "Your Lordship."

Marchioness.—"The Most Honourable the Marchioness of ——," commencing with "Madam," and styled "Your Ladyship."

Marquis's Eldest Son.—As Duke's.

Marquis's Younger Sons.—As Duke's.

Marquis's Daughter.—As Duke's.

Earl.—Letters are addressed "The Right Honourable the Earl of——," or "The Earl of——," commencing with "My Lord," and styled "Your Lordship."

Countess.—"The Right Honourable the Countess of——," commencing with "Madam," and styled "Your Ladyship."

Earl's Eldest Son.—As if he held by right the title he bears by courtesy.

Earl's Younger Sons.—As Baron's sons.

Earl's Daughter.—As Duke's daughter.

Viscount.—Letters are addressed "To the Right Honourable Lord Viscount——," or, "The Lord Viscount——," commencing with "My Lord," and styled "Your Lordship."

Viscountess.—"The Right Honourable the Viscountess of——," commencing with "Madam," and styled "Your Ladyship."

Viscount's Son.—See Baron's son.

Viscount's Daughter.—See Baron's daughter.

Bishops.—Documents are addressed "The Right Reverend Father in God, William, by Divine Permission Lord Bishop of——." Letters, "To the Right Rev. the Lord Bishop of——;" commencing with "My Lord."

Bishops of Scotland and of America are addressed by their own name, and not by that of their diocese; and letters to them commence "Right Reverend Sir."

Baron.—Addressed, in writing, "To the Right Honourable Lord——," commencing with "My Lord," and styled "Your Lordship."

Baroness.—"The Right Honourable Lady——," or, "The Lady——," commencing with "Madam," and styled "Your Ladyship."

Baron's Son.—"The Honourable Robert——," &c. In writing, commence with "Sir."

Baron's Daughter.—"The Honourable Miss——," or, "The Honourable Mrs.——." In writing, commence with "Madam."

Baronet.—Address, "Sir John——, Bart.," commencing with "Sir," or, "Sir John."

Baronet's Wives.—Addressed as "Lady——." If the daughter of an Earl, Marquis, or a Duke, add the Christian name of the lady.

Maids of Honour.—"The Honourable Miss——," commencing "Madam."

Knight Bachelor.—"Sir John——," or, "Sir Thomas——," without the addition of "Knight." Letters commence "Sir."

Knight Bachelor's Wife is addressed by letter, "Lady——," commencing "Madam." When personally referred to, she is styled "Your Ladyship."

Knights of the Garter, St. Patrick, The Thistle, The Bath, St. Michael and St. George have the letters K.G., K.P., K.T., G.C.B., or, K.C.B., G.C.M.G., or K.C.M.G. respectively added after the surname.

Privy Councillor.—"Right Honourable," whatever be the rank.

The Wives of Privy Councillors enjoy no title in right of their husbands' appointment to the Board of Privy Council

Members of Parliament.—The letters M.P. should be added to the surname.

Military and Naval Officers.—The professional rank should be always prefixed to any other title the individual may hold, as "Major-General Sir John——, K.C.B.," &c. &c.

Lord Mayor.—"The Right Honourable the Lord Mayor," commencing "My Lord." In the United Kingdom there are three *Lord* Mayors, being those of London, York, and Dublin.

A Table of Precedency of Women.

THE QUEEN.
PRINCESS OF WALES.
Daughters of the Sovereign.
Wives of the Sovereign's Sons.
Wives of the Sovereign's Grandsons.
King's Sisters, or Wives of the Sovereign's Brothers.
King's Aunts, or Wives of the Sovereign's Uncles.
King's Nieces, or Wives of the Sovereign's Nephews.
Wives of Dukes of the Blood Royal.
Wife of Prince Leopold (King of the Belgians.)
Duchesses.
Wives of the Eldest Sons of Dukes of the Blood Royal.
Marchionesses.
Wives of the Eldest Sons of Dukes.
Daughters of Dukes.
Countesses.
Wives of the Younger Sons of Dukes of the Blood Royal.
Wives of the Eldest Sons of Marquises.
Daughters of Marquises.
Wives of the Younger Sons of Dukes.
Viscountesses.
Wives of the Eldest Sons of Earls.
Daughters of Earls.
Wives of the Younger Sons of Marquises.
Baronesses.
Wives of the Eldest Sons of Viscounts.
Daughters of Viscounts.
Wives of the Younger Sons of Earls.
Wives of the Eldest Sons of Barons.
Daughters of Barons.
Wives of Knights of the Garter.
Wives of Bannerets Royal.
Maids of Honour.
Wives of the Younger Sons of Viscounts.
Wives of the Younger Sons of Barons.
Wives of Baronets.
Wives of Bannerets (if not Bannerets Royal).
Wives of Knights of the Thistle.
Wives of Knights Grand Crosses of the Bath.
Wives of Knights of St. Patrick.
Wives of Knights Grand Crosses of St. Michael and St. George.
Wives of Knights Commanders of the Bath.
Wives of Knights Commanders of St. Michael and St. George.
Wives of Knights Bachelors.
Wives of Companions of the Bath.
Wives of Companions of St. Michael and St. George.
Wives and Daughters of Esquires; viz.:
- Wives of the Eldest Sons of the Younger Sons of Peers.
- Daughters of the Eldest Sons of the Younger Sons of Peers.
- Wives of Baronets' Eldest Sons.
- Daughters of Baronets.
- Wives of Bannerets' Eldest Sons.
- Daughters of Bannerets.
- Wives of Eldest Sons of Knights of the Garter.
- Daughters of Knights of the Garter.
- Wives of the Eldest Sons of Knights Grand Crosses of the Bath and of St. Michael and St. George, and Wives of the Eldest Sons of other Knights of the said Orders respectively.
- Daughters of said Knights.
- Wives of the Eldest Sons of Knights Bachelors.
- Daughters of Knights Bachelors.
- Wives of the Younger Sons of the Younger Sons of Peers.
- Daughters of the Younger Sons of the Younger Sons of Peers.
- Wives of Baronets' Younger Sons.
- Wives of Bannerets' Younger Sons.
- Wives of the Younger Sons of Knights of the Bath and St. Michael and St. George respectively.
- Wives of the Younger Sons of Knights Bachelors.

Wives of Gentlemen.
Daughters of Gentlemen.

The Queen and the Royal Family.

THE QUEEN.—VICTORIA, of the United Kingdom of Great Britain and Ireland, &c., Queen, Defender of the Faith. Her Majesty was born at Kensington Palace, May 24, 1819; succeeded to the throne June 20, 1837, on the death of her uncle King William IV.; was crowned June 28, 1838; and married Feb. 10, 1840, to his Royal Highness Prince Albert. Her Majesty is the only child of his late Royal Highness Edward Duke of Kent, son of King George III.

Her Royal Highness Victoria Adelaide Mary Louisa, PRINCESS ROYAL OF ENGLAND AND PRUSSIA, born Nov. 21, 1840, and married to his Royal Highness William of Prussia, Jan. 25, 1858, and has issue three sons and a daughter.

His Royal Highness Albert Edward, PRINCE OF WALES, born Nov. 9, 1841; married, March 10, 1863, Alexandra of Denmark (Princess of Wales), born Dec. 1, 1844, and has issue two sons, Prince Albert Victor, born Jan. 8, 1864, and George Frederick Ernest Albert, born June 3, 1865.

Her Royal Highness Alice Maud Mary, born April 25, 1843; married to H.R.H. Prince Frederick Louis of Hesse, July 1, 1862, and has issue a daughter, Princess Victoria, and a son.

His Royal Highness Alfred Ernest Albert, born Aug. 6, 1844.

Her Royal Highness Helena Augusta Victoria, born May 25, 1846.

Her Royal Highness Louisa Carolina Alberta, born March 18, 1848.

His Royal Highness Arthur William Patrick Albert, born May 1, 1850.

His Royal Highness Leopold George Duncan Albert, born April 7, 1853.

Her Royal Highness Beatrice Mary Victoria Feodore, born April 14, 1857.

George Frederick William Charles, K.G., Duke of Cambridge, cousin to Her Majesty, born March 26, 1819.

Augusta Wilhelmina Louisa, Duchess of Cambridge, niece of the Landgrave of Hesse and aunt to Her Majesty, born July 25, 1795; married, in 1819, the late Duke of Cambridge.

George Frederick Alexander Charles Ernest Augustus, K.G., King of Hanover, cousin to Her Majesty, born May 27, 1819, married Princess Frederica of Mecklenburgh-Strelitz, and has issue a son and two daughters.

Augusta Caroline Charlotte Elizabeth Mary Sophia Louisa, daughter of the late Duke of Cambridge and cousin to Her Majesty, born July 19, 1822, married June 28, 1843, to Frederick, Grand Duke of Mecklenburgh-Strelitz, and has a son.

Mary Adelaide Wilhelmina Elizabeth, daughter of the late Duke of Cambridge, and cousin to Her Majesty, born Nov. 27, 1833.

Eclipses in 1866.

In the year 1866 there will be three Eclipses of the Sun—viz., on March 16 and April 15, both of which are invisible from Europe. The third will take place on Oct. 8, but is only partly visible, as the Sun will be eclipsed at the time of sunset.

There will be two Eclipses of the Moon—viz., on March 31 and on Sept. 24. The former will occur early in the morning, and the Moon sets whilst she is eclipsed, and the latter is invisible from Europe.

The first Solar Eclipse will take place on March 16, and will be visible from a part of North America: the greatest Eclipse takes place at 9h. 51m. p.m. Greenwich mean time, in longitude 129 deg. east of Greenwich, and in latitude 72 deg. N.

The second Eclipse of the year is that of the Moon, on the morning of March 31. It begins at 48m. after 2h. a.m.; the Moon is wholly hidden from 44m. after 3h. to 22m. after 5h., and the Moon sets at 42m. after 5h, the eclipse not ending till 29m. after 6h., so that the Moon is partially eclipsed at the time of setting, and up to that time is visible from England.

The third Eclipse is one of the Sun. At its greatest phase seven-tenths of the Sun will be obscured, and this takes place at 51m. after 6h. on the morning of April 15, and will be visible from Australia and the Southern Ocean.

The fourth Eclipse is the second of the Moon, on Sept. 24. It is total, but invisible from Europe.

The fifth and last Eclipse of the year is a Partial Eclipse of the Sun, on Oct. 8. It begins at 26m. after 4h. in the afternoon, Greenwich mean time. Its greatest phase takes place at 26m. after 5h. ; but the Sun sets nearly five minutes before this time, so that the Sun sets when something less than one-half of the Sun's diameter will be eclipsed. At Cambridge the time of these phases will be about one minute earlier, mean time at Cambridge. At Oxford, in the mean time of the place, the eclipse will begin at 4h. 20m. p.m., the greatest phase at 5h. 20m. p.m., directly after which the Sun will set. At Liverpool the eclipse will begin in the time of that place at 8m. after 4h. ; its greatest phase will take place at 5h. 10m., and the Sun will set nine minutes afterwards. At Edinburgh it will begin at 4 o'clock nearly, its greatest phase will be at 4m. after 5h., and the Sun will set at 5h. 16m. local time. At Dublin it will begin, in Dublin mean time, at 3h. 52m., the greatest phase at 4h. 56m., the Sun setting exactly a quarter of an hour afterwards.

Population of Great Britain.—In 1864 there were 739,163 children born in England, and 495,520 persons died—both were above the average rate. The increase for the year, therefore, was 282,385 (in England, 244,243, and Scotland, 38,142). The population of England in June 1864 was estimated at 20,772,000; of Scotland, 3,118,700; of Great Britain, therefore, 23,890,700.

Principal Articles of the Calendar for the Year of our Lord 1866.

Ascension Day	May 10	May 5
Pentecost—Whit Sunday	May 20	May 15
1st Sunday in Advent	Dec. 2	Nov. 27

The year 1866 is the latter part of the 5626th and the beginning of the 5627th year since the creation of the world, according to the Jews. The year 5627 commences on Sept. 10, 1866.

The year 1866 answers to the 6579th year of the Julian Period, to the 2619th from the foundation of Rome, to the 2642nd year of the Olympiads, and to the year 7374-5 of the Byzantine Era.

The year 1283 of the Mohammedan Era commences on May 16, 1866, and Ramadân (month of abstinence observed by the Turks) commences on Jan. 18, 1866.

Transfer and Dividend Days at the Bank of England.

Stock.	Days of Transfer.	Dividends Due.
Bank Stock	Tuesday,	April 5, Oct. 10.
Three per Cent. Reduced		April 5, Oct. 10.

STAMP AND OTHER GOVERNMENT DUTIES.

PROPERTY AND INCOME TAX.

FROM April, 1865, to April, 1866, all incomes of 100*l.* per annum and not exceeding 200*l.* are taxed at the rate of 4*d.* in the pound, after allowing a deduction of 60*l.*: for example, a man earning 100*l.* will be rated only at 40*l.*; those of 200*l.* and upwards, at 4*d.* in the pound.

Exemption of Premiums from Income Tax.—Under a recent Act of Parliament, the premiums paid by a person for an assurance on his own life, or on the life of his wife, or for a deferred annuity to his widow, are declared free from income tax, provided such premiums do not exceed one-sixth of his returnable income.

DUTIES PAYABLE ON INHABITED HOUSE OF THE ANNUAL VALUE OF 20*l.* OR UPWARDS.

The duty is 6*d.* in the pound in respect of dwelling-houses occupied by any person in trade, who shall expose to sale and sell any goods in any shop or warehouse, being part of the same dwelling-house; or as a farm house *bonâ fide* used for the purpose of husbandry only. The duty is 9*d.* in the pound for dwelling-houses not so occupied and used.

DUTIES ON LEGACIES AND SUCCESSION TO REAL PROPERTY.

To children or their descendants, or lineal ancestors ... ... per cent.	£1	0	0
Brother or sister, or their descendants...	3	0	0
Uncle or aunt, or their descendants	5	0	0
Grand uncle or aunt, or their descendants	6	0	0
All other relations or strangers	10	0	0

The husband or wife of the deceased not chargeable with duty.

Probates and Letters of Administration are exempt if the effects are under 100*l.* in value.

DUTIES ON MALE SERVANTS.

For servants aged 18 years and upwards ... ... (per annum)	£1	1	0
Ditto under the age of 18 years...	0	10	6
Ditto employed as under-gardeners	0	10	6
Ditto employed as under-gamekeepers	0	10	6

Exemptions.—Occasional waiters, potboys, helpers, or ostlers of licensed innkeepers.

ARMORIAL BEARINGS.

Persons chargable with the duty of assessed taxes for any carriage at the rate of 3*l.* 10*s.* ... ... (per annum)	£2	12	9
Other persons	0	13	2

DUTIES ON DOGS.

Dogs of any description, each ... ... (per annum)	£0	12	0
Packs of hounds, of 66 or more	39	12	0
Packs of greyhounds, of 15 or more	9	0	0

Exemptions.—Dogs wholly kept and used in the care of sheep or cattle, or in driving or removing the same; provided no such dog shall be a greyhound, hound, pointer, setting-dog, spaniel, lurcher, or terrier. Dogs under 6 months old.

HORSES AND MULES.

Every horse kept or used for racing ... ... (per annum)	£3	17	0
Horses and mules above 13 hands in height, used for riding and drawing carriages chargeable with duty	1	1	0
Other horses and mules	0	10	6
Horses and mules kept by farmers, bailiffs, shepherds or herdsmen, rectors, vicars, curates, Roman Catholic priests, Protestant dissenting ministers, physicians, surgeons, apothecaries, and common carriers	0	10	6
Ditto under 13 hands, kept for riding or drawing carriages charged duty	0	10	6
Ditto, kept for any other purposes	0	5	3

Exemptions.—Horses or mules used for agriculture or trade.

DUTIES ON CARRIAGES.

For every carriage with four wheels, where drawn by two or more horses or mules... ... ... (per annum)	£3	10	0
Where drawn by one horse or mule only	2	0	0
For every carriage with four wheels, each being of less diameter than thirty inches, where drawn by two or more ponies or mules, neither of them exceeding 13 hands in height	1	15	0
Where drawn by one such pony or mule only	1	0	0
For every carriage with less than four wheels, where drawn by two or more horses or mules	2	0	0
Where drawn by one horse or mule only	0	15	0
Where drawn by one pony or mule not exceeding 13 hands in height...	0	10	0
Carriages kept and used solely for the purpose of being let for hire, one-half of the above-mentioned duties respectively.			
For any carriage with four wheels used by any common carrier	2	6	8
And where the same shall have less than four wheels...	1	6	8

Exemptions.—Any waggon, van, cart, or other carriage, to be used solely in the course of trade or husbandry.

RECEIPTS.

For 2*l.* and upwards... ... ... One Penny.

N.B. Persons receiving the money are to pay the duty.

Receipts may be stamped within fourteen days of date on payment of 5*l.*, or within one month on payment of 10*l.* penalty; after that time they cannot be stamped.

Penalty for giving a receipt without a stamp	£10	0	0
Penalty for not effectually cancelling or obliterating adhesive stamps when used	10	0	0
Penalty for frauds in the use of adhesive stamps...	20	0	0

POSTAL REGULATIONS.

LETTERS.

ONE PENNY is the well-known charge on letters passing between two places within the United Kingdom, and weighing under half an ounce; if above that weight, 1*d.* for every additional half-ounce.

Unpaid letters are charged double; on these insufficiently paid, twice the deficiency is charged. As the post-office does not give the turn of the scale, pay the next rate when there is a doubt, rather than incur the double penalty.

Letters, book-packets, &c., may be registered, for safe transmission, by payment of a fee of 4*d.* If the letter be marked "Registered" and posted without a registration receipt being obtained from the postmaster, 1*s.* will be charged.

On letters containing coin, posted without registration, 8*d.* is charged on delivery. Small sums should therefore be sent in postage-stamps, not in money.

NEWSPAPERS.

The newspaper regulations apply solely to publications bearing the impressed newspaper stamp—that is, the stamp with the name of the newspaper printed on the sheet itself. For newspapers paid by postage-labels, see "Book Post."

Publications bearing a newspaper stamp are not limited as to weight, but by the size of the sheet; and as this is attended to by the printer, the sender need only trouble himself to ascertain the fact of the paper bearing a stamp.

The publication must be folded in such a manner that the whole of the stamp may be seen; but if there are more than two papers in the same cover, it will suffice if the stamps be so arranged that they can readily be examined.

A newspaper must be posted within fifteen days from the printed date of issue. Up to that date it may be reposted any number of times without charge; but after that time it can only be transmitted under book-post regulations.

The newspaper must have no cover, or a cover open at the ends, and must not contain any inclosure. It must have on it no writing or mark beyond the name and address of the person to whom it is sent. If the address of one person has been written upon it, this address must be cut off (obliteration not being sufficient) before sending the paper to another person, or it will be charged for as an unpaid letter; but if a penny postage-label be affixed, the old address need not be cut off, and the paper may otherwise be written on.

BOOK POST.

Unstamped newspapers, magazines, and MSS. are carried under the book-post regulations, as well as books, maps, engravings, photographs, plain paper, parchment, &c. The charge on these "book packets" is 1*d* for 4oz.; 2*d.* for 8oz.; and from that point the increase is 2*d.* for every 8oz., there being no 3*d.* or other intermediate charge. Inasmuch as the payment is by weight, a newspaper weighing over 4oz. must bear two penny stamps, notwithstanding that a similar paper bearing an impressed newspaper stamp of 1*d.* will go free; but on the other hand, two or three copies of a smaller newspaper may be transmitted for a single stamp, provided they do not exceed in all 4oz., although each, if sent separately, or under newspaper regulations, would cost 1*d.* The postage on book packets must be prepaid in full, by means of postage-stamps affixed outside. The wrapper round the book or parcel must be open at the ends, but a string may be tied round to prevent the contents slipping out. If it is closed at the ends, double letter rate will be charged for it on delivery.

No book-packet may contain any written letter, closed or open, or any inclosure sealed or otherwise closed against inspection; nor must there be any letter, nor any communication of the nature of a letter, written in any such packet, or in or upon its cover. Entries, however, merely stating who sends the book, &c., or to whom it is given, are not regarded as a letter. Indeed, the name and address of the sender is not only permitted, but recommended, so that if, for any reason, the packet cannot be forwarded, it may be returned.

Book-packets may be detained for twenty-four hours if the postmaster thinks fit. Whenever, therefore, immediate delivery is a matter of great importance, it is better to pay the full letter charge, and thereby avoid risk of delay.

PATTERN POST.

Patterns (of no intrinsic value) may be sent by post at the rate of 2*d.* for 4oz., 4*d.* for 8oz., and 4*d.* additional for every increase of 8oz. or fraction of that weight. If the patterns exceed 24oz. in weight, or anything of value is sent ostensibly as a pattern, the full letter rate will be charged. In other respects the regulations are much the same as for the book-post.

POSTAGE-STAMPS.

Every postmaster is required to have on hand a sufficient stock of postage-labels and embossed penny envelopes, and to sell them to the public at the following prices:—Labels at 1*d.*, 2*d.*, 3*d.*, 4*d.*, 6*d.*, 9*d.*, and 1*s.*, respectively. Of the embossed penny envelopes, 12 are to be sold for 1*s.* 1½*d.*, 8 for 9*d.*, 6 for 6¾*d.*, 4 for 4½*d.*, 2 for 2¼*d.*, and 1 for 1¼*d.*

Every rural messenger is authorised to sell postage-labels and embossed envelopes at the same prices; and when any person applies to him for postage labels the messenger must either supply them, or (if he have none in his possession) must, without extra charge, receive the postage in money, and, on his arrival at the post-office, obtain labels for it and affix them carefully to the letters.

FOREIGN POSTAGES, POST-OFFICE ORDERS, &c.

Those desirous of full information as to letters, newspapers, book and pattern posts for foreign countries and the colonies, and also as to Post-office Orders, the Post-office Savings Bank, and many other matters not touched on here, should refer to the "British Postal Guide," which may be obtained by order of any postmaster or bookseller: it is published quarterly, price 1*s.*

Pastimes for Ladies.

TABLE CROQUET.

OF ALL GAMES played in or out of doors, it may fearlessly be asserted that Croquet has an interest for the fair sex beyond any other. We have no sympathy with those libellers who say that croquet is a favourite pastime because it gives opportunities for showing off dainty feet and neat ancles, nor do we believe one bit in the more serious accusation that the game is but a convenient vehicle for flirting. Like other good things it may be abused. We do not deny that there may exist certain misguided fellow-creatures who play at playing croquet, their real object being to exhibit the charms of nature (or it may be of art); and perhaps some even go so far as to amuse themselves by croqueting the too susceptible hearts of ephemeral admirers, instead of attending to the game. These last, we make bold to observe, are nuisances on the croquet-ground. They are never ready when it is their turn to play, and often have to be fetched from some out-of-the-way corner; then they have quite forgotten which is their hoop, and they can never distinguish between friends and foes. As the Yankees say, we "disgust" such people. But your regular *bonâ fide* croquet player is cast in a very different mould. She is for a practice with her sister directly after breakfast; she hopes you will come early; she takes care only to invite those who enjoy the game for its own sake; she sets you to work as soon as you arrive; and she goes on playing as long as daylight lasts. Indeed, we have known some enthusiasts, rather than give up an exciting contest, finish it by lantern light. Like Sarah Battle she is for a clean-swept and well-mown lawn, and for the rigour of the game. As Charles Lamb said of the celebrated Sarah, so may we of the downright croquet-player, only adapting the description from whist to croquet:—"She was none of your lukewarm, half-and-half players, who have no objection to take a mallet if you want one to make up; who affirm that they have no pleasure in winning; that they can while away an hour very pleasantly at croquet, but are indifferent whether they play or not. These insufferable triflers are the curse of the ground. One of these flies will spoil a whole pot. Sarah Battle was none of that breed. She detested them as I do, from her heart and soul, and would not willingly play with them. She loved a thorough-paced partner, a determined enemy; she took and gave no concessions; she hated favours; she fought a good fight, cut and thrust; she held not her good sword [her mallet] like a dancer."

Seriously, we believe, that nearly all croquet players play the game on its merits, and like it because it is a truly scientific amusement. It employs many an afternoon in out-door exercise, which, without the stimulus of "something to do," would perhaps be spent in sedentary occupations, and it affords a healthy excitement such as only a mixed game of skill and chance can offer.

In the winter months out-door croquet must of course be given up. We have certainly been told that some persons who are in popular phrase called "croquet mad," will sweep the snow off the ground in order to play. But these deflers of seasons are necessarily exceptional people, and are we think aptly named by the term above quoted. There is no reason, however, why croquet should not be adapted to the requirements of the floor and table, and played indoors. "Floor-croquet," also called "drawing-room croquet," and "parlour" or "table croquet," of various kinds, have accordingly been manufactured, and are sold by most dealers in fancy goods. It is of these that we propose to say a few words.

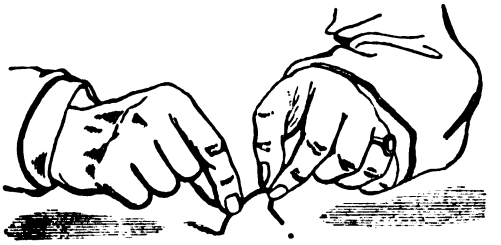
Croquet played on the floor may be said, as a rule, not to answer. We have only tried it in summer on wet days, using, in a very spacious room, the outdoor implements, with chairs for hoops. But the game is manufactured with weighted hoops, and on a smaller scale, so as to suit the size of an average drawing-room. It seldom happens, however, that the floor is quite level, and consequently the balls have a tendency to roll together to one corner. The game also necessitates the removal of all fragile furniture, and even then the skirting board suffers. We, therefore, dismiss "drawing-room croquet" as a game which cannot often be played, especially as it has a very attractive rival in "table-croquet."

Table-croquet, as its name implies, is played on a table, tight croquet being taken with the finger, as shown in the accompanying figure. The

production of this game has taxed the ingenuity of several makers and players. The first attempt should more properly have been called "board-croquet," as it is played on a board something like a bagatelle-board, only with no cups, and with little holes to admit the hoops. With a small board the game is simply childish (the smallest boards are about 3ft. 6in. long); with a large one, as big as an ordinary dining-table, it becomes expensive, about 7*l.* being the price. The board is now generally discarded, and weighted hoops, or as some call them loaded arches, are substituted, the game being played on a common table covered with a cloth. This is a decided improvement on the former plan; but it is liable to objection on two grounds. First, the weights are greatly in the way and interfere with the course of the balls, so that many delicate strokes become impossible; and in addition "wiring," or rather "weighting," instead of being an occasional accident, is the usual state of all the players. Secondly, the hoops and posts, in spite of the weights, are often knocked over, or otherwise displaced. This is a more serious objection than the other, as all croquet-players will see at once, who recollect how often a stroke at the outdoor game is rendered easy or difficult by the hoop being placed, as it should be, perpendicularly. In this case the ease or difficulty would not arise as a question (to coin a word) of perpendicularity, but rather as a question of a displaced hoop being put back in precisely the same place it previously occupied.

A third and very ingenious plan is one for rendering the hoops stable, and at the same time getting quit of the weight. The "wire" consists of two pieces, one being like a stencil plate, with two prongs sticking up from it. This is placed under the cloth and the prongs come through. The other piece, the hoop itself, is a hollow cylinder which fits on to the two prongs. This plan is free from the objections previously urged; its only fault, to our mind, is that it is complicated, and liable to get out of order, and difficult to put up and take down.

The problem, then, that still remains is to simplify the hoop and its appendage; the conditions required being that the hoop shall be stable, and that there shall be no weights at the bottom. These conditions are in our judgment satisfied by "Cavendish's" patent table-croquet hoops. They are so ridiculously simple that every one on seeing them must wonder the idea did not occur to some one before. Each is only a bit of twisted wire, the lower part of the leg, which in the outdoor game goes down into the ground, being bent at right angles to the upper part (see figure), so that the



bent part will slip through the cloth and obtain a hold between it and the table.

Having described the principal kinds of table-croquet sold by Jaques of Hatton-garden, Cremer of Regent-street, and others, it only remains for us to give our verdict in favour of the last, the agents for which are Parkins and Gotto, of Oxford-street. We may add that coloured glass balls are employed, which are not only more elegant in appearance than the wooden ones heretofore used, but are better in other respects, being heavier, and (as there is no paint to knock off) permanent in colour.

Whist.

WHIST is certainly the best of all domestic games. The never ending variety of Whist, its well-adjusted complements of skill and chance, the lessons of self-sacrifice which it teaches, and the insight into human nature that through it all players, in the highest sense of the word, must acquire, constitute Whist the king of card games. Whist, though it requires for the moment the exercise of much thought and ingenuity, has intervals of relaxation between the hands; the mental effort is not sustained, and the players become refreshed and ready to start again. Moreover, the interest attaching to the game for its own sake is such that it needs not the stimulus of gambling; and hence the home rubber is the most popular, and the least abused of all card games. How many families are there who look forward to their quiet rubber for love, or may be for postage stamps, as soon as the cloth is removed? How many who, when evening approaches, renew their mimic pasteboard strife, and find a constantly recurring pleasure in the combinations of this most interesting of games?

Yet with all this how is it that so few really good players are to be met with? Each circle has its genius—its great gun. But when he is brought face to face with those who play much in public, as for instance with the London and Paris club players, and weighed in their balance, he is but too frequently found wanting. The fact is, the ordinary run of players never learn the game. They at first sit down ignorant, pressed possibly, to make up a table, catch a few general rules from the local authority, apply them to all cases without discrimination, and in consequence they never become sound players; and though they continue to play all their lives, they miss a large proportion of the pleasure which the game is capable of affording. Many people play at Whist; but players properly so called are scarce.

It is admitted that one person can hardly arrive at perfect Whist by his own practice, however extended. He must be content to avail himself of the experience of others, as students in all sciences do. For this purpose, there can be no better plan than carefully to peruse THE FIELD Whist

Digitized by Google

Lessons, either alone or together with "Cavendish on Whist." The object aimed at by both these authorities, is to supply the want of a Whist teacher. They first state the fundamental principles of the game, and then apply them to a number of hands to be played through, as printed chess games are. It is by suitable illustrations of this kind that principles can best be brought forcibly home to the student, and fixed firmly in his memory.

Sound theory can easily be acquired by anyone who will take the pains to master the reasons for ordinary play. Those who have been in the habit of playing at random, and without any positive plan, would be surprised to find how little trouble is required to transform themselves into more than average players: and any trouble which may be so expended is soon repaid them a thousand-fold by an incalculably increased enjoyment of their now scientific pastime. Whatever is worth doing, is worth doing well, whether we are engaged in the gravest occupation of life, or the most unimportant relaxation.

How to kill Butterflies, &c.

We hope no one could think of killing any insect by such a process as sticking a pin or needle through it. The fumes of bruised laurel leaves, of chloroform, or benzine collas, under an inverted tumbler, will kill any insect, apparently without pain, and certainly without doing it the slighest injury as a specimen.

Restoring Faded Flowers.

Place the flower in a small empty tea-cup or scent bottle. Half fill a saucer with water, in the centre of which place the cup or bottle containing the flower, over which invert a tumbler the top of which rests in the water, covering the flower in the cup and excluding the air. The effect is surprising: in a short time the faded flower will revive, the colour return into the petals, which quickly expand, and the scent returns as powerfully as when the flower is first plucked. Care should be taken that the flower does not come in contact with the sides or bottom of the inverted tumbler.

Artificial Coral for Grottoes and other Ornamentation.

To two drachms of vermilion add one ounce of resin, and melt them together. Have ready the branches or twigs peeled and dried, and paint them over with this mixture while hot. The twigs being covered, hold them over a gentle fire, turning them round till they are perfectly covered and smooth. White coral may also be made with white lead and resin; black coral with lampblack and resin. When irregular branches are required, the sprays of an old blackthorn are best adapted for the purpose; and for regular branches, the young shoots of the elm tree are most suitable. Cinders, stones, or any other materials, may be dipped in the mixture, and made to assume the appearance of coral.

To prevent Rot in Dwelling-houses.—Make two or more openings in the external walls, and put gratings on them to keep out vermin, from below the basement floor. Insert a tile pipe into the fire-wall, with one end open to the space below the floor, and carry the pipe up the centre of the fire-wall as close as possible to the fire-flue, and out at the chimney head. The air in the pipe will be rarefied, being in close contact with the fire-flue, thus causing a continuous upward flow, sweeping the space below the floor of all the foul air, which, in my opinion, is the chief cause of dry-rot. The whole of the apartments of the house may be ventilated by means of this pipe, by inserting a tube into it at the level of the ceiling, with a valve in it to prevent down-draught.—*Builder.*

Preserving Cut Flowers.—An endless variety of ornamental vessels are used for the reception of cut flowers, and they are all very useful if made so that the stalks can be inserted in pure water. This water ought to be changed every day, or once in two days at the farthest, and a thin slice should be cleanly cut off from the end of each stalk every time the water is removed, which will occasion fresh action, and revive the flowers. Water about milk warm, or containing a small quantity of camphor, will sometimes revive decayed flowers. The best method of applying this is to have the camphor dissolved in spirits of wine, for which the common camphorated spirits of the druggist's shop will be quite sufficient, adding a drop or two of this to every ounce of water. A glass shade is also useful in preserving flowers, and cut flowers ought always to be shaded during the night.

How to make a Mignonette Tree.—Get a pot of ordinary mignonette and pull up all the plants but one, which may be rigorously trimmed, leaving only one shoot. Tie this shoot to a perpendicular stick of white cedar, and on its putting forth a bunch of flower buds cut them off entirely. The stalk will then put out a multitude of young shoots, which must be allowed to grow until they are about 3½in. long. Then select (according to the strength of the plant) four, six, or eight of these shoots, with equal spaces between them, and, having made a hoop with a piece of whalebone, attach your shoots to it, supported at the proper height. When they have grown two or three inches longer, and are going to bloom, support them by a second hoop like the first. Let them bloom, but take off the seed pods before they have time to form, or the plant may die. Just below the places where the flowers had been new shoots will shortly afterwards appear, from among which choose that one on each branch which is in the best situation to replace what has been nipped off. By degrees the principal stalk and its branches will become woody, and the mignonette will be herbaceous only at its upper extremities, which will bloom all the year. It will, in fact, have become a tree which, with proper treatment, will live from a dozen to fifteen years.

Wintering Fuchsias.—Most kinds of fuchsias, even of the new and tender varieties, can be wintered out of doors by slightly pruning them in, lifting, and burying them about ten or twelve inches deep at the edge of a laurel bush or similar sheltered place. If dug out about the beginning of May, and planted where they are to grow, there is every probability of their flowering admirably during the season.

How to make an Aviary.—The best situation for an aviary is against a brick wall with a south aspect. It may be of any length, but not more than 12ft. or 15ft. in width, so as to avoid the necessity of joists, which the birds would use as perches and cover with dirt, and which would, besides, spoil the appearance. The ground, after being double-trenched, should be well drained, and, above all things, carefully wired all round for 3ft. below the ground, to prevent the intrusion of rats, which at some time or other would be certain to get in. The walls may be covered with creeping plants; and, in exposed situations, thick branches of the common spruce, cut in winter to preserve the leaves, should be nailed up. Small shrubs of box, yew, and furze should be planted, but no large trees, which encourage damp. The feeding place should be separated from the aviary either at one end, or through an arch on the other side of the brick wall. Thus the aviary is kept cleaner, the birds are not disturbed at feeding time, and the mice—a perfect pest in all aviaries—may be kept under. Of course the top, as well as the sides and ends, should be of wire, and quite exposed to the weather. The aviary should be first built, and the frame of wood or iron to sustain the wire; then the wire-maker will have the dimensions of the different sizes required. The wire may be purchased in London at 6*d.* per foot, the price to include three coats of paint. It will be better if the turf be laid down, shrubs, &c., planted, a month or more before the birds are put in. As to the number of birds to be kept, this must be a matter of fancy; but it is a great mistake to have too many. A pair only of each sort should be turned out, if the owner is desirous of seeing them breed. The following succeed: the goldfinch, linnet, greenfinch, and thrush readily; the twite, redpole, yellowhammer, bullfinch, and skylark, not quite so easily; not probable with the woodlark, siskin, and some others. The great secret is to keep them well supplied with large quantities of groundsel, chickweed, and other garden weeds. Two or three pairs of birds breed more readily in a small aviary, say 12ft. or 15ft. square, than a greater number in a larger one, and it seems to be a point of great importance to provide suitable nesting-places for them. They have been known to remain for weeks without building, and yet commence half an hour after a thick fir branch had been put up. As might be expected, those which are semi-insectivorous, as, for instance, the yellowhammer, would only rear one or two young ones in each nest, but the goldfinch, linnet, and greenfinch, would bring up three or four at a time.

Hints for the Flower Garden.—Hardy annuals are best sown in the open border in light soil, from March to June for summer and autumn flowering; and in September for flowering the following spring. Half hardy annuals require to be sown in March or April, on a gentle hot-bed, or in a close frame *without bottom heat*, the latter mode succeeding perfectly, unless the seeds are sown too early in the season; many may even be sown in the open borders at the end of April or beginning of May, but will not then flower so early. Tender annuals, a very limited class, will also vegetate in a close frame but require more warmth to bring them to *perfection* than the preceding; they should, after picking out, be transferred to a second hot-bed, and will flower most satisfactorily in the greenhouse or window. Hardy perennials may be sown in the open borders any time from March to August, but will succeed with greater certainty if raised in a close frame, with or without bottom heat; thus treated many will flower the first season, if sown early and planted out in the borders in May. The amateur will do well to bear in mind that though some perennial seeds vegetate as quickly as those of annual plants, there are many others which usually remain dormant for weeks, or even months. To this class belong the Gentians, Cyclamens, Peonies, Fraximella, and many Australian Leguminosæ. Half hardy perennials require the treatment of the half hardy annuals differing only in their need of winter protection. Stove seeds need a moist, elevated temperature, such as the stove or forcing pit affords, and greenhouse seed succeed well under the same conditions; in their absence the latter are best raised in a good hot-bed. Biennials may be sown in the open ground in spring or summer, not later than June and July, the seedlings being planted in autumn when they are intended to bloom the following season. The half hardy plants of this class should be pricked out in pots, that they may be protected in winter. All seeds sown in frames or pits *require shading* with tiffany or thin calico in bright weather, during the the heat of the day, especially as the spring advances. In the open ground seeds should not be sown too early; there is a great risk of failure before the end of March; where early flowers are desired of annuals it is better to sow in autumn. For all seeds in pots a compost of *finely* pulverised leaf mould, peat, or other vegetable soil, with one-third its bulk of sand, or very sandy loam, will answer well; sow very thinly; let the pots be well drained; cover the seed with about its own thickness of soil, and thin out crowded seedlings, early. After germination has once commenced the surface of the soil should on no account, be suffered to become dry. Very small seeds, such as Mimulus, Lobelia, Calceolaria, should not be covered with soil, but be sprinkled thinly *on* the soil, which should be *previously* watered from a fine rose. Chinese Primula germinates best when covered with a layer of damp moss. This seed often fails to grow from being too deeply covered with soil, and many other failures are attributable to the same cause.

THE AILANTHUS SILKWORM AND ITS CULTURE IN THE OPEN AIR.

BY W. B. TEGETMEIER.

THE CULTURE of the Ailanthus silkworm (*Bombyx Cynthia*) in the open air has made such satisfactory progress during the past two years that I am desirous of pointing out the advantages that may possibly accrue from the general introduction of this silk-producing insect.

The Ailanthus silkworm is a native of the temperate regions of China, where it lives on the leaves of the Ailanthus glandulosa, a shrub formerly known in our own country as the varnish tree of Japan, but now more generally termed the Ailanthus. This shrub, which was introduced into Europe by the Abbé Incarville more than a hundred years since, is exceedingly hardy, and will grow freely in almost any soil, flowering, fruiting, and seeding almost equally well in stiff clay, calcareous soil, ferruginous sand, and thriving alike in inland populated districts and by the seaside. It may be cultivated either by means of suckers or by seeds.

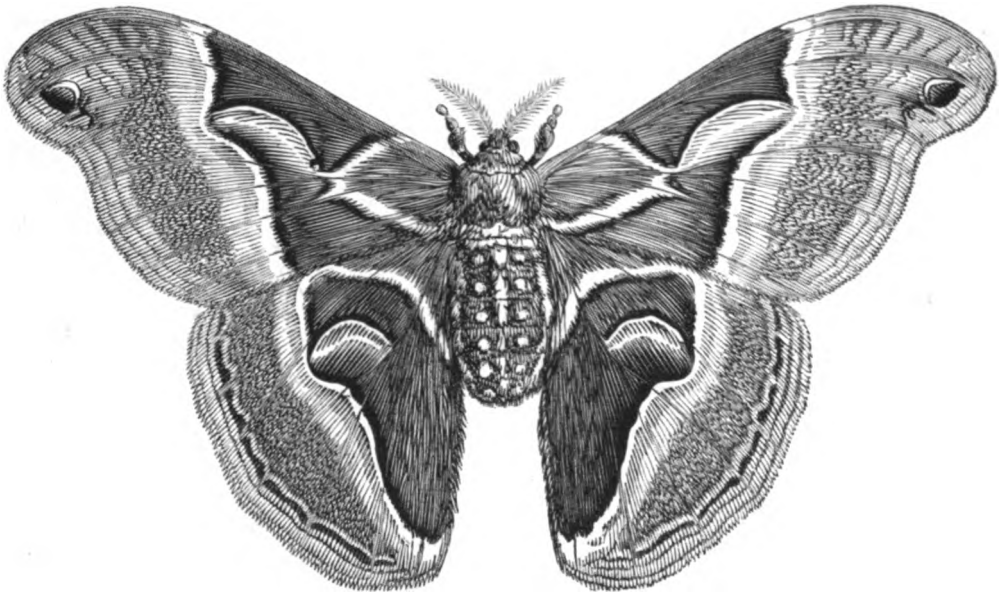
Lady Dorothy Nevill, to whom the first introduction of the insect into this kingdom is due, says, in her translation of M. Guerin-Menneville's treatise on the Ailanthus shrub, that "the seeds may be sown from the months of February till May, broadcast or in rows, and ought to be covered with about half an inch of earth, and they will appear from three weeks to a month after they are sown. With the exception of a few cereal grains there are hardly any other shrubs where the seed germinates so quickly, and it is not uncommon to see some of the shoots from these seeds 30in. and 50in. high the first year. Quantities of Ailanthus trees have been planted on the Apennines because they resist the bite of animals, and no ground game will touch them on account of the smell they exude when a leaf is gathered or a branch broken off. Those trees destined for the reception of the worms ought to be planted about a yard from each other; the chief stem cut down every year, so that the young shoots spring up and afford young tender leaves for the worms; and by planting them not too great a distance one from another the shoots join each other, and thus enable the worms to go from one plant to another. As I mentioned before, this tree may be multiplied by its roots, which can be cut off and planted as we do potatoes. Where the plants are yearly cut down they naturally will not flower or seed. Experience has taught me that if trees are planted from 12ft. to 15ft. high, they may be cut down immediately to within two or three feet of the soil, so that they will immediately throw out fresh shoots. This tree is so hardy and so easy to propagate, that in a plantation of 15,000 to 20,000 plants made in France, not one died. In England it is equally hardy. I planted three dozen standard plants on a sloping bank exposed to the sun; the heads were cut off, and the leaves began to sprout about the middle of May."

The Bombyx Cynthia will feed freely on many other plants besides the Ailanthus shrub. I have reared many magnificent worms on laburnum leaves, and they all progressed in a very satisfactory manner, attained their full maturity, and spun good-sized cocoons, but the eggs laid by the laburnum-fed moths produced worms that were stunted and valueless. In China, where this silkworm has been cultivated for a very long period, it is fed on the Ailanthus shrub, and is always reared in the open air.

The credit of introducing this useful silkworm into Europe belongs to P. Fantoni, a Piedmontese missionary in the province of Quang Tung, who forwarded cocoons to Europe in 1856; these, in 1857, produced moths, which laid eggs that were hatched in a few days.

In tracing rapidly the life history of this insect, I will commence with the eggs. They are considerably larger than the eggs of the common silkworm. The number laid by the females, however, is much smaller, averaging about 150 each. These eggs hatch in a few days, varying from eight to twelve, according to the heat of the weather, and produce well-made, dark-coloured worms, that pass through successive stages, changing the skin, or moulting, at each stage. Without detailing the exact appearances of each stage, I may mention that the dark body becomes white, and is covered with a kind of waxy bloom, like that on a plum, on which the dew and rain cannot settle. Gradually the numerous tubercles with which the rings of the body are covered, become green—a lovely emerald, tipped with marine blue, and the last ring of the body is golden yellow, the combination of tints being particularly pleasing. In the latter stages the animals eat voraciously, and when they have attained their full size, varying from 2½in. to 3in. they alter in appearance, cease to eat, and commence to spin, usually placing the cocoon between two or three neighbouring leaflets. Here, however, a wonderful instinct comes into play. Under ordinary circumstances the leaflets would fall off in the autumn, and the chrysalis contained in the cocoon connected with them would be liable to be destroyed because of falling on the ground. To prevent this undesirable contingency, the worm before spinning the cocoon, attaches the stem of the leaflets employed to the main stem of the plant by means of very strong fibres, which perfectly surround the junction, so that on the death of the leaflet it remains securely attached to the parent stem.

Thus securely enveloped in its cocoon the worm changes into a pupa or chrysalis, and so progresses towards its final stage. The period of time required to produce this change varies with the season of the year. The early-laid eggs produce moths in the summer, so that two broods, and consequently two crops of silk may even in our own climate be secured every season. The later-hatched worms remain in the cocoons during the winter, and emerge in the following spring or early summer. As to the appearance of the perfect insect, I can hardly hope to describe its beauty, and would therefore rather refer to the life-sized and life-like engraving of a specimen reared in the open air.



MOTH OF THE AILANTHUS SILKWORM

At the Paris Exhibition of Insects M. Givelet read a paper containing an account of the best method of bringing this worm into cultivation on a large scale. This gentleman commenced planting the Ailanthus in 1860, and after some misfortunes and disappointments, completely succeeded in the breeding and rearing of the worms. He reports that during the season of 1864 he collected about twenty thousand cocoons. The long continuance of hot weather greatly favours the experiments made in the rearing of Bombyx Cynthia. In the inclosure within the Jardin d'Acclimatation, in the Bois de Boulogne, there were to be seen in 1865 a large number of the worms of the third generation of the season, feeding in the open air on the Ailanthus, or spinning their cocoons. The creatures were of great size, and in perfectly healthy condition. The cocoons are generally formed at the extreme end of the branches, or rather of the leaves, for the Ailanthus has long compound leaves, with many leaflets, like the ash, where no bird, however light, could rest and make a meal of the occupant, and the worms take the curious precaution, before commencing the cocoon, to attach several threads of their web to the leaf-stalk as high as the third or fourth leaflet, so that, if that on which the cocoon is fixed were to be broken from its stalk, it would still be held pendent by these stay-threads.

It may interest our readers to know that eggs of this silkworm may be had in May and June from Lady Dorothy Neville, or Dr. Wallace of Colchester.

THE OAK SILKWORM, OR YAMA-MAI.

BY W. B. TEGETMEIER.

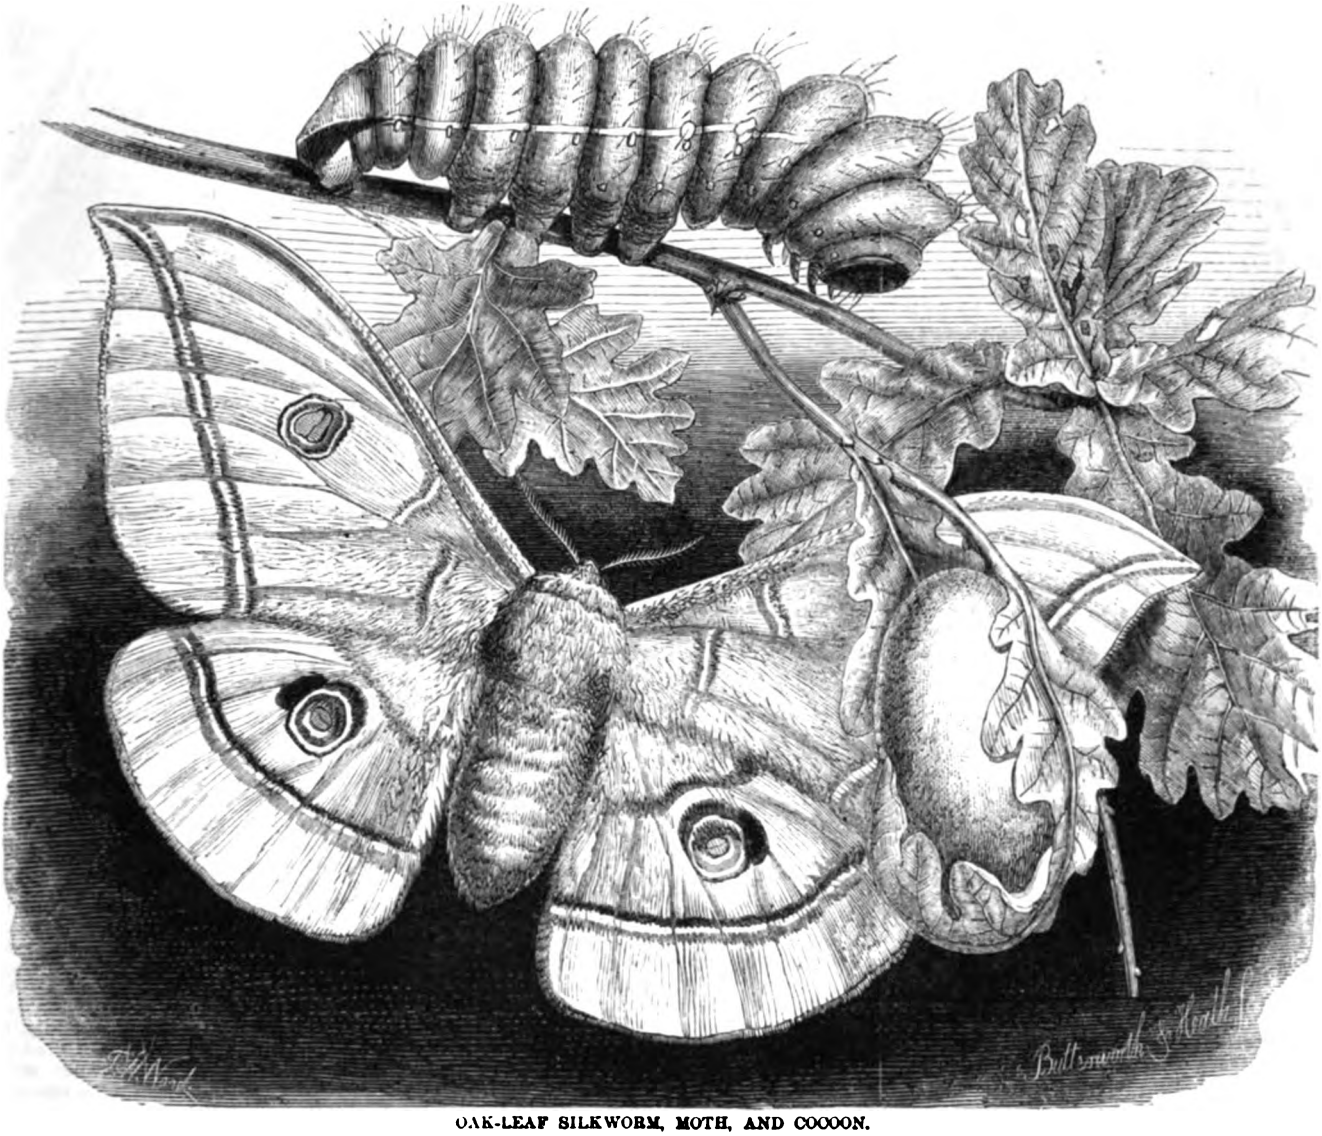
THE YAMA-MAI is regarded as one of the most valuable silkworms of Japan. It is said that it formerly was kept in the exclusive possession of the Imperial family, and that it was a crime punishable with death to export the eggs. However this may be, it is obviously only with great difficulty that the insect was introduced to Europe. A single moth was reared from the egg in 1861; but it was not until 1863 that success was achieved, when a Dutch medical naval officer (M. Pompe van Meedervoort) was enabled to bring to Europe a considerable number of Yama-mai eggs, through the devotion of a pupil, who risked his life to obtain them. These were distributed to M. G. Méneville and other distinguished sericiculturists of France, and have been propagated with such success that M. Personnat, in May, 1863, stated that he had 20,000 silkworms on his oaks at Laval. This fact alone proves the adaptability of the insect to our climate, which is not unlike that of Japan.

When full, these cocoons weigh from 75 to 120 grains; empty, about 12 grains. They average 100 to the pound avoirdupois. The silk well prepared is equal to the best mulberry silk in appearance, though the threads are much thicker and stronger.

The cocoons are formed among the leaves of the oak, and while spinning the worm must not be disturbed. In the course of the first day it will have quite enveloped itself, and may then be removed with the twig and adherent leaves, and hung up for about a week, when the cocoon will have been completed. The chrysalis is not fully formed till about twenty days from the commencement of the cocoon.

After thirty or forty days, according to the weather, the moth pushes its way out of the cocoon, using a fluid provided by nature to separate the threads. Its wings, small and shrivelled at first, expand on contact with the air, and rapidly assume their magnificent proportions and colour.

The perfect moth of the Yama-mai is a most beautiful creature. It is about 6 inches in breadth from tip to tip of the first pair of wings, and



OAK-LEAF SILKWORM, MOTH, AND COCOON.

The eggs of the Yama-mai are of a dark brown colour, each being about 1-12th of an inch in diameter; they are not perfectly circular, but flattened more than an orange, those that are barren being hollowed on either side.

When first hatched the insect is dark coloured, about a quarter of an inch long, covered with stiff hairs, very like an unprepossessing hairy caterpillar.

During the larval state the animal changes its skin or moults four times each moult being preceded by a singular trance-like sleep, during which the worm remains attached solely by its hinder feet, with the fore-legs raised away from the branch.

After the second and third moults the larvæ become of an exquisite transparent green colour, with a yellow line down each side, ending in a triangular dark brown patch near the tail. The shape also alters remarkably; the caterpillar becomes humpbacked, and the segments of the body are marked with great distinctness. After the fourth moult it attains a length of three inches, and spins a cocoon as large as a pigeon's egg.

3 inches from the antennæ to the base of the second pair; of a rich golden yellow, both body and wings. The head and upper edge of the first pair of wings are reddish; the antennæ long and yellow. From the points of the first pair of wings a band of white, black, and red passes across the second pair in the form of a horse-shoe. There is a transparent spot with a red, white, and black border about the middle of each wing.

The times occupied by the insect in the stages of its existence have been carefully noted. The first moult takes place ten days after hatching, the second twenty days, the third thirty-three days, the fourth forty-six days, and eighteen days after the last moult the cocoon is spun, making the larval life to occupy sixty-four days. In thirty or forty days more the moths emerge, and in a fortnight or three weeks they lay 150 to 250 eggs, and then die.

The worms after the first and second moults seem exceedingly hardy; they are not even injured by slight frost, and may be placed out of doors in oak coppices after their second moult.

KING KAMEHAMEHA IV. AND QUEEN EMMA OF HAWAII.

THE SANDWICH ISLANDS were made known to the civilised world eighty years ago by Captain Cook, and became at once notorious throughout the civilised world for the death of the great circumnavigator, who was murdered by the natives in the year 1788. At that time the islands were inhabited by independent barbarous tribes who, each under its own chief, were engaged in frequent and desolating wars with one another. Fifteen years afterwards the islands were again visited by another great naval discoverer, Captain Vancouver, who spent some time there and was greatly interested in the character of the people. This visit happened in the midst of the conquests by which one of the chiefs was gradually reducing the whole group of islands into one sovereignty. This chief, Kamehameha, is said by all who knew him to have been a really remarkable man. A warrior of gigantic proportions and prowess; who effected his conquests, however, less by his personal prowess than by the strategic skill of self-taught generalship; who displayed the wisdom and sagacity of a statesman in turning his conquests into a united and loyal nation; who showed a deep appreciation of the advantages of civilisation, and spent his whole reign in the task of leading and urging his people to acquire the knowledge and arts and usages of European life. He was succeeded by his son, Kamehameha II., who, with his Queen, visited England in 1834, where they both fell victims to the small-pox.

He was succeeded by Kamehameha III., who during a reign of thirty years was under the influence of American congregationalist ministers, who induced the king to grant a constitution to his people, under which they conducted the government. He was succeeded in 1860 by his nephew Kamehamoha IV., the subject of this memoir.

The late king is described by all who knew him as having been a very remarkable man. Tall and slight in person, of a very dignified, graceful, and winning address. Highly accomplished in all manly exercises. Reading with thorough appreciation and enjoyment such writers as Shakspeare, Dickens, Thackeray, and Tennyson.

His sympathies were with England, to whom indeed the whole people, ever since the visit of Vancouver, had looked with affection and confidence. He dismissed the American missionaries from his councils, and took Mr. Wyllie, a Scotsman, for his prime minister. Soon after his accession he wrote an autograph letter to Queen Victoria, and through his minister to the English prime minister and the late Archbishop of Canterbury, asking that an English mission might be established in his kingdom. In compliance with this request a bishop and three clergymen were sent out in 1862. On the arrival of the mission they found that the king had been, entirely unprompted, employing himself in translating the English prayer-book into the native language. To this translation he prefixed a preface to explain and recommend it to the use of his people; and, that his English friends might see what he had said, he took the pains to translate his native preface into English. This essay was so ably done and of such high general interest, that the Christian Knowledge Society published the writing of this Hawaiian king for the edification of the Christians of England.* Some of the anecdotes related of him remind us of the most picturesque stories of the evangelisation of the European nations. After the baptism and again after the confirmation of himself and the queen, he spent hours in explaining to his courtiers the meaning of those rites. He would sometimes travel with the bishop on his missionary journeys, and the king would translate the bishop's addresses to his people. On more than one occasion, in the absence of any clergyman of the mission, the king himself, with the bishop's sanction, conducted a public service for his people. His aid-de-camp, Major Hoapili, since ordained to be a deacon, read prayers decently vested in a surplice, and then the king, also in a surplice, preached what is said to have been an eloquent and affecting sermon. Soon after the events last narrated the king rapidly sank and died (Nov. 30, 1863), leaving behind a name which will be remarkable in the annals of the Christian Church.

The grandfather of Queen Emma was one of the Englishmen who had settled in the island in the time of Kamehameha I., and had been by him married to a native chiefess of high birth, and appointed governor of one of the islands. It had been the intention of the late king to visit England to endeavour to enlist our sympathies on behalf of his people. His widowed queen, with true feminine devotion, resolved to carry out this visit, and do what in her lay to realise its object. She arrived in England in July, 1863, and was very well received by Queen Victoria, and by some of the highest nobility in Church and State. The bishop wrote of her as "one who has been a true nursing mother of the English Church in these isles of the west. She is a right royal lady, in feeling as in mien; of spotless life, though surrounded by evil, spending her means in doing good." Her pleasing person, her remarkably perfect manner, and the almost romantic interest of her story, made a great and favourable impression upon all who had the honour of being brought into acquaintance with her. One chief object of her visit was to obtain additional support for the English mission, which has already effected great good among the people. During her visit a subscription was also opened to erect a church in Honolulu, the capital of the islands, which is much needed for the work of the mission, and to give it the character of a monumental church to the memory of the late king. Donations for either or both of these objects would be thankfully received by the treasurers of the mission, to their account at Messrs. Barnett, Hoare, and Co.'s, 62, Lombard-street.

The illustrations (for which we are indebted to the proprietor of the *Parish Magazine*, conducted by the Rev. Erskine Clarke, of Derby) are taken from excellent photographs of their majesties.

* Since the above was written, the king's preface has been translated into Italian by the Anglo-Continental Society, for circulation in Italy.

The Lady's Work-table.

INTRODUCTION.

THE YEAR 1866 has seen the introduction of some few novelties in fancy work. As sewing machines now execute what is called "plain work" with a precision and regularity unattainable by the neatest fingers that ever plied needle, more attention has been paid to ornamental stitching than prior to their introduction. *Appliqué* work is much practised; ticking, cloth, leather, and velvet now all receive a large share of ornamental embroidery. In offering the accompanying designs to the public, these popular tastes have been well borne in mind. A coloured design for a Vallance has been selected, because the fashion of this decorative addition to a mantelpiece, *portière*, and window curtain is fast growing in this country, and, like our neighbours on the other side of the Channel, the discovery has been made that these needlework vallances impart a degree of finish and elegance to the doors and windows of a drawing-room or boudoir unattainable without them. Fish, bread, and chesnut *serviettes* are now made more ornamental by the addition of fancy stitches in ingrain coloured cotton. A new material called "Java cloth" has been introduced for *serviettes*, and a specimen of the novelty will be found among the following illustrations. *Guipure d'art* is even more extensively practised than last year, and for trimming furniture up to covering parasols, decorating neckties, cuffs, and collars, it is in great demand. After the netted foundation has been completed, it should be tightly stretched in a small wire frame sold for the purpose, and the different stitches darned in. To give facility in copying designs of *guipure d'art*, these stitches have been illustrated on an enlarged scale, so that not the slightest difficulty will be found, even by the inexperienced, in producing them. Tatting, crochet, knitting, and Berlin wool work have not been forgotten; designs for all these popular employments will be found among the accompanying illustrations. Let us hope that in making this selection we shall have succeeded in giving the industrious among those who patronise the "Queen Almanac" congenial as well as useful employment for some portion of the year 1867.

Description of Coloured Pattern.

Border for Table Cover or Vallance for Mantelpiece.

Designed by R. Helbronner, 263, Regent-street, W.

THIS pattern, if worked on No. 22 canvas, will be 8 inches in depth; and on 24 canvas, 7 inches in depth. The entire design should be in single Berlin wool, with the exception of the maize, which should be in filoselle. It can be used for a long or square rug, sofa cushion, or ottoman; but for the latter the design must be reversed, so that the two centres meet, when the single black line is to be omitted. For a rug, use No. 14 canvas and double Berlin wool, or six-thread fleecy; for cushion and ottoman, No. 20 canvas and Saxony wool.

1. D'Oyley—Tatting.

By Mlle. Riego de la Branchardière, 2, Old Quebec-street, Oxford-street, W.
By Appointment to H.R.H. the Princess of Wales.

MATERIALS.—Walter Evans and Co.'s Boar's Head crochet cotton, No. 14 or 18. Tatting pin No. 1, and a small shuttle.

The Centre.

Fill the shuttle and commencing a loop work 2 double stitches, then take the tatting pin and (make a pearl loop and work 2 double stitches after it 8 times), take out the pin and draw the foundation loop quite close, knot the end of cotton left at the commencement and the shuttle thread together, so as to form a ninth pearl loop, keeping the knot in the centre.

1st Dot—Commence a loop close to the knot, work 3 double stitches, make a pearl loop, then 3 double stitches; draw quite close. Put the pin in the next pearl loop of the centre, and join the shuttle thread to it. Repeat the Dot until 9 are made, joining to the centre after each one is finished. At the end keep the cotton at the back of the 1st Dot, and join to the pearl of it.

First Rosette.—Commence a loop, work 3 double, (then 1 pearl and 3 double alternately 10 times); draw close, keep the cotton at the back of the Rosette, and join it to the 3rd pearl on the right side; then join the cotton to the pearl of the next Dot.

Second Rosette.—Commence a loop, work 3 double, join to the next pearl of the previous Rosette; 3 double, then (1 pearl and 3 double 9 times); draw close: keep the cotton at the back, join to the 3rd pearl, then join to the next Dot. Repeat the second Rosette until 9 in all are worked, and fasten off.

The First Circle of Diamonds.

1st Oval—Commence a loop, work 6 double stitches; then (1 pearl and 3 double 5 times); 3 double more to make 6 in all; draw close. Make 2 Ovals more the same as the 1st Oval commencing them close together.

4th Oval—Commence, work 6 double, 1 pearl, 3 double, 1 pearl, 3 double, join to the centre pearl of a Rosette; 3 double, 1 pearl, 3 double, 1 pearl, 6 double; draw close. Fasten off, passing the end of the cotton through the centre of the last Oval, then through the 1st Oval, and knot the ends together.

The Second Diamond.

Work *two* Ovals the same as the 1st Oval, then work *two* Ovals as the 4th Oval, joining the first of them to the next Rosette, and the last Oval to the previous Diamond. Repeat the 2nd Diamond until 9 are worked.

First Star.

The Centre.—Commence a loop, work 1 double stitch, then (1 pearl and 1 double alternately, 6 times); draw close, then join the cotton to the 1st pearl loop.

1st Oval—Commence a loop, close to the centre, work 6 double stitches, then (1 pearl and 3 double alternately, 6 times); 1 double more to make 4 in all; draw close and join to the next pearl of the Centre.

2nd Oval—Commence close to the last, work 4 double, join to the last pearl loop: then 3 double, (1 pearl and 3 double, 5 times); 1 double more; draw close and join to the next pearl of the Centre.

Work 4 Ovals more, the same as the last; then knot the two ends together and sew the last pearl to the 1st Oval. Fasten off.

The *Second Star* is made the same as the first to the end of the 5th Oval, but in working the 6th Oval, instead of the centre pearl loop, it must be joined to a pearl loop of the 1st Star.

Work 9 Stars in all, joining them so that one Oval is left unattached on one side, and three on the other side of the joining.

Joining Circle.—Commence a loop, work 2 double, (1 pearl and 3 double 5 times); join to the centre pearl of one of the Diamonds; 3 double, (1 pearl and 3 double 5 times); take the 1st Star and join to the Oval between the joinings of them; then 1 double and fasten off.

Joining Diamond.—Commence a loop leaving an end of about one yard; work 6 double stitches, then (1 pearl and 3 double twice); join to the pearl loop *between* the Circle of Diamonds already made; this pearl is the one which attaches them together; 3 double, 1 pearl, 3 double, 1 pearl, 6 double; draw close. Take the end of thread in the right hand, and using the other thread for the foundation, make 5 single stitches. Take the shuttle again, make a 2nd Oval, joining it to the centre pearl of the joining circle; 5 single as before. Make a 3rd Oval, joining it to the next Star, 5 single as before. Make a 4th Oval, but omitting the joining, work 5 pearls; when finished, 5 single and fasten off.

For the 2nd Joining Circle.—Commence with 2 double, (1 pearl and 3 double 5 times); join to the centre pearl of the Circle of Diamonds, 3 double, (1 pearl and 3 double twice); join to the last Diamond, 3 double, (1 pearl and 3 double twice); join to a Star, 2 double; fasten off. Repeat the Diamond and Circle all round.

The Border.

For the Diamonds.—Make 4 Ovals the same as directed for the 1st Oval in the Circle of Diamonds; fasten off. Make 8 Diamonds more the same.

Joining Dot.—Commence a loop, work 3 double; join to the centre pearl of the 3rd Oval in one of the Stars; 3 double, join to the centre pearl of the next Star; 4 double, join to the centre pearl of one of the Diamonds; then 1 double and fasten off. Repeat this Dot until the Diamonds are attached.

The Edging.—Fill the shuttle, but instead of cutting the cotton off, keep the reel to the left as it will be required for a "Straight Thread."

1st Dot—Commence a loop and work 5 double stitches; take a Star and join to the centre pearl of an Oval of it, then 5 double and draw close. Reverse the work.

Take the thread from the reel and hold it in the left hand for a straight thread, then with the shuttle work three double stitches; leave the straight thread to the left and continue with the shuttle only. Reverse the work.

2nd Dot—Commence a loop, work 4 double, join to the centre pearl of the Diamond, then 4 double; draw close and reverse the work.

1st Scallop—Take the straight thread, work 2 double, (then 1 pearl and 2 double 5 times); leave this thread and reverse the work.

3rd Dot—4 double, join to the second pearl of the next Oval, 4 double, draw close. Reverse the work. Make a Scallop as before; then a 4th Dot joining to the next pearl but one. Make a Scallop; then a 5th Dot, joining to the next Oval; then 3 double on the straight thread, and repeat from the 1st Dot all round.

2. Music Stool Cover in Raised Crochet.

MATERIALS—Walter Evans and Co.'s Boar's Head crochet cotton, No. 12; Walker's Uncotopic Penelope needle, No. 3.

This design is composed of nine Circles, as in the section, the last one being enlarged for the centre; when these are attached they will form the top of the cover. The border, although represented in the engraving as lying flat, so as to show the pattern, is intended to cover the sides of the stool, and will therefore draw in each round.

The Circles.

The Raised Rose.—Commence by making 6 chain, and work 1 single in the first stitch to make it round.

1st round—Work 10 plain in the foundation round.

2nd round—Make 4 chain, miss 1, and work 1 plain on the plain stitches of the last round; repeat until 5 loops of chain are worked.

3rd round—Work in the first loop of 4 chain (1 plain, 4 treble, and 1 plain —in all 6 stitches), then, missing the plain stitch of the first round, repeat 4 times more.

4th round—Make 4 chain, keep these chains at the back of the last round, and work a plain stitch between the two plain stitches of the last round; repeat 4 times more.

5th round—Work in the 4 chain (1 plain, 6 treble, and 1 plain), then, missing the plain stitch of the last round, repeat 4 times more.

2. Music Stool Cover—Raised Crochet.

Digitized by Google

6th round—Work as the fourth round, making 6 chain instead of 4 chain.
7th round—Work in each of the 6 chain (1 plain, 10 treble, and 1 plain).
8th round—Work as the fourth round, making 8 chain instead of 4 chain.
9th round—Work in each of the 8 chain (1 plain, 13 treble, and 1 plain).
10th round—Work as the 4th round making 10 chain instead of 4 chain.

11th round—For the 1st Small Leaf make 14 chain, turn, miss the last nine stitches of these chain, work 1 single in the next stitch, and leaving 4 chain for the stem turn so as to cross it; work 18 plain in the loop of chain, and 1 single on the 4 chain; then for the 2nd Small Leaf make 11 chain, miss 9 and work 1 single in the tenth stitch, and leaving 1 chain work 18 plain in the loop of chain, then 1 single on the 1 chain and 3 plain on the 3 chain of the 1st leaf: then in the next loop of chain at the back of the Rose work as before (1 plain, 1 treble, 14 long, 1 treble, and 1 plain), in all 18 stitches; repeat from the commencement of the round four times more, fasten off.

12th round—Commence in the eighth plain stitch of the 1st leaf, and work 3 plain on the next three stitches of it, then make 10 chain, and work 3 plain on the three centre stitches of the 2nd leaf; repeat working 10 chain and 3 plain on each leaf all round, ending with a single stitch on the first stitch of the round.

13 round—Work 4 chain, miss 1, and 1 treble*, (1 chain, miss 2, and 1 treble, six times); then to increase, work 1 chain and 1 treble in the next stitch; repeat from * to the end, increasing after every sixth treble stitch. It will now be 70 treble stitches round. To finish the round, work 1 chain and 1 single on the third stitch of the 4th chain.

14th round—Make 4 chain, and work 1 treble in the 1 chain of the last round; then 1 chain, miss 1, and 1 treble in each 1 chain, repeating all round; end with 1 single.

15th round—7 chain, miss 3, and work 1 plain in the 2nd chain stitch of the last round; repeat; at the end work 4 single on the 1st 7 chain.

16th round—5 chain, miss 7, and 1 plain in each loop of 7 chain, repeating all round

17th round—3 chain, miss 2, then 3 treble all in one stitch; 3 chain, miss 2, 1 plain on the 1 plain of the last round. Repeat, making in all 35 small divisions. Fasten off.

Make seven Circles more the same.

The Centre Circle.—Repeat as the previous Circles to the end of the 14th round.

15th round—Work 4 chain and 1 treble in the next chain stitch,* (1 chain, miss 1, and 1 treble in the one chain 7 times) then to increase, work 1 chain and 1 treble in the same chain stitch as before. Repeat from * all round, increasing after each 7th treble stitch; at the end work 1 single on the 1st stitch.

16th round—Make 7 chain, miss 3, and work 1 plain in the alternate chain stitches. Repeat. End with 4 single on the 7 chain.

17th round—Make 5 chain, miss 7, and 1 plain in each 7 chain. Repeat.

18th round—Make 5 chain miss 5, and 1 plain in each 5 chain. Repeat.

19th round—3 chain, miss 2, then 3 treble all in one stitch; 3 chain, miss 2, 1 plain on the 1 plain of the last round. Repeat.

20th round—Work 1 plain in the 3 chain, then 7 chain, miss 3; 1 plain in the next 3 chain. Repeat.

21st round—3 chain, and in the 7 chain work 2 treble, 3 chain, and 2 treble; then 3 chain and 1 plain between the 2 plain stitches of the last round. Repeat.

22nd round—3 chain, miss 2, and in the 3 chain of the last round, work 2 treble, 1 chain; take one of the eight Circles and join to the centre of one of the divisions of it; then 1 chain, and in the same 3 chain of the last round as before work 2 treble; then 3 chain, miss 2, and work 1 plain in the 3 chain; miss 1 and work 1 plain in the next 3 chain; repeat once more joining to the next division of the Circle; then 3 chain, miss 2, 2 treble as before, 5 chain, join to the next division but one of the Circles; 4 chain, 1 single on the 1st stitch of the 5 chain; 2 treble as before; 3 chain, miss 2, 1 plain, miss 1, 1 plain, 3 chain, miss 2, 2 long in the 3 chain as before; 7 chain join to the next division of the Circle; 6 chain, 1 single on the 1st stitch of the 7 chain, and in the same 3 chain as before work 1 long, 3 chain, 1 long, 7 chain; take another Circle and join to a division of it; 6 chain, 1 single on the 1st stitch of the 7 chain; then as before 2 long, 3 chain, miss 2, 1 plain, miss 1, 1 plain, 3 chain, miss 2, 2 treble as before; 5 chain, join to the next division of the circle; 4 chain, 1 single on the 5 chain; 2 treble, 3 chain, miss 2, 1 plain, miss 1, 1 plain. Repeat from the commencement of the round. In making the next joining miss a division and join to the 2nd division. When all the Circles are attached four divisions are to be sewed together at the sides, leaving a division unattached near the centre Circle.

MUSIC STOOL COMPLETE.

The Border.—Begin on a Circle at the next division but one to those already joined. Make 11 chain, join to the 2nd division of the Circle to the right; 4 chain, 3 treble on the centre of the 11 chain, 4 chain, 1 single on the 1st chain stitch, turn on the wrong side.

Work 5 chain, and 1 plain in the 4 chain; then 5 chain, miss 3, 1 plain, in the next 4 chain; 5 chain, 1 long stitch on the division already attached; then 5 chain, 1 long on the next division but one, turn back.

3 chain and 3 treble on the centre of each 5 chain three times; 5 chain, 1 plain on the next division but one of the Circle. Fasten off, and repeat the same between all the Circles.

1st round—Commence on one of the divisions of a circle, work 5 chain and 1 plain on each division, continuing the same on the pattern between the Circles until it is worked all round.

2nd round—3 chain, and in the 5 chain work (3 treble, 4 chain, and 3 treble); then 3 chain, miss 1, and 2 plain in the next 5 chain. Repeat all round.

3rd round—1 plain in the 3 chain, then 3 chain, miss 3, and in the 4 chain work (3 treble, 4 chain and 3 treble), 3 chain, miss 3, 1 plain in the 3 chain; repeat.

Work 6 rounds more the same as the last.

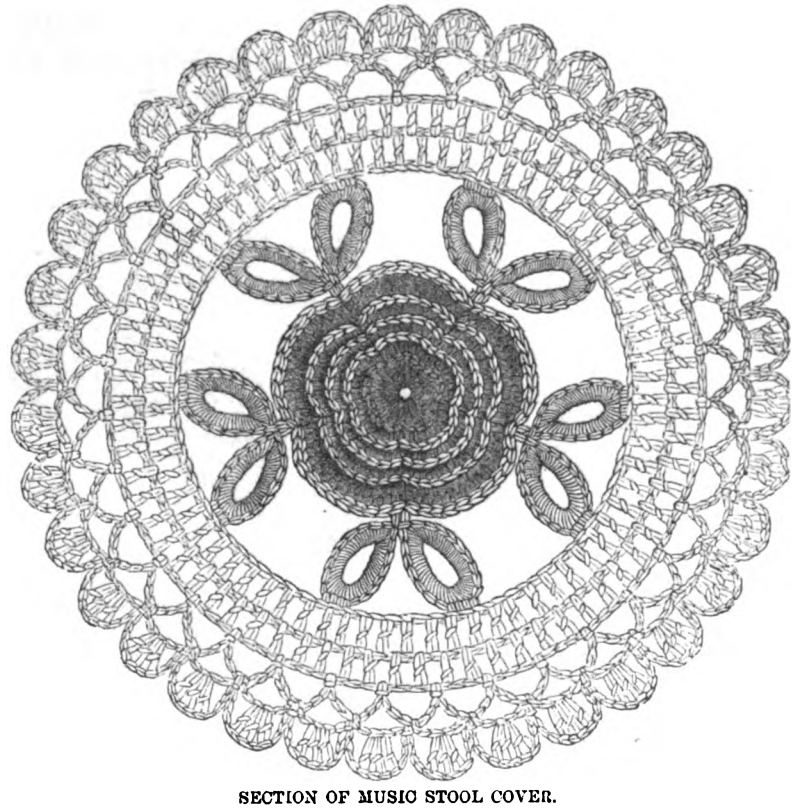
10th round—6 chain, miss 14 and work 1 plain in each 4 chain; repeat all round.

11th round—1 chain, miss 1, 1 treble; repeat.

12th round—All treble stitches.

13th round—1 chain, miss 1, 1 treble; repeat.

Finish with a fringe looped in the last round of crochet as shown in the section.



SECTION OF MUSIC STOOL COVER.

Braiding.—When the pattern is pinned or tacked on the material to be worked, with a needle and thread lightly trace all the lines just enough to carry out the design; then tear off the paper, and braid as usual on the line of thread. The work is done in half the time by this plan, as the paper is so easily taken away from the thread; and the worker proceeds much more comfortably without it under the hand.

To Polish Shells.—Remove all the extraneous matter from the surface of the shell by rubbing it well with emery powder and water, and polish it thoroughly with rottenstone and sweet oil applied on wash-leather. Commence operations by cleansing the shell with a brush and plenty of soap. Muriatic acid is occasionally used, and is applied with a feather; but this requires the greatest care, as it is apt to injure the interior of the shell and destroy its brightness should it chance to touch it. The emery powder may be of two or three degrees of fineness, beginning with the coarsest. The rubbing must be continued for some time, as must also the application of the rottenstone and oil.

Digitized by Google

3. Couvrepied—in Tricot Ecossais.

MATERIALS—for the ground of the squares claret and green wool, with the star pattern on them worked in gold colour filoselle; the dividing pattern in alternate rows of white and black wool. 8 thread Berlin wool or 4 ply fleecy may be used. Tricot needles Nos. 7 and 4 measuring the stem in the circles of the Bell gauge. Walker's rug needles No. 18.

THE SQUARES.

Commence with the claret or green wool and No. 7 needle; make a chain of 29 stitches.

1st row—Miss the last chain stitch, * put the needle into the next chain stitch and bring the wool through in a loop on the needle; keep the two loops on the needle; and repeat from * until there are 29 loops on the needle.

To work Back.—Take the wool on the needle and bring it through two of the loops each time, until only one loop is left. This forms the ordinary *tricot* stitch. In raising the loops the work should be tight, but the working back should be rather loose, which will have the effect of making each stitch square.

2nd row—Miss the edge stitch, put the needle into the next upright stitch, and bring the wool through in a loop; raise all the stitches the same. Work back as before. Repeat as the 2nd row until 27 rows in all are worked.

The Dividing Pattern.—Join on the black wool, and using No. 4 needle, work the 1st row, as section No. 1, thus:

1st row—Keep the loop on the needle, put it into the 1st stitch, and raise loop as usual; put the needle into the next stitch, and raise another loop; then take the wool on the needle, and bring it through the three looops; this forms one stitch. * To form another stitch; keep the loop on the needle, put the needle into the *same* claret stitch as the last black stitch; raise a loop; then raise a loop from each of the two next claret stitches; there will now be 4 black loops: take up the wool and bring it through all of them: see section of 1st row. Repeat from * to the end of the row; then 1 chain and fasten off the wool. These rows should be worked loosely.

2nd row—With the white wool commence in the 1st stitch of the black row; work 2 chain stitches *; put the needle into the same black stitch and bring the wool through; then put the needle into the next black stitch, always taking both edges of the stitch, bring the wool through, when there will be three loops on the needle, take up the wool and bring it through them: see section of the 2nd row. Repeat from * to the end, then 1 chain and fasten off. Work 7 rows more, the same as the 2nd row, using the black and white wool alternately.

To commence the next square, take the green wool and No. 7 needle. Commence in the first stitch of the last row; put the needle into the next stitch, bring the wool through *; then turn the wool round the needle, put it in the next stitch, bring the wool through. Repeat from * to the end (there should be twenty-nine loops and turns in all); then work back as in the first row of the first Square, and finish the Square the same.

Repeat the Dividing Pattern and the Square until the required length is made, then make as many stripes as will form the width, and for the long dividing pattern make a chain the length of the stripes, and repeat the black and white rows.

The Star Pattern on the Squares is to be worked with the gold filoselle in chain stitch, making one stitch on each square of the tricot, and following the pattern given in the engraving.

---

4. Baby's Sock—Knitting.

MATERIALS.—One skein each of white and coloured Andalusian wool; 4 knitting needles, No. 16 Bell gauge, measured in the circle. This will make a middle-sized Sock. For a smaller size use needles No. 18, and for a larger size, needles No. 14 or 15.

The Sock is commenced at the Leg, and worked round, so as to avoid any seams.

With the coloured wool cast on loosely 28 stitches on each of three needles, in all 84 stitches, then make it round by pearling the 1st stitch with the fourth needle.

1st round—All pearl.

2nd round—Knit 5 stitches plain, * then knit 3 together, thus—slip a stitch, knit 2 together, and with the left needle turn the slipped stitch over the two knitted together; then knit 11 plain. Repeat from * 5 times more, but ending with knit 7.

3rd round—All plain.

4th round—Make 1, knit 4, knit 3 together as before, knit 4, make 1, knit 1. Repeat all round.

5th round—All plain.

6th round—As the 4th.

7th round—All plain.

8th round—Knit 4, * knit 3 together, knit 9. Repeat from *, end with knit 5.

9th round—Knit 3, * knit 3 together, knit 7. Repeat from *, ending with knit 4. Join on the white; there will now be 48 stitches on the needle.

10th round—All plain.

11th, 12th, and 13th rounds—All pearl.

At the end of the last round, put the last stitch on the 1st needle, then turn back so as to work off the last needle, which will turn the work on the contrary side to the previous rounds.

† 14th, 15th, and 16th rounds—All pearl.

17th round—Make 1, knit 2, knit 3 together, knit 2, make 1, knit 1, which should always be over the knit 1 in the previous rounds Repeat 5 times more.

18th round—All plain.

Repeat the last 2 rounds twice more; then commence at †, and work these 9 rounds twice more.

41st and 42nd rounds—All pearl.

43rd round—All plain.

44th round—(Make 1, knit 2 together, and knit 1, twice); (make 1 and knit 2, 9 times); (make 1, knit 2 together, and knit 1, 8 times).

45th round—All plain.

46th and 47th rounds—All pearl.

Now commence, the Back of the Leg, which is worked backwards and forwards, in rows, working off two of the needles.

1st row—With the wool at the back of the right needle, slip a stitch, this is to form a firm selvedge; knit 1 (slip 1 and knit 3, 9 times), then slip 1, knit 2; turn back, leaving 16 stitches on the 3rd needle, for the Front of the Sock. Work on the last row for the

2nd row—With the wool at the back of the right needle, slip the 1st stitch; bring the wool in front, pearl 1 (slip 1 and pearl 3, 9 times), then slip 1, pearl 2, turn back.

3rd row—Bring the wool in front of the right needle, slip a stitch, pass the wool to the back, knit 1 (slip 1 and knit 3, 9 times), then slip 1, knit 2.

4th row—As the 2nd. The same stitch is always slipped in these 4 rows.

5th row—With the wool in front, slip 1, pearl 40.

6th row—With the wool in front, slip 1, pass the wool to the back, knit 40.

7th row—(Slip 1 and knit 3, 9 times), slip 1, knit 4.

8th row—With the wool at the back, slip 1; bring it in front (pearl 3, and slip 1, 9 times), then pearl 4.

9th row—With the wool in front, slip 1, pass it back (knit 3 and slip 1 9 times), then knit 4.

10th row—As the 8th.

11th row—As the 5th.

12th row—As the 6th.

Repeat from the 1st row to the end of the 11th, once more.

24th row—Slip 1, (knit 3 and knit 2 together, 8 times).

Then to form the Heel, put all the stitches of the last row on one needle, still leaving the 16 stitches on the other needle. Work on the 24th row for the

25th row—Slip 1, knit 22, turn back, leaving 10 stitches on the other needle.

26th row—Take the needle with the 10 stitches. Work off the 23 stitches thus—slip 1, knit 11, then knit 2 together, and leaving 9 stitches, turn back.

27th row—Take the needle with 9 stitches, slip 1, knit 11, knit 2 together, turn back. Work 18 rows more as the last, always knitting the last stitch and a stitch off those left together; there will now be 13 stitches on the needle.

46th row—Slip 1, knit 4, knit 2 together, knit 4, knit 2 together.

Then to form the Side, raise 12 stitches from the left selvedge of the 24 rows, thus—keep the wool at the back, put the needle into the side of the next stitch, and bring the wool through with the point of the needle. When the 12 stitches are raised, take another needle, knit the 16 stitches which were left for the front; then with the 3rd needle, raise 12 stitches up the right selvedge, and with the same needle knit 6 stitches off the 1st needle; the wool will now be in the centre of the plain rows of the heel; on the 1st needle there will be 18 stitches, on the 2nd needle 16 stitches, and on the 3rd needle 18 stitches; it is now to be worked all round.

1st round—Knit 7, then pearl 39, knit 6.

2nd—As the last.

3rd—Knit 8 (slip 1 and knit 3, 9 times), slip 1, knit 7.

4th, 5th, and 6th—As the last.

7th and 8th—As the 1st.

9th, 10th, 11th, and 12th—Knit 10 (slip 1 and knit 3, 8 times), slip 1, knit 9.

13th and 14th—As the 1st.

15th, 16th, 17th, and 18th—As the 3rd.

19th—As the 1st.

20th—Knit 6, knit 3 together, pearl 35, knit 3 together, knit 5.

21st, 22nd, 23rd, and 24th—Knit 8 (slip 1 and knit 3, 8 times), slip 1, knit 7.

25th—Knit 8, pearl 33, knit 7.

26th—Knit 5, knit 3 together, pearl 33, knit 3 together, knit 4.

27th, 28th, 29th, and 30th—Knit 8 (slip 1 and knit 3, 7 times), slip 1, knit 7.

31st—Knit 7, pearl 31, knit 6.

32nd—Knit 4, knit 3 together, pearl 31, knit 3 together, knit 3.

33rd, 34th, 35th, and 36th—Knit 8 (slip 1 and knit 3, 6 times), slip 1, knit 7.

37th—Knit 6, pearl 29, knit 6.

38th—Knit 3, knit 3 together, pearl 29, knit 3 together, knit 2.

39th, 40th, 41st, and 42nd—Knit 8 (slip 1, and knit 3, 5 times), slip 1, knit 7.

43rd—Knit 3, knit 3 together, pearl 25, knit 3 together, knit 2.

44th—Knit 2, knit 3 together, pearl 23, knit 3 together, knit 1.

45th, 46th, 47th, and 48th—Knit 6 (slip 1 and knit 3, 4 times), slip 1, knit 5.

49th—Knit 3, knit 3 together, pearl 17, knit 3 together, knit 2.

Cast off tightly, and sew the stitches together to form the toe.

The socks should be washed and stretched into shape before drying them, then with the coloured wool and a rug needle, work a stitch of cross stitch on the centre stitch of each check. Run a ribbon in the open row at the ankle, making a rosette of the ribbon, and sew it to the centre.

5. Lady's Cravate—Tatting.

MATERIALS.—Walter Evans and Co.'s Boar's Head Crochet Cotton, No. 16, a small shuttle and tatting pin No. 3, that is, the largest size.

The cravate is composed of a strip of muslin one and a half yards in length; it should be rounded at each end and hemmed. The circle for the tatting medallion is to be cut out and the edge covered with a round of narrow lace insertion.

THE MEDALLION.

The Centre.—Fill the shuttle, and commencing a loop, work a double stitch, then (1 pearl loop and 2 double stitches alternately 11 times): draw quite close, and then join the cotton to the first pearl loop, so that the thread may be in the centre of it.

1st Dot—Commence a loop, work 5 double stitches, and then 1 pearl loop, and 5 double more; draw close, join the cotton to the next pearl of the centre. Repeat until 11 Dots are made. At the end of the round keep the cotton at the back of the 1st Dot, and join to the pearl loop of it.

1st small Dot—Commence a loop, work 2 double stitches, then 1 pearl loop, and 1 double stitch; draw close.

2nd Dot—Commence a loop close to the Rosette, work 1 double, join to the last pearl of the Rosette; then 1 double, 1 pearl, 1 double, draw close, &c.

Commence again at the Rosette and repeat all round.

This finishes the Medallion, which is now to be sewed in the centre of the muslin.

The Rosette.—Commence a loop close to the small Dot, work 1 double, join to the pearl of the small Dot, then 2 double (1 pearl and 2 double alternately 6 times), 1 pearl, 1 double; draw quite close. Join to the pearl loop of the next Dot thus: Put the pin in the loop of the Dot, and draw it through as usual, then pass the pin through the space in the centre of the Rosette, passing it from the back to the front; draw the joining loop through, and, passing the shuttle in it, draw it close.

THE EDGING.

1st Oval—Fill the shuttle, and commencing a loop, work 6 double stitches; then (1 pearl and 2 double stitches alternately 3 times); 4 double more, to make 6 in all; draw close.

Reverse the work after each Oval is made, and repeat until sufficient is worked to edge each end of the cravate.

The Crochet Edge.—Use Walker's Penelope needle, No. 4, and commencing in one of the pearl loops of the first Oval, work 4 chain and 1 treble in the next pearl; then 4 chain and 1 treble in the same pearl; 4 chain and 1 plain in the next pearl; 2 chain and 1 plain in the pearl of the next Oval. Repeat to the end.

6. Necktie in Open Tricot.

MATERIALS—Two skeins of coloured and one of white 8-thread Berlin wool; Walker's tricot needle, No. 4. Commence with the white wool, and make a chain of 8 stitches.

1st row—Use the white wool; keep the loop on the needle, put the needle into the last chain but one, bring the wool through in a loop, when there will be two loops; put the needle into the next chain, bring the wool through for a third loop; take up the wool again and bring it through the last 2 loops. * Then put the needle into the *same* chain stitch as before, bring the wool through, put the needle into the next chain, bring the wool through, take up the wool again and bring it through the last 2 loops, repeat from * three times more; then bring the wool through the last chain. There should now be 7 loops on the needle. Leave the white wool and tie on the coloured wool to the commencement, so as to use it for the next row.

2nd row—Take up the coloured wool and bring it through the last loop *, then take up the wool again and bring it through the last coloured and white loops. Repeat from * until only the coloured loop is on the needle.

3rd row—Coloured wool, put the needle into the space between the 2 upright white loops, bring it through in a loop; * then put the needle into the next space and bring the wool through; take up the wool and bring it through the last 2 coloured loops; put the needle into the *same* space as before, and bring the wool through; repeat from * until there are 7 loops. Leave the coloured wool, and using the white instead, work the same as the 2nd and 3rd rows.

Continue the coloured and white rows alternately for six inches, then about half a yard with the coloured wool, and six inches again of the coloured and white alternately. Finish the ends with a knotted fringe, made in the coloured wool.

7. Bread or Fish Serviette.

A NEW MATERIAL has been introduced for bread, fish, and table *serviettes*. It is called Java cloth, and is somewhat similar to the Panama canvas, which must be well known to our readers, as it has been introduced upwards of two years. Instead of being manufactured in different shades of brown thread, the Java cloth is of white soft cotton, and washes well; *serviettes* of all descriptions will be made of it. Our design represents the fourth part of a bread *serviette*; the ornamental stitches are produced in scarlet French embroidery cotton, and are worked on the hand and not in a frame; the stitches used are cross, button-hole, and long point *lancé*—the last-named will be found among the ornamental stitches, page 25. When the ornamental stitching is completed, the threads of the Java cloth are drawn out at the sides to form the fringe, the button-hole stitches at the edge prevent the fabric from ravelling further than desirable. Although scarlet ingrain cotton is more effective on a white ground than any other colour, blue, black, and orange may be substituted for it, if preferred. Silver fish drainers are now more generally used than white *serviettes*, but still many housekeepers cling to the old fashion of serving boiled fish on a white cloth, believing in the efficacy of the napkin to absorb the water, rather than to allow it to drain through the holes in the silver plate. To those who approve of embroidered *serviettes* of any description, we recommend the Java cloth; it would be highly ornamental decorated after our design for serving roasted chesnuts upon. It is a novelty, and will, we have no doubt, become popular.

8. Fancy Stitches for either Ticking, Embroidery, or Application Work.

THESE eighteen fancy stitches will be found extremely useful for a variety of fancy work and for ornamenting children's frocks. They are so clearly illustrated in our engravings, that little difficulty will be found in carrying them out.

No. 1. *Point lancé* is a very simple and easy stitch to work. The needle must be brought through to the right side of the material about to be ornamented, in the centre of the star, from which the lines diverge, and each line commences and ends in the centre. Care must be taken to work the lines at an equal distance from each other. If the worker has not a correct eye it is the better plan to mark out a circle with a pencil, and then place the rays at equal distances from each other. This ornamental stitch will be found useful for ticking, application, and several other descriptions of fancy work.

No. 2. To produce *Point Russe* the design must first be traced on the fabric about to be ornamented. For this variation of the stitch commence by making a cross in the centre of the design; then continue with the second cross, the lines of which are worked alternately with the outline inclosing it; the small white dots on the engraving indicate the commencement and ending of the separate stitches. It will be found necessary to take an occasional backstitch, as well as to draw the thread through to the back of the work. This stitch looks well either in Pyrenean wool or fine black silk on white cambric frocks. It is also useful for ticking work.

No. 3. *Herring-bone or Feather Stitch* is commenced at the top of the piece of work intended to be ornamented, and is executed with the needle pointed towards the worker. The wool is fastened on the wrong side of the material, and the needle is brought through to the right. The stitches are worked regularly from right to left. When the stitch is made at the left side, the wool is passed under the needle, and held down with the thumb a short distance from the stitch, as indicated in the illustration. When a right hand stitch is to be made, the same process is repeated, only the needle is drawn out in the contrary direction.

No. 4. *Chain Stitch.*—This stitch is illustrated (for the sake of clearness) on a larger scale than it is to be worked. It should have all the effect of a continuous chain. The needle is brought through to the front, and in taking each stitch (as indicated in the engraving) the thread or wool used should be held down with the thumb, and the needle inserted into the hole from whence it was drawn out. Chain stitch looks well in bright coloured wool or silk, on muslin frills which are used for trimming children's frocks. It is useful for ornamenting brown holland pinafores, and a variety of other things.

No. 5. *Stem Stitch.*—This stitch is applicable for stems and tendrils, and other graceful lines, which intermingle with the thick satin stitch used for leaves, flowers, &c., in both white and coloured embroidery. It serves as a variation to the plain line traced with cotton, and afterwards overcast, which is so generally used in *Broderie Anglaise*. The stem stitch has an advantage over these overcast lines, as it is produced more rapidly, besides being more ornamental.

No. 6. *Overcast or Cordonnet.*—This stitch is useful in working either net applications or English embroidery. The line which this is to cover should be first drawn on the material, and then traced out with coarse cotton, and afterwards closely worked over. The engraving shows how the needle is inserted into the material to produce overcast.

No. 7. *Double Feather Stitch* is a button-hole stitch worked at regular and prolonged intervals, two being taken at the right side of the centre line and

Digitized by Google

two at the left side, and so on alternately. It is all surface work, the needle, except for fastening off the thread, never being pulled through to the wrong side of the material. The small figure, No. 1, on the engraving shows the point the needle must next enter, and No. 2 where it is brought out to produce the next stitch. The cotton should be held obliquely under the left thumb when the side stitches are being worked, otherwise they will come too straight to look feathery and graceful.

No. 8. *Point Natte, or Plait Stitch*, is very frequently used in modern embroidery. There is no rule for producing it, as it can be worked either upwards or downwards. Our engraving illustrates the upward mode of working. It is useful for ornamenting children's frocks, as well as flannel petticoats, and is very effective in wool on white muslin.

No. 9. *Picot Stitch.*—In our illustration *four picot* stitches form a star. To make a single picot the needle is brought to the outside of the material at the top, and the cotton held down with the left thumb: insert the needle, taking up a quarter of an inch of the material, pull the needle through, forming a loop as shown in the engraving. Make the loop form, by taking a single stitch to the centre of the star.

Nos. 10 and 11. *French Knots.*—These represent the stitch known as a French knot. The needle must first be brought to the right side of the material, and our illustration (No. 9) shows the manner of laying the thread round the needle. As will be seen, the needle is placed in a slanting direction on the surface of the material about to be decorated, and there held midway down with the left thumb. The thread is passed round the needle from right to left; the thread forms a knot round the needle, which should then be drawn out. No. 10 shows how this knot or twist is fastened down. The needle should be passed to the back of the work almost close to the thread where it was brought out. These knots, to be effective and rich-looking, should be worked full and round, and not drawn too tightly. They are used for filling up leaves, flowers, &c.

No. 12. *Witch Stitch* must be commenced from the bottom instead of the top of the work, that is from the left to the right side. Care must be taken to form the cross stitches at equal distances from each other. For ordinary purposes, when the work is not on a large scale, a quarter of an inch space between every cross-stitch will be required. The stitch can be produced with wool, silk, or cotton, and looks well as an ornamental edge to the strips of coloured gingham, now so fashionable on white piqué dresses.

Nos. 13 and 14. *Point d'Armes.*—These represent the stitch known as *Point d'Armes*. As will be seen, it is worked on the *wrong* side of the material, and is found very useful in arabesques, leaves, and other designs. The outline is first traced with cotton, and the space inclosed by the traced line is filled in with an even cross-stitch, worked somewhat over the outline. The manner of working is shown in engraving No. 13. When all the leaves, &c., are filled in, turn to the right side of the work, and *Point d'Armes* will be seen, as in illustration No. 14.

No. 15. *Cross Stitch.*—This is the ordinary stitch in which Berlin patterns are worked

No 16. *Fancy Tambour Stitch.*—This stitch is particularly useful in application work, and especially in that upon cloth, which is now so much in vogue, and in which the greater the variety of stitches the more beautiful the effect proves.

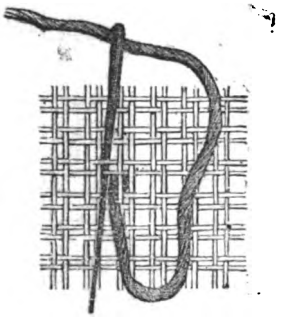
No. 17.—*Point de Poste* is so called from the rapidity with which it can be produced. This stitch, like the preceding one, is used for flowers, leaves, &c. When the needle is inserted into the material in the manner illustrated, the thread is wound six times round it, previously to being drawn through. The thread must not be pulled too tightly if it is desired that this pretty, useful stitch should look full and rich.

No. 18. *Wheat-ear Stitch* is worked in two rows, the one separately from the other. Commence according to illustration by working from right to left hand. When the first row is completed turn the material and work the reverse manner. This stitch looks well, in black purse silk, as an ornamental heading to tucks.

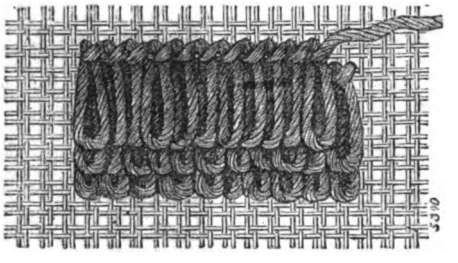
Quilts knitted in small pieces—Three Patterns.—Put on any number of stitches you please, say 49; they must be in *twos* and *fives*. Put on 3 at each end of needle, which must be *always* knitted plain for an edge, although you need not have *an edge*, if you prefer not. Knit the 3 edge plain; knit 2 and purl 5 to end, except the 3 edge plain. In going back, purl 2 and knit 5, keeping the edges. When 9 rows are done, knit 1 row plain and purl 1 row; this will form a raised stripe on the flat side. Then begin again as at first; knit 2 plain and purl 5, and the reverse. You can make the piece any size you wish by adding any number of stitches, in *twos* and *fives*. *Another:*—Put on any number divisible by 10. If you want an edge, put on additional stitches, 2 or 3 each end of needle extra, and always knit them plain. 1st row, *P 1, B 9; 2nd, B 1, P 7, B 2; 3rd, P 3, B 5, P 2; 4th, B 3, P 3, B 4; 5th, P 5, B 1, P 4; 6th, P 4, B 1, P 5; 7th, B 4, P 3, B 3; 8th, P 2, B 5, P 3; 9th, B 2, P 7, B 1; 10th, B 9, P 1. Begin again. *Another, Checked or Matted:*—Put on any number divisible by 6; knit them off plain. 1st row, B 3, P 3; 2nd and 3rd, repeat; 4th, P 3, B 3; 5th and 6th, repeat. Begin from 1st again. *Explanation of terms:*—P means a plain stitch; B a purl or seam stitch.

Plush-Stitch for Raised Canvas Work.

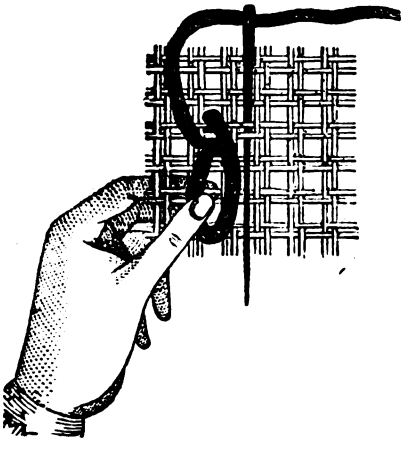
As practical instructions for working the raised wool embroidery are likely to be useful to our readers, we have had the process drawn and engraved very clearly, so as to afford every facility to the learner. This style of work is again coming into fashion, as it is found extremely effective for copying flowers and animals. Engraving No. 2 illustrates the stitch when completed, and before it is cut. The canvas used may be either that known as silk, when no grounding will be required, or, what is more general, black railway canvas. Engraving No. 1 illustrates the commencement of the stitch; the needle is brought to the front of the canvas, two threads of which are taken up and the wool pulled through; but before taking a second stitch (which is a simple cross one) the loop is held down



No. 1.



No. 2.



No. 3.

with the left thumb (see No. 3). One row must be entirely completed before another one is commenced; and the pattern must be commenced at the bottom instead of the top, otherwise the loops interfere with the progress of the work. As several shades of wool are required in a single row if flowers or animals are represented, it facilitates the working to have different needles all ready threaded with the shades required. Great care is necessary in shearing the work, so as to give it a plush-like effect. The lowest loops are cut first, the wood is combed, and then sheared closely. Few amateur workers can manage this last process so as to give the darkest shades the greatest depth of effect, and as several pairs of scissors are required, we would advise the design, when completed, to be handed over to a professional who thoroughly understands the art.

9. Knitted Edging.

First row—Slip 1, knit 2, make 1 (by throwing the cotton over the needle), knit 2 together, knit 2, make 1, knit 1, make 1, knit 2.

2nd row—Slip 1, knit 4, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 2 together, knit 2.

3rd row—Slip 1, knit 2, make 1, knit two together, make 1, knit 3, make 1, knit 2.

4th row—Slip 1, knit 7, make 1, knit 2 together, knit 2.

5th row—Slip 1, knit 2, make 1, knit 2 together, knit 1, make 1, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 3.

6th row—Slip 1, knit 1, pull the slipped stitch over the knitted one, knit another, and pull the first of these over the second, thus casting off 2 stitches, knit 5, make 1, knit 2 together, knit 2.

Count and see that you have 10 stitches on your needle before recommencing the pattern.

10. Diamond Edging.

Knitted edging suitable for trimming the top of a child's frock: Black velvet or braid to be run through the holes in the diamonds, to draw it prettily to the figure. This pattern, knitted in coarse cotton, is suitable for trimming an Antimacassar. Needles, No. 18 (see Chambers's Registered Bell gauge); Evans's crochet cotton, No. 22.

Cast on 11 stitches.

1st row—Slip 1, knit 2, make 1, knit 2 together, knit 3, make 1, knit 1, make 1, knit 2.

2nd row—Slip 1, knit 4, knit 2 together, knit 2, make 1, knit 2 together, knit 2.

3rd row—Slip 1, knit 2, make 1, knit 2 together, knit 2, make 1, knit 3, make 1, knit 2.

4th row—Slip 1, knit 6, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 2 together, knit 2.

5th row—Slip 1, knit 2, make 1, knit 2 together, make 1, knit 2, make 1, knit 2 together, knit 1, make 1, knit 2.

6th row—Slip 1, knit 9, make 1, knit 2 together, knit 2.

7th row—Slip 1, knit 2, make 1, knit 2 together, knit 1, make 1, knit 2 together, knit 1, knit 2 together, make 1, knit 3.

8th row—Slip 1, knit 9, make 1, knit 2 together, knit 2.

9th row—Slip 1, knit 2, make 1, knit 2 together, knit 2, make 1, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 4.

10th row—Slip 1, knit 1, pull the slipped stitch over the knitted one, knit another stitch and pull the first of these over the second; then knit a third and pull the second over the third, thus casting off 3 loops; knit 6, make 1, knit 2 together, knit 2. Count and see you have 11 loops left on your needle before recommencing the pattern.

11. Borders—Russian Embroidery.

These borders are intended for ornamenting Garibaldi bodices, &c. They are to be worked in either wool or silk, on strips of any material which is a contrast in colour to that which composes the bodice. These strips or bands are used on the shoulder seams and round the throat, also as cuffs and epaulettes to the sleeves; three of them are arranged in straight lines down the front of the bodice and three down the back. If the bodice is made of black silk, then the bands are black worked with white filoselle; if the bodice is blue cashmere the bands are white cashmere worked with blue Pyrenean wool. Ingrain French embroidery cotton (La Croix, No. 14) may be used on white cambric bands. These borders would look well in red wool on white cambric for trimming children's frocks.

12. Crochet Insertion.

Materials.—Walter Evans and Co.'s Boar's Head cotton, No. 18; Walker's Uncotopic Penelope needle, No. 4.

The First Side.

1st Circle.—Make 13 chain, turn, miss the last 8 chain, and work 1 single in the 9th stitch so as to form a round loop, and leaving 4 chain turn so as to cross it, and in the round loop work 8 plain, which should cover half of the foundation round them for

The Oval.—Make 10 chain, miss the last 4 chain and work 1 plain in the 5th stitch, leaving 5 chain; this forms the 1st Dot; and for the 2nd Dot make 5 chain and work 1 plain in the 1st stitch of these 5 chain; then for the 3rd Dot, make 5 chain and 1 plain in the 1st stitch; and for the 4th Dot, 5 chain and 1 plain in the 1st stitch; then to join the Dots work 1 single in the last stitch of the 5 chain left before the 1st Dot.

Repeat the Circle and Oval until the length required is made, ending with the 8 plain in the Circle.

The Second Side.

To finish the Circle work 8 plain more in the same round loop, then on the next stitch of the 4 chain left between the Circle and Dots work 1 single, and for the

1st Dot—Make 9 chain, and missing the last 4 chain, work 1 plain, leaving 4 chain; and for the 2nd, 3rd, and 4th Dots make (5 chain and work a plain stitch in the 1st stitch of the 5 chain 3 times); then to join the Dots work 1 single on the last stitch of the 4 chain left before the 1st Dot; then make 3 chain and work 1 single on the 1st chain stitch before the next circle; repeat from the commencement of the second side.

The Heading.—1st row—Commence on the centre of the 8 plain of the 1st Circle, and work 1 long stitch, then 5 chain and 1 plain between the 2nd and 3rd Dots; 5 chain and 1 long on the centre of the next Circle. Repeat to the end. Fasten off.

2nd row—Commence on the 1st stitch of the last row, make 2 chain, miss 2, and 1 treble. Repeat to the end.

Work the heading on the other side to correspond.

13. Crochet Border.

Materials.—For trimming petticoats, drawers, &c., use Walter Evans and Co.'s Boar's Head crochet cotton, No. 16; Walker's Uncotopic Penelope needle, No. 4; for a coarser size, use cotton No. 12; needle, No. 3.

The Centre.—Commence by making a foundation chain of about a third longer than the edging is to be when finished. At the end turn, and, missing the last chain, work 4 plain in the 4 following stitches, of the chain *; then make 9 chain, and missing 9 stitches of the foundation chain, work 4 plain along it. Repeat from * to the end and fasten off.

1st row—Commence in the 2nd stitch of the first 9 chain, and work 3 plain in the 3 following stitches of the 9 chain; then * 1 chain, miss 4, and in the second stitch of the 4 plain in the centre, work 2 long stitches, both in the 1 stitch; then 3 chain, and in the next stitch of the 4 plain work 2 long stitches; then 1 chain, and missing 4 stitches, work 3 plain on the 3 centre stitches of the next 9 chain; repeat from * to the end; then work this row on the other side of the centre so as to correspond with the 1st row.

2nd row—Work on the 1st row 2 chain, miss 2, and 1 treble; repeating to the end.

The Edge.—1st row—Work on the 1st row, on the other side, and commencing at the 3 plain, work 7 plain, * then 5 chain, miss 1, and 11 plain, repeat from * to the end.

2nd row—Commence at the 1st stitch of the last row, and work 3 treble over the 3 plain; then 4 chain, miss 6, 2 treble in the centre stitch of the 5 chain, then 4 chain, miss 6, 3 treble over the 3 plain of the last row. Repeat.

3rd row—3 chain and 3 plain alternately to the end.

14. Crochet Edging or Trimming.

Materials.—Walter Evans and Co.'s Boar's Head crochet cotton, No. 16, and Walker's Uncotopic needle, No. 3½. For Antimacassars, &c., cotton No. 10, and needle No. 3.

The Insertion.—Commence with a chain of twenty-four stitches.

1st row—Miss the last 6 chain, and work 1 treble in the 7th stitch of the foundation; then 4 chain, 1 treble in the next stitch of the foundation, 5 chain, miss 3, 1 treble; then (4 chain and 1 treble in the next stitches of the foundation, 4 times); 2 chain, miss 3, 1 treble, 4 chain, 1 treble, 2 chain, miss 2, 1 treble, turn back. This row being for the foundation is not repeated.

2nd row—6 chain, miss 4, 1 treble in the last 4 chain; then 4 chain and 1 treble in the same 4 chain as before; 5 chain, miss 19, and work 1 treble in the 4th loop of chain of last row; then (4 chain and 1 treble in the same loop of chain as before, 4 times); 2 chain, miss 7, 1 treble in the next 4 chain; 4 chain and 1 treble in the same 4 chain as before; 2 chain, miss 2, 1 treble in the 2nd stitch of the 6 chain at the side; turn back. Repeat this 2nd row until sufficient length of the insertion is made.

The Heading.—Work a row of treble stitches along one side of the selvedge.

The Scallops.—1st row—Commence in the 1st loop of chain which forms the selvedge of the insertion, work 4 chain and 1 plain in each of the next 5 loops; * then make 30 chain, and down this chain miss the last 5 stitches, and work 1 treble, then (1 chain, miss 1, and 1 treble, 12 times); and in the next loop of the insertion work 1 plain; then (4 chain and 1 plain in the next 9 loops). Repeat from * to the end. Fasten off.

2nd row—Commence in the 1st loop of the last row; work 8 chain, 1 plain in the next loop; * then (4 chain and 1 plain twice in the same loop as before); 6 chain, miss 6, 1 plain in the next loop but one (4 chain and 1 plain twice in the same loop as before); then missing the next 6 stitches, work 24 treble up the treble and chain stitches of the 1st row; to turn the end, work (2 treble both in one stitch, 7 times); then 24 treble, 1 plain in the next loop of the insertion; and in the next loop, 4 chain and 1 plain twice; 6 chain, miss 6, 1 plain in the next loop but one; 4 chain and 1 plain twice in the same loop; 8 chain, miss 6, 1 plain in the next loop but one. Repeat from * to the end. Fasten off.

3rd row—Commence in the 8 chain of the last row, and in it work 1 treble, 4 chain, and 1 treble; then 2 chain, and in the 6 chain work 2 treble, 4 chain, and 2 treble more; * then 3 chain, and in the 6th stitch of the 24 treble work 2 treble; 4 chain, and 2 treble more in the same stitch as the last. Repeat from * 8 times more, that is, all round the treble stitches. When finished, work 3 chain, and in the next 6 chain work 2 treble, 4 chain, and 2 treble; then 2 chain. Repeat from the commencement of the row. Fasten off.

4th row—Commence in the 4 chain of the last row, and work in it 1 plain, 4 chain, and 1 plain; * then 5 chain, miss 7, 1 plain in the 4 chain between the treble stitches; 4 chain, 1 plain in the same 4 chain as before. Repeat from * to the end. Fasten off.

5th row—Commence in the 4 chain of last row, and work in it (3 chain and 1 treble, 3 times), 4 chain, miss 18, 1 plain in the next 4 chain but one; then 4 chain, miss 7, and in the next 4 chain work 1 treble; then

Digitized by Google

3 chain and 1 treble 3 times in the same 4 chain as before: 5 chain, miss 7, 1 plain in the next 4 chain; 5 chain, miss 7, 1 treble in the next 4 chain; then 3 chain and 1 treble 3 times in the same 4 chain; 6 chain, miss 7, and in the centre 4 chain work 1 treble; then 3 chain and 1 treble 5 times. Work the other side to correspond, and repeat.

6th row—Commence in the 2nd plain stitch of the last row; work 4 chain, and in the next 3 chain between the treble stitches work 1 plain; then 4 chain and 1 plain 3 times in each of the loops of 3 chain round the point of the Scallop; when the three centre patterns are finished, work 1 plain on the next plain stitch, then 4 chain, and between the next treble stitches work 3 loops as before; then to attach the Scallops together work a treble stitch in the corresponding loop of the 2nd Scallop, and repeat the pattern.

Square Nets and Netting.

Instructions for making square-meshed, square and oblong nets, as foundation for Cluny lace and other purposes, will doubtless be useful to our readers. As the mode of making these nets is not generally known, we have much pleasure in inserting the following description of the process.

We may premise that we shall always term the stick on which the netting is made *a spool*, and not a mesh—which name is only properly applied to the opening between the threads of the net; in so doing, we shall escape from such absurdities as the following, taken from one of the best authors on netting:—"The method of netting *without a mesh*, is by passing the needle *through the mesh*," &c.

By the term loop, we mean to signify the loop formed around the spool, as each knot is made in succession, the last row netted always consisting of a series of loops.

Square-meshed nets, as shown at Fig. 1, are made by commencing at one angle or corner, and netting diagonally across the square to the opposite

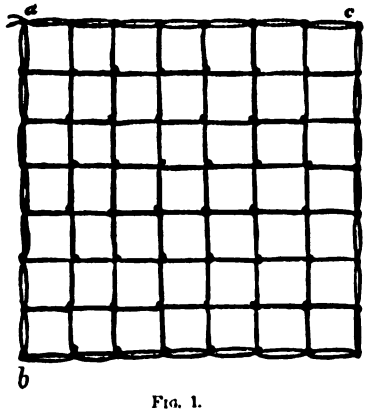

Fig. 1.

corner. In beginning a square-meshed net, one loop is first netted on to the cord which is used as a foundation; the spool is then withdrawn, and two loops are netted into the one first made. The last of these two should always be made with what is known as the fisherman's knot, as if made in the ordinary manner a lopside knot is the result. The mode of making the fisherman's knot is described below. The spool is again withdrawn from these two, and a new row commenced; this will consist of three loops, two being formed by taking up the last loop of the previous row twice. The netting is to be continued in the same manner, the last loop of every row being taken up twice. By this means a half-square of netting will be formed, of which the last row is the diagonal, and the two sides—*a c* and *a b*—form the selvedges on each side of the half-square. When the sides of the square are of the required length, a single row should be netted without the extra loop at the end; and then, to form the remaining half of the square, the rows should be continued, but with this difference, that the last two loops in every row should be taken up with the needle at once; thus the width of the netting will be gradually diminished to one mesh, and when the net is stretched out it will be found a complete square formed of square meshes, as shown at Fig. 1.

In order to make the angle neater, the spool should be withdrawn before the last knot is tightened, so that the last loop is made to come into the angle; and the first knot should be untied, and the loop also drawn up tight, so as to render the net correct in shape.

The netting of an oblong net, such as shown in Fig. 2, is a rather more complicated matter. This is commenced with a half-square, as before, the length of either side determining the width of the net. This done, at the end of the next row the last two loops are to be taken up at once; but on returning to the end of the succeeding row, two loops are to be netted into one, as before, and this alternation is to be continued. At the end of *every other row two loops are to be taken up at once*, and at the end of *the alternate rows two loops are to be netted into one*. The side at which the latter is done—*c d*—will be the long side of the oblong, and when this is of the required length, two loops are taken up at *each end of each row*; and the net diminished to the point *e*.

In making an oblong great care must be taken always to diminish or increase at the proper sides of the net, otherwise a confused mass of useless netting will be the result. This is easily avoided if a few threads of coloured string or a riband is tied at the angle *b*, to show which side should be diminished by taking up two loops in one.

The mode of netting the fisherman's knot, alluded to above, is as follows: Let the spool and netting be held in the usual manner. Then, to make a new loop, bring the needle backward over the spool; then carry it forward under the spool, *but without catching the string on any finger*. Pass the needle upwards through the loop that is to be taken up, and pull it close up to the spool, seizing the twine passing through the loop with the forefinger and thumb of the left hand. The loose twine should be allowed to fall over to the left, and down in front over the netting; and the needle should then be passed upward between the loop that is being taken up and the last one secured. On tightening the loose twine, the knot is completed.

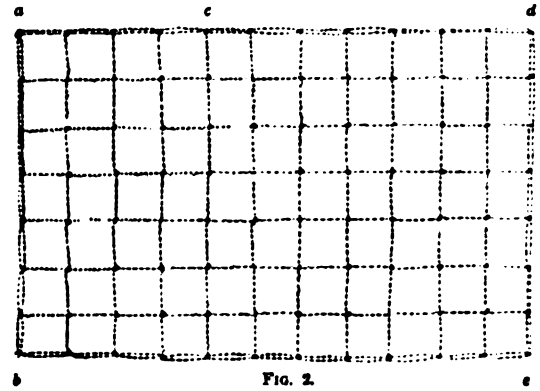

Fig. 2.

This mode of netting is shown in the engraving (Fig. 3), where the twine may be traced from the last-formed knot, round the spool, through the loop, then to the left, where it is secured by the thumb; the loose twine is shown lying over the netting, and the point of the needle is just inserted behind the loop that is being taken up. To finish the knot, the needle must be pulled through, and the string drawn tight.

A very slight examination will show that the knot made by this method is precisely the same as that resulting from the common mode of proceeding.

We have purposely made this description as minute as possible, so that, doubtless, it appears complicated; but in reality the stitch is much more simple then the one ordinarily used, and can be made with very much greater rapidity. It necessarily follows that anyone used to the old mode will find this new plan awkward at first, and will fail to net as neatly as

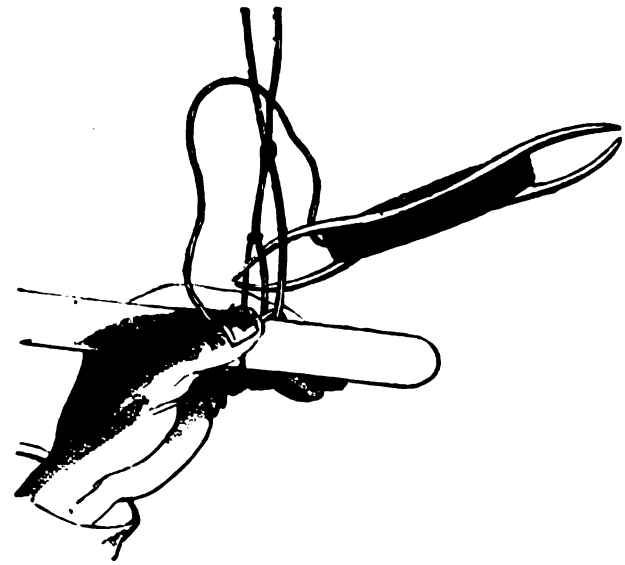

Fig. 3.

before; but the strangeness is soon overcome, and great rapidity speedily obtained. With stout cord the advantage is very great; there is no sawing required to tighten the knot, consequently no fraying either of the twine or the fingers.

Another immense advantage possessed by this knot is, that it can be made, using one, two, or three fingers instead of the spool, and with a short end of the string without a needle; so that in mending nets it is really invaluable.

Two points, however, we have omitted to mention: the method is not adapted to very small netting, and therefore it will not suit all varieties of ladies' work; and it is always necessary that the spool should be larger than the needle, otherwise the latter sticks in passing between the loops. Again there are certain stitches that cannot be made in this manner, such as the first row or foundation of a net.

Ornamental Stitches for Guipure d'Art.

Digitized by Google

15. Guipure d'Art Squares.

Guipure d'Art is now one of the popular employments of ladies who employ their leisure hours in fancy work, and it can be adapted to many useful articles of furniture. It is easy to accomplish, and is fascinating work, as every stitch tells. After the foundation is netted, it should be stretched tightly on a small wire frame bound with ribbon, which is convenient to hold. Some workers recommend the Flemish thread for producing it. There are eight numbers of this thread used in guipure d'art—viz., 24, 42, 48, 60, 70, 84, 96, and 120. The first, third, fourth, and sixth of these numbers are generally employed for the purpose. Long and square frames for embroidering the netted foundation are to be procured, as well as tasteful boxes for holding this now favourite work.

For the four accompanying designs the materials required are: Walter Evans and Co.'s Mecklenburgh linen thread, Nos. 4 and 10, a steel netting needle, and meshes No. 12 and 8 bell-gauge; also Walker's elliptic needles No. 6, and a small wire frame about four inches square.

The Netted Squares.

Fill the needle with No. 6 thread, and using No. 8 mesh, commence on a piece of thread for the foundation. Net one stitch, turn back and net two stitches, both in the first stitch; turn back, net one stitch plain, then net two stitches in the last stitch. Continue working backwards and forwards, and netting two stitches in the last stitch of each row, until it is increased to twenty stitches; after which, net one row quite plain, then to decrease the square, net two stitches together at the end of each row, until it is decreased to two stitches, then net them together without the mesh, so as to make a small stitch; this finishes one square, and eight more will be required. The squares should now be washed, stiffened, and pinned out. When dry, sew one of them in the frame, and embroider the pattern on the netting with No. 10 thread and No. 6 needle. All the ornamental stitches used in darning these squares will be found illustrated on an enlarged scale, with the needle placed in working position, so as to obviate the necessity for any further written directions.

16. Description of Fancy Berlin Stitches.

These designs will be found useful for slippers, sofa cushions, ottomans, chairs, and a variety of other purposes.

No. 1 is the ordinary cross stitch, worked on Penelope canvas; the dividing lines are in black wool. The darker stripes have a green ground with crimson squares on it, the light stripes have a white ground with green squares. The squares are further enlivened with a single cross on each stitch in gold coloured silk. This pattern is easy to work, as but little counting is required.

No. 2.—This pretty stitch is very quickly worked, and for sofa cushions, as a means of using up odd skeins of wool, it will be found invaluable. It is worked on coarse Penelope canvas. A row of double cross stitch, known as either Leviathan or Smyrna stitch, commences the pattern. This row is followed by two lines of narrow black silk *soutache* or braid, which are held with the thumb while being sewn over with two lines of witch stitch in white purse silk. The two lines of braid are followed by a row of wool in double cross-stitch, each line being of a different colour; the bright shades of scarlet, blue, green, and mauve producing the best effect. Care must be taken to select braid of the correct width, two rows of which will be equal to the single row of wool.

No. 3 is worked in two colours, with four shades of each colour. Contrasts are the most effective—such as violet and green, blue and orange, &c. Our illustration is worked in pink and grey white standing for the lightest shade of grey. Commence with the darkest shade, and work over eight threads of canvas. For each succeeding colour commence two threads further off. Common, and not Penelope, canvas is the material on which this stitch should be worked.

No. 4 is a variation on the ordinary leviathan stitch, and is produced thus: instead of the usual eight stitches taken over four threads in a vertical and horizontal direction, our engraving represents the same only taken over three stitches. The first stitch is taken over two threads straight across the canvas, the second over four threads across, and the third and last over two threads. The thin crosses are over the larger ones, produced in gold cordonnet.

No. 5.—The variety of stitches in this design renders the work, when completed, highly effective. What is called the herring-bone stitch on canvas is clearly illustrated in our engraving, by the needle being placed in holes of the canvas as it is worked; the alternate rows are cross-stitch. The design commences thus: A row of herring-bone stitch in green filoselle, and a row of cross-stitch in black wool; then follow in the same succession alternate lines of green herring-bone and black cross-stitch, the former varied, as indicated in our design, with lines of dark violet and white. The violet stripes, and the first of the three green stripes, are worked over with white purse silk in herring-bone stitch; the black lines are also included when this is the case. This design well repays the trouble of working, and the colours can be varied according to taste.

No. 6.—This effective and quickly executed stitch is to be worked on Penelope canvas; the manner of working is so clearly illustrated that any written explanation would be superfluous. Our pattern is worked in stripes with cinnamon colour and mauve wool, three shades of each colour. The stripes are separated with a double row of cross-stitch in black wool, and these latter are afterwards crossed with maize filoselle. Four lines of each shade are worked to form every separate section of the shading. The colours may be varied, a pleasing contrast being the principal point for the successful effect of the work. If this stitch is used for sofa pillows, the furniture of the room must regulate the selection of the colours.

No. 7.—This stitch is one of the many variations of cross-stitch, and is so clearly illustrated in our engraving that any further description would be superfluous. The dark squares are all worked with black wool, and the alternate squares as follows: brown with a white centre, and green with a gold centre. The black squares are further ornamented with five crosses executed in gold-coloured cordonnet. It will be found useful for sofa cushions, &c.

No. 8.—This stitch is flat when worked, and is, in fact, satin stitch on canvas. The colours used in our pattern are Havannah brown, violet, and white. The violet is represented in the engraving by the darkest shading. Penelope canvas should be used, and the needle should for every stitch take up six threads of the canvas. The white and brown diamonds are, when completed, crossed with gold fil selle.

A Knitted Purse.—Some very pretty purses may be knitted with fine netting silk and small steel needles, using steel or gold beads, which must be threaded on the silk before the work is commenced. The required number of stitches must then be set on, and the knitting done in the plain stitch like a garter, letting a bead down on each alternate stitch of each alternate row, which will bring all the beads on to the right side of the purse. For a long purse scarlet, black, blue, orange and white silk may be used, working about four or five rows of each, and then finishing the purse to the length required in blue or black. The variegated end is sewed up square, with a tassel at each corner, and the self-coloured end gathered in to a long tassel of steel or gold beads to correspond with the work. The part so knitted has a very good effect, and the work is simple and quickly done.

Pence Purses.—Four needles, No. 20. Claret and green, scarlet and black, single Berlin wool, or any two colours that may be preferred. Commence with the *handle*, by casting on 4 stitches with *claret*, and knitting in plain rows, backwards and forwards, until it be two inches long; then cast on 6 stitches on the same needle, 26 on the second, and 10 on the third; then from the first needle * knit 2, purl 2, alternately; from the second needle purl 2, knit 2, bring the wool forward, slip 1, knit 1, pass the slip-stitch over it; knit the remaining stitches plain, within 7 of the end; then knit 2 together, knit 1, purl 2, knit 2; on the next needle purl 2, knit 2, alternately. Repeat from * for 3 rounds, until 12 stitches only remain on the second needle; this finishes the *spout*. Knit 3 rounds, continuing the ribbing, of 2 stitches, purled and plain. Knit 5 rounds with *green*, 3 with *claret*, 5 with green, continuing the ribbing as before; knit 1 plain round, and purl 3 rounds, with *claret*; knit 1 plain round, bringing the wool forward between every two stitches; purl 3 rounds, knit 1 plain round. In the next two rounds bring the wool forward and knit 2 together; knit 1 plain round with *claret*, purl 3 rounds, knit 1 round plain. In the next 2 rounds bring the wool forward, and knit 2 together; knit 1 plain round, purl 3 rounds. Divide the stitches on the four needles, 12 on each; then knit 5 rounds plain, decreasing 1 stitch, alternately at each end and in the middle of the needle; knit 3 rounds more plain, decreasing occasionally. Divide the stitches on three needles, knit a plain round, and purl 3 rounds without decreasing; finish with plain rounds, decreasing, until 4 stitches only remain on each needle. Draw up the small opening, and attach the lower end of the handle to the side of the jug.

Under-Petticoat.—The following directions for making an under-petticoat in crochet will be found simple and inexpensive, and very pleasant work for leisure hours, as it does not require much attention. The petticoat is made of Scotch fingering wool, of which about 5s. worth will be required. Black and white speckled wool, with some bright colour (such as scarlet or violet) and white have a good effect. Make a chain of 424 stitches with the speckled wool, and for the next row put a treble stitch with one chain between into every alternate stitch of the foundation. Turn back and do the same for four more rows (making five in all), only putting the treble into the space instead of into a stitch. At the beginning of each row throughout the work 3 chain must be done to represent the first treble. Five rows of any bright colour preferred; two rows of white, five rows of colour as before; five rows of speckled, two rows of colour, five rows speckled; five rows of colour, two rows white, four rows of colour; two rows of speckled, two rows white, two rows speckled; two rows white, in the last of which leave out the chain stitch between the trebles every twelfth time; two rows speckled, missing one space entirely about every twelfth treble in the first row; two rows white, missing a space every twelfth treble in the first row as before; two rows speckled, missing spaces in the first row as before; two rows white in the same way, and one speckled row without diminishing. The rest of the petticoat is all white, going on backwards and forwards till it is the length required, and diminishing in every alternate row by occasionally missing a space till it is the proper size for the waist. Then do a row of plain crochet at the top, putting one stitch into each space, and also down the two sides (putting three or four stitches in each space), to strengthen the edge as far as it is intended to leave open for the placket-hole. A row of plain crochet round the edge of the petticoat with the colour, strengthens it and looks neat. There is only one seam in the petticoat, the work being sewn up at the back when finished, leaving off at the placket-hole.

Dress and Fashion.

MOVEMENTS OF FASHION, 1866-67.

THE YEAR 1866 has seen many changes, but none greater than those to be remarked in ladies' dress. Crinolines have decreased in dimensions until there is just a suspicion of them, and nothing more; bonnets have grown wonderfully less, and become mere fanciful headdresses, taking various eccentric forms, and being generally worn perched at the summit of the head; short petticoats have come into vogue for outdoor wear; pleats have disappeared from below the waists of dresses; *peplums* have come in, *demi ajustes* have gone out; in fact, there seems a general shrinking and manifestation of collapse in many details of a fashionable lady's toilette very different from what the end of 1865 witnessed. This is the case with respect to many details; but as regards others, the facts are completely the reverse. Heads of hair seem, on the contrary, to have inflated, and the luxuriant growth of auburn locks is something to marvel at, were it not among "things generally known" that there is even more false addition worn than natural growth. Hairdressers drive a brisker trade than ever, for the new styles of *chignons* are coiled round and round like snail-shells, and to compass them at all satisfactorily, a thick length of hair measuring over a yard is positively necessary. To render this still thicker and more massive when coiled, a frizette is added inside the length, or *tail* of hair, as it is sometimes called. Then thick curls, and ringlets, and plaits, and rolls, are added *ad infinitum*, the grand object for a successful *coiffure* being an elaborate massive arrangement of hair, particularly at the back of the head. Not one Englishwoman in ten thousand is sufficiently well endowed by Nature to meet these requirements, consequently recourse is had to false additions, which, to do the hairdressers justice, are so artfully contrived that detection, even by practised eyes, is often a matter of difficulty.

No. 1. PROMENADE TOILETTE WITH SHORT SKIRT.

We will take a brief survey of the materials and styles now in vogue before directing the reader's attention to the different illustrations. For winter wear the newest fabric is plush, of a novel manufacture; entire suits—dress, petticoat, and paletot—are made of it. Her Royal Highness the Princess of Wales has already appeared in public on several occasions in plush suits, and her mother, the Queen of Denmark, has also had more

Digitized by Google

than one suit of this beautiful English manufacture. Velveteen is also a favourite material, and entire toilettes of black, grey, and mauve velveteen are very general. Brocaded Lyons silks are coming into favour; the reason of this re-introduction is the distressed state of the Lyons silk weavers. The Empress of the French set the example, and ordered a dress expressly for her *fête* day, which was celebrated at Compiègne last November. The material was ruby velvet brocaded with gold, and report says cost no less a sum than 28*l.* the *mètre*. The dress was tastefully trimmed with gold lace, and her Majesty, who, although rather stouter than of yore, is still pre-eminently handsome, looked exceedingly

petticoat and paletot are made of the same material; the latter is sleeveless, so that the skirt and sleeve match—the dress sleeves being the only ones worn. The long loose Venetian sleeves are once more making their appearance, but as yet are exceptions, and not the rule. For full dress and carriage toilettes the skirts are even longer than during preceding years, and trains are universal.

There are as many fashionable forms of bonnets as there are days in the week, but without doubt the *cataluncs*, or small squares of velvet, in imitation of the Spanish headdress, predominate, and these are artfully adorned with lace, feathers, beads, and flowers. Bonnet strings are worn very wide, and

No. 2. PROMENADE TOILETTE WITH PEPLUM-BASQUE.

well thus draped in the products of those far-famed though of late rather neglected looms. Irish poplins, French merinoes, reps, and linseys are all popular—grey, mauve, and green being the fashionable colours. Striped fabrics have been worn so universally that they are at last giving way to round dots; and the taffetas with the metallic dots in relief are among the latest novelties in silks.

Short petticoats are decidedly gaining ground for out-door wear, and a much cleaner, healthier, and in every way more desirable toilette they prove for walking dresses. The short costumes are as yet fantastic in style; the

are frequently tied under the *chignon*; in many instances they are covered with either lace or blonde lappets.

Beads of all descriptions run riot on everything. They are embroidered thickly on Cluny lace, on cashmere, on velvet; and these fabrics are made up into jackets, paletots, and *peplums*. Jet, button, and feather trimmings are all in high favour, the last-named especially. Among the illustrations will be found specimens of the *peplum-basque* and the short out-door toilettes, both of which styles are likely to prevail during a portion at least of the year of grace 1867.

Digitized by Google

1. Promenade Toilette with Short Skirt.

A striped velveteen dress and petticoat to match; all the ornaments are black and white gimp. The skirt is gored, so that there are no pleats at the waist, and is fastened down the front with large fancy buttons; it is then looped up at the right side with a long piece of ribbon to match the gimp. The petticoat is bordered with a Russian pleating. A velvet hat with a wreath of shaded velvet leaves round it; a spray of similar foliage falls over the *chignon*.

2. Promenade Toilette with Peplum-Basque.

A black and white dress, either silk or foulard, with a *peplum-basque*. The skirt is trimmed at the seams and round the edge, likewise the bodice and basque, with black ribbon-velvet covered with white Cluny insertion. The velvet is two inches and a half wide on the skirt, and one inch and a half wide on the bodice—the lace in equal proportions. The waistband corresponds with the rest of the trimming. The *peplum-basque* is fastened on underneath the waistband, and only added for out-door wear. A Lamballe bonnet, consisting of tulle pullings covered with daisies and crystal drops.

Sponging a Black Silk Dress.—Sponge the black silk lightly on both sides with a perfectly clean sponge dipped in spirits of wine, then with a moderately warm iron smooth the silk over on one side, not the side that will form the outside when re-made. If the selvedges are too tight to allow the silk to become smooth, they will require snipping at intervals.

Black Silk Stockings.—The following is a good plan for washing black silk stockings. Make a lather with hot water and wash them well in it, but never rub the soap on them. Rinse them thoroughly in cold water, and mangle them instead of ironing. The mangle will give them a brighter appearance than the iron

Novel Application of Photography.—At Lyons a process has been adopted for photographing upon silk, linen, and other articles, and many persons have their portraits upon their linen instead of having it marked with their name or initials. In the silk shops various articles are exhibited, photographed with names and fanciful devices. The articles are not at all injured by washing. The process is easily and rapidly effected.

To clean Black Lace.—The lace must be carefully sponged with gin, or if preferred, with green tea, and afterwards wound round and round a bottle to dry. No iron must be used, as if touched with it the lace would assume a flattened and glossy appearance, which would spoil it. It is a good plan to fill the bottle with hot water to expedite the drying process. The lace must not be placed near the fire, or it will become of a rusty colour, and never look well.

Washing Materials.—Muslin-de-laine, chalis, and worsted damask may be cleaned by making a lather of chips of curd soap boiled in a little water; into this the article to be washed should be placed when the lather is cold; then well washed, rinsed quickly in a pail of cold water placed ready, wrapped in a cloth (or a sheet if the piece happens to be very large) well wrung, so that it is nearly dry when taken out, and then pinned upon a line; afterwards mangled. Black and white, as well as coloured materials, will look as well as new, *carefully* done this way.

Fashionable Riding Habits.—The present fashion for riding jackets is not a deep basque, but a *basquine*, beginning at the point of the jacket about an inch wide, and gradually increasing in width until it joins the sparrowtail at the back, which this year has been rounded at the edge instead of being straight. The length of the habit is cut to one yard and a half, from which a very wide hem is turned up. The skirt is much gored and quite plain in the front of the waist, with small pleats on the hips. With these exceptions, there is no difference in the make of habits since 1865 In hats there is no change.

To wash Cluny Lace.—Take an ordinary pint beer-bottle (of course seeing it is clean inside), and round the thick part sew one fold of strong linen or calico. Then carefully wind the lace round it, pulling it out to its full width, and tack each edge carefully, securing any parts of the pattern with the needle which are likely to be displaced in washing. Cover the whole with a strip of very thin book-muslin and make a lather with common yellow soap, adding a good quantity of blue, and a very little starch. In this boil the bottle well for some time, using an ordinary saucepan, then change the water, using no soap or blue, and let the boiling go on again; afterwards use fresh rinsing water pumping it over the bottle; dry gradually, and the lace will come off beautifully white and smooth, needing no ironing.

To wash Flannels.—Flannels and other woollen articles should be washed in rain water, never in hard water or in water softened by soda. They should not be rubbed with soap, but a good strong lather should previously be made with soap and clean soft water; add boiling water till it is as hot as the hand will bear, then dip the articles in lifting them up and down till well washed, but not rubbing them: squeeze (not wring) out the dirty suds and use more clean if necessary. Thoroughly rinse in clean warm water, in which the blue bag has been dipped. Dry in the open air, if the weather be fine. If the articles are dusty, well brush or shake them before wetting. If they are very greasy add some ox-gall to the soapsuds, in the proportion of half a pint of gall to six quarts of suds; and in such case a second rinsing in clean water will be necessary to remove the smell.

To take Mildew out of Linen.—Rub the linen well with soap, and having scraped some fine chalk, rub it also on the place; lay the linen out of doors; as it dries wet it a little, and in twice doing the mildew will come out.

To clean White Cashmere.—If the laundress complies implicitly with the following directions, she may be quite sure that a white cashmere will not become the least yellow when washed. The cashmere must be washed with white soap (not too much of it) and cold water. When quite clean, it should be well rinsed in cold water with a little blue in it, then ironed while very damp with not a very hot iron, the ironing to be continued until the cashmere becomes perfectly smooth.

Moths.—Clothes that are in constant use, or that are often beaten or shook, are not attacked by moths; and the best plan with those articles which are not likely to be wanted for any length of time is to sew them up in calico, or pack them in paper, so as to exclude the parent moth, and thereby prevent her laying her eggs, the larvæ from which do the damage. Spirit of turpentine and benzine collas will also keep away moths, but the remedy may in many cases be thought as bad as the disease. Pepper, tobacco, and other things, are also used; but nothing, we think, equals properly packing for clothes, rugs, carpets, &c., not in use.

Non-inflammable Dresses for Ladies.—Muslins and similar fabrics, steeped in a seven per cent. solution of sulphate of ammonia, or a twenty per cent. solution of tungstate of soda, and then dried, may be held in the flame of a candle or gas-lamp without taking fire. That portion of the stuff in contact with the light becomes charred and destroyed, but it does not inflame, and consequently the burning state does not spread to the rest of the material. Both solutions are employed by dipping the clothes into the solution after they have been washed and rinsed. Tungstate of soda is used in the Queen's laundry. It is rather more expensive than the other; but it is preferable, as it does not in any way interfere with the "getting-up" of the articles.

To Fix Colour in Washing Materials.—The colour of washing materials may be preserved by using water that is only milk warm, making a lather with white soap before you put in the dress, instead of rubbing it on the material, and then by stirring into the first and second tub of water a large table-spoonful of ox-gall. The gall can be obtained from any butcher. The articles should be washed quickly, and then rinsed through two cold waters. Into each rinsing water stir a teaspoonful of vinegar, and after rinsing them wring them out immediately. When still a little damp bring them in, have irons ready heated, and iron them at once, as it injures the colour to allow them to remain damp too long, or to sprinkle and roll them up in a covering for ironing next day. If they cannot be conveniently ironed immediately, let them hang until they are quite dry, and then damp and fold them on the following day, a quarter of an hour before ironing.

Cleaning Ostrich Feathers.—When they have been *thoroughly* washed and rinsed, and passed several times between the fingers, or rubbed gently in the palm of the hand while in the soap, they do not require any further bleaching, but, on being dried, appear beautifully white. If the feather has been *dressed* previously, in which case a fine wire has been passed inside it, although not perceptible, it will be found that the feather can, with a little trouble and contrivance, be easily twisted into any shape or curl wished. The downy part of the feather, forming the *vane*, as it is termed by naturalists, can be curled by twisting it round a pair of scissors, or a thick netting-pin without the least difficulty, particularly if this be done before it is *quite* dry.

Our Portraits.

THE EMPRESS OF RUSSIA.

Her Imperial Majesty the Empress of "all the Russias" was born on the 8th of August, 1824. Her father was Louis, Grand Duke of Hesse-Darmstadt, who died in June, 1848; her mother was the Grand Duchess Wilhelmine Louise, daughter of the late Charles Louis, Hereditary Prince of Baden. She was baptised by the names of Maximilienne Wilhelmine Auguste Sophie Marie, and assumed the names of Marie Alexandrowna upon her reception into the Greek Church and her marriage with the present Emperor of Russia (then known as the Grand Duke Alexander), on the 28th April, 1841. The Empress is not only very beautiful, but is one of the most illustrious members of European royalty.

THE CESAREVNA OF RUSSIA.

The Cesarevna of Russia was born on the 26th of November, 1847; is daughter of the present King and Queen of Denmark, and sister of H.R.H. the Princess of Wales. Her Imperial Highness was baptised by the names of Mary Sophia Frederica Dagmar, but assumed the name of Mary Feodorowna on her marriage with the heir-apparent to the throne of Russia, the Grand Duke Alexander Alexandrowitch, which took place on Friday, Nov. 9, 1866.

THE ARCHBISHOP OF CANTERBURY.

The Archbishop of Canterbury was born in 1794, was educated at Westminster School and Christ's Church, Oxford, where he took first-class honours *in literis humanioribus*, and assumed the B.A. degree in the year 1815. In 1836 he became the first Bishop of Ripon, was translated to the See of Durham in 1856, was elevated to the See of York in 1860, and in October, 1862, he was translated to his present high position.

9. Knitted Edging.

First row—Slip 1, knit 2, make 1 (by throwing the cotton over the needle), knit 2 together, knit 2, make 1, knit 1, make 1, knit 2.

2nd row—Slip 1, knit 4, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 2 together, knit 2.

3rd row—Slip 1, knit 2, make 1, knit two together, make 1, knit 3, make 1, knit 2.

4th row—Slip 1, knit 7, make 1, knit 2 together, knit 2.

5th row—Slip 1, knit 2, make 1, knit 2 together, knit 1, make 1, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 3.

6th row—Slip 1, knit 1, pull the slipped stitch over the knitted one, knit another, and pull the first of these over the second, thus casting off 2 stitches, knit 5, make 1, knit 2 together, knit 2.

Count and see that you have 10 stitches on your needle before recommencing the pattern.

10. Diamond Edging.

Knitted edging suitable for trimming the top of a child's frock: Black velvet or braid to be run through the holes in the diamonds, to draw it prettily to the figure. This pattern, knitted in coarse cotton, is suitable for trimming an Antimacassar. Needles, No. 18 (see Chambers's Registered Bell gauge); Evans's crochet cotton, No. 22.

Cast on 11 stitches.

1st row—Slip 1, knit 2, make 1, knit 2 together, knit 3, make 1, knit 1, make 1, knit 2.

2nd row—Slip 1, knit 4, knit 2 together, knit 2, make 1, knit 2 together, knit 2.

3rd row—Slip 1, knit 2, make 1, knit 2 together, knit 2, make 1, knit 3, make 1, knit 2.

4th row—Slip 1, knit 6, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 2 together, knit 2.

5th row—Slip 1, knit 2, make 1, knit 2 together, make 1, knit 2, make 1, knit 2 together, knit 1, make 1, knit 2.

6th row—Slip 1, knit 9, make 1, knit 2 together, knit 2.

7th row—Slip 1, knit 2, make 1, knit 2 together, knit 1, make 1, knit 2 together, knit 1, knit 2 together, make 1, knit 3.

8th row—Slip 1, knit 9, make 1, knit 2 together, knit 2.

9th row—Slip 1, knit 2, make 1, knit 2 together, knit 2, make 1, slip 1, knit 2 together, pull the slipped stitch over the knitted one, make 1, knit 4.

10th row—Slip 1, knit 1, pull the slipped stitch over the knitted one, knit another stitch and pull the first of these over the second; then knit a third and pull the second over the third, thus casting off 3 loops; knit 6, make 1, knit 2 together, knit 2. Count and see you have 11 loops left on your needle before recommencing the pattern.

11. Borders—Russian Embroidery.

These borders are intended for ornamenting Garibaldi bodices, &c. They are to be worked in either wool or silk, on strips of any material which is a contrast in colour to that which composes the bodice. These strips or bands are used on the shoulder seams and round the throat, also as cuffs and epaulettes to the sleeves; three of them are arranged in straight lines down the front of the bodice and three down the back. If the bodice is made of black silk, then the bands are black worked with white filoselle; if the bodice is blue cashmere the bands are white cashmere worked with blue Pyrenean wool. Ingrain French embroidery cotton (La Croix, No. 14) may be used on white cambric bands. These borders would look well in red wool on white cambric for trimming children's frocks.

12. Crochet Insertion.

Materials.—Walter Evans and Co.'s Boar's Head cotton, No. 18; Walker's Uncotopic Penelope needle, No. 4.

The First Side.

1st Circle.—Make 13 chain, turn, miss the last 8 chain, and work 1 single in the 9th stitch so as to form a round loop, and leaving 4 chain turn so as to cross it, and in the round loop work 8 plain, which should cover half of the foundation round them for

The Oval.—Make 10 chain, miss the last 4 chain and work 1 plain in the 5th stitch, leaving 5 chain; this forms the 1st Dot; and for the 2nd Dot make 5 chain and work 1 plain in the 1st stitch of these 5 chain; then for the 3rd Dot, make 5 chain and 1 plain in the 1st stitch; and for the 4th Dot, 5 chain and 1 plain in the 1st stitch; then to join the Dots work 1 single in the last stitch of the 5 chain left before the 1st Dot.

Repeat the Circle and Oval until the length required is made, ending with the 8 plain in the Circle.

The Second Side.

To finish the Circle work 8 plain more in the same round loop, then on the next stitch of the 4 chain left between the Circle and Dots work 1 single, and for the

1st Dot—Make 9 chain, and missing the last 4 chain, work 1 plain, leaving 4 chain; and for the 2nd, 3rd, and 4th Dots make (5 chain and work a plain stitch in the 1st stitch of the 5 chain 3 times); then to join the Dots work 1 single on the last stitch of the 4 chain left before the 1st Dot; then make 3 chain and work 1 single on the 1st chain stitch before the next circle; repeat from the commencement of the second side.

The Heading.—1st row—Commence on the centre of the 8 plain of the 1st Circle, and work 1 long stitch, then 5 chain and 1 plain between the 2nd and 3rd Dots; 5 chain and 1 long on the centre of the next Circle. Repeat to the end. Fasten off.

2nd row—Commence on the 1st stitch of the last row, make 2 chain, miss 2, and 1 treble. Repeat to the end.

Work the heading on the other side to correspond.

13. Crochet Border.

Materials.—For trimming petticoats, drawers, &c., use Walter Evans and Co.'s Boar's Head crochet cotton, No. 16; Walker's Uncotopic Penelope needle, No. 4; for a coarser size, use cotton No. 12; needle, No. 3.

The Centre.—Commence by making a foundation chain of about a third longer than the edging is to be when finished. At the end turn, and, missing the last chain, work 4 plain in the 4 following stitches, of the chain *; then make 9 chain, and missing 9 stitches of the foundation chain, work 4 plain along it. Repeat from * to the end and fasten off.

1st row—Commence in the 2nd stitch of the first 9 chain, and work 3 plain in the 3 following stitches of the 9 chain; then * 1 chain, miss 4, and in the second stitch of the 4 plain in the centre, work 2 long stitches, both in the 1 stitch; then 3 chain, and in the next stitch of the 4 plain work 2 long stitches; then 1 chain, and missing 4 stitches, work 3 plain on the 3 centre stitches of the next 9 chain; repeat from * to the end; then work this row on the other side of the centre so as to correspond with the 1st row.

2nd row—Work on the 1st row 2 chain, miss 2, and 1 treble; repeating to the end.

The Edge.—1st row—Work on the 1st row, on the other side, and commencing at the 3 plain, work 7 plain, * then 5 chain, miss 1, and 11 plain, repeat from * to the end.

2nd row—Commence at the 1st stitch of the last row, and work 3 treble over the 3 plain; then 4 chain, miss 6, 2 treble in the centre stitch of the 5 chain, then 4 chain, miss 6, 3 treble over the 3 plain of the last row. Repeat.

3rd row—3 chain and 3 plain alternately to the end.

14. Crochet Edging or Trimming.

Materials.—Walter Evans and Co.'s Boar's Head crochet cotton, No. 16, and Walker's Uncotopic needle, No. 3½. For Antimacassars, &c., cotton No. 10, and needle No. 3.

The Insertion.—Commence with a chain of twenty-four stitches.

1st row—Miss the last 6 chain, and work 1 treble in the 7th stitch of the foundation; then 4 chain, 1 treble in the next stitch of the foundation, 5 chain, miss 3, 1 treble; then (4 chain and 1 treble in the next stitches of the foundation, 4 times); 2 chain, miss 3, 1 treble, 4 chain, 1 treble, 2 chain, miss 2, 1 treble, turn back. This row being for the foundation is not repeated.

2nd row—6 chain, miss 4, 1 treble in the last 4 chain; then 4 chain and 1 treble in the same 4 chain as before; 5 chain, miss 19, and work 1 treble in the 4th loop of chain of last row; then (4 chain and 1 treble in the same loop of chain as before, 4 times); 2 chain, miss 7, 1 treble in the next 4 chain; 4 chain and 1 treble in the same 4 chain as before; 2 chain, miss 2, 1 treble in the 2nd stitch of the 6 chain at the side; turn back. Repeat this 2nd row until sufficient length of the insertion is made.

The Heading.—Work a row of treble stitches along one side of the selvedge.

The Scallops.—1st row—Commence in the 1st loop of chain which forms the selvedge of the insertion, work 4 chain and 1 plain in each of the next 5 loops; * then make 30 chain, and down this chain miss the last 5 stitches, and work 1 treble, then (1 chain, miss 1, and 1 treble, 12 times); and in the next loop of the insertion work 1 plain; then (4 chain and 1 plain in the next 9 loops). Repeat from * to the end. Fasten off.

2nd row—Commence in the 1st loop of the last row; work 8 chain, 1 plain in the next loop; * then (4 chain and 1 plain twice in the same loop as before); 6 chain, miss 6, 1 plain in the next loop but one (4 chain and 1 plain twice in the same loop as before); then missing the next 6 stitches, work 24 treble up the treble and chain stitches of the 1st row; to turn the end, work (2 treble both in one stitch, 7 times); then 24 treble, 1 plain in the next loop of the insertion; and in the next loop, 4 chain and 1 plain twice; 6 chain, miss 6, 1 plain in the next loop but one; 4 chain and 1 plain twice in the same loop; 8 chain, miss 6, 1 plain in the next loop but one. Repeat from * to the end. Fasten off.

3rd row—Commence in the 8 chain of the last row, and in it work 1 treble, 4 chain, and 1 treble; then 2 chain, and in the 6 chain work 2 treble, 4 chain, and 2 treble more; * then 3 chain, and in the 6th stitch of the 24 treble work 2 treble; 4 chain, and 2 treble more in the same stitch as the last. Repeat from * 8 times more, that is, all round the treble stitches. When finished, work 3 chain, and in the next 6 chain work 2 treble, 4 chain, and 2 treble; then 2 chain. Repeat from the commencement of the row. Fasten off.

4th row—Commence in the 4 chain of the last row, and work in it 1 plain, 4 chain, and 1 plain; * then 5 chain, miss 7, 1 plain in the 4 chain between the treble stitches; 4 chain, 1 plain in the same 4 chain as before. Repeat from * to the end. Fasten off.

5th row—Commence in the 4 chain of last row, and work in it (3 chain and 1 treble, 3 times), 4 chain, miss 18, 1 plain in the next 4 chain but one; then 4 chain, miss 7, and in the next 4 chain work 1 treble; then

Digitized by Google

3 chain and 1 treble 3 times in the same 4 chain as before: 5 chain, miss 7, 1 plain in the next 4 chain; 5 chain, miss 7, 1 treble in the next 4 chain; then 3 chain and 1 treble 3 times in the same 4 chain; 6 chain, miss 7, and in the centre 4 chain work 1 treble; then 3 chain and 1 treble 5 times. Work the other side to correspond, and repeat.

6th row—Commence in the 2nd plain stitch of the last row; work 4 chain, and in the next 3 chain between the treble stitches work 1 plain; then 4 chain and 1 plain 3 times in each of the loops of 3 chain round the point of the Scallop; when the three centre patterns are finished, work 1 plain on the next plain stitch, then 4 chain, and between the next treble stitches work 3 loops as before; then to attach the Scallops together work a treble stitch in the corresponding loop of the 2nd Scallop, and repeat the pattern.

Square Nets and Netting.

INSTRUCTIONS for making square-meshed, square and oblong nets, as foundation for Cluny lace and other purposes, will doubtless be useful to our readers. As the mode of making these nets is not generally known, we have much pleasure in inserting the following description of the process.

We may premise that we shall always term the stick on which the netting is made *a spool*, and not a mesh—which name is only properly applied to the opening between the threads of the net; in so doing, we shall escape from such absurdities as the following, taken from one of the best authors on netting:—"The method of netting *without a mesh*, is by passing the needle *through the mesh*," &c.

By the term loop, we mean to signify the loop formed around the spool, as each knot is made in succession, the last row netted always consisting of a series of loops.

Square-meshed nets, as shown at Fig. 1, are made by commencing at one angle or corner, and netting diagonally across the square to the opposite

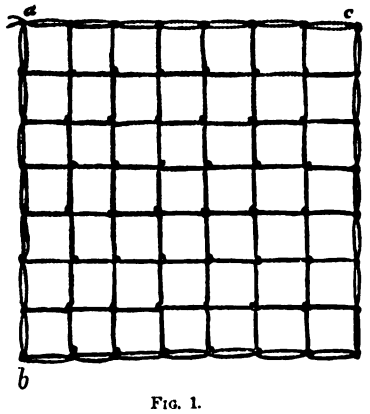

FIG. 1.

corner. In beginning a square-meshed net, one loop is first netted on to the cord which is used as a foundation; the spool is then withdrawn, and two loops are netted into the one first made. The last of these two should always be made with what is known as the fisherman's knot, as if made in the ordinary manner a lopside knot is the result. The mode of making the fisherman's knot is described below. The spool is again withdrawn from these two, and a new row commenced; this will consist of three loops, two being formed by taking up the last loop of the previous row twice. The netting is to be continued in the same manner, the last loop of every row being taken up twice. By this means a half-square of netting will be formed, of which the last row is the diagonal, and the two sides—*a c* and *a b*—form the selvedges on each side of the half-square. When the sides of the square are of the required length, a single row should be netted without the extra loop at the end; and then, to form the remaining half of the square, the rows should be continued, but with this difference, that the last two loops in every row should be taken up with the needle at once; thus the width of the netting will be gradually diminished to one mesh, and when the net is stretched out it will be found a complete square formed of square meshes, as shown at Fig. 1.

In order to make the angle neater, the spool should be withdrawn before the last knot is tightened, so that the last loop is made to come into the angle; and the first knot should be untied, and the loop also drawn up tight, so as to render the net correct in shape.

The netting of an oblong net, such as shown in Fig. 2, is a rather more complicated matter. This is commenced with a half-square, as before, the length of either side determining the width of the net. This done, at the end of the next row the last two loops are to be taken up at once; but on returning to the end of the succeeding row, two loops are to be netted into one, as before, and this alternation is to be continued. At the end of *every other row two loops are to be taken up at once*, and at the end of *the alternate rows two loops are to be netted into one*. The side at which the latter is done—*a c d*—will be the long side of the oblong, and when this is of the required length, two loops are taken up at *each end of each row*; and the net diminished to the point *e*.

In making an oblong great care must be taken always to diminish or increase at the proper sides of the net, otherwise a confused mass of useless netting will be the result. This is easily avoided if a few threads of coloured string or a riband is tied at the angle *b*, to show which side should be diminished by taking up two loops in one.

The mode of netting the fisherman's knot, alluded to above, is as follows: Let the spool and netting be held in the usual manner. Then, to make a new loop, bring the needle backward over the spool; then carry it forward under the spool, *but without catching the string on any finger*. Pass the needle upwards through the loop that is to be taken up, and pull it close up to the spool, seizing the twine passing through the loop with the forefinger and thumb of the left hand. The loose twine should be allowed to fall over to the left, and down in front over the netting; and the needle should then be passed upward between the loop that is being taken up and the last one secured. On tightening the loose twine, the knot is completed.

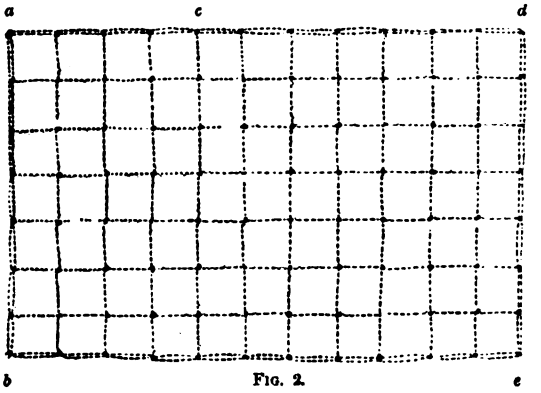

FIG. 2.

This mode of netting is shown in the engraving (Fig. 3), where the twine may be traced from the last-formed knot, round the spool, through the loop, then to the left, where it is secured by the thumb; the loose twine is shown lying over the netting, and the point of the needle is just inserted behind the loop that is being taken up. To finish the knot, the needle must be pulled through, and the string drawn tight.

A very slight examination will show that the knot made by this method is precisely the same as that resulting from the common mode of proceeding.

We have purposely made this description as minute as possible, so that, doubtless, it appears complicated; but in reality the stitch is much more simple then the one ordinarily used, and can be made with very much greater rapidity. It necessarily follows that anyone used to the old mode will find this new plan awkward at first, and will fail to net as neatly as

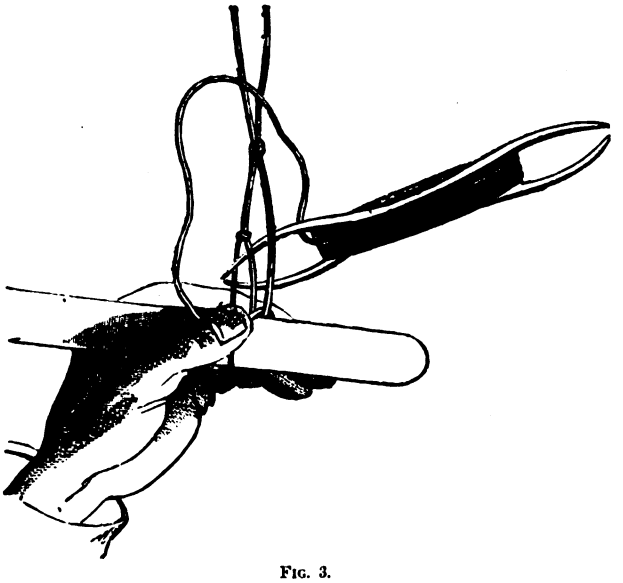

FIG. 3.

before; but the strangeness is soon overcome, and great rapidity speedily obtained. With stout cord the advantage is very great; there is no sawing required to tighten the knot, consequently no fraying either of the twine or the fingers.

Another immense advantage possessed by this knot is, that it can be made, using one, two, or three fingers instead of the spool, and with a short end of the string without a needle; so that in mending nets it is really invaluable.

Two points, however, we have omitted to mention: the method is not adapted to very small netting, and therefore it will not suit all varieties of ladies' work; and it is always necessary that the spool should be larger than the needle, otherwise the latter sticks in passing between the loops. Again there are certain stitches that cannot be made in this manner, such as the first row or foundation of a net.

15. Guipure d'Art Squares.

Guipure d'Art is now one of the popular employments of ladies who employ their leisure hours in fancy work, and it can be adapted to many useful articles of furniture. It is easy to accomplish, and is fascinating work, as every stitch tells. After the foundation is netted, it should be stretched tightly on a small wire frame bound with ribbon, which is convenient to hold. Some workers recommend the Flemish thread for producing it. There are eight numbers of this thread used in guipure d'art—viz., 24, 42, 48, 60, 70, 84, 96, and 120. The first, third, fourth, and sixth of these numbers are generally employed for the purpose. Long and square frames for embroidering the netted foundation are to be procured, as well as tasteful boxes for holding this now favourite work.

For the four accompanying designs the materials required are: Walter Evans and Co.'s Mecklenburgh linen thread, Nos. 4 and 10, a steel netting needle, and meshes No. 12 and 8 bell-gauge; also Walker's elliptic needles No. 6, and a small wire frame about four inches square.

The Netted Squares.

Fill the needle with No. 6 thread, and using No. 8 mesh, commence on a piece of thread for the foundation. Net one stitch, turn back and net two stitches, both in the first stitch; turn back, net one stitch plain, then net two stitches in the last stitch. Continue working backwards and forwards, and netting two stitches in the last stitch of each row, until it is increased to twenty stitches; after which, net one row quite plain, then to decrease the square, net two stitches together at the end of each row, until it is decreased to two stitches, then net them together without the mesh, so as to make a small stitch; this finishes one square, and eight more will be required. The squares should now be washed, stiffened, and pinned out. When dry, sew one of them in the frame, and embroider the pattern on the netting with No. 10 thread and No. 6 needle. All the ornamental stitches used in darning these squares will be found illustrated on an enlarged scale, with the needle placed in working position, so as to obviate the necessity for any further written directions.

16. Description of Fancy Berlin Stitches.

These designs will be found useful for slippers, sofa cushions, ottomans, chairs, and a variety of other purposes.

No. 1 is the ordinary cross stitch, worked on Penelope canvas; the dividing lines are in black wool. The darker stripes have a green ground with crimson squares on it, the light stripes have a white ground with green squares. The squares are further enlivened with a single cross on each stitch in gold coloured silk. This pattern is easy to work, as but little counting is required.

No. 2.—This pretty stitch is very quickly worked, and for sofa cushions, as a means of using up odd skeins of wool, it will be found invaluable. It is worked on coarse Penelope canvas. A row of double cross stitch, known as either Leviathan or Smyrna stitch, commences the pattern. This row is followed by two lines of narrow black silk *soutache* or braid, which are held with the thumb while being sewn over with two lines of witch stitch in white purse silk. The two lines of braid are followed by a row of wool in double cross-stitch, each line being of a different colour; the bright shades of scarlet, blue, green, and mauve producing the best effect. Care must be taken to select braid of the correct width, two rows of which will be equal to the single row of wool.

No. 3 is worked in two colours, with four shades of each colour. Contrasts are the most effective—such as violet and green, blue and orange, &c. Our illustration is worked in pink and grey white standing for the lightest shade of grey. Commence with the darkest shade, and work over eight threads of canvas. For each succeeding colour commence two threads further off. Common, and not Penelope, canvas is the material on which this stitch should be worked.

No. 4 is a variation on the ordinary leviathan stitch, and is produced thus: instead of the usual eight stitches taken over four threads in a vertical and horizontal direction, our engraving represents the same only taken over three stitches. The first stitch is taken over two threads straight across the canvas, the second over four threads across, and the third and last over two threads. The thin crosses are over the larger ones, produced in gold cordonnet.

No. 5.—The variety of stitches in this design renders the work, when completed, highly effective. What is called the herring-bone stitch on canvas is clearly illustrated in our engraving, by the needle being placed in holes of the canvas as it is worked; the alternate rows are cross-stitch. The design commences thus: A row of herring-bone stitch in green filoselle, and a row of cross-stitch in black wool; then follow in the same succession alternate lines of green herring-bone and black cross-stitch, the former varied, as indicated in our design, with lines of dark violet and white. The violet stripes, and the first of the three green stripes, are worked over with white purse silk in herring-bone stitch; the black lines are also included when this is the case. This design well repays the trouble of working, and the colours can be varied according to taste.

No. 6.—This effective and quickly executed stitch is to be worked on Penelope canvas; the manner of working is so clearly illustrated that any written explanation would be superfluous. Our pattern is worked in stripes with cinnamon colour and mauve wool, three shades of each colour. The stripes are separated with a double row of cross-stitch in black wool, and these latter are afterwards crossed with maize filoselle. Four lines of each shade are worked to form every separate section of the shading. The colours may be varied, a pleasing contrast being the principal point for the successful effect of the work. If this stitch is used for sofa pillows, the furniture of the room must regulate the selection of the colours.

No. 7.—This stitch is one of the many variations of cross-stitch, and is so clearly illustrated in our engraving that any further description would be superfluous. The dark squares are all worked with black wool, and the alternate squares as follows: brown with a white centre, and green with a gold centre. The black squares are further ornamented with five crosses executed in gold-coloured cordonnet. It will be found useful for sofa cushions, &c.

No. 8.—This stitch is flat when worked, and is, in fact, satin stitch on canvas. The colours used in our pattern are Havannah brown, violet, and white. The violet is represented in the engraving by the darkest shading. Penelope canvas should be used, and the needle should for every stitch take up six threads of the canvas. The white and brown diamonds are, when completed, crossed with gold fil selle.

A Knitted Purse.—Some very pretty purses may be knitted with fine netting silk and small steel needles, using steel or gold beads, which must be threaded on the silk before the work is commenced. The required number of stitches must then be set on, and the knitting done in the plain stitch like a garter, letting a bead down on each alternate stitch of each alternate row, which will bring all the beads on to the right side of the purse. For a long purse scarlet, black, blue, orange and white silk may be used, working about four or five rows of each, and then finishing the purse to the length required in blue or black. The variegated end is sewed up square, with a tassel at each corner, and the self-coloured end gathered in to a long tassel of steel or gold beads to correspond with the work. The part so knitted has a very good effect, and the work is simple and quickly done.

Pence Purses.—Four needles, No. 20. Claret and green, scarlet and black, single Berlin wool, or any two colours that may be preferred. Commence with the *handle*, by casting on 4 stitches with *claret*, and knitting in plain rows, backwards and forwards, until it be two inches long; then cast on 6 stitches on the same needle, 26 on the second, and 10 on the third; then from the first needle * knit 2, purl 2, alternately; from the second needle purl 2, knit 2, bring the wool forward, slip 1, knit 1, pass the slip-stitch over it; knit the remaining stitches plain, within 7 of the end; then knit 2 together, knit 1, purl 2, knit 2; on the next needle purl 2, knit 2, alternately. Repeat from * for 3 rounds, until 12 stitches only remain on the second needle; this finishes the *spout*. Knit 3 rounds, continuing the ribbing, of 2 stitches, purled and plain. Knit 5 rounds with *green*, 3 with *claret*, 5 with green, continuing the ribbing as before; knit 1 plain round, and purl 3 rounds, with *claret*; knit 1 plain round, bringing the wool forward between every two stitches; purl 3 rounds, knit 1 plain round. In the next two rounds bring the wool forward and knit 2 together; knit 1 plain round with *claret*, purl 3 rounds, knit 1 round plain. In the next 2 rounds bring the wool forward, and knit 2 together; knit 1 plain round, purl 3 rounds. Divide the stitches on the four needles, 12 on each; then knit 5 rounds plain, decreasing 1 stitch, alternately at each end and in the middle of the needle; knit 3 rounds more plain, decreasing occasionally. Divide the stitches on three needles, knit a plain round, and purl 3 rounds without decreasing; finish with plain rounds, decreasing, until 4 stitches only remain on each needle. Draw up the small opening, and attach the lower end of the handle to the side of the jug.

Under-Petticoat.—The following directions for making an under-petticoat in crochet will be found simple and inexpensive, and very pleasant work for leisure hours, as it does not require much attention. The petticoat is made of Scotch fingering wool, of which about 5*s.* worth will be required. Black and white speckled wool, with some bright colour (such as scarlet or violet) and white have a good effect. Make a chain of 424 stitches with the speckled wool, and for the next row put a treble stitch with one chain between into every alternate stitch of the foundation. Turn back and do the same for four more rows (making five in all), only putting the treble into the space instead of into a stitch. At the beginning of each row throughout the work 3 chain must be done to represent the first treble. Five rows of any bright colour preferred; two rows of white, five rows of colour as before; five rows of speckled, two rows of colour, five rows speckled; five rows of colour, two rows white, four rows of colour; two rows of speckled, two rows white, two rows speckled; two rows white, in the last of which leave out the chain stitch between the trebles every twelfth time; two rows speckled, missing one space entirely about every twelfth treble in the first row; two rows white, missing a space every twelfth treble in the first row as before; two rows speckled, missing spaces in the first row as before; two rows white in the same way, and one speckled row without diminishing. The rest of the petticoat is all white, going on backwards and forwards till it is the length required, and diminishing in every alternate row by occasionally missing a space till it is the proper size for the waist. Then do a row of plain crochet at the top, putting one stitch into each space, and also down the two sides (putting three or four stitches in each space), to strengthen the edge as far as it is intended to leave open for the placket-hole. A row of plain crochet round the edge of the petticoat with the colour, strengthens it and looks neat. There is only one seam in the petticoat, the work being sewn up at the back when finished, leaving off at the placket-hole.

Dress and Fashion.

MOVEMENTS OF FASHION, 1866-67.

THE YEAR 1866 has seen many changes, but none greater than those to be remarked in ladies' dress. Crinolines have decreased in dimensions until there is just a suspicion of them, and nothing more; bonnets have grown wonderfully less, and become mere fanciful headdresses, taking various eccentric forms, and being generally worn perched at the summit of the head; short petticoats have come into vogue for outdoor wear; pleats have disappeared from below the waists of dresses; *peplums* have come in, *demi ajustes* have gone out; in fact, there seems a general shrinking and manifestation of collapse in many details of a fashionable lady's toilette very different from what the end of 1865 witnessed. This is the case with respect to many details; but as regards others, the facts are completely the reverse. Heads of hair seem, on the contrary, to have inflated, and the luxuriant growth of auburn locks is something to marvel at, were it not among "things generally known" that there is even more false addition worn than natural growth. Hairdressers drive a brisker trade than ever, for the new styles of *chignons* are coiled round and round like snail-shells, and to compass them at all satisfactorily, a thick length of hair measuring over a yard is positively necessary. To render this still thicker and more massive when coiled, a frizette is added inside the length, or *tail* of hair, as it is sometimes called. Then thick curls, and ringlets, and plaits, and rolls, are added *ad infinitum*, the grand object for a successful *coiffure* being an elaborate massive arrangement of hair, particularly at the back of the head. Not one Englishwoman in ten thousand is sufficiently well endowed by Nature to meet these requirements, consequently recourse is had to false additions, which, to do the hairdressers justice, are so artfully contrived that detection, even by practised eyes, is often a matter of difficulty.

No. 1. PROMENADE TOILETTE WITH SHORT SKIRT.

We will take a brief survey of the materials and styles now in vogue before directing the reader's attention to the different illustrations. For winter wear the newest fabric is plush, of a novel manufacture; entire suits—dress, petticoat, and paletot—are made of it. Her Royal Highness the Princess of Wales has already appeared in public on several occasions in plush suits, and her mother, the Queen of Denmark, has also had more

Digitized by Google

than one suit of this beautiful English manufacture. Velveteen is also a favourite material, and entire toilettes of black, grey, and mauve velveteen are very general. Brocaded Lyons silks are coming into favour; the reason of this re-introduction is the distressed state of the Lyons silk weavers. The Empress of the French set the example, and ordered a dress expressly for her *fête* day, which was celebrated at Compiègne last November. The material was ruby velvet brocaded with gold, and report says cost no less a sum than 28*l.* the *mètre*. The dress was tastefully trimmed with gold lace, and her Majesty, who, although rather stouter than of yore, is still pre-eminently handsome, looked exceedingly

petticoat and paletot are made of the same material; the latter is sleeveless, so that the skirt and sleeve match—the dress sleeves being the only ones worn. The long loose Venetian sleeves are once more making their appearance, but as yet are exceptions, and not the rule. For full dress and carriage toilettes the skirts are even longer than during preceding years, and trains are universal.

There are as many fashionable forms of bonnets as there are days in the week, but without doubt the *catalanes*, or small squares of velvet, in imitation of the Spanish headdress, predominate, and these are artfully adorned with lace, feathers, beads, and flowers. Bonnet strings are worn very wide, and

No. 2. PROMENADE TOILETTE WITH PEPLUM-BASQUE.

well thus draped in the products of those far-famed though of late rather neglected looms. Irish poplins, French merinoes, reps, and linseys are all popular—grey, mauve, and green being the fashionable colours. Striped fabrics have been worn so universally that they are at last giving way to round dots; and the taffetas with the metallic dots in relief are among the latest novelties in silks.

Short petticoats are decidedly gaining ground for out-door wear, and a much cleaner, healthier, and in every way more desirable toilette they prove for walking dresses. The short costumes are as yet fantastic in style; the

are frequently tied under the *chignon*; in many instances they are covered with either lace or blonde lappets.

Beads of all descriptions run riot on everything. They are embroidered thickly on Cluny lace, on cashmere, on velvet; and these fabrics are made up into jackets, paletots, and *peplums*. Jet, button, and feather trimmings are all in high favour, the last-named especially. Among the illustrations will be found specimens of the *peplum-basque* and the short out-door toilettes, both of which styles are likely to prevail during a portion at least of the year of grace 1867.

Digitized by Google

1. Promenade Toilette with Short Skirt.

A striped velveteen dress and petticoat to match; all the ornaments are black and white gimp. The skirt is gored, so that there are no pleats at the waist, and is fastened down the front with large fancy buttons; it is then looped up at the right side with a long piece of ribbon to match the gimp. The petticoat is bordered with a Russian pleating. A velvet hat with a wreath of shaded velvet leaves round it; a spray of similar foliage falls over the *chignon*.

2. Promenade Toilette with Peplum-Basque.

A black and white dress, either silk or foulard, with a *peplum-basque*. The skirt is trimmed at the seams and round the edge, likewise the bodice and basque, with black ribbon-velvet covered with white Cluny insertion. The velvet is two inches and a half wide on the skirt, and one inch and a half wide on the bodice—the lace in equal proportions. The waistband corresponds with the rest of the trimming. The *peplum-basque* is fastened on underneath the waistband, and only added for out-door wear. A Lamballe bonnet, consisting of tulle pullings covered with daisies and crystal drops.

Sponging a Black Silk Dress.—Sponge the black silk lightly on both sides with a perfectly clean sponge dipped in spirits of wine, then with a moderately warm iron smooth the silk over on one side, not the side that will form the outside when re-made. If the selvedges are too tight to allow the silk to become smooth, they will require snipping at intervals.

Black Silk Stockings.—The following is a good plan for washing black silk stockings. Make a lather with hot water and wash them well in it, but never rub the soap on them. Rinse them thoroughly in cold water, and mangle them instead of ironing. The mangle will give them a brighter appearance than the iron

Novel Application of Photography.—At Lyons a process has been adopted for photographing upon silk, linen, and other articles, and many persons have their portraits upon their linen instead of having it marked with their name or initials. In the silk shops various articles are exhibited, photographed with names and fanciful devices. The articles are not at all injured by washing. The process is easily and rapidly effected.

To clean Black Lace.—The lace must be carefully sponged with gin, or if preferred, with green tea, and afterwards wound round and round a bottle to dry. No iron must be used, as if touched with it the lace would assume a flattened and glossy appearance, which would spoil it. It is a good plan to fill the bottle with hot water to expedite the drying process. The lace must not be placed near the fire, or it will become of a rusty colour, and never look well.

Washing Materials.—Muslin-de-laine, chalis, and worsted damask may be cleaned by making a lather of chips of curd soap boiled in a little water; into this the article to be washed should be placed when the lather is cold; then well washed, rinsed quickly in a pail of cold water placed ready, wrapped in a cloth (or a sheet if the piece happens to be very large) well wrung, so that it is nearly dry when taken out, and then pinned upon a line; afterwards mangled. Black and white, as well as coloured materials, will look as well as new, *carefully* done this way.

Fashionable Riding Habits.—The present fashion for riding jackets is not a deep basque, but a *basquine*, beginning at the point of the jacket about an inch wide, and gradually increasing in width until it joins the sparrowtail at the back, which this year has been rounded at the edge instead of being straight. The length of the habit is cut to one yard and a half, from which a very wide hem is turned up. The skirt is much gored and quite plain in the front of the waist, with small pleats on the hips. With these exceptions, there is no difference in the make of habits since 1865 In hats there is no change.

To wash Cluny Lace.—Take an ordinary pint beer-bottle (of course seeing it is clean inside), and round the thick part sew one fold of strong linen or calico. Then carefully wind the lace round it, pulling it out to its full width, and tack each edge carefully, securing any parts of the pattern with the needle which are likely to be displaced in washing. Cover the whole with a strip of very thin book-muslin and make a lather with common yellow soap, adding a good quantity of blue, and a very little starch. In this boil the bottle well for some time, using an ordinary saucepan, then change the water, using no soap or blue, and let the boiling go on again; afterwards use fresh rinsing water pumping it over the bottle; dry gradually, and the lace will come off beautifully white and smooth, needing no ironing.

To wash Flannels.—Flannels and other woollen articles should be washed in rain water, never in hard water or in water softened by soda. They should not be rubbed with soap, but a good strong lather should previously be made with soap and clean soft water; add boiling water till it is as hot as the hand will bear, then dip the articles in lifting them up and down till well washed, but not rubbing them: squeeze (not wring) out the dirty suds, and use more clean if necessary. Thoroughly rinse in clean warm water, in which the blue bag has been dipped. Dry in the open air, if the weather be fine. If the articles are dusty, well brush or shake them before wetting. If they are very greasy add some ox-gall to the soapsuds, in the proportion of half a pint of gall to six quarts of suds; and in such case a second rinsing in clean water will be necessary to remove the smell.

To take Mildew out of Linen.—Rub the linen well with soap, and having scraped some fine chalk, rub it also on the place; lay the linen out of doors; as it dries wet it a little, and in twice doing the mildew will come out.

To clean White Cashmere.—If the laundress complies implicitly with the following directions, she may be quite sure that a white cashmere will not become the least yellow when washed. The cashmere must be washed with white soap (not too much of it) and cold water. When quite clean, it should be well rinsed in cold water with a little blue in it, then ironed while very damp with not a very hot iron, the ironing to be continued until the cashmere becomes perfectly smooth.

Moths.—Clothes that are in constant use, or that are often beaten or shook, are not attacked by moths; and the best plan with those articles which are not likely to be wanted for any length of time is to sew them up in calico, or pack them in paper, so as to exclude the parent moth, and thereby prevent her laying her eggs, the larvæ from which do the damage. Spirit of turpentine and benzine collas will also keep away moths, but the remedy may in many cases be thought as bad as the disease. Pepper, tobacco, and other things, are also used, but nothing, we think, equals properly packing for clothes, rugs, carpets, &c., not in use.

Non-inflammable Dresses for Ladies.—Muslins and similar fabrics, steeped in a seven per cent. solution of sulphate of ammonia, or a twenty per cent. solution of tungstate of soda, and then dried, may be held in the flame of a candle or gas-lamp without taking fire. That portion of the stuff in contact with the light becomes charred and destroyed, but it does not inflame, and consequently the burning state does not spread to the rest of the material. Both solutions are employed by dipping the clothes into the solution after they have been washed and rinsed. Tungstate of soda is used in the Queen's laundry. It is rather more expensive than the other; but it is preferable, as it does not in any way interfere with the "getting-up" of the articles.

To Fix Colour in Washing Materials.—The colour of washing materials may be preserved by using water that is only milk warm, making a lather with white soap before you put in the dress, instead of rubbing it on the material, and then by stirring into the first and second tub of water a large table-spoonful of ox-gall. The gall can be obtained from any butcher. The articles should be washed quickly, and then rinsed through two cold waters. Into each rinsing water stir a teaspoonful of vinegar, and after rinsing them wring them out immediately. When still a little damp bring them in, have irons ready heated, and iron them at once, as it injures the colour to allow them to remain damp too long, or to sprinkle and roll them up in a covering for ironing next day. If they cannot be conveniently ironed immediately, let them hang until they are quite dry, and then damp and fold them on the following day, a quarter of an hour before ironing.

Cleaning Ostrich Feathers.—When they have been *thoroughly* washed and rinsed, and passed several times between the fingers, or rubbed gently in the palm of the hand while in the soap, they do not require any further bleaching, but, on being dried, appear beautifully white. If the feather has been *dressed* previously, in which case a fine wire has been passed inside it, although not perceptible, it will be found that the feather can, with a little trouble and contrivance, be easily twisted into any shape or curl wished. The downy part of the feather, forming the *vane*, as it is termed by naturalists, can be curled by twisting it round a pair of scissors, or a thick netting-pin without the least difficulty, particularly if this be done before it is *quite* dry.

Our Portraits.

THE EMPRESS OF RUSSIA.

Her Imperial Majesty the Empress of "all the Russias" was born on the 8th of August, 1824. Her father was Louis, Grand Duke of Hesse-Darmstadt, who died in June, 1848; her mother was the Grand Duchess Wilhelmine Louise, daughter of the late Charles Louis, Hereditary Prince of Baden. She was baptised by the names of Maximilienne Wilhelmine Auguste Sophie Marie, and assumed the names of Marie Alexandrowna upon her reception into the Greek Church and her marriage with the present Emperor of Russia (then known as the Grand Duke Alexander), on the 28th April, 1841. The Empress is not only very beautiful, but is one of the most illustrious members of European royalty.

THE CESAREVNA OF RUSSIA.

The Cesarevna of Russia was born on the 26th of November, 1847; is daughter of the present King and Queen of Denmark, and sister of H.R.H. the Princess of Wales. Her Imperial Highness was baptised by the names of Mary Sophia Frederica Dagmar, but assumed the name of Mary Feodorowna on her marriage with the heir-apparent to the throne of Russia, the Grand Duke Alexander Alexandrowitch, which took place on Friday, Nov. 9, 1866.

THE ARCHBISHOP OF CANTERBURY.

The Archbishop of Canterbury was born in 1794, was educated at Westminster School and Christ's Church, Oxford, where he took first-class honours *in literis humanioribus*, and assumed the B.A. degree in the year 1815. In 1836 he became the first Bishop of Ripon, was translated to the See of Durham in 1856, was elevated to the See of York in 1860, and in October, 1862, he was translated to his present high position.

The Queen and the Royal Family.

THE QUEEN.—VICTORIA, of the United Kingdom of Great Britain and Ireland, &c., Queen, Defender of the Faith. Her Majesty was born at Kensington Palace, May 24, 1819; succeeded to the throne June 20, 1837, on the death of her uncle King William IV.; was crowned June 28, 1838; and married Feb. 10, 1840, to his Royal Highness Prince Albert. Her Majesty is the only child of his late Royal Highness Edward Duke of Kent, son of King George III. The children of her Majesty are:

Her Royal Highness Victoria Adelaide Mary Louisa, Princess Royal of England, born Nov. 21, 1840, and married to his Royal Highness Prince Frederick William of Prussia, Jan. 25, 1858, and has issue two sons and a daughter.

His Royal Highness Albert Edward, PRINCE OF WALES, born Nov. 9, 1841; married, March 10, 1863, Alexandra of Denmark (Princess of Wales), born Dec. 1, 1844, and has issue two sons, Prince Albert Victor, born Jan. 8, 1864, and George Frederick Ernest Albert, born June 3, 1865.

Her Royal Highness Alice Maud Mary, born April 25, 1843; married to H.R.H. Prince Frederick Louis of Hesse, July 1, 1862, and has issue two daughters and a son.

His Royal Highness Alfred Ernest Albert, born Aug. 6, 1844.

Her Royal Highness Helena Augusta Victoria, born May 25, 1846, married to his Royal Highness Prince Frederick Christian Charles Augustus of Schleswig-Holstein-Sonderburg-Augustenburg, July 5, 1866.

Her Royal Highness Louisa Carolina Alberta, born March 18, 1848.

His Royal Highness Arthur William Patrick Albert, born May 1, 1850.

His Royal Highness Leopold George Duncan Albert, born April 7, 1853.

Her Royal Highness Beatrice Mary Victoria Feodore, born April 14, 1857.

George Frederick William Charles, K.G., **Duke of Cambridge**, cousin to Her Majesty, born March 26, 1819.

Augusta Wilhelmina Louisa, Duchess of Cambridge, niece of the Landgrave of Hesse and aunt to Her Majesty, born July 25, 1795; married, in 1819, the late Duke of Cambridge.

George Frederick Alexander Charles Ernest **Augustus, K.G.**, Duke of Cumberland, and Ex-king of Hanover, cousin to Her Majesty, born May 27, 1819, married Princess Frederica of Mecklenburgh-Strelitz, and has issue a son and two daughters.

Augusta Caroline Charlotte Elizabeth Mary Sophia Louisa, daughter of the late Duke of Cambridge and cousin to Her Majesty, born July 19, 1822, married June 28, 1843, to Frederick, Grand-Duke of Mecklenburgh-Strelitz, and has a son.

Mary Adelaide Wilhelmina Elizabeth, daughter of the late Duke of Cambridge, and cousin to Her Majesty, born Nov. 27, 1833, married the Prince of Teck, June 7, 1866.

State Payments to Members of the Royal Family.

Her Majesty's Privy Purse	£385,000
The Trustees of the late King of the Belgians (of this £27,000 repaid)	37,500
Her Royal Highness the Duchess of Cambridge	6,000
Her Royal Highness the Duchess of Mecklenburg-Strelitz	3,000
His Royal Highness the Duke of Cambridge	12,000
Her Royal Highness the Princess Mary of Cambridge	3,000
Her Royal Highness the Crown Princess of Prussia	8,000
Her Royal Highness the Princess Alice Maud Mary	6,000
His Royal Highness the Prince of Wales	40,000
Her Royal Highness the Princess of Wales	10,000
His Royal Highness Prince Alfred	15,000
Her Royal Highness Princess Helena	6,000

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New Moon on the 6th, at 12.30 a.m.; first quarter on the 13th, at 4.34 p.m.; full moon on the 20th, at 7.36 a.m.; last quarter on the 27th, at 2.47 p.m.

THE PLANETS.

Morning Stars—Mercury, Venus, and Saturn. Evening Star—Jupiter.

REMARKS ON THE WEATHER.

In the first month of the year which, in the most natural division of the seasons, constitutes the second month of the Winter quarter, heat is at its lowest in all its particulars. The mean temperature varies from 39° 6, the mean highest in the day, to 32° 6, the mean lowest at night; yet the mean of the 24 hours, upon a long average of years, does not fall below the freezing point. Continued frost is consequently always an exception to the general rule of the climate; but the majority of nights are frosty. If we denote the complete saturation of the air with moisture by 1000, the mean state of this month would be 939. The quantity of rain greatly exceeds the amount of evaporation. The mean temperature of London is about 2° higher than that of the surrounding country; the difference exists chiefly in the night, and is greatest in Winter and least in Spring.

GARDEN PLANTS IN FLOWER.

Laurustinus (Viburnum Tinus); Bearsfoot (Helleborus fœtidus); Garden Anemone (Anemone hortensis); Christmas Rose (Helleborus niger); Yellow Hellebore (Eranthis hymenalis); Sweet Coltsfoot (Tussilago fragrans); Snowdrop (Galanthus nivalis); Japan Quince (Cydonia japonica); China Roses (Rosa indica); and Japan Allspice (Chimonanthus fragrans).

Useful Hints for the Household.

Washing.

THE following exceedingly practical directions on washing and getting up muslins and fine linen, are extracted with some few alterations from a valuable treatise on Starch, by Messrs. Wotherspoon of the Glenfield Starch Works:—

As cleanness and purity are the two great ends in washing which laundresses strive to attain, it will be necessary, in the first place, to see that the various tubs and vessels into which the clothes are to be put are perfectly clean. When this has been attended to, take the finer description of articles first, such as dress shirts, &c., and put them into a tubful of pure water the night previous to your washing day, and allow them to steep till the following morning. The linens will be easier freed of the starch, and the clothes will be found to be much easier cleaned when this is done. When about to wash, take them out of the tub in which they have lain overnight and wash it out, then fill with hot water, adding a little washing powder, then take the clothes and soap each article well as you put it into the water, then rub thoroughly until the water becomes so tainted as to be unfit for further use, when you can fill another tub with water the same as the first, and transfer the clothes from the first to the second tub, where they are to be treated the same as in the first, and when completed, take out and put them into a bag and place it in the boiler, which should be previously filled with water, and into which some sliced white soap and soda have been put, and permit them to boil, say for an hour or so, when they can be taken out, and after half wringing them, take them to the green to bleach, spreading the right side uppermost, and watering them when required. Care must be taken not to apply too much water at one time, as if left in pools on the top of the clothes in summer, it has a tendency to yellow them in these particular places. When the first side has been sufficiently bleached they can be reversed, and the second treated in the same way. Clothes should all be allowed to bleach for a day at least; they are not easily injured with too much bleaching, if properly attended to. When they have been bleached long enough bring them in and put them into a tubful of pure cold water, where allow them to remain all night, whereby they will be as much benefited as by another day's bleaching. On the following morning take them from the tub in which they have been steeping, and after a slight rinse through the water, put them into another tub prepared for them, containing water into which a little blue has been put (lukewarm water is best), then, when steeped a few minutes, wring them out and hang up to dry. It is absolutely necessary to put all fine clothes into a bag when to be boiled, and to cut the soap into slices and mix with the water in the boiler. When so done, they are safe from being stained either by the sides of the boiler or by the soap adhering to them in small particles.

We have given an outline of the method of preparing the clothes mentioned, and will now proceed with our remarks on the *treatment of muslins*. White muslins should be washed in warm water, and rubbed with white soap alone, without putting any soda into the water. Two waters for these will be sufficient; then take to the green to bleach, and subject to precisely the same treatment as already mentioned for other clothes until finished.

Coloured Muslins are put into warm water the same as white ones, but instead of rubbing the soap on to them, it should be tied up into a cloth by itself, and boiled in a goblet of water, and when dissolved, the liquid poured out of the goblet into the tub containing the water intended for their use. The boiling of the soap for coloured muslins is necessary on account of the delicacy of some of the colours, which, if rubbed with hard soap, would be tainted a little by its strength. When put through two waters both soaped in this way, they should be taken out and put into a tubful of pure cold water into which a handful or two of common salt is put, and stirred round to mix with the water. This will assist very considerably in keeping the colours fast. Allow them to remain in this tub for a few hours, and take out and dry in the open air, if possible, in some place shaded from the sun, which should be kept entirely from bearing upon them as it destroys their colour.

STARCHING AND DRESSING.

As the success of the laundress depends not only upon her knowledge of and experience in her calling, as well as a strict adherence to system in all her arrangements, but, especially, upon her selection of the best starch and her adoption of the best methods of preparing it, we would urge upon all laundresses the necessity of attending most particularly to these two latter points, as by neglecting them all the labour and care bestowed upon washing and bleaching will be wasted. We recommend them to use the Glenfield Patent Starch, because we are certain, when the directions are strictly adhered to, it is more easily used than any other. As this matter so much affects the comfort and appearance of the wearer of the articles dressed, we give the following simple directions to prepare the Glenfield Patent Starch for use: The articles intended to be starched having been laid out in their proper place, put the necessary quantity of dry starch into a perfectly clean earthen bowl or basin, moisten it with lukewarm water and bruise it with the back of a table-spoon until it is reduced to a paste; next place the bowl on the table, take the kettle containing pure boiling water (be sure it is boiling) in your left hand, and the spoon in your right, pour the boiling water on the starch, and while pouring, stir moderately with the spoon until the starch becomes of the required thickness, which is most correctly ascertained by lifting a small portion in the spoon and pouring it back again. Proceed to use it *while warm* according to the following directions, by the laundresses of the first families of the country.

MUSLINS.

There are few articles passed through the hands of the laundress, requiring more care and attention than muslins, and few also that show

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New moon on the 4th, at 6.16 p.m.; first quarter on the 12th, at 1.40 a.m.; full moon on the 18th, at 7.41 p.m.; last quarter on the 26th, at 11.32 a.m.

THE PLANETS.

Morning Stars—Venus and Saturn. Evening Star—Mercury towards the end of the month. Mars is visible the greater part of the night.

REMARKS ON THE WEATHER.

The mean temperature increases nearly two degrees. This accession takes place principally while the Sun is above the horizon; the average maximum rising to 42° 4, nearly three degrees, while the nightly temperature advances about one degree, to 33° 7. This inequality is partly owing to the increased influence of radiation under a less clouded sky, which dissipates the increasing heat. The average of nights in this month, of which the air is frosty, does not exceed eleven. The quantity of rain is at its minimum, very little exceeding the amount of evaporation. The saturation of the air with moisture falls to 905. An abundance of hoar-frost is a well-known indication of rain. Great frosts are commonly preceded by continued thick mists, arising from the condensation of the vapours emitted by the rivers and other waters. Snow, when slowly produced, will often be found crystallised in the most beautiful forms.

GARDEN PLANTS IN FLOWER.

Snowdrop (Galanthus nivalis); Mezereon (Daphne Mezereon); Coan Sowbread (Cyclamen Coum); Wild Primrose (Primula vulgaris); Violets (Viola odorata); Lapland Diapensia (Diapensia lapponica); Spring Bulbocodium (Bulbocodium vernum); Fringed Star of Bethlehem (Ornithogalum fimbriatum).

the perfection of her work to greater advantage; therefore, to turn them out of hand successfully is, as anyone may readily suppose, a task accompanied with some little toil and difficulty. We have tried a variety of different experiments in the starching of muslins, for the purpose of discovering the best mode of dealing with these fabrics, and the way considered most satisfactory is, to have the muslin perfectly dry, and the starch made rather thick than thin, in a large basin. Then, dip the dress into the starch, which press well into the folds, then either wring gently or take the loose starch off with the hand and spread out before the stove and allow to dry thoroughly; water down afterwards to the proper dampness, taking all the creases carefully out, and roll up till next day for ironing. In ironing muslins, as well as other articles, great care is necessary to have the irons perfectly clean, and neither too hot nor too cold, as any of these two extremes is alike injurious to the success of the operation. Laundresses, in ironing muslins, require to have a long board for the purpose of placing inside the dress to allow its being done to better advantage. The board requires to be changed to fresh parts of the dress as the ironing proceeds. Commence and finish the body of the dress first, then iron the skirt (and flounces if any) and when completed hang up in the laundry. The heat will improve and beautify it considerably, both in stiffness and appearance.

LACES.

Laces, like muslins, require a good deal of care, and have to be rather tenderly treated—their texture being so fine, that any coarse treatment would be productive of ruinous consequences, and should be therefore carefully avoided. When laces require washing, they are not to be rubbed as ordinary articles are, but soaped and put into a small linen bag made for the purpose, tied close at the mouth, and put into a boiler for a few minutes—this will answer the same end as rubbing and will not injure the laces. After taking them out of the boiler, they should be spread out on the grass to bleach for a short time. When this is done they should be brought in and placed in a tubful of pure water by themselves—it will also be found beneficial to allow them to remain all night in the water—they can be taken the following morning and the water pressed gently out of them by the hand; they may then either be hung out in the air to dry, or dried indoors. When this is completed, they can be dipped into the starch, and then pressed and dried with a white cloth, giving them an air before the fire and putting aside for ironing—which is accomplished the same as with other articles. Laces are seldom or never wanted very stiff, therefore, if making starch for them alone, it should be made rather thin than otherwise. When lace is in very long strips it often perplexes the inexperienced how to manage it successfully. In such cases it should be doubled up half by half until it is less than a yard in length; then, take a needle and thread and fasten the plies together (a very few stitches will suffice), in which state it should remain until after starching. When about to be ironed, undo the sewing, open up and iron fold by fold, until finished.

PETTICOATS AND PRINTED CLOTHES.

Having now gone over the principal articles of feminine attire in which starch is employed, and described the method of treating each as found most suitable, we consider it almost needless to offer any remarks under this head, yet if omitting to do so our "hints" might be considered incomplete; therefore, for the information of those who are not quite versant in the art, we may be permitted to subjoin the usual and approved method of preparing these articles. Petticoats and printed clothes ought to be perfectly dry before being starched. They should be well soaked in starch made rather thick than otherwise, and the starch pressed firmly into the fibres, then wring the clothes softly and hang up to dry, after which moisten down with water till the required dampness, then lay aside and iron next day. Stiffness, in these, being more required than fineness of polish, they should be allowed to hang in the laundry a considerable time after being ironed. When allowed so to remain, they cannot fail to satisfy the wearer better than if ironed and put past at once.

SHIRTS.

Shirts should be dried before being starched. The starch having been made according to the directions on each package, in a vessel which has been thoroughly cleansed, proceed (while the starch is warm) to gather together the breast of the shirt and parts to be starched, which having accomplished, dip into the starch, and on withdrawal press the linen as firmly as possible so as to force the starch through all the fibres; then strip the starch off, and spread out over the "horse" to dry, which before an ordinary fire will not take more than five minutes. When dry repeat the operation, and if wanted very stiff, a third dipping will be necessary. After the last dipping in the starch, the clothes should be placed only a minute or so at the fire, after which they should be rolled up tightly and laid past for ironing. The starch should be made rather thin than thick, by being so it will soak into the linen better and more freely, than if made thick, and the linen will be of a more uniform stiffness. It is better to place all articles that have been starched before a stove or fire, than to hang them out in the open air; the air having a tendency to reduce the strength of the starch before it becomes dry. If the heat cannot be brought to bear conveniently in the same degree upon all the parts of the articles undergoing drying at the same time, they should be changed, in order that all the parts may be thoroughly dry before a second submersion in the starch. The ironing should be done the day following the starching. The clothes will then take on a better polish and the starch will not incline to stick to the iron; when this is completed they should be again placed on the clothes horse, and allowed to remain there all night with the heat bearing upon them. By adopting this principle the clothes will retain their stiffness longer in any kind of weather, and the wearer will be delighted with their elasticity and beautiful finish.

Another method is to make the starch pretty thick, and while the clothes are wet dip into the starch, squeeze the starch well through the clothes,

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New moon on the 6th, at 9.38 a.m.; first quarter on the 13th, at 8.47 a.m.; full moon on the 20th, at 8.55 a.m.; last quarter on the 28th, at 7.46 a.m.

THE PLANETS.

Evening Star—Mercury. Morning Stars—Jupiter and Venus.

REMARKS ON THE WEATHER.

With this month commences the spring quarter, the seedtime of the husbandman, when it is so important to the interests of agriculture that the superfluous moisture should be exhaled from the earth, which would prevent the proper preparation of the soil, and destroy the germinating principle of the grain. By a wise provision of Providence, therefore, the temperature of this month advances six degrees, while the dew point rises only four. The increase of temperature is chiefly during the day, and takes place by sudden starts, and not by a steady increase from day to day. Evaporation is rather more than doubled, as well as the quantity of rain, which it slightly exceeds. The moisture of the air is reduced to 831. Showers and hail are common, attended in some instances by frosty nights. Storms of wind may be expected about the equinox, and are distinguished from the equinoctial gales of autumn by their greater dryness.

GARDEN PLANTS IN FLOWER.

Spring Sowbread (Cyclamen vernum); Eastern Henbane (Hyoscyamus physaloides); Vernal Adonis (Adonis vernalis); Daffodils (Narcissus, many species); Van Thol Tulip (Tulipa suaveolens); Small Periwinkle (Vinca minor); Fritillary (Fritillaria Meleagris); Crown Imperial (Fritillaria Imperialis); Dog's-tooth Violet (Erythronium Dens Canis); Hyacinths (Hyacinthus orientalis); Cornelian Cherry (Cornus mascula); Dwarf Almond (Amygdalus nana); Blackthorn (Prunus spinosa).

then strip it off and spread out before the stove for about two minutes; after which, roll up and put past for ironing. On this principle, one starching will suffice.

We append a third mode of starching shirts, which in many places is practised with perfect success.

Have the shirts completely dry before being put into the starch, which should be made moderately thick, press the starch thoroughly into the linen, and then take as much of it off with the hands as possible. After which, put the starched parts into a clean white cloth and squeeze firmly, until all the exterior starch on the linen is absorbed by the cloth; then hang a minute or so at the fire to dry, after which moisten the body with a little water, then roll up and put past for ironing. Some people dispense with the hanging to the fire, as they say, if the weather be warm or the laundry hot it is unnecessary; but the majority of laundresses agree, that linens are much the better of an air at the fire before putting past, as they consider that the heating allows the ironing to be better performed and the clothes to acquire a more glossy appearance.

After shirts have been starched they should not be allowed to remain at the fire until *dry*, as they would thereafter require to be damped with water before they could be ironed—a practice which should be discarded, as when done in that manner they neither retain their stiffness so long nor look so well as when put past in a damp state.

GENTLEMEN'S COLLARS.

The next article in importance to the shirt for gentlemen's wear is the collar, which, indeed, in many cases, and especially during the winter months, may be said to be the leading article of gentlemen's dress prepared by the laundress; for however well dressed the shirt, and however elegant and pleasing the other garments may be, anything defective in the getting up of this important article, not only contrasts ill with the neatness and splendour of its associates, and with the wearer's general appearance, but adds considerably to his annoyance and discomfort. Too much care then can scarcely be bestowed on the getting up of this article, seeing its position is so conspicuous, and that its perfection and elegance adds so much to the comfort and satisfaction of the wearer. As collars are almost in every case preferred or required stiff, we would recommend the starch being made rather thin, and the collars dipped into it three times, pressing or squeezing the starch each time well into the linen, and stripping it off and drying before the stove five minutes between the times. If done on this principle, the collars will be found to retain their stiffness and elasticity longer than by the common practice of making the starch thick, and dipping the collars into it only once; for the starch being made thin penetrates better into the linen than when thick, and being dried before each starching, they absorb more starch, and will be stiffer, and consequently retain their firmness as long as desired. Place the collar for only a minute or so at the fire after the last starching, then put past for ironing.

IRONING.

As there are different ways of starching adopted by different individuals, so also are there different ways of ironing; and as a great deal depends on the success of this operation, for the pleasing both of the laundress and the wearer, we consider it our duty to place before our readers the best method we have discovered for the attainment of this end. Collars, the same as shirts, should be ironed the day following the starching; by which time the starch will have gradually dried up, and left the collar only damp—the condition most suitable for ironing. Place a table-cloth, or other white cotton cloth, over the top of the ironing-blanket; this will be found better than ironing upon the baize, and prevent any hairs from sticking to the collar: having done so, place the collar in a semicircular position right side up, then apply the iron with a firm pressure to the centre and run to the point, then glide the iron back and over the other half, and one turn or so more from point to point will do; then reverse the collar, and run the iron once lightly over the inside, then hang on the clothes-horse before the stove same as the shirts; when ironed in this position they will be found to incline to curl to the same shape in which they are worn. Ironing collars straight should never be done, as the collars remain straight, and are never so agreeable round the neck when they have to be bent in putting on.

CONCLUDING REMARKS.

We would further add, in conclusion, that the utmost care should be taken to have the water by which the starch is to be made perfectly free from all impurities, as, if at all dirty, it is impossible to make the starch as pure as it is needed to satisfy the fastidious.

Some laundresses make a practice of putting various ingredients into the starch when making it, thinking they are thereby adding to its virtues: but we consider this perfectly unnecessary. The hotter the starch is used the better, both for stiffening and imparting a finer and more glossy surface to the linens when ironed. It is a matter of the greatest importance to keep the irons perfectly clean, and free from all stains, smoke, &c.; unless this is carefully attended to, the laundress, however willing and anxious she may be to complete her work creditably, will undoubtedly fail in doing so, and ought therefore to give special attention to this important branch of her profession. In ironing articles, of whatever description, the irons should all be brought to the exact heat, neither too hot nor too cold; and if so, the most pleasant results will follow. The finer the texture of all fabrics, the better gloss and polish will be imparted when properly ironed. Hence it is that laundresses generally prefer dressing fine clothes to coarse ones, their taste and skill appearing to more advantage; fine articles, therefore, are alike prized by both laundress and wearer.

In concluding our remarks, we may observe that all clothes which have been previously starched and laid past, should, when required for use, be placed at the fire for a few minutes; if this is done they will feel more flexible and agreeable to the wearer, and their appearance be in consequence considerably improved.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New Moon on the 4th, at 10.4 p.m.; first quarter on the 11th, at 3.9 p.m.; full moon on the 18th, at 11.6 p.m.; last quarter on the 27th, at 2.1 a.m.

THE PLANETS.

Mars and Saturn are visible nearly all night. Morning Stars—Venus and Jupiter.

REMARKS ON THE WEATHER.

The mean temperature of the air rises only six degrees, and the dew point only four and a half. The mean of minimum saturation is 651. Evaporation is increased to 2.290 inches, and the quantity of rain does not exceed 1.786 inches. The power of radiation from the earth in its mean effect attains its highest amount. The most experienced meteorologists are of opinion, from long series of careful observations, that a wet spring is an indication of a dry time for the ensuing harvest. There are upon an average six frosty nights in this month. The greatest depression of temperature, in every month, happens all other circumstances being the same, a short time before sunrise.

GARDEN PLANTS IN FLOWER.

Wall Flower (Cheiranthus Cheiri); Hyacinth (Hyacinthus orientalis); Cowslip (Primula veris); Pasque Flower (Anemone Pulsatilla); Yellow Tulip (Tulipa sylvestris); Gentianella (Gentiana acaulis); Yellow Alysson (Alyssum saxatile); Spring Snow Flake (Leucojum vernum); Primrose Peerless (Narcissus biflorus); Sweet Bay (Laurus nobilis); Spring Crocus (Crocus vernus, and others); Bulbocodium (Ixia Bulbocodium); Swedish Dogwood (Cornus suecica); Common Almond (Amygdalus communis); Cherry (Prunus Cerasus); Bird Cherry (Prunus Padus); Common Laurel (Prunus laurocerasus); Black Hawthorn (Crattægus nigra); Snowy Mespilus (Amelanchier Botryapium).

Cooking Salt Cod.

SALTED cod is by the English considered only a dish of penitence; and most good housewives probably think that to serve it up in a nauseous form is prudent and economical, without reflecting that the chances are in favour of a much greater expense than the sum saved being incurred in medical attendance and physic.

There is not a more delicious or more wholesome article of food than the salted cod, provided it be carefully prepared; and among the various modes of doing this, we do not object, as one of the varieties, to the eternal egg-sauce. But this must be properly made, and as it is in such general use we had perhaps better begin with directions for making it.

Boil half a dozen eggs very hard; when cold, chop them of the size required; put a lump of fresh butter into a saucepan, with a small quantity of water, a little salt, and some flour; when the butter is melted, add the chopped eggs, and half a table-spoonful of lemon juice. Let the sauce boil up, then take it from the fire and put it into a sauceboat.

The fish must be soaked long enough to deprive it of almost all its salt. Indeed, it must be so fresh as to require even a little salt added to it. To boil it, the cod must be put into plenty of cold water, in a large boiler. The moment the water begins to boil, take it off the fire, and let the fish remain in the hot water until it is sufficiently done. Care must be taken not to break it in taking it out of the water; the best way to avoid this is to fasten the fish into a dish, and let the lattor be boiled with it—a practice very often followed in boiling a turbot.

We now proceed to point out a few of the several modes of dressing salted cod, so as to entitle it to assume the station it ought to hold at the tables of the rich, and to show the less affluent that they are treating with neglect one of the cheapest and most palatable dishes that could be afforded them.

The first process is that of soaking; this is done by putting the fish into plenty of cold water, which must be changed twice a day, until the salt is drawn out, a fact to be ascertained only by tasting a little bit of the thick part of the fish. The next thing to be done is to boil the cod; for this we have already given directions.

We begin with *Salt Cod and Cream Sauce.* After the cod is boiled, place it carefully in a dish with the skin downward; then cover it with the following sauce. Put half a pound of butter into a stewpan; as soon as it is melted, scatter over it a table-spoonful of flour. When the flour and butter are well mixed, and have begun to boil, add gradually a pint of fresh cream a little salt, a dessert-spoonful of anchovy sauce, a little cayenne and white pepper. Do not let it boil up, but allow it to thicken gradually, stirring it all the while with a wooden spoon. Garnish the dish with fried potatoes thus prepared. Peel the potatoes and cut them into balls of the size of a walnut. Put a lump of butter into a stewpan; when it boils, throw in the potatoes wiped very dry. Toss them until they are done; but take care they are not fried too much. If you do not like to garnish with the potatoes, have a dish of them upon the sideboard, to be eaten with the fish.

Salt Cod à-la-Maitre d'Hôtel.—When the fish is boiled, separate it into large flakes, but without their being detached from the skin or from each other, the skin being downward in the dish. Make your sauce thus:—To half a pound of butter add a table-spoonful of flour: when the butter and flour are properly mixed and are in ebullition, add gradually half a pint of water. Do not now let it boil. Season it with white pepper and salt to your taste, and add the juice of half a lemon, with some chopped parsley. Before you put this sauce into the dish, take care that the fish be well drained. Cover the fish with it. Garnish with fried potatoes like the preceding.

Salt Cod and Fried Onions.—Boil the cod as usual. Cut some onions into dice, and fry them brown in a stewpan. Then dredge them with flour. Add gradually half a pint of cream, and a little water. When the onions are well done, put in a good lump of fresh butter, and season to your taste. Divide the fish into separate flakes; put it into the sauce; let it have a boil, then serve it up hot.

Salt Cod and Boiled Onions.—Boil the fish, and put into a dish with the skin downward, and place boiled onions all round it. Put half a pound of butter into a stewpan with a table-spoonful of flour. When the flour and butter are well mixed, add gradually three-quarters of a pint of good gravy. Stir the mixture until it boils. Season it to your taste with pepper and salt. When the sauce is done, take it off the fire. When entirely off the boil, thicken it with three yolks of eggs beat up with the juice of half a lemon and a table-spoonful of water. Pour the sauce over the fish and onions. Parsneps may be eaten with this dish.

Salt Cod à-la-Provençale.—Boil the fish, and keep it hot. Pound four or five cloves of garlic, and put them into a stewpan with two table-spoonfuls of olive oil a quarter of a pound of butter, one anchovy chopped fine, pepper and salt to your taste. Keep shaking the stewpan until the contents are well mixed; then put in the hot fish, and continue to shake it until the whole forms a compact mass. Just before it is done, add a little cream. Serve it up immediately.

Flavoured Vinegar.

VINEGAR may be flavoured in a variety of ways, and is sometimes very useful for flavouring, &c. Capsicum vinegar, garlic vinegar, shallot vinegar, onion vinegar, caper vinegar, cress-seed vinegar, celery-seed vinegar, truffle vinegar, ginger vinegar, black-pepper vinegar, white-pepper vinegar, Chili vinegar, horse-radish vinegar, may all be made by steeping about an ounce of either of the articles in a pint of vinegar, letting it stand for fourteen days, and then straining and bottling for use. Tarragon vinegar, and others in which the leaf is the flavouring substance, are made by floating the leaves in vinegar, steeping for a fortnight and straining.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New moon on the 4th, at 7.40 a.m.; first quarter on the 10th, at 10.4 p.m.; full moon on the 18th, at 1.52 p.m.; last quarter on the 26th, at 5.22 p.m.

THE PLANETS.

Morning Stars—Venus and Jupiter. Evening Star—Mars. Saturn may be seen during the greatest portion of the night.

REMARKS ON THE WEATHER.

The temperature of the air still outstrips the advance of the vapour, and the atmosphere attains very nearly its state of greatest dryness. The state of saturation is 769; the mean minimum 597. Evaporation amounts to 3.286 inches, and rain to 1.853 inches. The force of radiation from the surface of the earth is 13°; its mean nightly effect 4° 2; the reduction of this effect implies a rather more clouded state of the atmosphere. The genial showers of this month are generally brought by the south-west winds. They greatly promote the progress of vegetation. Frosty nights are not uncommon, and produce great injury to the fruit blossoms. There are, in fact, only two months, namely, July and August, in which, taking into consideration the power of radiation, vegetation, in certain situations, is not occasionally exposed to a temperature of 32°.

GARDEN PLANTS IN FLOWER.

Poet's Narcissus (Narcissus poeticus); Milk Wort (Polygala vulgaris); White Peony (Paeonia albiflora); Columbine (Aquilegia vulgaris); Yellow Asphodel (Asphodelus luteus); Lily of the Valley (Convallaria majalis); Globe Flower (Trollius Europæus et Asiaticus); Laurel Rose (Rhododendron ponticum); Monkshood (Aconitum Napellus); Broom (Spartium scoparium); Lilac (Syringa vulgaris et persica); German Flag (Iris germanica); China Rose (Rosa indica).

Protecting Cucumbers, Melons and Vegetable Marrows.

AFTER trying various modes for protecting marrows and cucumbers from insects, we find the following superior to any other. Two small twigs of osier or other slender wood, about a foot and a half or two feet long, are bent over the young plants and the ends thrust in the ground, as represented

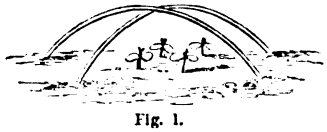

Fig. 1.

by Fig. 1. A newspaper is then placed upon these curved sticks, covering the whole, and the edges are fastened down all round by a covering of earth as shown in Fig. 2. This constitutes the whole contrivance, and affords complete protection from all insects; the paper being thin and porous, admits a sufficient supply of air and light, at the same time sheltering from

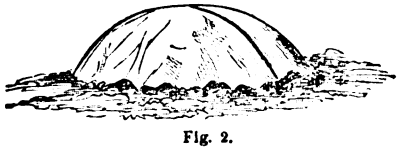

Fig. 2.

cold winds. Plants thus protected grow twice as fast as those fully exposed. Another advantage of this mode is the protection it affords from night frosts, rendering it admirably adapted to plants which have been early removed from the hotbed. Lastly and not least is its cheapness. A gardener will apply it to a dozen in as many minutes, the material costing nothing to anyone who takes a newspaper.

Unless the paper is very thin and fragile, heavy rains will not break it. Strong plants will sometimes burst through; but a better way, when they

Fig. 3.

become large, is to tear a hole in the top, as shown in Fig. 3, the remaining paper at the sides still affording some protection, although plants of this size are usually safe from injury. We obtained the suggestion from an American paper, but improved upon it as above described.

On the mixing of Eggs for a Pudding.

WE have frequently known not only that eight or ten, after having been broken into a basin, have been thrown away, because the very last that was added proved stale, but also that, owing to the carelessness of a cook, a valuable Christmas pudding has been spoiled by the admission of an egg that was musty; we would therefore suggest that a cup be used to break each egg into before it is put into the basin in which they are all to be beaten, the scent will thus detect if one be unfit for use.

Castor Oil Pomade for the Hair.

PUT half a pound of fresh lard into a basin, and pour a quart of boiling water over it; stir it, that it may be well melted. This purifies it and gets rid of the salt. When cold take it out of the water, squeeze it dry, and beat it with a wooden fork till in a soft cream; then add, by degrees, two ounces of fresh castor oil and twenty-five drops of essential oil of bergamot, or any other perfume preferred, and beat it till quite like a thick cream. Put it into covered toilet pots. If tightly covered it will keep a long time.

On keeping Gold and Silver Fish.

HAVING for three or four years preserved several fish that were presented to us, a few practical hints to those who may be in possession of those foreign beauties, and unskilled in their management, may not be unacceptable. The largest globe that London could furnish was provided. New River water, to the extent of three gallons, was given every day; and as the globe was emptied and replenished by means of a syphon, the fish were not disturbed. A frequent cause of their death is injudicious food, and too much of it; bread kills them, and biscuit is scarcely to be trusted, because the materials of which it is composed are not always pure. Foreign vermicelli, in minute portions, given at intervals of two or three days, is the very best food. Water contains so much nourishment, that if it be changed every day, little food need be given in addition. The most proper situation for a globe of fish is near a window (which in fine weather should be open), but not in the direct rays of the sun, because the spherical figure of the water, caused by the glass, may tend to form a burning lens. The centre of a green basket flower-stand, with exotic plants on each side, is a most elegant arrangement; at the bottom of the globe two or three shells, and a piece of red coral, may be introduced with admirable effect; they offer a double advantage, for they conceal any unsightliness caused by sediment in the water, &c. We have seen moss introduced; but as it is not an aquatic plant, it might prove distasteful, if not inimical to the fish. When the globe requires to be cleaned, which may be about once a week, it will be requisite to employ a net, in order to remove them; this may be made of gauze, attached to a long piece of whalebone bent round at the end, to form the receptacle, into which one fish at a time should be introduced, and lifted gently from the globe into a large bowl.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New moon on the 2nd, at 3.12 p.m.; first quarter on the 9th, at 6.37 a.m.; full moon on the 17th, at 4.55 a.m.; last quarter on the 25th, at 5.28 a.m.

THE PLANETS.

Morning Stars—Venus and Jupiter. Evening Stars—Mercury and Mars. Saturn is visible during the greater part of the night.

REMARKS ON THE WEATHER.

In this month the advance of the dew point and of the daily temperature are nearly equal. The dryness of the atmosphere is now at its height. The maximum temperature of the air averages 69° 4, the minimum 48° 1, and the greatest difference between the two happens at this time. The quantity of evaporation rises a little above that of last month, and amounts to 3.760 inches, and the quantity of the rain to 1.830 inches. The state of the air's saturation is 762; the mean minimum 597. The energy of the sun's beams is now at its height, as well as its mean *effect* at midday; the temperature of the air, however, does not attain its maximum till the two following months. The average number of days on which rain falls is under twelve, and is the lowest of any month in the year.

GARDEN PLANTS IN FLOWER.

White Jasmine (Jasminum officinale); Greek Valerian (Polemonium cœruleum); Sword Lily (Gladiolus communis); Dwarf Larkspur (Delphinium Ajacis); Honeysuckle (Lonicera Periclymenum et Caprifolium); Turkscap Lily (Lilium pomponium); Fraxinella (Dictamnus albus); Provence Rose (Rosa provincialis); Indian Pink (Dianthus sinensis); Gueldres Rose (Viburnum Opulus); Garden Pink (Dianthus hortensis); Monkey Flower (Mimulus luteus); Sweet William (Dianthus barbatus); Night-smelling Rocket (Hesperis tristis).

On the Preparation of Liqueurs.

THE enormous cost of the French, German, Dutch, and Italian liqueurs renders their being prepared in a cheap form a most desirable thing. As an agreeable termination to a repast, and at the same time a gentle and wholesome stimulus that induces the stomach to perform its digestive functions more kindly, these liqueurs are in great request among the wealthy; but, from the excessive price at which they are sold, the less affluent classes are debarred from their use.

The particular effect looked to from the use of these cordial preparations is a gentle action of the stomach, and nothing more; they are therefore to be taken sparingly: hence the object of having a very small glass, which contains a sufficient dose to prove beneficial.

In the countries where these liqueurs are made, they are distilled from the fruits and plants of which they carry the flavour, and mixed with sugar and alcohol. This mode of preparation, which is generally considered the best, is attended with considerable expense, without, in our opinion, giving the liqueurs a superiority over those made after the fashion we are about to indicate, that might compensate for the difference in the cost. Indeed, if the alcohol be good, we assume that as perfect liqueurs may be made by our recipes as by the most elaborate use of the still, and at one-third of the expense.

The spirit required for the liqueurs which we shall indicate—indeed, for all liqueurs made with the essential oils, should be sixty-two degrees over *proof*. If the liqueur to be made is intended to be kept, or for sale, a rectifier should be applied to for a few gallons of spirit carefully rectified to the requisite height. And let it be understood, that although these liqueurs are fit for use the moment they are made, they improve greatly by being kept, and after a few years might vie with the most famed.

The first thing to be prepared is the colouring matter. Four colours only are generally used in tinting liqueurs: yellow, red, pink, and green. They are thus prepared:—

Yellow.—Into a four-ounce phial put half a drachm of saffron and two ounces of spirits of wine, of the strength indicated as above. Let it stand until the spirit is tinged of a deep yellow; then strain it for use.

Red.—Put a quart of ripe bilberries, well cleansed from the leaves, into a clean tinned copper stewpan, with as much cold water as will cover them. Boil them until they are well broken, then throw them into a basin to cool. When cold strain them through a linen bag. To the juice add an equal quantity, by measure, of spirits of wine, of the strength already indicated. Filter the mixture through filtering-paper, and bottle it for use.

When no bilberries are to be obtained, the red colour may be produced by infusing, during a fortnight, two ounces of red sandal-wood in a pint of spirits of wine. If, at the expiration of that time, the colour should not be dark enough, the addition of a little sub-carbonate of soda will give it the required tint.

Pink.—Dissolve half an ounce of cochineal in a sufficient quantity of spirits of wine.

Green.—Put a handful of well-cleansed vine-leaves, or spinach, into a decanter, and fill it with spirits of wine. Let it stand in the sun, or near the fire, during ten days. When the spirits of wine have become of a bright green, the preparation may be strained for use.

The colouring matter being ready, the next thing to be thought of is the syrup, which is made in the following manner.

Put a quart of water over the fire, in a well-tinned and exceedingly clean copper stewpan. When it begins to boil, drop into it, lump by lump, one pound of the best loaf sugar. Let it boil up after all the sugar is dissolved; then pour it into a broad dish to cool. When cold it is fit for use.

The first liqueur to which we shall call the reader's attention is the *Crême de Citron*, or Lemon Cream. On the Continent, it is made with the *oleum de cedra*, an oil not always to be had in London, but for which oil of citron is a very good substitute. This liqueur is of a clear bright yellow, and of very agreeable flavour. To make it put sixty drops of oil of citron (or *oleum de cedra*, if you have it) into a quart of spirits of wine; shake it well, then mix with it the quart of syrup, for making which we have already given the recipe. Add likewise two ounces of the yellow colouring matter; then filter the whole through filtering-paper. If not sufficiently bright and pellucid, filter it a second time, through some fresh paper; then bottle it for use.

We next come to *Crême de Girofle*, or Cream of Cloves, a delightful liqueur, excellent for singers when suffering under relaxation of the throat. It is made by adding forty drops of oil of cloves to a quart of spirits of wine, and, after shaking it well, mixing with it a quart of syrup as above indicated, and as much of the red colouring matter as will impart to it a good colour. Filter it through filtering-paper, and bottle it immediately.

The queen of liqueurs is considered, among the Sybarites of our island, to be *Noyau*, for which we give two recipes: one for the white, the other for the pink.

White Noyau is made as follows:—Into a quart of spirits of wine put twenty drops of good essential oil of bitter almonds, and six drops of oil of orange. Shake it well; then add the quart of syrup. Filter it through the paper until it is clear and bright.

This liqueur is more used in England than any other, though our own taste would lead us to prefer Curaçoa, and several others in the list we offer in the present paper. But, as this is matter of mere taste, those who choose to put our recipes to the proof must judge for themselves.

Pink Noyau.—To a quart of spirits of wine add fifteen drops of essential oil of bitter almonds, three drops of oil of roses, four drops of oil of aniseed, and one drop of tincture of Vanilla. Shake it well; then add the quart of syrup, and a sufficient quantity of the pink colouring matter to make the liqueur of a delicate pink colour. After filtering it, bottle it for use.

It is necessary here to observe that the quality of the essential oil of bitter almonds varies a great deal. The proportions we have indicated in our recipes for Pale and Pink Noyau apply only to the best and most con-

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

New Moon on the 1st, at 9.48 p.m.; first quarter on the 8th, at 5.31 p.m., full moon on the 16th, at 7.56 p.m.; last quarter on the 24th, at 2.32 p.m.; new moon on the 31st, at 4.43 a.m.

THE PLANETS.

Morning Star—Venus. Evening Stars—Mercury, Mars, and Saturn.

REMARKS ON THE WEATHER.

In this month the increase of vapour is rather greater than that of temperature, and both approach their maximum. The hygrometric degree is 811; the mean minimum moisture 658. Evaporation decreases to 3.293 inches, and the rain attains its maximum, 2.516 inches. A continuance of rainy weather commonly happens about the middle of this month. This periodical tendency to rain has given rise to the popular tradition of St. Swithin. The increase of the mean temperature is wholly derived from the night, for the mean maximum is only 69° 2, while the mean minimum rises to 52° 2. The decrease of solar power does not immediately check the mean temperature. As the sun advances in north declination, the heat we derive from him increases *actually* in proportion to his altitude, but not *sensibly*, because a part of it is required to heat the earth, and is there lost by absorption. As he declines southward in the autumn, the heat we receive *actually* grows less in proportion, but not *sensibly*, because we now receive back a certain quantity from the warm earth.

GARDEN PLANTS IN FLOWER.

Damask Rose (Rosa damascena); Yellow Rock Rose (Cistus Helianthemum); Evening Primrose (Œnothera biennis); Martagon Lily (Lilium chalcedonicum); Common Mullein (Verbascum Thapsus); Thorn Apple (Datura Stramonium); Musk Mallow (Malva moschata); Traveller's Joy (Clematis Vitalba).

centrated essential oil. It may occur that the oil is not so strong as that we have ourselves been accustomed to use, in which case a few drops more might be added to the liqueur before it is filtered, by first dissolving them in spirits of wine. In this respect the maker must consult his own taste and judgment.

The next to Noyau, in the estimation of connoisseurs, is *Anisette*. Bordeaux is celebrated for this liqueur, and the name of Marie Brisart, the most eminent of the manufacturers of Anisette in that city, is known throughout Europe. To make Anisette, add, to a quart of spirits of wine, twenty drops of the essential oil of aniseed, and, after shaking it well, mix with it a quart of the syrup; then filter and put it into bottles.

Crême de Canelle, or Cream of Cinnamon, is also a very agreeable liqueur, and is extremely beneficial to dyspeptic persons. It warms and comforts the stomach, and removes the pain and unpleasant effects arising from flatulence and fermentation in that organ. We give the best mode of making it.

To a quart of spirits of wine add twenty drops of oil of cinnamon, and two of oil of roses. Shake it well until the oil is properly dissolved; then mix with it a quart of the syrup, and a sufficient quantity of the red tincture to produce a bright, full colour. Filter, and bottle it immediately.

Crême de Rose, or Rose Cream, is prepared much in the same manner. Into a quart of spirits of wine put twelve drops of oil of roses, and three of oil of nutmeg. Shake the mixture well, and, when the oils are dissolved, add a quart of the syrup, and a sufficient quantity of the pink tincture to produce a fine rose colour. It may then be filtered and bottled.

Crême de Menthe, or Cream of Mint. Drop into a quart of spirits of wine twenty-five drops of oil of mint, and three of oil of citron. Shake it well, and mix with it a quart of syrup. Add as much as may be deemed necessary of the green colouring matter; then filter and bottle the liqueur.

One of the most delicious of cordials is the following—*Crême de Vanille*, or Cream of Vanilla. Into a quart of spirits of wine put twelve drops of the tincture of Vanilla. Shake it well: then add a quart of the syrup. When well mixed, let it stand ten minutes; then filter it twice or thrice, if necessary, through filtering paper. If it is bright and clear after coming through the filtering-paper the first time, it need not be filtered again.

Cream of Peppermint is rather a vulgar liqueur; nevertheless we give it among the others, as some might perhaps be found who would prefer it to any other.

To a quart of spirits of wine add twenty-five drops of oil of peppermint, and, after shaking it, mix with it a quart of the syrup. Filter it until it is bright.

Pomeranzen, Wackholder, and Kummel, are German liqueurs in some repute, though not so highly esteemed as those which have already appeared on our list.

Pomeranzen is made by adding to a quart of spirits of wine ninety drops of oil of orange, and a quart of the syrup. It must be filtered.

Wackholder.—Into a quart of spirits of wine put thirty drops of oil of juniper. Shake it well, and add a quart of the syrup. When it is filtered, bottle it for use.

Kummel.—To a quart of spirits of wine add seventy drops of oil of caraways, and, after you have shaken it well, mix with it a quart of the syrup. Filter it, and it will be fit to bottle.

The next thing to which we must direct attention is the *Golden Wasser*, or *Dantzic Brandy*. This liqueur, which is very little known in England, has a beautiful appearance, from the gold that floats in it. At Paris it is in very great request. We have no doubt that it will prove equally acceptable here.

To a quart of spirits of wine add twelve drops of oil of aniseed, six drops of oil of cinnamon, three drops of oil of roses, and eight drops of oil of citron. Shake it well. As soon as the oils are dissolved, mix with it a quart of the syrup. Filter it through filtering-paper, and before you bottle the liqueur, stir into it a square of leaf gold, cut into very little bits.

We shall conclude with a recipe for making the far-famed *Curaçoa*, which, to our taste, is the best of liqueurs.

Boil a quart of water in a very clean stewpan. Add to it, bit by bit, a pound of dark-brown sugar-candy. When the whole is dissolved, let the syrup boil up; then pour it into a deep dish to cool. Do not use the syrup until it is quite cold.

Into a quart of spirits of wine drop one hundred and twenty drops of oil of bitter orange. When this latter is dissolved, mix with it the syrup just described; then filter and bottle the liqueur, which should be of a rich brown colour.

Use of Salt to prevent Stains.

If red wine, fruit, jams, &c., be spilt on a table-cloth, the *anti*-economical mode of removing them, is either to apply bleaching liquor at home; or if we are too idle, or too much occupied, or too careless about the matter, we give general directions to our laundress, and she either extracts the stains or not, "as it may happen;" and too often, if the former, it is done with so little caution that the liquid is spilled where it is not required, and not being noticed cannot be washed out, and the consequence is that beautiful table linen is frequently found with holes that are perfectly unaccountable to the owner of them, and blame attaches, in consequence, to every one, from the bleacher to the shopkeeper, when she alone is in fault. Bleaching liquid is very seldom required to be used in a family if due attention be paid to a stain. The moment it is made, let salt (common table salt) be rubbed on the spot *before it have time to dry*. The use of the salt is to keep it damp till the cloth is taken to the wash, when, without any further trouble or attention it will entirely disappear by the usual process of washing. If the stain have had time to dry, the application of salt will too often fail in the effect intended; and then the use of bleaching liquor will probably be required. This, if cautiously rinsed out from the linen, will not injure cotton or linen goods.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

First quarter on the 7th, at 7.9 a.m.; full moon on the 15th, at 10.37 a.m.; last quarter on the 22nd, at 9.22 p.m.; new moon on the 29th, at 1.5 p.m.

THE PLANETS.

Morning Stars—Mercury and Venus. Evening Stars—Mars and Saturn. Jupiter is visible nearly all night.

REMARKS ON THE WEATHER.

The temperature of this month is but little reduced, owing to the prevalence of hot nights. The action of the sun's rays is considerably assisted by the warm earth, which radiates heat into the air; while, in spring, it absorbs every day a proportion of the heat which the sun produces. The greatest heats of summer are generally produced by east and south-east winds; the greatest heats of winter by south and south-west winds. Evaporation is nearly the same as in the last month, 3.327 inches, but the rain decreases nearly one-half; the average amount being only 1.453 inches; state of saturation 819; mean minimum moisture 677.

GARDEN PLANTS IN FLOWER.

French Marygold (Tagetes patula); Zinnia (Zinnia elegans et multiflora); Passion Flower (Passiflora cœrulea); Dyer's Coreopsis (Coreopsis tinctoria); Yellow Gentian (Gentiana lutea); Sweet Sultan (Centaurea moschata); Calathian Violet (Gentiana Pneumonanthe); Lady's Traces (Spiranthes autumnalis); American Groundsel (Senecio elegans); Globe Thistle (Echinops sphærocephalus); Soap Wort (Saponaria officinalis); Turnsole (Heliotropium europæum); Golden Rod (Solidago odora et gigantia); Grove Aster (Aster hemoralis); Tansy (Tanacetum vulgare); Siberian Wallflower (Cheiranthus rostratus); Shining Marygold (Tagetes lucida); Winter Cherry (Physalis Alkekengi); Long-flowered Marvel of Peru (Mirabilis longiflora).

Salad Mixture.

TAKE two yolks of raw eggs, and two table-spoonfuls of best olive oil, and well mix with one teaspoonful of salt, and the same of mustard, anchovy sauce, and Chili vinegar; when the whole is thoroughly mixed, add a table-spoonful and a half of Tarragon vinegar. The salad should be wiped dry before being made up, and should never be made up until immediately before sending to table.

To keep Eggs Fresh.

SMEAR them over, *the day they are laid*, with lard or butter, free from salt. A piece the size of a walnut will suffice for a dozen eggs. Take them one by one in the palm of the hand, and two or three turns of the hand will effectually close up the pores; then place them in an open basin or basket, loose, on the pantry-shelf, and at the end of six months they will be as good as the day they were laid.

Liquid Honey for Sweetening.

THE following recipe for a delicious liquid honey is taken from Mr. Langstroth, the celebrated American apiarian. He says "the best judges have pronounced it one of the most luscious articles they ever tasted." "Put two pounds of the purest white sugar in as small a quantity of hot water as will dissolve it; take one pound of freshly strained white clover honey—any honey of good flavour will answer—and add it warm to the syrup, thoroughly stirring together. As refined loaf sugar is a pure and inodorous sweet, one pound of honey will give its flavour to two pounds of sugar, and the compound will be free from that smarting taste that pure honey often has, and will usually agree with those who cannot eat the latter with impunity. Any desired flavour can be added to it."

Cream Cheese.

THE following recipe for making cream cheese has been found successful: Take a quart of cream, or, if not desired very rich, add one pint of new milk, warm it in hot water until it is about the heat of milk from the cow. Add a table-spoonful of rennet, let it stand till thick, then break it slightly with a spoon, and place it in a frame eight inches square and four inches deep, in which previously put a fine canvas cloth; press it slightly with a weight, let it stand thirteen hours, and then put a finer cloth in the frame—a little powdered salt should be put over the cloth. It will be fit for use in a day or two.

To clean Watercress and Salads.

AT certain periods of the year it is common for the under part of the leaves to have a transparent gelatinous substance adhering to them, which cannot be removed by washing. If, however, the cresses are put into a strong brine made with common salt and water, and suffered to remain there a few minutes, every animal substance will be detached from the leaves, which may then be washed with pure water and sent to table. Salads and culinary vegetables of all kinds may by the same simple method be freed from slugs, worms, and insects.

Cheap and excellent Ginger-beer.

Two gallons of water, 2lb. of loaf sugar, 2oz. of bruised ginger, one lemon; put all together, and pour the boiling water upon it. Let it stand one day, then strain it, and put two spoonfuls of yeast to it.

Uses of Paste.

To those of our female readers, who may not be aware of the wonder-working powers of this substance, we shall very gladly communicate our own knowledge on the subject; and then present them with the most approved method of making a useful ingredient in domestic economy, "which," as the medicine advertisements say, "no family should be without."

Where is the young female who is destitute of books in constant requisition, which possess the faculty of tearing? What young lady is without an accumulating mass of loose music, still too small to form a volume for the binder? And where is the mother who has not regretted the wear and tear, the almost *decomposition*, as chemists would say, of her daughter's music; that expensive item in modern female education? And yet a very little trouble, nay, almost a little amusement, will set all to rights, and soon produce order and neatness, where disorder reigned before.

The material requisite for this simple undertaking, will consist of that wonder-working substance *paste*, a paste brush, and some old, thin, book-muslin.

Having arranged each piece of music separately, and fastened it with a needle and strong thread, through the middle of the backs (where half sheets occur, turn down a very *leetle* fold, to afford a space for the needle), cut a strip of muslin, the whole length of the page, and about an inch in breadth: and paste this down the back, so as to extend over the paper on each side of it, nearly to the extremity of the margin. Muslin is recommended, in preference to paper, for two obvious reasons; that it is stronger, and thinner, and will not increase the bulk too much, when the music shall be aranged for binding. We have known music thus effectually repaired, to have endured the attacks of constant "practising" for years without further trouble.

A very small quantity of paste should be made, that it may be used while it remains free from mouldiness. A dessert-spoonful of flour to half a pint of water, with as much powdered alum as can be pinched up by the ends of the finger and thumb, must be brought to a boil, stirring one way all the time; and on a good fire the whole process will be finished in a very few minutes. As soon as it boils up once (*i.e.* when the *one bubble* shall appear), it is done: the longer it boils, the less perfect it will become. Alum is added to prevent mouldiness; without the admixture of this mineral substance paste will become thin, watery, and mouldy in a few days. With a little stock of paste always at hand, it is surprising how easily, speedily, and agreeably, the books and music of a family can be kept in order.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

First quarter on the 5th, at 11.21 p.m.; full moon on the 14th, at 0.33 a.m.; last quarter on the 21st, at 3.9 a.m.; New moon on the 27th, at 11.42 p.m.

THE PLANETS.

Morning Star—Mercury at beginning of month. Evening Stars—Mars and Saturn. Jupiter may be seen during greater part of the night.

REMARKS ON THE WEATHER.

In this, the first month of autumn, the reduction of temperature begins to be sensibly felt; but still less in the night than during the day. Precipitation and evaporation are again nearly upon a par; the former averaging 2.193 inches, the latter 2.620 inches, the state of saturation 827; mean minimum moisture 702. The power of the sun again decreases. Terrestrial radiation remains nearly the same. At the latter part of this month, or the beginning of the next, the equinoctial gales may be expected. The changes of the barometer are great and sudden. Some of the finest weather in the whole year commonly occurs in this month.

GARDEN PLANTS IN FLOWER.

Umbelled Hawkweed (Hieracium umbellatum); Orpine (Sedum Telephium); Amarella (Gentiana amarella); Ladies' Fringes (Gentiana ciliata); Golden Rod (Solidago Virgaurea); Harvest Bells (Campanula rotundifolia); Autumnal Hyacinth (Scilla autumnalis); Whorled Coreopsis (Coreopsis verticillata); Rose Feverfew (Pyrethrum roseum); Changeable Colchicum (Colchicum versicolor); Michaelmas Daisy (Aster N. Angliæ); Devil's Bit Scabious (Scabiosa Succisa); Southernwood (Artemisia Abrotanum); Italian Pimpernel (Anagallis Monelli); Meadow Saffron (Colchicum autumnale); Clary (Salvia sclarea); Red Valerian (Centranthera rubra); Fuchsias (Fuchsia gracillis, &c.).

Making Pilau.

THIS very wholesome and cheap dish consists of nothing more than rice swelled and softened by broth of any description. The substances most commonly used, and their proportions, are as follows:

Three ounces of rice for each person; it should be picked and washed in three waters. Half a pound of mutton to each portion of rice. Half an ounce of very fresh butter cut into small bits for each of the portions. A sufficient quantity of water to allow, when the broth is made, one pint to be imbibed by each portion of the rice. The broth is made first, and the meat should be but two-thirds dressed.

Pilau is made in a well-tinned copper stewpan, with a cover of sufficient size to allow the rice to swell, over a charcoal brazier. The broth is poured into the saucepan, and when it boils the cleaned rice is gradually thrown into it; the rice insensibly absorbs the broth, and when the whole is imbibed the rice is swollen, but unbroken, and perfectly tender, and is done. When taken off the fire and uncovered, a number of little holes, produced by the evaporation of the broth, will be observed; into these small pieces of butter are put, and the stewpan is carefully closed; the butter soon melts and mixes with the rice; it is left to simmer for a quarter of an hour, and then placed in a tureen or dish. The rice should not be stirred while on the fire. The meat having been cut into small pieces and browned nicely in fresh butter (which completes its cooking), is placed neatly on the pilau.

Pilau is improved by using pigeons and fowls, either added to the meat or alone. No vegetables are to be used, as they impart a harsh unpleasant flavour to the dish.

A Pilau for Five Persons.—Five ounces of rice, two pounds and a half of meat, two ounces and a half of fresh butter, five pints of broth made from the meat, and salted as usual. After the broth is made half an hour is sufficient for cooking this dish, which is the general food of the Turks.

Venice Pilau, as a Side-dish.—Six ounces of rice, washed in three tepid waters; stew it gently in two pints of broth over a clear charcoal fire, and closely covered. When all the broth is imbibed it is done, and is to be taken off the fire; add three ounces of fresh butter, cut into small bits, that it may melt the quicker, and close the stewpan. Take six yolks and three whites of eggs, and beat them up well; uncover the stewpan and pour them into the rice, and then close it again, but still off the fire, and let it simmer. Take a deep dish, butter it, pour into it one-third of the rice, and add some small pieces of butter, and a layer of meat, cut and browned apart; then a second layer of rice, butter, and meat; then a third layer; arrange the whole in a dome shape; beat up the yolk of an egg in milk or cream, and cover the outside with it, then put the dish into the oven; the butter melts and the pilau assumes a yellowish crust; it is served in the same dish.

Constantinople Pilau.—According to the quality and number of the guests take either mutton, fowls, or pigeons; boil them till rather more than half done, then put the meat and broth into a basin. Having washed the pot, melt some butter in it, and when very hot, having cut up the half-cooked meat into bits, the fowls into four, and the pigeons in half, throw them into the butter and fry till of a light brown. The necessary quantity of rice being well washed, is then to be placed over the meat in the pot, and the broth to be poured over the rice till it is covered to a full finger's depth; then cover the pot, and keep a clear fire under it, and, from time to time, take out some grains of rice to ascertain if it softens sufficiently or requires more broth; the rice must remain whole though thoroughly done, as well as the pepper which is used for seasoning. As soon as the rice is done, cover the top of the pot with a cloth five or six times folded, and the cover above it; and in a little time melt some more butter, and pour it into holes made for the purpose with the handle of the spoon; cover it quickly again, and let it simmer till served. It is served in large dishes, with the meat nicely arranged at the top. One may be white of its natural colour, another tinted yellow with saffron, and a third red with pomegranate juice.

Though the meat is fat enough for our stomachs, the Turks add as much as three pounds of butter to six of rice, which makes the pilau disagree with those unaccustomed to it.

Some persons prefer rice simply cooked with salt and water; it is served in many ways among the grandees of the Porte; and instead of meat, a herb, omelette, or nicely poached eggs are placed on the rice: in this manner it can disagree with none.

Management of Plants in Rooms.

To treat on the proper management of plants in houses is a subject attended with considerable difficulty, every genus requiring some variation both in soil, water, and general treatment. If the room where the plants are intended to be placed is dark and close, but few will ever thrive in it; if, on the contrary, it is light and airy, with the windows in a suitable aspect to receive the sun, plants will do nearly as well as in a greenhouse; but if they are observed to suffer, the effects may generally be traced to one of the four following causes: Want of proper light and air, injudicious watering, filthiness collected on the leaves, or being potted in unsuitable soil.

Want of proper light and air is perhaps the most essential point of any to be considered, for, however well all other requisites are attended to, a deficiency in either of these will cause the plants to grow weak and sickly. Let them always be placed as near the light as they can conveniently stand, and receive as much air as can be admitted, when the weather will allow. Indeed, those persons who have no other convenience than the house to keep them in, will find that they derive immense advantage from being, during fine weather, in spring and autumn, turned out of doors in the evening, and taken in again in the morning, the night-dews contributing greatly to their health and vigour.

Injurious watering does more injury to plants in rooms than many persons imagine. To prevent the soil ever having a dry appearance is an object of importance in the estimation of very many; they therefore water to such

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

First quarter on the 5th, at 6.17 p.m.; full moon on the 13th, at 1.24 p.m.; last quarter on the 20th, at 9.17 a.m.; new moon on the 27th, at 1.3 p.m.

THE PLANETS.

Evening Stars—Mercury, Venus, Mars, Jupiter, and Saturn.

REMARKS ON THE WEATHER.

The mean temperature falls nearly 9°; the dew-point declines almost in the same proportion, the dryness is reduced to 4° 1, and moisture increases to 870. Evaporation decreases to 1.488 inches, while the rain continues in nearly the same quantity, the amount for the month being 2.073 inches. Now that the fruits of the earth are laid up in store, the increase of wet is attended by no injurious effects; the remaining heat of the earth is preserved from needless expenditure, and guarded from dissipation, by an increasing canopy of clouds, by which the effect of radiation is greatly reduced.

GARDEN PLANTS IN FLOWER.

Late Feverfew (Pyrethrum serotinum); Sweet Maudlin (Achillea ageratum); Beautiful Aster (Aster pulcherrimus); Liatris (Liatris elegans and pilosa); Garden Gold Flower (Chrysanthemum coronarium); Belladonna Lily (Amaryllis Belladonna); Guernsey Lily (Nerine sarniensis); Saffron Crocus (Crocus sativus); Dahlias (Dahlia superflua); Yellow Amaryllis (Sternbergia lutea); Parrot Corn-flag (Gladiolus psittacinus); Scarlet Sage (Salvia fulgens); Round-headed Buddlea (Buddlea globosa); Spotted Honeywort (Cerinthe maculata).

GARDEN WORK.

The garden should now be cleared and put in order for the season. Fibrous-rooted plants should be transplanted. Bulbs should be got in the borders. Dahlia roots dug up, dried in the shade, and put away till May.

an excess that the mould becomes sodden, and the roots consequently perish. Others, to avoid this evil, run exactly into the opposite extreme, and scarcely give sufficient to sustain life. This, however, is by no means so common a practice as that of giving too much, for in general if anything appears to be the matter with the plants, large doses of water are immediately resorted to, and if recovery is not speedy this nostrum is again administered, with but little doubt of its infallible restorative powers; but such persons, like an unskilful physician who gluts the weakly stomach of his patient, only hasten on what they are trying to prevent. This overplus of water will show its bad effects by the very dark colour and flabby disposition of the leaves; and if the plant receives too little, the leaves will turn yellow, and eventually die.

The best plan is, to always allow the soil in the pot to have the appearance of dryness (but never sufficient to make the plant flag) before a supply of water is given, which should then be pretty copious; but always empty it out of the pan or feeder in which the pot stands, as soon as the soil is properly drained. The water used for the purpose ought always to be made about the same temperature as the room in which the plants grow—never use it fresh from the pump; either let it stand in a warm room all night, or take off the chill by adding a little warm water to it, or the growth of the plants will be much checked.

Filthiness collected on the leaves may either arise from insects or dust. The former may be speedily remedied by placing the plants under a handglass or anything that is convenient, and burning some tobacco until they become well enveloped in the smoke; and the latter may be removed by occasionally washing them on the head with pure water, either by means of a syringe, the rose of a watering-pan, or with a sponge, when the filth still adheres.

Being potted in unsuitable soil is by far the most difficult part of the business to rectify, for no certain line can be drawn, unless each genus was treated on separately; however, as this cannot be done in a paper like the present, a few general remarks, which, perhaps, with some little exceptions, may be found to be pretty correct, must suffice.

All plants whose branches are fragile or slender, and roots of a fine thready, fibrous texture, with general habits like the *Ericeæ*, will require the same soil (peat earth) and very similar treatment to Cape Heaths. Those whose wood and general habits partially differ, and whose roots are of a stronger texture, as *Acacia*, *Ardisia*, *Stenocarpus*, *Tetratheca*, *Tristanea*, &c., will require a portion of sandy loam, in many cases about equal parts; and where the habits, &c., differ materially from the heath, only a small portion of peat earth will be required, and a compost may be made a little rich, by the addition of well-rotted dung.

Almost all Cape and other bulbs, as *Sparaxis*, *Ixia*, *Gladiolus*, *Tritonia*, &c., thrive best in a mixture of light rich sandy loam, leaf mould, and a little peat. Shrubby and herbaceous plants, with luxuriant roots and branches, as several species of *Myrtus*, *Jasminum*, *Hibiscus*, *Hermannia*, *Heliotropium*, &c., require rich loam, lightened with leaf soil, without any portion of peat. Plants with powerful roots, and but slender heads, as *Veronica*, *Senacia*, *Scutellaria*, *Ruellia*, *Mauraudia*, &c., require a light, sandy soil, mixed with a small portion of leaf mould and very rotten dung. At the time of potting, always lay plenty of broken potsherds at the bottom of each pot, to give a good drainage.

It will be seen that these directions do not allude to either orchideous, succulent, or aquatic plants. Many of the orchideæ require a portion of decayed wood mixing with the soil; others grow in damp moss; but these being chiefly stove plants, will not flourish in a room. There are several species, however, that thrive very well both in the greenhouse and in rooms, as *Arethusa*, *Calypsogon*, *Dendrobrium*, *Ophrys*, &c., the soil suitable for these is a mixture of about equal parts of light sandy loam and peat; very little or no water must be given when they are not in a growing state.

Succulent plants of all descriptions require very little water, and in general are very easily managed in rooms; many of them thrive in a mixture of sandy soil and lime rubbish, as *Aloe*, *Cucalia*, *Cactus*, *Aizoon*, &c.; others grow well in a mixture of equal parts of light sandy loam and peat, as *Coris*, *Cotyledon*, *Mesembryanthemum*, &c. The proper soil for the geranium is half rich rotted manure, a fourth fresh yellow loam, and a fourth of equal parts of good garden mould and leaf soil.

Aquatic plants, as *Villarsia*, *Actinocarpus*, &c., generally do well in a mixture of peat and loam, and require to be constantly kept in a wet state; indeed, the best way is to place the pot in a deep pan or feeder, which should always be kept filled with water.

Bulbs of most sorts flourish in rooms with less care than most other kinds of plants. Hyacinths should be planted in autumn. In preparing pots for them, select such as are about four inches deep and three inches wide; put a little rotten dung in each pot, fill each pot up with light rich soil, and plant the bulbs so shallow that nearly half the bulb stands above the soil; plunge the pots in the open air, and cover them six or eight inches deep with rotten bark. During spring take them out as they are wanted to bring into flower, and set them in the window of a warm room where they will be fully exposed to the sun. Those who do not possess a garden may set the pots in a cellar or outhouse, or in the corner of a yard, and cover them with light soil or sand until they are wanted to bring into the room to flower. When the leaves begin to decay after they have done flowering, give them no water; when the leaves are dead, take them out of the soil and remove the offsets, and lay them in an airy situation until the time of planting.

If grown in water-glasses, they require to be placed in a light airy situation, and the water will be required to be changed once in three or four days. If drawn up weakly, it will be necessary to support the stems with sticks, split at the bottom so as to fit on the edge of the glasses at the top. This, however, will not be necessary if they be kept in a light and airy situation. When out of flower, plant them in pots of soil to perfect their leaves, and treat them as above; they will then flower again the succeeding year.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

First quarter on the 4th, at 2.27 p.m.; full moon on the 12th, at 1.9 a.m.; last quarter on the 18th, at 5.6 p.m.; new moon on the 26th, at 5.11 a.m.

THE PLANETS.

Evening Stars—Mercury and Saturn at the beginning of the month, and morning during the latter part. Evening Stars—Venus, Mars, and Jupiter.

REMARKS ON THE WEATHER.

In this generally dark and dreary month the atmosphere is nearly saturated with moisture. The temperature of the air is nearly 42° 9, and the dew-point averages no lower than 40° 5, the dryness is, therefore, only 2° 4, and the moisture averages 910. The precipitations are augmented to 2.400 inches, and only 0.770 inch are carried off by evaporation. The comparative warmth of the season is owing to the heat given out by the condensation of the vapour into rain, &c. Dense fogs and mists are common, and a gloomy, windy sky are prevailing characteristics of this month.

GARDEN PLANTS IN FLOWER.

Mountain Violet (Viola altaica); Sweet Coltsfoot (Tussilago fragrans); Ten-petalled Sunflower (Helianthus decapetalus); Chinese Chrysanthemums (Chrysanthemum sinense); Indian Hawthorn (Raphiolepis rubra); Blue Sage (Salvia augustifolia); Arbutus (Arbutus Unedo); Irish Heath (Menziesia Dabeoci); Blue-headed Gilia (Gilia capitata); Grey-leaved Bindweed (Convolvulus althæoides); Scarlet Lobilia (Lobilia fulgens).

GARDEN WORK.

Tulips should be planted the first week. Transplant hardy shrubs. Make beds of hyacinths if not done last month. Plant out roses and rose sticks for grafting or budding. Collect dead leaves for leaf mould.

Curry Powder.

CORIANDER seed, 4½oz.; cumin seed, 1oz.; black pepper, ¾oz.; cayenne, ½oz.; and pale turmeric, 2oz. Another recipe: Coriander seed, 1½oz.; mustard seed, 1oz.; black pepper, ½oz.; lesser cardamom, ½oz.; ginger, ½oz.; mace, ¼oz.; and pale turmeric, 2½oz.

To pickle Eggs.

AT the season when fresh eggs are most abundant, take as many as may be thought desirable, and boil them hard. Remove the shells, and lay the eggs carefully in large-mouthed jars, pouring over them scalding vinegar well seasoned with whole pepper, allspice, ginger, and other spices. When cold, cork them close, and in a month they will be fit for use. As a condiment for cold meat, hashes, &c., they will be found exceedingly good.

Mode of curing Hams.

THE following is a recipe for curing Westphalia hams:—Rub every ham over with 4oz. of saltpetre. The next day put of bay-salt, common salt, and coarse brown sugar each ½lb. into one quart of stale strong beer; boil this together, and pour it boiling over the ham. Let it lie for a fortnight in this pickle, rubbing it well, and turning it twice a day. Smoke it afterwards for a fortnight over a wood fire, taking care that the wood is neither pine, fir, nor deal. Where there is no convenience for smoking, Smith's "Cambrian Essence" will prove an excellent substitute.

Rules for Pickling.

THE best vinegar should always be used for pickling: in all cases it should be boiled and strained. The articles to be pickled should first be parboiled or soaked in brine, which should have about six ounces of salt to one quart of water. The spices used for pickling are whole pepper, long peppers, allspice, mace, mustard-seed, and ginger, the last being first bruised. The following is a good proportion of spice: to one quart of vinegar put half an ounce of ginger, the same quantity of whole pepper and allspice, and one ounce of mustard-seed, four shalots, and one clove of garlic. Pickles should be kept secure from the air, or they soon become soft; the least quantity of water, or a wet spoon, put into a jar of pickles, will often spoil the contents.

Packing Eggs for Travelling.

As eggs which have to be sent long journeys or sea-voyages will be likely to encounter much shaking, they should be carefully packed. If bran is used, it will shake down, and leave room for the eggs to shift. The following mode of packing has been found much more successful: Procure a box which will rather more than hold the eggs placed on end; spread at the bottom a bed of cut hay, or any other elastic material which will not shift if the case should happen to be turned upside down; cut strips of cotton-wool (common wadding), and roll each egg in a piece of it; arrange them in the box, and fix them in their places with hay, paper, or anything most convenient; fill up with cut hay, and fasten on the lid. If for a very long journey, the case had better be placed in the midst of a hamper of hay, straw, shavings, or anything of the kind, possessing some elasticity.

Orange Marmalade.

PROCURE Seville oranges, stew them till they become so tender that you can pierce them with a straw, changing the water two or three times. Drain them, take off the rind, weigh the pulps, previously taking out the pips; and, supposing the quantity to be six pounds, add seven of sugar; boil it slowly till the syrup be clear, then add the peel, having cut it into strips. Boil it up again, and it is finished. This is a new method, has been tried, and found to be excellent as well as economical.

Scouring Bedrooms in Winter.

THE practice of scouring bedrooms in the winter season, is one of exceeding danger, and productive of colds and coughs innumerable, to say nothing of more serious evils, occasioned by the humidity of the atmosphere, and the difficulty of ventilation, and the carelessness or ignorance of persons respecting the necessity of it. A fire should always be lighted in a room the floor of which has been wetted; and if this should be impracticable in consequence of there being no grate, a pan of hot coals should be passed over the boards. A day should be selected for the performance of this operation, when an obvious tendency to dry quickly can be observed in the air, and the windows and doors should be set wide open; but such a day rarely occurs in winter; it is therefore advisable to avoid the danger of having rooms scoured, and to rest contented with thorough and frequent sweeping, till a more proper season shall arrive.

Bedroom Carpets.

WHEN bedrooms are not covered entirely with carpeting, it is usual to have "bed-round carpets," *mitred* at the corners. This mitring is an improvement on the old fashion of three straight pieces (the longest bit at the feet), but when a bed-round carpet is mitred, it is very difficult to shake, requiring two or three persons, besides the certainty of splitting the seams. It is therefore desirable to make an alteration that shall obviate the inconvenience, without spoiling the pretty finish which the mitred corners produce. This is effected by having the carpets cut out as if to be mitred; but instead of joining the corners, let them be finished off with binding, the same as the ends, and *left open*. When laid down they will present exactly the same appearance, and the inconvenience of the joined corners will be obviated.

Blackbeetles.

THE following are several recipes for getting rid of these pests:—Place a few lumps of unslacked lime where they frequent. Set a dish, containing a little sugared beer or syrup at the bottom, and place a few sticks, so as to form a sort of gangway for the beetles to climb up, when they will go headlong into the bait set for them. Mix equal weights of red lead, sugar, and flour, and place it near their haunts. Plaster of Paris, mixed with oatmeal. Phosphorus paste, such as is sold in the shops. Get a couple of hedgehogs and turn them out in the kitchen; when all is quiet at night the hedgehogs will come out and eat up hundreds of beetles. Do not poison the hedgehogs, but put some water for them to drink.

MEMORANDA FOR THE MONTH.

THE PHASES OF THE MOON.

First quarter on the 4th, at 10.21 a.m.; full moon on the 11th, at 0.10 p.m.; last quarter on the 18th, at 3.34 a.m.; new moon on the 25th, at 11 39 p.m.

THE PLANETS.

Morning Stars—Mercury and Saturn. Evening Stars—Venus and Jupiter.

REMARKS ON THE WEATHER.

The month of December, the first of the winter quarter, closes the year with nearly the same characters as those of the preceding month. Frosts are very seldom of long continuance. The mean temperature of the whole year is not found to vary, in different years, more than four degrees and a half.

GARDEN PLANTS IN FLOWER.

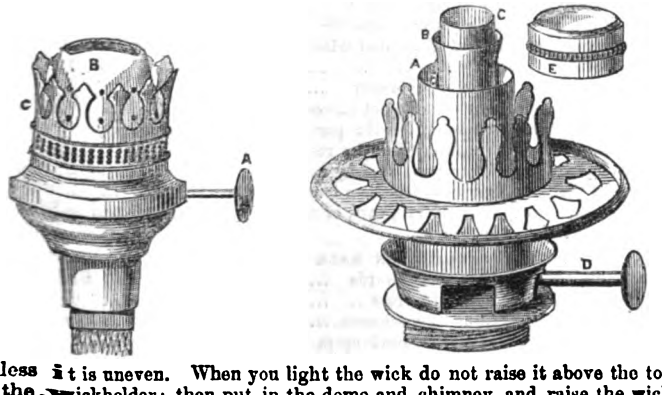
China Roses (Rosa indica); Late Chrysanthemums (Chrysanth. sinense); Japan Allspice (Chimonanthus fragrans); Chinese Jasmine (Jasminum revolutum); Cape Aletris (Tritoma Uvaria), Violets (Viola odorata); Heartsease (Viola tricolor); Japan Corchorus (Kerria japonica)

GARDEN WORK.

In this, the final month of the year, severe frosts are to be expected; therefore protect the stems and roots of half-hardy shrubs. Secure tender roses in sheds. Cover with litter pansies and pinks. Protect dwarf plants by mats and hoops. Delicate and half-hardy climbers may have mats hung before them, so as not to touch them; this will keep off the frost. These coverings should not be removed on bright days.

To manage Paraffin Lamps.

WITH regard to the management of paraffin lamps, we would say buy a stout-made lamp of good material and workmanship. The oil reservoir should be of glass or earthenware, as metal conducts the heat of the flame to the oil, and heats it so that it smells. Keep all the parts of the lamp scrupulously clean, and as the oil has a tendency to spread over the surface, the outside of the lamp should be carefully wiped before lighting. Always dry a new wick before use; a damp wick prevents the oil rising freely. If it is wished to light a new wick immediately, dip the upper part of it into the oil before lighting. Never burn the lamp with the flame low. By so doing no saving is effected, as part of the oil is driven off in vapour without being burnt, and a bad smell is the result. Whereas, when properly burnt, a paraffin lamp gives off no smell whatever. Never put the oil into a dirty can; a very few drops of any other oil will cause the lamp to smoke. Buy no oil that will not stand the hot water test. To trim and light flat wick lamps the best method is to take off the dome C, that carries the chimney, and wipe the top of the wick and wickholder clean. Do not cut the wick



unless it is uneven. When you light the wick do not raise it above the top of the wickholder; then put in the dome and chimney, and raise the wick slowly. When it is wished to re-light the lamp without fresh trimming, take off the chimney from the gallery. Turn the handle till the wick comes up to the split in the cone; light it, and instantly turn it down into the cone till the flame is all but extinguished; put on the chimney and gradually turn up the wick till the flame gives its brightest light without smoking or getting dingy at the top. To put on a new wick on the circular wick lamps, remove the gallery that carries the chimney and globe, by sliding it up the tube A. Take off the small nozzle E from the top of the burner, as shown in the figure. Take a cotton and cut the lower end to a point. Two inches from the top cut a slit two inches long through one thickness of the cotton. Push the pointed lower end of the cotton down between the outer tube A and the moveable tube B. Pass the slit in the cotton over the tube B, so as to surround it with the upper part of the wick, and tie a thread loosely around the wick so as to secure it to B. Turn down the tube B by means of the handle D, when it will carry the cotton down with it. Replace the nozzle, E, on the top of the burner, cut off the cotton level with the top, turn the cotton up again and dip it in the oil, and the whole is ready for use. One cotton will last three months. Keep the square hole at the bottom of the central air-tube, C, free from dirt or ashes.

How to test the Safety of Paraffin Oil.

MANY persons object to the employment of paraffin oil on account of its liability to accident. It is not too much to say, that all the accidents that have ever taken place with mineral oils have been caused by the use of those from which the naphtha has not been properly removed, and which, consequently, take fire at a low temperature. Now the question to be answered is, what is a safe oil and how are we to know it? If an oil gives off inflammable vapours before being heated to 130 degrees of Fahrenheit's thermometer, it is considered unsafe for domestic use. To test this is very easy to anyone possessing a thermometer, and a slight acquaintance with making experiments; but what is wanting is a method of testing which requires no scientific knowledge and no apparatus but what is to be found in every house, and the following, proposed by Mr. Tegetmeier, in a paper read by him before the Association of the Medical Officers of Health, meets the case, and may be used with confidence in its results: Take a breakfast cup holding about half a pint, fill it full from a kettle of boiling water, pour this into an earthenware quart jug, then fill the same cup again with boiling water from the kettle, and pour it also into the quart jug, then fill the cup with cold water, put it into the jug, shake the jug to mix the hot and cold water, then pour the tepid water from the jug into the cup till the cup is half full; now pour about a table-spoonful of the oil to be tested on the tepid water in the cup, take the oil-can with the oil out of the room, then touch the surface of the oil in the cup with a lighted splinter of wood, or a match without sulphur. If the match causes a flash of flame to appear on the surface of the oil, it is below the standard of safety, and should not be used; if no flame appears, the oil is up to the standard. In this trial no time should be lost after pouring the boiling water from the kettle, as the water may get too cold, but the whole can be got through in from two to three minutes. It is well to have a saucer at hand, and if the oil should be a bad oil and ignite with the match, place the saucer on the mouth of the cup and the flame is extinguished. This trial should be done in daylight, and at a distance from a fire, and the directions must be followed exactly in the order as given above. It will be objected that it is dangerous to set people to try such experiments, but if the above rules be followed there is no risk.

Postal Regulations.

LETTERS.

ONE PENNY is the well-known charge on letters passing between two places within the United Kingdom, and weighing under half an ounce; if above that weight, 1*d.* must be paid for every additional half-ounce.

Unpaid letters are charged double; on these insufficiently paid, twice the amount of the deficiency is charged. As the post-office does not give the turn of the scale, pay the next higher rate when the letter just balances the weight, or you will in all probability inflict the double penalty on the receiver.

Letters, book-packets, &c., may be registered, for safe transmission, by payment of a fee of 4*d.* If the letter be marked "Registered" and posted without a registration receipt being obtained from the postmaster, 1*s.* will be charged.

On letters containing coin, posted without registration, 8*d.* is charged on delivery. Small sums should therefore be sent in postage-stamps, not in money.

NEWSPAPERS.

The newspaper regulations apply solely to publications bearing the impressed newspaper stamp—that is, the stamp (which, except in the case of the *Times*, the *Illustrated News*, and one or two others, is printed on the corner in red ink) with the name of the newspaper printed on the sheet itself. For newspapers paid by postage-labels, see "Book Post."

Publications bearing a newspaper stamp are not limited as to weight; the sender, therefore, need only ascertain the fact of the paper bearing a stamp.

The publication must be folded in such a manner that the whole of the stamp may be seen; but if there are more than two papers in the same cover, it will suffice if the stamps be so arranged that they can readily be examined.

A newspaper must be posted within a fortnight from the printed date of issue. Up to that time it may be reposted again and again without charge; but after the fortnight it can only be transmitted under book-post regulations.

The newspaper, if put in a cover, must be left open at the ends, and must not contain any inclosure. It must have on it no writing or mark beyond the name and address of the person to whom it is sent. Even an old address must be cut off (obliteration not being sufficient) before sending the paper to another person, or it will be charged for as an unpaid letter. When, however, it is found desirable to mark or write upon a newspaper, all that is necessary to be done is, to add a penny postage-label, when you may write as much as you please.

BOOK POST.

Unstamped newspapers, magazines, and MSS. are carried under the book-post regulations, as well as books, maps, engravings, photographs, plain paper, parchment, &c. The charge on these "book packets" is 1*d.* for 4oz.; 2*d.* for 8oz.; and from that point the increase is 2*d.* for every 8oz., there being no 3*d.* or other intermediate charge. Inasmuch as the payment is by weight, a newspaper weighing over 4oz. requires two penny stamps, notwithstanding that a similar paper bearing an impressed newspaper stamp of 1*d.* will go free; but on the other hand, two or three copies of a smaller newspaper may be transmitted for a single stamp, provided they do not together exceed 4oz., although each, if sent separately, or under newspaper regulations, would cost 1*d.* The postage on book packets must be prepaid in full, by means of postage-stamps affixed outside. The wrapper round the book or parcel must be open at the ends, but a string may be tied round to prevent the contents slipping out. If it is closed at the ends, double letter rate will be charged for it on delivery.

No book-packet may contain any written letter, closed or open, or any inclosure sealed or otherwise closed against inspection; nor must there be any letter, nor any communication of the nature of a letter, written in any such packet, or in or upon its cover. Entries, however, merely stating who sends the book, &c., or to whom it is given, are not regarded as a letter. Indeed, the name and address of the sender is not only permitted, but recommended, so that if, for any reason, the packet cannot be forwarded, it may be returned.

Book-packets may be detained for twenty-four hours if the postmaster thinks fit. Whenever, therefore, prompt delivery is a matter of importance, it is better to pay the full letter charge, and thereby avoid risk of delay.

PATTERN POST.

Patterns (of no intrinsic value) may be sent by post at the rate of 2*d.* for 4oz., 4*d.* for 8oz., and 4*d.* additional for every increase of 8oz. or fraction of that weight. If the patterns exceed 24oz. in weight, or anything of value is sent ostensibly as a pattern, the full letter rate will be charged. In other respects the regulations are much the same as for the book-post.

POSTAGE-STAMPS.

Every postmaster is required to have on hand a sufficient stock of postage-labels and embossed penny envelopes, and to sell them to the public at the following prices:—Labels at 1*d.*, 2*d.*, 3*d.*, 4*d.*, 6*d.*, 9*d.*, and 1*s.*, respectively. Of the embossed penny envelopes, 12 are to be sold for 1*s.* 1½*d.*, 8 for 9*d.*, 6 for 6¾*d.*, 4 for 4½*d.*, 2 for 2¼*d.*, and 1 for 1½*d.*

Every rural messenger is authorised to sell postage-labels and embossed envelopes at the prices stated above; and when any person applies to him for postage labels the messenger must either supply them, or (if he have none in his possession) must, without extra charge, receive the postage in money, and, on his arrival at the post-office, obtain labels for it and affix them carefully to the letters.

FOREIGN POSTAGES, POST-OFFICE ORDERS, ETC.

The regulations as to letters, newspapers, book and pattern posts for foreign countries and our colonial possessions, differ in other respects besides cost of postage. Full information on these points, and also as to Post-office Orders, the Post-office Savings Bank, and other matters not touched on here, will be found in the "British Postal Guide," which may be obtained by order of any postmaster or bookseller.

Assessed Taxes, &c.

PROPERTY AND INCOME TAX.

FROM April, 1866, to April, 1867, all incomes of 100*l.* per annum and not exceeding 200*l.* are taxed at the rate of 4*d.* in the pound, after allowing a deduction of 60*l.*: for example, a man earning 100*l.* will pay only on 40*l.*, and one earning 190*l.* will pay on 130*l.*; but those of 200*l.* and upwards are to pay on the full amount.

Exemption of Premiums from Income Tax.—Under a recent Act of Parliament, the premiums paid by a person for an assurance on his own life, or on the life of his wife, or for a deferred annuity to his widow, are declared free from income tax, provided such premiums do not exceed one-sixth of his returnable income.

RECEIPTS.

For 2*l.* and upwards, 1*d.*—N.B. Persons receiving the money are to pay the duty.

Receipts may be stamped within fourteen days of date on payment of 5*l.*, or within the month on payment of 10*l.* penalty; after that time they cannot be stamped. Penalty for giving a receipt without a stamp, 10*l.* Penalty for not effectually cancelling or obliterating adhesive stamps when used, 10*l.* Penalty for frauds in the use of adhesive stamps, 20*l.*

ARMORIAL BEARINGS.

Persons chargeable with the duty of assessed taxes for any carriage at the rate of 3*l.* 10*s.* ... ... (per annum)	£2	12	9
Other persons	0	13	2

DUTIES ON LEGACIES AND SUCCESSION TO REAL PROPERTY.

To children or their descendants, or lineal ancestors of the deceased ...	£1	0	0
Brother or sister, or their descendants...	3	0	0
Uncle or aunt, or their descendants	5	0	0
Grand uncle or aunt, or their descendants	6	0	0
All other relations or strangers	10	0	0

The husband or wife of the deceased not chargeable with duty. Probates and Letters of Administration are exempt if the effects are under 100*l.* in value.

DUTIES ON DOGS.

Dogs of any description, each ... ... (per annum)	£0	12	0
Packs of hounds, of 66 or more	39	12	0
Packs of greyhounds, of 15 or more	9	0	0

Exemptions.—Dogs wholly kept and used in the care of sheep or cattle, or in driving or removing the same; provided no such dog shall be a greyhound, hound, pointer, setting-dog, spaniel, lurcher, or terrier. Dogs under 6 months old.

HORSES AND MULES.

Every horse kept or used for racing ... ... (per annum)	£3	17	0
Horses and mules above 13 hands in height, used for riding and drawing carriages chargeable with duty	1	1	0
Ditto kept for any other purpose	0	10	6
Horses and mules kept by farmers, bailiffs, shepherds or herdsmen, rectors, vicars, curates, Roman Catholic priests, Protestant dissenting ministers, physicians, surgeons, apothecaries, and common carriers... ...	0	10	6
Ditto under 13 hands, kept for riding or drawing carriages chargeable with duty...	0	10	6
Ditto, kept for any other purpose	0	5	3

Exemptions.—Horses or mules used for agriculture or trade.

DUTIES ON CARRIAGES.

For every carriage with four wheels, where drawn by two or more horses or mules... ... ... (per annum)	£3	10	0
Where drawn by one horse or mule only	2	0	0
For every carriage with four wheels, each being of less diameter than thirty inches, where drawn by two or more ponies or mules, neither of them exceeding 13 hands in height	1	15	0
Where drawn by one such pony or mule only	1	0	0
For every carriage with less than four wheels, where drawn by two or more horses or mules	2	0	0
Where drawn by one horse or mule only	0	15	0
Where drawn by one pony or mule not exceeding 13 hands in height...	0	10	0
Carriages kept and used solely for the purpose of being let for hire, one-half of the above-mentioned duties respectively.			
For any carriage with four wheels used by any common carrier	2	6	8
And where the same shall have less than four wheels...	1	6	8

Exemptions.—Any waggon, van, cart, or other carriage, to be used solely in the course of trade or husbandry.

DUTIES ON MALE SERVANTS.

For servants aged 18 years and upwards ... ... (per annum)	£1	1	0
Ditto under the age of 18 years...	0	10	6
Ditto employed as under-gardeners	0	10	6
Ditto employed as under-gamekeepers	0	10	6

Exemptions.—Occasional waiters, potboys, helpers, or ostlers of innkeepers.

HOUSE DUTY.

On inhabited houses of the annual value of 20*l.*, or upwards, the duty is 6*d.* in the pound in respect of dwelling-houses occupied by any person in trade who shall expose to sale and sell any goods in any shop or warehouse, being part of the same dwelling-house, and in front and on the ground or basement story thereof; or by a person licensed to sell therein, by retail, beer &c.; or as a farmhouse by a tenant or farm servant, and *bonâ fide* used for the purpose of husbandry only. But for dwelling-houses not occupied and used for any of the purposes described in the preceding, the duty is 9*d.* in the pound.

Exemptions.—Market-gardens and nursery-grounds are not to be included in valuation of inhabited houses.

Digitized by Google

Eclipses.

In 1867 there will be two eclipses of the sun—viz., on March 6 a partial eclipse, visible at Greenwich, and on August 29 a total eclipse, not visible in Europe.

There will also be two eclipses of the moon—viz., on March 20 and Sept. 13 and 14. Both eclipses will be visible from Greenwich.

The first solar eclipse will take place on March 6, and begins at Greenwich at 7m. after 8h. in the morning. The greatest phase is at 9h. 32m. a.m., and the eclipse will end at 8m. to 11h. Greenwich mean time.

The second eclipse of the year is that of the moon, on March 20. It will begin at 7h. 16m. a.m., and will end at 22m. after 10h. At 8h. 49m. the greatest phase will take place, when four-fifths of the moon's diameter will be covered.

The third eclipse is one of the sun, on August 29. It will be visible from parts of South America and the South Atlantic Ocean as a total eclipse, and at the Cape of Good Hope as a partial eclipse.

The fourth and last eclipse of the year is one of the moon, on the night of September 13 and the morning of the following day, and is visible at Greenwich. The eclipse will begin generally at 3m. to 11h. p.m. on the 13th. The greatest phase will occur at 26m. after midnight, when the moon will be in the zenith of a place whose longitude is 7 deg. 26 min. W., and latitude 4 deg. 16 min. S., and it will end generally at 1h. 55m. a.m. on the morning of the 14th.

Names of Months.

The Names of the months were given by the Romans. January, the first month, was named after Janus. February, the second month, was named from Febro, to purge. *March*, the third month, was formerly the first month, and was dedicated to Mars. April, the fourth month, was derived from Aperire, to open, in reference to buds and flowers beginning to open. May, the fifth month, is said to *have been* named in honour of the Majores, senators who assisted Romulus in the government. June, the sixth month, from Juno, because it was sacred to this goddess. July, the seventh month, was named after Julius, the surname of Caius Julius, who was born in this month. August, the eighth month, was named in honour of Augustus. September, the ninth month, was formerly the seventh month, and takes its name from septem, seven. October, November, and December were named from octo, eighth; novem, nine; and decem, ten; indicating their places in the year as the eighth, ninth, and tenth months.

High Water Table.

The Poultry-yard.

Profitable Poultry.

A CORRESPONDENT of *The Field* says that in breeding table fowls, a short-legged Cochin cock, and some large Dorking hens, will produce chickens that, at eight months old, will weigh from 11lb. to 13lb. the pair, when picked and ready for the spit. For laying, nothing surpasses the old fahioned red-cheeked Spanish, taking into consideration the size and richness of the egg. Another corespondent, writing on the same subject, says:—To combine quality with size (the great desideratum in table poultry), the best birds to *start with* are a cross between Cochin and Dorking. Select a good cock of the first variety, not above three years old, and mate him with six first-rate Dorking hens of a year old; next season take the *pullets* of that cross, and mate them with game; the produce of this cross you must use for the table, as it cannot be improved on; do not breed from them on any consideration, as it cannot be done to gain any point of goodness. By the above crosses you get all the essentials you require; in the first you get size from the Cochin, and one good cross of quality from the Dorking; and by your game cross you sacrifice very little in size, and add another first-rate cross of quality. I have seen birds of this cross obtain first-rate and rapid weight, and when killed retain nothing of their Eastern origin except that peculiar juiciness for which they are remarkable; the flesh being as white as snow, and as savoury as any aldermanic gourmand could desire. This cross cannot be improved upon for table purposes. It is a great folly to breed further than one cross (*i.e.*, to mate cross-bred birds together), and you may rely on it, that the further you get from the first cross the more disappointment you will have. It is more difficult to cross to breed increased egg producers than increased value for the table; and, in fact, I do not think that any amount of crossing can produce birds which would beat in laying some of present known favourite varieties.

Rearing Chickens.

It will usually be found most desirable to allow a hen to sit where she has been in the habit of laying. If the weather be not frosty, and an early brood be desired, the best plan is to allow the eggs, as laid, to remain undisturbed in the nest. If this be done, the hen will be observed to become broody much sooner than she otherwise would do. The eggs also hatch with much greater certainty than if they had been removed and then replaced. This possibly arises from their being warmed up, and moved by the hen every day. Whatever be the cause, the fact is certain that a hen who steals a nest in a hedge, or in some concealed situation, usually brings forth a much larger and stronger brood than one sitting in the hen-house that has had the eggs given to her in the ordinary manner. It is obvious, however, that in situations where the nest is apt to be disturbed by other hens laying in the same nest, the plan cannot be carried out. The number of eggs given to a sitting hen should vary with the season. In warm weather a hen will cover about thirteen of her own eggs very efficiently; in winter not more than eight or nine should be given. There is no reason for the prevalent prejudice in favour of an odd number.

It is scarcely necessary to add, that the sitting hen must be well fed. As old Cobbett says, "Though she does not give *milk*, she gives *heat*;" and since his time science has made still more evident the truth, that the production of animal warmth depends entirely on the consumption of a portion of the food taken into the system. The chickens are usually all hatched on the twenty-first day—that is to say, on the same day three weeks that the eggs were given to the hen; and on the following morning they are ready and strong enough to leave the nest with the hen and take food.

Any interference with hatching hens is exceedingly undesirable. The removal of the chickens as fast as they are hatched, and the placing of them in flannel by the side of the fire, is a most injurious plan. It is not possible to supply the exact temperature and genial warmth of the mother. Artificial aids can never supply the place of nature. The same remark applies to cramming the chickens with pepper or barley-corns, as is practised by some would-be improvers on nature. Anatomy teaches us that shortly before birth the yolk passes into the intestines of the bird, and furnishes it with food sufficient for its support for the first day; and the experience of those who have tried to rear large numbers of chickens by means of artificial hatching-machines, was entirely in favour of keeping the young birds for the first twenty-four hours without any supply of food. The best food for the young chicken is coarse oatmeal moistened with milk, or grits, varied with a little egg and bread-crumbs. If the hen is allowed a free range during the warmer part of the day, after the dew is off the grass, she will, by scratching, furnish the young birds with a supply of animal food in the form of insects, grubs, small worms, &c., that will be found far more effectual in promoting their growth than the chopped egg or shred meat which must otherwise be given them as a substitute for the natural supply. In districts where cheese-making is carried on, a supply of chopped curd will be found very useful in promoting the growth of the chicken. The practice of gamekeepers, of hanging up the leg of a horse or other piece of decaying flesh to furnish maggots for the young pheasants, can hardly be followed near a dwelling-house; but if a dead fowl or any other animal be permitted to become flyblown, and then buried about a foot deep in any situation where the fowls run, they discover the maggots as they work their way to the surface on attaining maturity, and by scratching obtain an abundant supply of animal food.

Ills and Evils.

Antidote for Strychnine.

A FEW grains of camphor in an emulsion will counteract the perilous effects of strychnine and cause spasms to subside; and in the more advanced stages of lockjaw, a camphor bath and strong injection of the same has been found effectual.

Chilblains and Chaps.

THE following application is strongly recommended. It is to be applied by means of a pencil, and is to be renewed as often as required, so as to protect the parts from the air, until the cure, which is speedy, is completed: Collodion, 30; Venice turpentine, 12; castor oil, 6; mix.—*Medical Times and Gazette.*

Salve for Broken Chilblains, &c.

CUT up into small pieces 6oz. of galbanum plaister and 4oz. beeswax, and simmer over a slow fire in half a pint of sweet oil, till quite dissolved. Have ready in a jar in which the salve is to be kept, 12oz. of honey, on which pour the hot ingredients, and keep stirring all the time until quite cold.

Bites and Scratches of Cats, Dogs, &c.

To relieve the pain and reduce the swelling produced by bites and scratches, well bathe the wounds with tincture of arnica, diluted with about twelve times its quantity of water. The blood will soon begin to flow freely, the pain cease, and the swelling abate; and the wounds will quickly heal of themselves, unless there is serious injury done.

Remedy for the Sting of a Bee, &c.

FOR wasps', hornets', or bees' stings, vegetable blue, or equal parts of hartshorn and olive oil, will be found a good remedy. For dogs, when bitten by a viper, olive oil and volatile alkali, administered internally and externally, will afford relief and prove a sufficient remedy, or olive oil and hartshorn applied externally and the oil alone internally; but the inflammation will not subside under three days.

Cure for Bruises, Cuts, &c.

TAKE spirits of turpentine, tincture of myrrh, aloes, and Friar's balsam, and mix together in equal quantities. Colonel Whyte says of this: "It is an old recipe I got years ago when hunting in the county of Louth, where such recipes are most necessary, as the stones are nearly as sharp as Sheffield razors; it is the very best for cuts, overreaches, and wounds of every description for either man or beast that I ever yet met with, and is well worth noting in any sportsman's book."

Bite of Mad Dogs.

A SAXON forester, named Gastell, has published in the *Leipsic Journal* the following remedy, which he has used for fifty years, and by means of which, he says, he has saved many human beings and animals from death by hydrophobia. Take immediately some warm vinegar or tepid water, wash the wound clean therewith, and then dry it; then pour upon the wound a few drops of hydrochloric acid, which neutralises the poison of the saliva.

Tincture of Arnica for Sprains, &c.

NOTHING relieves the severe pain often consequent upon such injuries, as tincture of arnica, in the proportion of six drachms or one ounce to a pint of cold water. Let this be used as a lotion, and kept constantly applied. If the arnica be procured from any good respectable chemist, it will generally be found that all pain, swellings, and discoloration will soon cease. Subsequently, and to relieve the weakness and stiffness of the injured parts, elastic bandages should be used; these, if well adjusted, combined, of course, with rest, and that cardinal virtue, patience, will complete the cure.

Chilblains.

To cure chilblains, simply bathe the parts affected in the liquor in which potatoes have been boiled, at as high a temperature as can be borne. On the first appearance of the ailment, indicated by inflammation and irritation, this bath affords almost immediate relief. In the more advanced stages, repetition prevents them breaking; and its occasional adoption will operate against a return, even during the severest frost. Another method, when unbroken, is to soak the hands or feet in water in which a large spoonful of mustard has been mixed, to be used as hot as it can be borne. If broken, use glycerine.

Burns and Scalds.

A VERY great deal of injury is often caused by endeavouring to do more than is necessary, and it cannot be too firmly impressed on the memory: 1st. That as the exposure to the air of a burnt surface is the cause of the continuance of pain, the part should be immediately protected from the atmosphere. 2nd. That burns, if instantly wrapped up and kept excluded from the air, require no further treatment whatever, and heal in a few days; and where burns and scalds have quickly healed after being covered up in cotton wool or wadding, or after being thickly coated over with flour, the result is due to the effectual exclusion of the air, not to the particular virtues of the application. 3rd. That when the clothes of a person are on fire, the person is to be made to lie down, and to be instantly enveloped in the carpet, hearth-rug, blanket, coat, or any other article that by smothering the fire will extinguish the flame. 4th. That the blister raised by burning is never to be broken, nor burnt clothes adhering to the flesh removed.

Cure for the Toothache.

THE following is an American remedy:—"My dear friend," says H., "I can cure your toothache in ten minutes." "How, how?" I inquired; "do it in pity." "Instantly," said he; "have you any alum?" "Yes." "Bring it, and some common salt." They were produced. My friend pulverised them, mixed them in equal quantities, then wetted a small piece of cotton, causing the powder to adhere, and placed it in my hollow and aching tooth. "There," said he, "if that does not cure you I will forfeit my head. You may tell this to every one, and publish it everywhere. The remedy is infallible." It was as he predicted. On the introduction of the mixed alum and salt I experienced a sensation of coldness, and with it—the alum and salt—I cured the torment of the toothache.

Hoarseness.

WHEN Napoleon I. returned from Elba, he was seized with this affection but a few hours before he was to reply to the harangues of the municipality of Lyons. His physician, Dr. Fourreau de Beauregard, prescribed the following potion:—Liquid ammonia, 10 drops; syrup of erysimum, 45 grammes (about 1½ oz.); infusion of blossoms of lime-tree, 90 grammes (about 3 oz.); to be taken in one draught. It produces the desired effect immediately, and was afterwards known by the name of "Imperial potion."

. . . When a public man is affected with sudden hoarseness just at a time when he must speak, the impediment may be removed by the application of a mustard plaister round the neck, and another at the base of the breast.—*Dr. Caffe in the "Journal des Connaissances Médicales."*

Cure for Warts.

THE following are several recipes for getting rid of warts:—1. Whenever your hand is disengaged, rub the wart with your tongue. 2. The extracted juice of a bean-pod is, after two or three applications, a safe and certain agent for the removal of warts. 3. Take a piece of the root of the ash-tree; put a part of the root into the fire; this will cause the juice to fizzle out at the part which has not been exposed to the action of the fire. Apply the juice to the wart. 4. Obtain at a good chemist's a small stopped bottle of strong glacial acetic acid—it must be the glacial acid. Touch the wart constantly with a camel's-hair brush dipped in it, so as to leave a drop on the wart to soak in. Do not let any run on to the surrounding skin. Persevere in this treatment, and some fine day on looking for the wart it will be found to have vanished. This acid does not stain the skin, and no scar will be perceptible where the wart has been.

Corns.

THE following are recipes for the cure of corns, both hard and soft: 1. Pare hard corns, and with a camel's-hair pencil apply daily a strong solution of iodine—say a drachm to the ounce. The paring ought to be repeated in a week. 2. Both hard and soft corns can be cured by the following simple means: Dip some lint in warm water; when well soaked, lay several folds of it on and between the toes; cover it well with gutta percha paper or oiled silk; tie this on at night, and, if possible, wear it for a day or two as well. All pain will be at once removed, and the corns will soon be so softened as to be easily picked out. 3. Soak in water or vinegar two or three folds of fine soft rag—it must be a little larger than the corn—cover it over with oiled-silk, so as entirely to exclude the air, and keep it on until the corn becomes soft and easy to take out. 4. Soft corns may generally be prevented by the free use of tepid water and brown soap. If the soft corn be very painful, touch it with lunar-caustic every morning till the pain abate.

Scarlatina, Measles, and Diptheria.

SESQUI-CARBONATE of ammonia, which is well known for its power in arresting the deadly influence of snake poisons, has been found to possess a similar influence over scarlet fever and measles. Mr. Charles Witt, of 30, Spring-gardens, London, says that the dose for these diseases varies from three to ten grains, according to the age of the patient. It should be dissolved (with an equal quantity of loaf-sugar to make it palatable) in as little cold water as will admit of its being swallowed; and it should on no account be mixed with other medicines, or even with acidulous drinks. The treatment is as follows:—First, a dose of calomel (from half a grain for children, to five grains for an adult) should be placed upon the tongue and swallowed. About an hour afterwards, give the first dose of ammonia, and repeat every three or four hours, if the disorder takes the favourable course; but if it increase in violence, the dose of ammonia must be given every two hours or every hour, or sometimes even more frequently, till the graver symptoms are subdued. The medicine has been found to possess similar powers over diptheria.

How to Cure a Smoky Chimney.

"I HAVE just succeeded," says Mr. C. Butler-Clough, in the *Mining Journal*, "in curing an obstinate smoky chimney by the aid of a zinc covering outside a common earthenware chimney-pot, having two openings in the zinc, one east and the other west. There are also two partitions or stoppers, north and south, to prevent the draught from escaping by the opposite opening. By the aid of this contrivance an upward current of air is carried outside the flue to its top, on the windward side of the chimney. I have now had the plan in use some time, and in the face of several most violent storms not a particle of smoke or soot has come down the flue. In other rooms the soot was blown on the floor to a large extent."

British Weights and Measures.

Avoirdupois Weight.

This weight is used in almost all commercial transactions, and in the common dealings of life.

27·34 Grains ...	... 1 Drachm.	28 Pounds	... 1 Quarter (qr.)
16 Drachms ...	... 1 Ounce.	4 Quarters	... 1 Cwt. (112 lbs.)
16 Oz. (or 7,000 Troy gr.)	1 Pound(lb.)	20 Cwt.	... 1 Ton.

The following is used in the Wool Trade.

14 Pounds ...	... 1 Stone.	6½ Tods	... 1 Wey.
2 Stone ...	... 1 Tod.	2 Weys	... 1 Sack.
12 Sacks ...	... 1 Last.		

Troy Weight.

24 Grains ...	... ... 1 Pennyweight	...	... 24 grains.
20 Pennyweights ...	... 1 Ounce ...	...	... 480 „
12 Ounces ...	... ... 1 Pound ...	...	...5760 „

Used for weighing gold, silver, and precious stones (except diamonds). The *carat*, used for weighing diamonds, is 3⅛ grains. The term *carat*, however, when used to express the fineness of gold, has a particular meaning of its own. Every mass of alloyed gold is supposed to be divided into 24 equal parts; thus the standard for coin is 22 carats fine, that is, it consists of 22 parts of pure gold and 2 parts of alloy.

For scientific purposes the grain only is used.

Apothecaries' Weight.

10 Troy Grains ...	1 Scruple.	3 Scruples ...	... 1 Drachm.
8 Drachms ...	... 1 Oz.		

This weight is used in medical prescriptions only.

Measures of Surface.

144 Square Inches	1 Square Foot.	40 Perches	... 1 Rood.
9 Square Feet...	1 Square Yard.	4 Roods ..	... 1 Acre.
30¼ Square Yards	1 Perch or Rod.	640 Acres ...	... 1 Square Mile.

Measures of Time.

60 Seconds ...	... 1 Minute	28 Days ...	... 1 Lun. Month.
60 Minutes ...	... 1 Hour.	28, 29, 30, or 31 days	1 Cal. Month.
24 Hours ...	... 1 Day.	12 Calendr. months	1 Year.
7 Days	... 1 Week.	365 Days ...	... 1 Common Year.

366 Days ... ... 1 Leap Year.

In 400 years, 97 are leap years and 303 common.

Measures of Length.

12 Inches ...	1 Foot.	8 Furlongs (1760 yards)	1 Mile.
3 Feet ...	1 Yard.		
5½ Yards ...	1 Rod, pole, or perch.		
40 Poles ...	1 Furlong.	69·510 Miles ...	1 Degree of a Great Circle of the Earth.

Other Measures of Length.

A Nail	2¼ Inches	Used for measuring cloth of all kinds.
Quarter	4 Nails	
Yard	4 Quarters.	
Ell	5 Quarters.	
Hand	4 Inches	Used for height of horses.
Fathom	6 Feet.	Used in measuring depths.
Link	7.92 Inches	Used in land measure.
Chain	100 Links	

Measures of Solidity and Capacity.

1728 Cubic Inches ... 1 Cubic Foot. | 27 Cubic Feet ... 1 Cubic Yard.

4 Gills	1 Pint.	2 Gallons	1 Peck.
2 Pints	1 Quart.	8 Gallons	1 Bushel.
4 Quarts	1 Gallon.	8 Bushels	1 Quarter.

5 Quarters ... ... 1 Load.

The four last denominations are used for dry goods only. For liquids several denominations have been heretofore adopted, viz.:—For Beer, the Firkin of 9 gallons, the Kilderkin of 18, the Barrel of 36, the Hogshead of 54, and the Butt of 108 gallons. Flour is sold nominally by measure, but actually by weight, reckoned at 7lb. avoirdupois to a gallon.

Registration.

Births.

Persons should cause their children to be registered within forty-two days after birth, by giving personal notice to the registrar of their district.

Deaths.

Intimation should be given of deaths in the same manner as births. This should be done within five days, as the undertaker has to give a certificate to the minister who reads the funeral service, who, if he buries the body without a certificate, is bound to give notice to the registrar within seven days. As the *cause* of death is to be entered, great care should be exercised in ascertaining the real nature of the deceased's death.

The Four Quarters of the Year.

Spring Qr. commences	March 21	Autumnal Qr. commences	Sept. 23
Summer „ „	June 21	Winter „ „	Dec. 22

Terms in England usually taken in Leases.

Lady Day ...	... March 25	Michaelmas ...	... Sept. 29
Midsummer ...	... June 24	Christmas ...	... Dec. 25

Interest Table.

Our Portraits.

PRINCESS SOPHIE CHARLOTTE OF BAVARIA.

This is the Princess who was so nearly being elevated to the throne of Bavaria, but whose engagement to marry her cousin, the youthful King Louis II., has recently been announced as "broken off." Various causes are assigned for this rupture; the King is eccentric, and an incompatibility of character, which daily become more evident, determined the young lady's father (Duke Max, as he is called in Munich) to disengage his daughter from her promise. This appears the most intelligible solution of the question, which has afforded much food for gossip since the fact was publicly announced. The King is romantic and eccentric; he shows a decided aversion to all affairs of state, and has become invisible so far as his ministers are concerned. He rarely lives in his capital, and apparently is wrapped up in Richard Wagner, and what a certain party is pleased to call "the music of the future."

Princess Sophie Charlotte was born on the 22nd February, 1847. She is the youngest of five daughters; her four sisters are respectively—Queen Marie, wife of Francis II., ex-King of Naples; the Empress Elizabeth of Austria, Countess Matilda of Trani, and Princess Helena of Thurn and Taxis. Princess Sophie, like her sister of Austria, is exceedingly pretty. She has received a very careful education, and possesses great musical talents; her voice is rich and powerful, and she sings at sight the most difficult scores in any easy unstudied manner that rarely fails to enchant her audience. On the 22nd January of the present year, the King asked Princess Sophie to be his Queen. The same evening Princess Sophie was formally betrothed to her royal cousin. But the old adage about the slip between cup and lip has come to pass. Prince Max has had a stern lesson in the fate of his daughter, whose virtues shed such a bright lustre over the ill-fated Francis II. at Gaeta. He recognises the inexorable fact that crowned heads are not more considered in these reforming days than other heads—that they can be shot, dethroned, dispossessed, while the rest of the world looks on, and contents itself with saying its little say. While Europe is in the state it is, and Bismark is all-powerful in Germany, who shall say that Prince Maximilian has acted unwisely in discountenancing his daughter's alliance with a very unpopular King?

THE KING AND QUEEN OF THE BELGIANS.

Leopold II., of Belgium, is related by blood to our own royal family and to the ex-royal family of France. His father was, perhaps, the wisest king of our generation, and his mother, Louise Marie of Orleans, was a model of virtue and grace. She married the late King on the 9th of August, 1832, and the eldest-born, Leopold II., the subject of our notice, came into the world at Brussels, on the 9th of April, 1835; he is consequently thirty-three years of age. On the 23rd of August, 1856, the King, then Duke of Brabant, married Marie Henrietta Anne—an Austrian archduchess, whose father was the late Archduke Joseph, Palatine of Hungary, and her mother a daughter of Louis, Duke of Wurtemberg. The Queen is about a year younger than her husband, as she was born on the 23rd of August, 1836.

The King, when Duke of Brabant, spent much of his time in travelling. About twelve years since, accompanied by his wife, he visited the Tuileries, and made a stay of a few weeks there, notwithstanding the fact that Napoleon III. had confiscated the property of his mother's family; then he travelled through several European states, and ultimately prolonged his journey to Egypt and Asia Minor. Since he came to the throne about two years since, little has been heard of him, except the warm welcome he accorded our volunteers when they visited his capital. But it is a compliment to constitutional sovereigns to be able to say with truth that their public actions have not rendered them conspicuous. Following the example of his illustrious father, Leopold II. knows how to hold the scales between disputants, and to trust not so much to power as to a wise conduct in all political matters. Belgium, which in former times was inclined to revolutions, now devotes her energies to trade under a liberal and free government.

The Queen, who is much beloved for her kindly nature, is passionately fond of riding, and, like many of her countrywomen, is a splendid horsewoman. The royal couple have three children—two princesses and one prince—of the respective ages of nine, eight, and three. The heir apparent to the throne is the second born.

THE KING AND QUEEN OF THE GREEKS.

Christian William Ferdinand Adolphus George, King of the Greeks, the second son of the King of Denmark, was born on the 24th of December, 1845, and is consequently in his twenty-second year. He was married on the 27th of October, 1867, to the Grand Duchess Olga, daughter of the Grand Duke Constantine of Russia. The ceremony took place in the Winter Palace at St. Petersburg with all that pomp and splendour for which the court of the Czar is so conspicuous. The programme was as follows:—At noon the bride and bridegroom, with the Imperial family, proceeded in nuptial procession to the church, where Monseigneur Isidore, the metropolitan of St. Petersburg, performed the service, assisted by many other members of the holy synod. On leaving the chapel the august pair received the congratulations of the Court, the diplomatic body, and of others present. At five p.m. a grand banquet was given for the Imperial family, the holy synod, and the functionaries of the three highest grades. The artistes of the opera performed different airs during the banquet, and each toast was saluted by 101 guns from the fortress. In the evening a grand ball was given by the Emperor, who opened it by dancing the polonaise with the Queen. The bride wore a dress of magnificent silver cloth, and over it a mantle of crimson velvet, lined with ermine. The bridegroom wore the uniform of a colonel of the Greek army, with the Order of the Redeemer.

THE EMPEROR OF RUSSIA.

Alexander II., Emperor and Autocrat of all the Russias, was born on the 29th April, 1818. His father, Nicholas, was then a simple Grand Duke, his elder brother, Constantine, standing between him and the throne.

Up to the age of seven the Emperor's education was superintended by his mother, who was a sister to the late King of Prussia. At this period, by the death of one uncle and the renunciation of the crown by another, his father, Nicholas, came to the throne. The child's education was then confided to General Mierden, of German origin, and professing the Protestant faith. This tutor was succeeded by the poet Joukowski, a disciple of the romantic school. Other generals followed; but the fame of none of these preceptors or tutors has ever spread beyond the Western frontier. But among them all, the youthful Alexander had no tutor so strict as his own father; from an early age he tried to mould his son to be an autocrat, which was his idea of a ruler. In 1840, his health being in a weak state, he was ordered to travel, and remained several months a visitor at the Court of Hesse. So attractive did he find one of the daughters of that ducal house, that he did not leave until he married the Princess Marie, a lady six years younger than himself, which event came off in 1841.

Nicholas died during the Crimean war; Alexander ascended the throne on March 2, 1855, and was crowned September 7 of the following year.

The Czar does not look his fifty years; he is tall and graceful, with a Grecian profile, but his blue eyes are expressionless. He has had six children, five sons and one daughter; his eldest born died two years ago at Nice, an event which gave him the deepest sorrow, and caused him to lay aside his imperial state and ceremony, and to remember only that he was a parent.

THE KING OF PRUSSIA.

William I., King of Prussia, was born on the 22nd of March, 1797. He is the second son of Frederick William III., and brother to the late King. At an early age he entered the military service, and was present at the campaigns against France in 1813 and 1815.

The Queen, to whom he was married in 1829, is a daughter of the late Grand Duke of Saxe Weimar; she is much beloved for her many noble qualities, and is regarded in her own country as a liberal patron of all that belongs to the literary and artistic world. Of late years she has devoted much time and energy to the supervision of hospitals. The royal couple have two children—Prince Frederic Charles, born in 1831, and married to the Princess Royal of Great Britain and Ireland, and Princess Louise, the wife of the Grand Duke of Baden.

In 1840, on his late brother's accession to the throne, the King of Prussia became Governor of Pomerania and commander of several German and foreign regiments. In October 1857, the state of his brother's health compelled him to resign the reins of government into the present King's hands, and in the following year, as the mental malady increased, the Prince was declared Regent, notwithstanding the strong opposition of those who held contrary political opinions. This regency, which lasted four years, prepared him for the throne, which he ascended on the 2nd January, 1861. The King of Prussia is certainly the only living man in Europe who believes in Divine Right. With an incomprehensible exaltation, he takes Providence as an accomplice, even in his annexations.

CHARLES XV., KING OF SWEDEN.

Charles XV., King of Sweden, is the grandson of Bernadotte; his grandmother was Mademoiselle Eugénie Clary, the daughter of a rich Marseilles merchant, who refused to give her as wife to Napoleon Buonaparte, because he declared "one Buonaparte was enough in a family," his eldest daughter being already married to Joseph Buonaparte.

In 1809, Charles XIII. was raised to the throne of Sweden, in the place of his nephew Gustavus IV., who had been compelled to abdicate. Having no children, he adopted the Prince of Schleswig-Holstein as his heir; but this Prince dying in 1810, the Diet of Orebro proclaimed Marshal Bernadotte to be the King's successor, as well as adopted son.

Accordingly, when Gustavus IV. died (which event took place on the 5th of February, 1818), Bernadotte was crowned King of Sweden and Norway, and his son Oscar I. succeeded him in 1844. The issue of King Oscar's marriage with the Princess Josephine of Leuchtenberg is the present King Charles XV., born May 3, 1826, and Prince Oscar, Duke of East Gothland, born three years later.

The Salic law exists in Sweden as in France; therefore Prince Oscar is heir presumptive to the throne, although the present King has a daughter about sixteen years of age by his marriage with Princess Louise of Orange, the daughter of the King of Holland. The King of Sweden is 41 years old, but as his hair is cut very close and tinged with grey, he looks older. He is tall, with a very manly bearing, and his appearance is more that of a native of the south of France than a Northerner. A thick black beard surrounds his face; he has handsome strongly marked features, sparkling

Digitized by Google

eyes, and an expression that well accords with the ambitious plans attributed to him.

Charles XV. is an artist is well as a king; some of his paintings, in which Scandinavian nature is most poetically rendered, were exhibited at the late great French Exhibition. A large landscape—the subject, Winter in Sweden—he has presented to the Emperor of the French.

The Government of Sweden and Norway is a limited monarchy. There is an assembly called the *Diet*, which consists of four chambers, and shares the legislative power with the sovereign. In Norway, the legislative assembly is called the *Storthing*, a body which possesses higher powers than the Swedish Diet. The executive power in both countries is vested in the sovereign. The established religion, both in Sweden and Norway, is the Lutheran, from which there are very few dissenters.

PRINCE OSCAR OF SWEDEN.

Prince Oscar Frederic of Sweden and Duke of East Gothland is a grandson of Bernadotte. He was born Jan. 21, 1829, and is brother to the reigning King. As the Salic law is recognised in Sweden, he is heir presumptive to the throne, Charles XV.'s family now comprising only a single daughter, his son having died of some childish disease when a baby. Prince Oscar married, on the 6th of June, 1857, Princess Sophie, a daughter of the late Duke William of Nassau, and by her he has three children, all princes, born respectively in the years 1858, 1859, and 1861, at the famous palace of Drottningholm.

Prince Oscar has translated "The Cid" into Swedish; he writes poetry, and is fond of inviting literary men to his palace, and reading and discussing their writings together. Like his brother, the King, he is extremely simple in his habits, and walks about Stockholm, rejecting vehicles. So unostentatious are both the brothers in their ways, that they might be easily mistaken for private gentlemen, were it not for the many respectful greetings that mark their track.

In winter Prince Oscar, with his family, occupies the palace of the heir-apparent at Stockholm, but in summer they remove to Drottningholm—the Swedish Versailles—an imposing-looking palace, designed by Tessin, its front commanding a landscape of rock, pine-clad island, and the blue water of the Malar. The rooms are filled with a goodly sprinkling of statues, pictures, tapestry, and china. The present dynasty have the good taste to preserve there all memories of their Wasa predecessors. Bernadotte, never feeling sure that he would die in Sweden, bore no love to the memory of the exiled race; but King Oscar, endeared to his people as a born Swede, protected all relics of his country's history, and his son, Charles XV., follows in his father's steps.

Prince Oscar holds two high posts in the Swedish army, besides being vice-admiral of the fleet.

SULTAN ABDUL AZIZ KHAN.

The Sultan is the second son of Mahmoud II., the destroyer of the Janissaries; he comes consequently of a race of reformers. What he desired when he came to the throne he desired heartily; but the Sultan proposed and the Administration disposed. Fundamentally there are no people in Europe more honest than the Turks, and the Sultan is the most perfect personification of Mussulman honesty; but, unfortunately, there are no people who lie under graver charges of fraudulent practice in public affairs.

The simple words which Abdul Aziz spoke on the 25th June, 1861, when he ascended the throne in the place of his deceased brother, plainly tell the character of the man: "I peremptorily order all the Ulemas, officers, and *employés* in the public service to fulfil their duties with perfect regularity and exemplary fidelity."

Abdul Aziz has done much for Turkey, but certainly not all he desired to do. In his early manhood he was respected by all with whom he came in contact. In the midst of a voluptuous court he lived an irreproachable life with one wife, never more content than when making agricultural experiments on his farm at Pharassaki, on the coast of Asia, or when seeking solitary retirement in Dalma-Bagtetic, on the Bosphorus.

The Sultan is a man of imposing presence, and is still young; he was born on the 9th of February, 1830, and is consequently in his thirty-eighth year. Youssouff Izzeddin, the son who accompanied him in his recent visit to this country, was born October 9, 1857.

According to the order of succession in Turkey, it is not his son who will succeed the present Sultan, but his nephew, Mehemet Mourad Efendi, born September 21, 1840, the son of Abdul Medjid. Much honour is due to the character of the Sultan, who has ever shown the heir to his throne the greatest affection and most tender care. So far above suspicion has his thorough honesty of purpose and action placed him, that when he recognised the order of direct succession in Egypt, no one thought for an instant that he had any personal motives in the act with reference to Turkey. So loyal a man should surely make a trustworthy ally, and a friend to be depended on. Therefore, long live Abdul Aziz Khan!

ISMAIL PASHA, VICEROY OF EGYPT.

Mehemet Ali, the powerful and unscrupulous ruler of Egypt, died, leaving many children behind him, some of whom succeeded him in their respective turns. Of his successors, Ibrahim Pasha, the conqueror of Nezib, was the most illustrious.

Ismail Pasha, the present sovereign, is the son of Ibrahim Pasha; succeeded his uncle Said on the 18th of January, 1863. He was educated in France, a fact which accounts for the Western spirit of civilisation that has tinged and influenced so many actions in his career. His keen countenance speaks plainly the deep penetration and ready intelligence with which nature has endowed him.

In this country we owe his Highness a deep debt of gratitude for the assistance he ever accords to the transit of our troops through his dominions, and more especially when our vast Indian Empire was seething with revolt and rebellion, now eleven years ago. The Viceroy's prodigality is proverbial, as his donations during his recent visit to both France and England testify.

The aptitude of Orientals in acquiring foreign languages is now a recognised fact. Ismail Pasha is no exception to the rule; he speaks English and French fluently, and almost as easy as his native Arabic. According to Mussulman law, either Mustapha Pasha, or Prince Halym, the last-born of Mohemed Ali, should have been his successor; but the Viceroy has obtained the Sultan's permission to change the order of succession in favour of his own children, a novel feature in the history of the Koran.

The Viceroy is youthful-looking for his years, especially when we take into account that he is an Oriental. He was born in 1816.

Turkish Orders of Knighthood.

The circumstances under which the Imperial Ottoman Order of the Crescent was instituted are somewhat flattering to our national vanity. Mr. Carlisle says: "It is an event which forms a memorable era in the annals of the eighteenth century, that the Turks, against whom the first order of knighthood was established, should have instituted a military one to recompense the bravery of a Christian and a hero, and expressly to commemorate a victory which was gained upon their own coasts, and upon which depended their existence as a nation." The victory in question was that of Nelson over the French fleet in the battle of the Nile on Aug. 1, 1798. When the Sultan received official confirmation of the battle, he intimated his admiration of Nelson's conduct in a communication to the British Minister to Turkey, wherein he says: "The service rendered by our much-esteemed friend, Admiral Nelson, on this occasion, being of a nature to call for public acknowledgment, his Imperial Majesty the powerful, formidable, and most magnificent Grand Seignor has destined as a present in his imperial name to the said Admiral, a diamond aigrette and a sable fur with broad sleeves. He hopes, moreover, that the English Minister will obtain the King's permission for Nelson to wear the aforesaid aigrette and pelisse." Mr. Smith very prudently suggested the propriety of establishing an order, to be called "the Imperial Ottoman order of the Crescent," and the Sultan adopted the recommendation, and instituted the first Turkish order for awarding warlike achievements with due honour. The order is divided into three classes, but is destined as a recompense to foreigners who may have rendered eminent services to the Porte, and not to Turkish subjects. Nelson was the first Knight Companion. On a round gold shield or medallion, enamelled red, the badge shows upon the obverse a star in the centre, with rays of brilliants, and a crescent of brilliants in the margin. Upon the reverse is the name of the Sultan, surrounded by a wreath. Knights of the first class wear this badge upon the left breast, with a star embroidered in silver, bearing a silver star and crescent on a red field; knights of the second class wear the decoration in a smaller size, without the star, and round the neck; while the third class has a still smaller badge, worn at the left button-hole, the field gold, and silver substituted for brilliants. Although originally only meant to commemorate the great triumph of English arms in Egypt, it was thought well to confer the order upon others. The Ottoman order is not seldom called the Osmanli, both words having the same signification.

There is also the Turkish order of the *Medidié*, which was instituted in 1852. Its badge is a silver sun of seven triple rays, alternating with crescent and stars. The red enamelled centre is inscribed with "zeal, honour, loyalty," the date, and the Sultan's name. The classes are distinguished much as in the previous case, the first wearing a star upon the left breast, and the second a star upon the right.

The Cascade of the Velino.

The cascade of the Velino, or the "Falls of Terni," of which we give an illustration, is situated about three miles from Terni, in Italy. The Velino near this point flows through a narrow gorge, over a rocky bed, with a rapid declivity, and falls into the valley of the Nera amidst clouds of mist. The perpendicular height from the edge of the rock to the level of the Nera is about 160 feet. The fall, however, is broken into two parts, the first of which is perpendicular, and then the water forms a succession of cascades or rapids until it meets the Nera. On a projecting shelf of rock which overhangs the precipice a pavilion called "la Specola," erected by Pius VI., commands a fine view of the fall and of the valley of the Nera. The cascade called Della Marmora has been considered as the finest in Europe, the mass of water being superior to all the Alpine cascades, and the height far superior to the fall of the Rhine at Schaffhausen. A rainbow is often seen hovering on the mist produced by the spray. The name of Marmora has been given to the mountain from which the river falls, on account of the abundant incrustations resembling marble, produced by the deposit of the waters of the Velino.

Garden.

Mignonette in Winter.

MIGNONETTE will thrive very well indeed in cold frames during the winter, and better still in low turf pits, *i. e.*, pits with walls made of sods—a cheap and capital method. It should be very near the light, get but little water, and be in rich light soil. The mignonette to bloom during the dead of winter should have been sown rather early in autumn, but you may sow it almost at any time in a comfortable light pit. It should be well protected during frost.

Management of Ferns.

As to soil, you cannot use anything better than fibry peat, with a sprinkling of leaf mould through it, and a good share of silver sand, or the nearest approach to that which you can obtain: sharp river sand is a good substitute. A sprinkling of cocoanut fibre might also be added with advantage—indeed, we are inclined to say that in a Wardian or other glass case ferns might be grown in this material alone. In either instance let the soil be a light mixture, free and open, and if the surface be covered with cocoa fibre it is sure to improve matters. The great point is to attend to the ferns frequently, and see that they do not suffer from draught, dust, &c., and it is also desirable to give a little air at the top of the case. It is not well to give air by opening the door or by causing a free draught through the case, but a little top ventilation is beneficial at all times, except when gas is burning. Give very little water in winter if the ferns be planted out; but if in pots they will require much more from the greater evaporation from the surfaces and sides of the pots. Ferns in pots are frequently severely injured or killed by keeping them over dry. When planted out in a mass of soil one good watering in late autumn suffices for a long time. Remove the "mould" from the surface of your case, stir up the soil a little, and then place about half an inch of cocoa fibre on it, and, if cocoa fibre is not at hand, use a little of the mixture recommended. If you have the opportunity, and your ferns be in a bad state, it is better to place them in a cool stove or greenhouse, according to their hardiness, till they recover. It is impossible to tell you how often to water. Your own judgment must direct you there. As a rule, ferns should be kept moist at all times, but it requires few waterings to keep them sufficiently so in winter.

To Water Plants.

PLANTS in pots in the open garden must be watered regularly; oven in rainy weather they must be examined, for the plant often throws all the water over the side. Many a camellia, heath, and hardwooded plant has been destroyed by neglect in wet weather.

Ladies' Flowers.

SKY-BLUE COLUMBINE (Aquilegia cœrulea).

IT is a native of the Rocky Mountains, and has been introduced to cultivators by Mr. W. Thompson, the seedsman of Ipswich. It is a hardy herbaceous perennial, and flowers rather early in summer, continuing a long time in flower. It, like most hardy flowers, flourishes best in a soil somewhat sandy and light. They, unliked potted things, require no daily attention, one good preparation being sufficient, and afterwards we have merely to keep them from being overrun with weeds or their coarser fellows. The proper place for this excellent Aquilegia is the choice mixed border, or the rockwork, particularly the former.

FAIR MAID OF FRANCE (Ranunculus aconitifolius fl. pl.)

This beautiful old border flower, now nearly extinct, is so white, neat, and pretty, that it deserves attention. It is sometimes called bachelor's button, but the name we give is the right one. The flowers are not large, but are so white and neat and pretty and double that they prove very useful for cutting, apart from their appearance in the border. It should always be used as a border flower in a shady place, or to plant along the margins of a shrubbery. In any case a rich, light soil and partial shade will be found to suit it best.

TENORE'S CANDYTUFT (Iberis Tenoreana).

There are several kinds of perennial candytuft grown in British gardens, but they are all white, and a very beautiful snowy white too. This will be welcomed as a purplish-flowered one, of a charmingly neat habit and dense profusion of flowers. One thing, however, must be borne in mind about it—it loves a light, sandy soil, and perishes (in winter) on a heavy clay one. But on light soils it will be found a gem, and in all places it should prove very useful for rockwork, as on such we usually put soil, or in which much water cannot rest in winter; or at least we ought to do so. This plant may be easily raised from seed, to be had very reasonably from Mr. Thompson, of Ipswich.

THE CHEDDAR PINK (Dianthus cœsius).

This is precisely one of those plants that require a peculiar treatment. It perishes in the ordinary border, but flourishes freely, and flowers abundantly on an old wall. To establish it on the top or any part of an old wall, the best way would be to sow the seeds on the wall in a little cushion of moss, if such existed, on whatever wall might be selected: or, if not, to place a little earth with the seed in the chink. The seeds may be had from the seedsman, but as many can have no means of establishing it on old walls, it may be grown upon a rockwork in firm sand or gritty earth.

To make Myrtles Flower Out of and In Doors.

WHEN myrtles do not flower it is because their strength has been exhausted, and they have not been repotted when their roots required it. If repotted once a year in good compost, say peat, loam, and leaf mould, the branches will be loaded with flowers. Care must be taken to give them enough water, particularly out of doors in dry weather. If kept too dry in the house they will get what is called the scale and look sooty and out of health. They like plenty of air but not draughts.

Plants for the Grave.

I HAVE often observed the unsuitable nature of the flowers planted on and near graves; often thought of selecting the really useful plants for such purposes, and hesitate no longer, in consequence of "Erminia's" query as to the best kind of flowers to plant on a child's grave: "I wish to have something which would look well all the year round." This touches the pith of the subject. If flowers that look well all the year round are more *apropos* for any one spot than another, that is in the cemetery; but, notwithstanding this, I have scarcely ever seen anything of the sort used in a graveyard. The gaudy flowers of the summer garden are frequently planted on graves; but, while far from suitable in tone, they perish in winter, and frequently present a miserable and ragged aspect after being cut down by the autumnal frosts and rains. Infinitely better are flowers of spring, whether they disappear in winter or no; and, better still, those which look well all the year round, irrespective of their flowers. There are plenty of plants eminently suited for this very purpose, cheap, hardy, and easily obtained, and some of them of such vivid green, even in the middle of winter, that they could not fail to contrast most favourably with their sculptured surroundings; and what more in unison with the feelings of those who love the memory of their dead than humble plants which perish not during our cold and dreary winters, but which glisten into a deeper green through the November blast, and emerge from the hardest frosts and deepest snows full of life, and ready to smile into flower under the earliest glances of spring.

I could probably find several hundred plants likely to do this; but as many of them are difficult to obtain, and as many of them might require more attention than they could conveniently get in a cemetery, I shall confine myself to those that are easiest procured and of hardiest constitution so that there may be no disappointment. The kind of plants that I would particularly select from are those known as alpines—hardy evergreen herbs of northern and elevated regions in temperate climes. These, with the exception of a few very dwarf and neat shrubs, are the only ones that will afford satisfaction. First among them, from its excellent constitution, and the readiness with which it may be procured, I would place the evergreen Iberis saxatilis, which forms neat little evergreen bushes, looks fresh at all seasons, and becomes a perfect sheet of snowy beauty in early spring. It grows everywhere, and will be found to do better on and around graves than in the shady and half-shady positions in which it is usually planted. This common kind is easily obtained, and as useful as any; there are several others equally useful, if you can obtain them, I. coritolia and I. gibraltarica—a kind sometimes sold in the nurseries by the name of correafolia, and which blooms later than the others, bearing large and fine pure white flowers. Suppose it is wished to make a dwarf evergreen edging round a grave or its railings, there is nothing which will equal the first or commonest of these plants; once planted evenly in line it will soon form a compactly-spreading hedge, and remain in good condition for years without any attention whatever. Should it at any time get too large or spreading for its position, it may be clipped in with a small shears as closely as you like: and it bears clipping as well as a privet hedge. Along with it might be associated the dwarf-creeping, compact, and evergreen Aubrietias, which become perfect masses of purplish blue in spring. Being a much dwarfer plant than the Iberis, those would require a slightly different position. The Iberis, for instance, might be in the centre, and these, with the dwarfer subjects, towards the edge. All the Aubrietias are suitable; they only differ a little in colour. Both are easily obtained as plants, and may be readily raised in any quantity from seed, which is very cheap. The white Arabis albida would also be very useful in this way, though it often perishes on level ground on heavy soil, and some of our largest London cemeteries are on the heaviest and worst clay that a plant can grow upon, like putty, in fact; but Iberis or Aubrietia will flourish on it. So, too, might the bright yellow alyssum be used, but I think it too loud and showy for such a spot; however, it may suit the tastes of those who cover a grave with scarlet geraniums and yellow calceolarias. The dwarf yellow alpine wallflower (Cheiranthus alpinus) forms a very neat and compact bush all through the winter, and produces masses of clear, pure yellow in spring; but it is not a very permanent plant in heavy soils, and we should, in this instance, choose the most permanent.

Silena Alpestris combines every good quality which could be desired in a plant of this kind: it is as hardy as the common daisy, forms a low-spreading evergreen tuft, and becomes a mass of the purest and prettiest snow-white flowers in early summer. Will form a charming companion for the Aubrietia, and is easily raised from seed, or may be had cheaply as ready grown little plants in any nursery where alpine plants are grown. I am particular in indicating how each plant may be obtained, in consequence of many people who have tried to get plants enumerated in my previous papers failing to do so. The fact is, that these most interesting flowers have been so much neglected generally that nearly all nurserymen have ceased to grow them, though a few are now cultivating very large collections. However,

Digitized by Google

we must here avoid anything difficult to obtain. In the very interesting Sedum tribe a good many dwarf things will be found suitable; the English Sedum album, for instance; the large glaucous S. semperviviodes, the very dwarf silvery S. glaucum, recently sent out by Mr. Salter, of the Versailles Nursery, Hammersmith; the green Sedums reflexum and sexangulare, not to mention others; indeed, nearly every hardy Sedum will be found suitable, and is pretty certain to look well at all seasons. Of course these dwarf plants require to be kept clear of weeds, and free from the company of larger and more straggling plants, which choke and disfigure them. The sempervivums, or houseleeks, also afford a few exceedingly permanent and pretty plants, which generally look better and more compact in winter than in summer. Some are green and others glaucous—all interesting and neat. S. Californicum, glaucous, with each leaf tipped with chocolate colour; S. hirtum, dwarf, neat and green; S. globiferum, forming round little balls of leaves, green with a pinkish tinge, and scarcely rising above the ground, will be found among the best, though every one of the hardy ones will be found suitable, and there are nearly or quite thirty hardy species in the Hull Botanic Garden.

The Saxifragas are still better than the preceding kinds, in consequence of their deep and vivid green. The mossy saxifrages are particularly remarkable for assuming their deepest green and verdure when winter commences to take hold of the ground, and almost every other plant begins to look ragged and decaying, or has lost its leaves. These, then, in nearly every instance offer attractive objects for planting on and near graves. It is useless to specify individual kinds, for nearly all are equally good, and only differ in their tone of green, and slightly in size, one or two scarcely growing more than an inch, and others attaining the dignity of three, four, or five, and even a foot, when the mass is old, and does luxuriously. The native S. hypnoides and its varieties are as good as any; while, if the silvery kinds are fancied, and very beautiful they are, looking as well or better at Christmas than at midsummer, aizoon, pectinata, crustata, pyramidalis, Hostii intacta, and others closely related to them, will be found to suit admirably. Those who do not know these encrusted saxifragas may be the more favourably disposed to them when it is stated that their tiny leaves are margined with a row of silvery or white dots, and the leaves being very abundantly and compactly produced, this gives the plants a singularly neat appearance. A tuft of these here and there among the emerald green kinds would look very beautiful. Even the Killarney saxifrage (the London pride) and its allies would do but scarcely so well, as the mossy and silvery sections which generally produce white flowers in spring or early summer. All these dwarf plants may be seen fully exposed in the scientific department of Regent's Park Botanic Garden, where, indeed they form the most interesting beds, and also at Kew, though there they are for the most part grown in pits, though they are as hardy as stones. But the preparation necessary for these plants would be a slight lightening of the surface soil with sand where heavy, and that is rarely necessary in ordinary soils.

Among these pretty alpines, &c., I would drop here and there a bulb or plant of some chaste and pretty spring flower, like the common or Crimean snowdrop, the Hepatica, the white and delicately-striped crocuses, Bulbocodium vernum, and any other spring flower that may be admired and obtainable. The fields, woods, or cliffs may afford not a few appropriate things, but information on this point will be best gained by my papers on "The Garden of British Wildflowers." A few violets would be very suitable if the soil were one in which they would flourish, which is certainly not the case on the north side of London. Finally, do not forget a few neat dwarf and hardy shrubs—compact tiny evergreens. In this way nothing surpasses Erica carnea, which is a perfect mass of charming flowers in spring, and hardy and free in almost all soils. Some of the dwarf and curious varieties of the common ling, which are to be had in good shrub nurseries, are also good; while the pretty little partridge berry (Gaultheria procumbens), with its bright red berries in winter and tiny close growth, cannot fail to charm. In a peat soil a good variety of dwarf ericaceous plants might be tried. On nearly all soils the bearberry (Arbutus Uva Ursi) will trail its recumbent evergreen growth healthfully along; and where there is considerable space, some of the dwarf hardy evergreen rhododendrons, the bright-berried skimmias, and dwarf green tapering conifers, like the Retinosparas, may be tried with great advantage, with a few of the varied and nicely marked ivies to train up rails, along chains, &c.; not to speak of other dwarf, evergreen, and interesting shrubs which may be found by examining any good shrub nursery.

From the limited space generally around graves the planting of large free-growing things is not to be recommended. The general planting of the cemetery with the larger trees of suitable character should be attended to by the managers of the cemetery. There are a great many conifers and other trees and shrubs which look very well in a young state, but which soon attain large and unsuitable dimensions; and these should be guarded against as unfit for the surface and immediate surroundings of a grave. It is not sufficient to see the aspect of the plant when young; we should inquire as to its usual ultimate development. The best example of taste in the planting of a cemetery that I know of is in the Dean Cemetery, at Edinburgh; the worst—and vile it is—in those London cemeteries where they mutilate the surface and disturb the memorials of the dead to carry out a little Cockney planting of evergreens, which are sure to perish sooner or later from smut and the other evils of our town atmosphere. I need only instance the recent "improvements" around the church in Bishopsgate-street.

IRIS.

The Delphinium.

THIS family is so noble in character, hardy, and useful, that no garden should be without a selection of the best varieties. They are hardy as need be; the colour in many has a richness almost unrivalled, while the delicate tintings and exquisite cærulean hues of some of the more recent varieties are quite by themselves as regards a peculiarly delicate charm of colour. It admits of a greater variety of employment than most things. It may be pegged down among humble bedding plants, or allowed to hold its trusses boldly up among dahlias, shrubs, and our tallest flowering plants. When planted a little within the low front edge of a shrubbery, the effect of the noble trusses peering above, and relieved by the foliage, is very beautiful indeed; and this is one of the best ways of employing the plant. It does not run to a mass of strong weedy leaves and stems like many of the plants recommended for shrubbery decoration, which indeed too often tend to produce nought but raggedness. You may conceal it immediately behind the front shrubs without displaying anything but the great beauty of the flowers; and, considering its size and strength, no plant is more tractable among the dwarfer inmates of the garden, for you may peg it down almost like a verbena. It has sometimes a habit which may be taken more advantage of than it is, if attention be paid to produce it—and that is of flowering a second time in the same year. This is more particularly the case if the plants be moved annually, and if the flowering stems be cut down low after the first flowering. The planting annually induces a tendency to a continuous bloom and growth, and the cutting down makes the plant break up again into a crop of young shoots which flower late; in fact, come in among the autumnal flowers.

It will grow almost anywhere; the richer and better the ground, the better the plant, of course. The ground may be enriched for this and like plants with any manure that may be easiest to procure, from the scrapings of ditches or roads to the choicest farmyard stuff. The only thing that need be said about it is, that for heavy clay land it will be wisest to employ disintegrating material, such as sand, the grit of limestone roads, &c., with horse manure, fresh leaf mould, &c.; while the light land will of course be grateful for the moister stuff, such as cowdung, stiff loam, clay, &c. Good kinds are fortunately easy to procure. There are not a few indifferent species of Delphinium, which must be avoided as not being quite ornamental; but some of the species are really good, and deserve a place. Among the best of these are D. elatum, D. grandiflorum (sinense) and D. formosum, D. Barlowi and D. azureum. The following list embraces most of the good varieties now to be had, with the best indicated by an asterisk: Alba cœlestina, *alopecuroides (ranunculus-like), Attraction, Barlowi, Beauty, Beauty of Charonne, *Belladonna, bicolor grandiflora, conspicuum, *Coronet, *Defiance, *Delight, elatum plenum, *Felix Powlet, formosum, formosum cœlestinum, gigantea, *grandiflorum, *grandiflorum maximum (peat soil), *Hendersoni, Hendersoni Ligeri, Herman Stenger, hybridum, imbricatum cœlestinum plenum, *Jules Bourgeois, *La Belle Alliance, Madame Bruant, Madame De Pruinas, Madame Guichard, Madame Hock, *Madame Rougier, Madame Thibaut, magnificum, mesoleucum superbum, Meteor, Monsieur Duchartre (ranunculus-like), *Monsieur Neuner, Montmorency, Mrs. Gerard Leigh, Nahamah, perfectum novum, *Pompon de Tirlemont, pulchellum, ranunculæflorum, *Schamyl, Star, Triomphe de Pontoise, Von Siebold, *William Pfitzer.

The Cold Pit as an Aid to the Flower Gardener.

DURING recent years some sagacious gardeners have been employing extensively what is called the "turf pit," and when well made and judiciously managed—both very simple affairs—nothing can be more useful, nothing more excellent for the garden. The pits are simply made of sods of turf cut rather thin. Some good gardeners, indeed, skin the turf of their pasture and make the walls of their little pits with it, using merely the turf, a couple or three inches thick; and when it has acted as a wall for twelve months or more, they take it down, it being then nicely decomposed and aerated—in fact, in the best possible condition for potting. All that we want is some kind of turf, and then to have it cut neatly and made into little walls by a handy labourer. The sods may be cut from 8in. to 10in. wide, more or less, according to the height we require the pit. Generally it will be well to follow the plan of a little brick pit, or even of a frame, so far as the height of the sides is concerned. Usually a row in plate of wood is placed on the top of the little sod walls, and on these the lights are placed. But a better way than that is to use nothing whatever except the wall of turf, leave the top sod with its level green side upwards, and on that rest cheap iron lights. Of course wooden ones would be apt to rot quickly in such a case. We advise the iron light, convinced that these turf pits are about as useful things as we can have in the garden, and likely to be always appreciated. Some use tarpaulin lights and boards and other opaque substances to cover such things; but we have no faith in such contrivances, and glass is cheap enough now to do away with the necessity of using opaque coverings in our very dull winters. The width that we should choose for such frames, if we were going to order lights for them, would be from 4ft. to 5ft.—say 5ft. as a rule. But of course if we have any old lights, and wish to utilise them in this way, we must make the pits precisely to suit them. The appearance of neat turf pits is in no degree more objectionable than stone ones. Their proper place is an out-of-the-way nook which we generally call the melon-yard, or some equivalent to that department. They should have a free open position. A well-drained position is of course best; and if we can place them on one of those beds of coal ashes which often occur about a country place, so much

the better. In most cases it would be better to have the bottom lowered a little, especially if the soil beneath were of a dry nature. In some pits beds of fine earth can be placed, on which to place cuttings in quantities. In others they will prove equally useful for storing plants in pots. In addition to bedding plants, pot roses, strawberries, and lots of other things, will be thankful for temporary shelter therein.

As for what may be grown and preserved in them with safety among bedding plants, there need be little doubt. The best of all places for the calceolaria is in such a pit. Cuttings put in in October and November will do finely indeed; it is the best and most successful of all ways of growing these. Then all half-hardy things may be tried in them with confidence, from cuttings and little divisions of our edging plants to the tall herbaceous lobelias. Perfectly hardy stuff, like the variegated arabises, &c., which it may sometimes be desirable to increase largely in the autumn, will succeed well, and be ready for turning out finely-developed plants for the next bedding season; while as for Neapolitan violets, and young, scarce, and delicate herbaceous plants, variegated plants, &c., which we much wish to increase, it is the very place for them. If verbenas were struck very early in the season, and, once rooted, allowed four or five weeks in the free open air before it became necessary to house them, they would thrive admirably in these pits. In consequence of gardeners generally striking verbenas too late, they are obliged to keep them in warmer or drier structures, or they would be sure to go off. The Gazania does capitally put in as cuttings in these pits; so does the Nierembergia. By the way, there is a fine new Nierembergia (frutescens), which will be found a capital bedding plant, and its best winter home will be in one of those pits, and so of all but the tenderest bedding plants.

The Propagation and Wintering of the Verbena.

Many gardeners depend for their stock of verbenas upon spring-struck plants, and some retain a few old plants in pots to supply the cuttings in spring—a good practice. Old plants taken up from the beds and potted in the autumn generally perish. In the propagation of the verbena, strike the cuttings as early as possible, and, once struck, place them in the open air for some weeks before there is any occasion to put them in frames, so that they may make some sturdy growth in the open air before requiring any protection. Then they are ready for any change, and may be kept over the winter as easy as the most vigorous of geraniums. As for the striking of them, we have sometimes done it under handlights in the open ground; but that was generally very early in the season. By shading the handlight we found them do very well in this way; but generally a gentle hot-bed will be found to be the place. The verbena abhors a dry atmosphere when in the cutting state, and yet it may be quite overdone with the moisture of a gentle hot-bed. Now, the way to humour this tendency is to keep the frame close in the daytime, and give air at the back at night, when evaporation is slow, placing the frame, if convenient, with its back to the sun. If you give air during the daytime, most likely the cuttings perish from evaporation; but you may do so with impunity at night, and it will, at the same time, tend much to keep the cuttings from being drawn. As soon as they are rooted, they should be taken out of this frame, kept in a slightly shady place for some days, and then pinched and gradually exposed to the full clear sun. They should be placed upon slates, or ashes, or boards, or anything to prevent the earthworms entering at the bottom. As for the spring striking of verbenas, it is the simplest of all operations, every bit growing, no matter how put in; but in the autumn more care is required. They may be struck and preserved over the winter either in pots, earthenware pans, or rough-and-cheaply put together wooden boxes. When once they are well exposed to the open air (or rather have made a firm and sturdy growth in it), they may be removed to the frames as soon as there is danger of any weather that will hurt them. We have preserved them with the greatest success in melon pits, standing on the soil in which the melons grew, and without any fire-heat whatever, merely giving them a little protection with mats, &c., in very severe weather; but as the verbena is a pretty hardy plant, it was very rarely necessary.

Violas, Lutea and Cornuta.

These are among the most recent additions to the flower garden. V. cornuta was the first to make its appearance. It is a native of the Pyrenees, cultivated for ages in our gardens. Generally speaking, it is poor on dry soils and in warm districts, and exceedingly good in wet places. Doubtless plenty of water would help it, even on a dry soil. In long lines or ribbons, or large beds, it looks very fine indeed, the colour being of a quiet though decided tone, but it is in mixtures that it will prove truly beautiful. The most beautiful bit of colouring we have ever seen was produced this season by a mixture of Beaton's variegated Nosegay Geranium and Viola cornuta, in a string of small chain beds. In many cold and stormy districts the blue Lobelia, so fine in the south, grows quite to grass instead of flower; that which spoils the Lobelia will highly improve this Violet of the Pyrenees. The same remarks apply to some extent to the blue, or rather the plum-coloured, Purple King Verbena, which is often a failure.

Next we have to do with Viola lutea. This has probably little to do with the true Viola lutea, but is simply a garden variety of Pansy, small and neat both in leaf and bloom, and of a rich yellow colour. It is likely to prove a more useful plant than Viola cornuta. It is less uncertain of growth and health on the generality of soils, while dwarf, neat, and of a colour much to be desired for the flower garden. The Calceolaria, which is of greater height, has of late become most precarious on many soils, so much so that many have given up its culture to a great extent; and therefore this Viola "comes in well," as the gardeners say. Much dwarfer and more compact than cornuta, it may be planted in front of it with the best taste. More tasteful uses than that, however, must soon be found for it in the margining of choice beds, in forming low and rich mixtures, with bright-leaved plants, like Amaranthus or Coleus kept very low, or not a few other things which will in due time suggest themselves to the flower-gardening reader. It is hardy, like the preceding.

The Uses of the Gladiolus.

This noble autumn flower gets scarcely any attention with us in proportion to its merits. Perhaps one of the best recommendations of this fine bulb is that its spike continues to open long after it is cut, and blooms in a vase of water as freely as in the open garden. Then we may safely say that the Gladiolus is the finest of all our flowers for indoor decoration in autumn, its tall and noble spike entirely preventing it from being used to produce the dumpling-like effects given by dahlias and other popular flowers.

But its uses in the open air are even greater; nothing in the way of a flowering plant will prove so good for varying and giving a more graceful and bold character to the flower garden.

It should be premised, however, that in all cases either a naturally sandy, rich, and deep light soil should be given to it, or one made so artificially. But the question of soil once settled, let us take the case of a bed of choice Roses in some position near the house. If they continue to flower well, the peeping forth of some splendid spikes of Gladioli here and there will surely not detract from their beauty. Now, to secure this most desirable end, all we have to do is to insert some bulbs of the various kinds of Gladioli in the spaces between the roses in the early part of May, or thereabouts. Plant them singly here and there, and at about three or four inches deep. Take up the roots in the month of October. Need we suggest a score of other uses analogous to this? Need we say how tastefully they may be introduced just within the edge of the low choice shrubbery, or beds of valuable shrubs on the lawn? Groups of them in the centre of flower-beds would be fine; and planted thinly here and there among beds of low-growing stuff—say Saponaria, Mignonette, &c. —they would rise above these, and their effect above the surfacing flower prove very fine indeed. They may be placed in groups or rings around standard roses; they will make the most valuable groups in the garden mixed border; and finally, we may make grand beds of them by themselves, or associated with Lilies or Irises. Where they are grown in some quantity it is, of course, best to give them a position on a border in the kitchen or nursery garden, as the formal aspect of anything grown in quantity is not nice for a lawn; but a single bed or two of them might be brought in with fine effect, either in lawn, pleasure-ground, or flower-garden. It would be well to edge such a bed with some good and bold subject, so as to hide a little the effect of their somewhat lank and naked stalks.

Begonia Veitchii.

Dr. Hooker states this to be, "of all the species of Begonia known, the finest," in his opinion. That any species of Begonia should flourish in the open air as this does is interesting enough; but that the most magnificent of the genus that we know should do so is surely a great encouragement. The foliage is of a rich, glossy green, and such as would embellish a good rockwork; but the flowers, which are considerably larger than a five-shilling piece, are of such a glorious colour that the plant cannot be dispensed with in any collection of hardy or flower-garden subjects. Messrs. Veitch have a fine stock of it, which will be sent out in the spring. As to its position in the garden, a well-made rockwork with sunny exposure will certainly prove one of the best; but on all warm borders it will be found to flourish, and, doubtless, it will prove useful even among bedding plants, from its fine colour and low growth of handsome leaves. For growing in pots in cold frame, or even in the open air in summer, and then removing it to the conservatory, there cannot be a nobler subject; and it may be grown in this way by many who have not means to cultivate the stove species. It may prove hardy everywhere in this country, and most probably so in the south and west of England and Ireland, and in favourable places generally.

Economical Way of preserving Fruit or Potatoes.

Apples, pears, or potatoes may be easily preserved in the following manner: A dry and well-ventilated place should be chosen, if possible on the ground floor; on this a layer, about four inches thick, of rye-straw is spread, then a layer of fruit or potatoes of the same thickness, and this is sprinkled with powdered plaster of Paris; on this another layer of straw, then fruit sprinkled with plaster, and so on, till five or six successive layers of straw, fruit, and plaster have been formed. In this manner potatoes may be kept fresh for some time, and the growth of the long white shoots, so detrimental to their nourishing qualities, and which render them unfit for planting, is prevented.

The Lady's Work Table.

NOVELTIES IN FANCY WORK, 1867-68.

THERE has been no lack of industry and invention in matters connected with the lady's work table during the year 1867. The most fashionable work at present is Breton embroidery—very easy to accomplish and most effective when completed. It came in with the Breton jackets, which were made of white and black cloth and embroidered in various bright-coloured silks, the designs being chiefly arabesques with miniature figures represented in the national costumes of Brittany. It is now applied to petticoats, children's frocks, hand-screens, cushions, and portfolios of every description. The stitch is identical with that hitherto known under the name of "Russian embroidery," neither more nor less than a succession of thin lines or long back stitches taken over the traced-out design, but the groundwork is a gay cloth or cashmere and the colours in which the pattern is worked out are gay and telling.

After Breton embroidery comes lacework, which is being developed in a most satisfactory manner. Mlle. Riego has introduced a valuable addition to this variety of work, in the form of a guipure tape, which has an open edge at both sides; by using it very little labour is required to produce most effective Venetian point. For collars, cuffs, sachets, lappets, apron trimmings, &c., this guipure tape will be found most advantageous, as it is linen, and thread being also used to connect it together in forming the pattern; the appearance of a valuable lace is produced with an incredibly small outlay of either skill, labour, or money.

Another variety of work is the Greek point, a design for which will be found among the accompanying illustrations. It is produced on a linen ground, the threads of which are drawn, and those remaining are stitched together into geometric designs. These form squares, which alternate effectively with others of guipure d'art, and they together form beautiful antimacassars, while alone they serve as D'Oyleys.

A novelty has been introduced during the year in trimming children's white frocks, and it is also applicable for ornamenting Garibaldi jackets of all sizes, as well as for white cambric petticoats, both for children and grown persons. Instead of insertions and frillings embroidered in satin stitch or *Broderie Anglaise* with white cotton, the novelty consists in their being worked on Pyrenean wool of various hues. The designs are generally flowers set in a black frame (either lozenge shaped or medallions), long wreaths and sprays of such small flowers as lilies of the valley, forget-me-nots, and violets, are worked in satin stitch and overcast with this fine make of wool, the colours being selected as closely matching the natural hues as is possible.

There is likewise a new variety of leather work, in fact we may say two new varieties. The first is executed with chamois leather, cut out into divers shaped leaves—say a wreath of ivy—and then sewn down with fine gold twist, so managed that the twist forms the stalks and veinings of the leaves. The other is executed with leathers of several colours, and these are likewise cut so as to represent leaves, stars, crescents, and other figures; they are laid on black cloth, stitched round with either chalk-white or blue beads, and connected together with narrow flat gold braid. If this latter variety of leather work is well managed, the effect resembles an Eastern production, rich and full of colour, but still harmonious and pleasing.

Tatting, guipure d'art, crochet, and knitting, are all practised, and many useful patterns in these several styles of work will be found in the accompanying engraving.

Postage-stamp collecting is a little out of fashion, but monogram and crest albums are still all the rage; and as the owners of country seats now have a miniature drawing of their houses embossed at the top of their note-paper, and eccentric monograms are on the increase, there is every probability that the taste for collecting crests will flourish for some time. We are also led to this conclusion, from the fact that ladies now draw original devices to contain the monograms, and as everything is adapted for the purpose, from omnibuses and clocks up to church windows, there seems but small probability of crest albums going out of fashion.

In materials for working, several introductions have been made during the year 1867. A needle has been invented that takes the thread single at the eye, and thereby enables elaborate and ornamental stitches to be produced on cloth with cord and other strong threads without difficulty or leaving any unnecessary trace of the needle. Two new varieties of canvas have also been introduced. One is dark brown in colour and is called "leather canvas;" its surface is punched all over with small holes; no grounding is required. The other is a grey canvas, much like in appearance what is called silk canvas, with the slight change of colour; it likewise requires no grounding, and very pretty winter antimacassars are worked on it. The Panama canvas is manufactured in several new shades and of different textures. At the great French Exhibition, recently closed, in the Champ de Mars, the Empress's Pavilion was a marvel of taste. The panels of the walls were white satin, embroidered by hand in the most exquisite patterns, and the carpet was worked on Panama canvas. This display of needlework will prove, no doubt, an incitement to both inventors and workers to exercise their skill in new channels, as the various decorations displayed such genuine taste and expression, and manifested in a wonderful degree how much artistic feeling can be expressed with such a trifling implement as a needle.

Description of Coloured Pattern.

BORDER FOR TABLE COVER, PORTIÈRE, ETC.

THIS beautiful border, applicable to so many useful purposes, is in what is called "the Smyrna style"—a style which is in great favour at the present time.

The colours are rich, and yet they blend well, and the effect when worked out is soft and pleasing to the eye. In the model the entire border is in single Berlin wool, with the exception of the white and the lightest shade of brown, and for both of these the stitches are crossed with filoselle. The pattern, if worked on No. 22 canvas, will be eight inches in depth, and on 24 canvas one inch narrower. If the design is used for a rug with fur on the centre—a most useful article during the present season for placing under pianos, writing tables, &c.—the materials should be coarser, and No. 14 canvas, with either six-thread fleecy or double Berlin wool, should be substituted for the finer qualities.

Whether copied on a large or a small scale, this delicate Smyrna border will well repay the labour of the worker.

1. Raised Crochet D'Oyley.

By Mlle. Riego de la Branchardière, 2, Old Quebec-street, W., Artiste in Needlework to H.R.H. the Princess of Wales.

MATERIALS—Walter Evans and Co.'s Boarshead cotton, No. 12; Walker's Uncotopic Penelope needle, No. 3.

THE CENTRE.

Commence with a chain of 8 stitches, and make it round by working one single in the 1st stitch.

1st round—Make 12 chain, turn, miss the last 5 chain, and on the remaining 7 chain, work 2 single and 5 treble; then 1 plain in the foundation round. Repeat 7 times more; and when the 8 divisions are made, work 7 single stitches up the side of the 1st division; then one plain in the loop of 5 chain.

2nd round—(Work 5 chain and 1 plain 3 times, in the same loop of 5 chain as before); then 3 chain, and 1 plain in the next loop of 5 chain. Repeat 7 times more; but at the end, instead of the last 3 chain, work 1 chain and 1 treble on the 1st plain stitch.

3rd round—Make 9 chain, turn, and on these chain, miss 1, 1 single, 1 plain, 1 treble and 2 long, which leaves 3 chain; make 3 chain to correspond, and missing the 3 loops of chain of the second round, work 1 plain on the centre of the 3 chain; make 11 chain, turn, miss 7, and work one single in the 4th stitch of the 11 chain, then 3 chain, and 1 plain in the same 3 chain of the second round as before; repeat 7 times more. At the end work 9 single up the first 9 chain, which will bring the cotton to the top of the point.

4th round—Make 5 chain, and work 1 plain in the loop of 7 chain, then (5 chain and 1 plain 5 times, all in the same 7 chain as before); make 5 chain and work 1 plain on the point; repeat 7 times more, and fasten off.

THE ROSES.

1st Rose—Commence with 8 chain, and work 1 single in the 1st stitch.

1st round—Work 8 plain on the foundation round.

2nd round—Make 2 chain and work 1 plain, taking both edges of the plain stitches in the 1st round; repeat 7 times more.

3rd round—Work in the 2 chain of last round (1 plain, 4 treble, and 1 plain), in all 6 stitches in the 2 chain; repeat until 8 divisions are made.

4th round—Make 3 chain and work 1 plain, keeping the chain at the back of the last round, and working the plain stitch on the plain stitch of the 2nd round, at the back between the divisions; repeat 7 times more.

5th round—Work in the 3 chain of last round (1 plain, 5 treble, and 1 plain); repeat all round.

6th round.—Make 4 chain and work 1 plain on the back of the 4th round; repeat.

7th round—Work in the 4 chain (1 plain, 6 treble, and 1 plain); repeat.

8th round—Make 10 chain, turn and work 1 single in the 4th stitch of the 10 chain; then 3 chain and 1 plain at the back, on the plain stitch of the 6th round; repeat 7 times more, then 5 chain and 1 plain in the 1st loop of 6 chain.

9th round.—Work 5 chain and 1 plain 5 times, all in the same loop of 5 chain as before; then 5 chain, 1 plain in the next loop of chain; repeat 5 times more; then for the joining, work (5 chain and 1 plain twice in the same loop); 3 chain.

Take the centre and join to one of the 8 divisions of it; then 3 chain, 1 plain in the same loop (5 chain and 1 plain twice), making 5 loops in all, as before; then work the 1st division as the first division and fasten off.

For the 2nd Rose work as the 1st Rose, except that in making the last division it is to be joined to the opposite division.

Make six Roses more the same.

THE BORDER.

1st round—Commence in [illegible] division to the right of those attached to the centre loop of the next division, [illegible] plain in the 2nd loop of the [illegible] loop of the division, [illegible] in the [illegible] loop of the [illegible] of the division round [illegible] all round.

2nd round—Work in the 5 chain of last round (4 plain, 3 chain, and 4 plain); repeat in each loop all round, then 4 single on the first 4 plain, and 1 plain in the 3 chain.

3rd round—Work 3 chain and 1 plain in the next loop (5 chain and 1 plain four times in the same loop); 3 chain, miss 4, 1 plain on the centre of the plain stitches; repeat until five divisions are made, working the last plain stitch in the next loop; then 1 plain in the next loop, and repeat all round. Fasten off.

2. Mat for Flowers—Crochet.

By Mlle. Riego de la Branchardière.

MATERIALS—4 skeins each of blue and white single Berlin wool; a ball of gold twine; and Walker's Uncotopic needle, No. 2½.

A skein of tatting silk may be substituted for the gold.

The Stars.—Commence with the gold twine, work 9 chain, and make it round by working a single stitch in the first stitch.

1st round—Work (3 chain and 2 plain, 8 times), putting the needle into the space in the centre of the foundation round. When the 8 little loops are made, fasten off.

Make 8 stars more the same.

The White Circle.—Use the white wool and commence in one of the little loops of a gold star; work 5 chain and 1 plain in each of the 8 loops; fasten off.

Repeat round each of the stars.

CENTRE STAR.

Blue Circle.—Commence in a white loop of one of the stars, work 7 chain, miss 5 and 1 plain in the next white loop; repeat all round and fasten off.

1*st Gold Circle.*—Commence in one of the blue loops, and to form a point, work 5 chain, turn, and on these 5 chain, miss 2, 1 plain, 1 treble, 1 long; then miss 7, 1 plain in the next blue loop; repeat all round and fasten off.

CIRCLE OF STARS.

1*st Blue Circle.*—Take one of the white and gold stars and commence in a loop of it, work (7 chain, miss 5 and 1 plain in the next loop, 7 times), 4 chain; take the centre star and join to one of the gold points of it, 3 chain, 1 plain in the next loop; fasten off.

2*nd Blue Circle.*—Take another star and commence in a loop of it (7 chain, miss 5 and 1 plain, 5 times), 4 chain, take the centre star and join to the next gold point to the left of the last star, 3 chain, 1 plain in the next loop, 4 chain, join to the next blue loop of the star, 3 chain, 1 plain as before, 4 chain, join to the next blue loop, 3 chain, 1 plain; fasten off. Repeat as the 2nd circle 6 times more, but in working the 8th circle, the 7 chain and 1 plain must be made only 3 times, and the two loops joined to the 1st star to make it round.

2*nd Gold Circle.*—Commence in the 1st unattached blue loop of one of the stars, work (4 chain and 1 treble, 4 times, all in the centre loop of the blue star), then 4 chain, miss 5, 1 plain in the next blue loop; and to form a point, work 5 chain, turn, miss 2, 1 plain, 1 treble, 1 long; then 1 plain in the next blue loop; repeat all round and fasten off.

White Circle.—Commence in one of the gold points, work 5 chain, 1 plain in the 4 gold chain 5 chain, miss 4, 1 plain in the next 4 chain; 5 chain, miss 4, 1 treble in the next 4 chain, then 5 chain, 1 treble in the same 4 chain as before (5 chain, miss 4 and 1 plain in the 4 chain twice), 5 chain, 1 plain in the next point. Repeat and fasten off.

Blue Circle.—Commence in the 1st 5 chain, work (5 chain, miss 5 and 1 plain in the 5 chain 6 times), then 2 chain, miss 5, 1 plain in the next 5 chain. Repeat and fasten off.

3. Crochet Cape.

By Mlle. Riego de la Branchardière.

MATERIALS—1 lb. of coloured 4-ply fleecy, and ½lb. of black; tricot needle, the stem of which measures No. 4, Bell gauge.

With the black wool make a chain of 244 stitches, worked very loosely.

Foundation row—miss the last chain stitch, and work a row of plain crochet; at the end cut off the wool, and draw it through to fasten it.

1st row—With the coloured wool. Leave an end and work a chain stitch, then commence with a "treble stitch," thus—turn the wool round the needle, put the needle into the first black stitch, bring the wool through it in a loop; there will now be 3 turns or loops of wool on the needle; take up the wool and bring it through 2 of the loops, take up the wool again and bring it through the remaining 2 loops. Then, in the next black stitch, work a "long stitch," thus—turn the wool twice round the needle, put it in the 2nd black stitch and bring the wool through, when there will be 4 loops on the needle; take up the wool, bring it through 2 of the loops, take up the wool again and bring it through 2 loops, take up the wool and bring it through the remaining 2 loops. Work 2 long stitches more in the same black stitch as the 1st, and in the 3rd black stitch work a treble stitch; * then work a single stitch in each of the 3 following black stitches, then in the next stitch work 1 treble, then 3 long all in the next stitch, then 1 treble in the next stitch. Repeat from * to the end. Cut off the wool and draw it through. This finishes the 1st raised row.

2nd row—Black. Commence with 1 chain, put the needle into the 1st treble stitch of the last row, bring the wool through and also through the loop on the needle, then take the next three stitches together, thus—put the needle into the lower or front edge of the next stitch on the right side of the work, then take up the next stitch, and then a 3rd stitch, take up the black, bring it through these 3 stitches and also through the loop on the needle, * then work 5 single stitches on the 5 following stitches, taking both edges; take 3 together and work 1 single stitch as before. Repeat from *, ending with 1 single. Draw the wool through and fasten off. The 3 stitches taken together are the 3 long, increased in the previous row. At the beginning and end of every other row knot the two ends together.

3rd row—Coloured wool. Commence with 1 chain and work 3 single on the first three stitches of the last row, * 1 treble, then 3 long stitches all in one; and in the next stitch 1 treble, then 3 single. Repeat from *, and fasten off.

4th row—Black. Commence with 1 chain, then 1 single on the 1st stitch of the last row; then 3 single more, taking both edges, * take 3 of the stitches together and work a single stitch as in the 3rd row, then 5 single, taking both edges. Repeat from * and fasten off.

These 4 rows form the pattern, and are to be repeated for about a third of a yard, except that to form the black dots, every third time the coloured raised row is worked the three long stitches are to be worked in black, and the wool slipped at the back so as to use it after every third raised pattern of the coloured row.

When the above depth is made the work should be decreased to form the shoulder, thus:—In making the coloured raised row, miss a stitch, and work only 2 single instead of 3 single each time, and in the following black row work 4 single instead of 5 single each time.

Repeat the coloured row with only 2 single stitches, and then the black row with 4 single stitches, until six patterns more are worked.

Then work six patterns, missing another single stitch and omitting it in the same manner as those previously decreased, then work a few rows plain to draw it in for the neck.

The Border: With the Black wool work along the foundation chain, commencing at the first stitch, make 5 chain turn, and on these 5 chain, miss 3 and 2 treble, then miss 3 of the foundation stitches and work 1 plain on it, repeat these points to the end, work the same up the side, across the neck, and down the other side, finish with a cord and tassels.

4. Winter Boot in Tricot Ecossais.

By Mlle. Riego de la Branchardière.

MATERIALS—For the Boot, 6 skeins of 6-ply fleecy, and an ivory tricot needle, the stem of which measures No. 7, Bell gauge. For the Border, 2 skeins of Partridge double Berlin wool, and Walker's Penelope crochet-needle, No. 1.

Commence by making a chain of 56 stitches; this, when joined, will form the back of the boot, and the shaping made in the centre of the rows will be for the sole.

1st row—Miss the 1st stitch, * put the needle into the next chain stitch, and bring the wool through in a loop; repeat from * until there are 39 loops on the needle, and, leaving the 17 chain "work back" thus—take the wool on the needle and bring it through two of the loops each time until there is only one on the needle.

2nd row—Miss the upright loop at the extreme edge, * put the needle into the next upright loop and bring the wool through in a loop; repeat from * until 27 loops are raised on the needle, then, to *increase* a stitch, put the needle into the stitch between the upright loops and bring the wool through, then raise two loops on the 2 next upright loops as usual; increase again, then raise 10 loops, and on the chain stitches raise 17 loops. Work back as the 1st row.

3rd row—Raise 27 loops on the 2nd row, including the one on the needle, then increase a loop, raise 4 loops, increase again, raise 27 loops. Work back.

4th row—Raise 27 loops as before; then increase a loop, raise 6 loops, increase again, raise 27 loops. Work back.

5th, 6th, 7th, and 8th rows—Raise all the loops without shaping, and work in all 4 rows of plain tricot.

9th row—Raise 24 loops; then, to *decrease*, put the needle into two of the upright loops and bring the wool through them as one loop; raise 10 loops, then decrease again, raise 24 loops. Work back.

10th row—Work without shaping, and work back.

11th row—Raise 23 loops, decrease, raise 10 loops, decrease, raise 23 loops; work back.

12th and 13th rows—Work 2 rows without shaping.

14th row—Raise 23 loops, decrease, raise 8 loops, decrease, raise 23 loops; work back.

Work 4 rows of plain tricot without shaping.

19th row—Raise 25 loops, increase as before, raise 6 loops, increase again, raise 25 loops; work back.

20th row—Plain tricot. In working back, at the end of the row, bring the wool through the last 3 loops instead of 2, this is to decrease, and every row is now to be ended the same.

21st row—Miss the two loops close together, raise 24 loops, increase, raise 6 loops, increase again, raise 23 loops, take the last 2 loops together; work back as the 20th row.

22nd row—Miss the 2 first loops, raise the rest, and at the end take the last 2 together; work back as the 20th row.

Repeat as the last row until only 18 stitches are left, which is for the toe, and finishes the boot.

Sew up the back of the boot, and, to join the slanting sides which form

Digitized by Google

the front, commence at the toe with the wool, and work a row of single crochet, thus—keep the wool at the back, put the needle into a stitch of the right selvedge, and then into the left selvedge, bring the wool through them, and also through the loop on the needle; repeat.

THE FUR TRIMMING.

With the Partridge wool and crochet needle commence with 6 chain.

1st row.—Miss 1 and work 5 plain crochet stitches, turn back 1 chain.

2nd row.—Hold the work between the thumb and finger of the left hand as usual, put the needle into the lower edge of the next plain stitch, leaving the upper edge at the front, keep the wool under the first finger of the left hand, then bring the wool round the finger so as to form a loop, take it upon the needle, bring it through the stitch and also through the loop on the needle, which will form a single stitch; draw the finger out of the loop and repeat from the commencement of the row 4 times more, turn back, 1 chain.

3rd row—It will be seen that two ribs or stitches lie one above the other on the right side of the work, put the needle into the rib nearest the loops, then into the upper rib, take the wool on the needle and bring it through them, take up the wool again and bring it through the 2 loops on the needle, which forms a plain stitch. Repeat 4 times more, then 1 chain.

Repeat the last two rows until sufficient is made for the top of each boot and sew to it.

5. Ermine Pelerine in Tricot Ecossais.

By Mlle. Riego de la Branchardière.

MATERIALS for the centre, 6oz. of light blue or pink, 4 ply fleecy, and a long tricot needle, the stem of which measures No. 5, Bell gauge; for the ermine spots and border, 2 skeins of black and 2 of white fleecy.

THE CENTRE.

Commence with the coloured fleecy and tricot needle, make a chain of 6 stitches.

1st row—Miss the last chain stitch, * put the needle into the next stitch and bring the wool through in a loop; repeat from * until there are 6 loops on the needle, and to "work back" take the wool on the needle and bring it through the last loop of the 6; then take up the wool and bring it through 2 loops at a time until there is only one left on the needle.

2nd row—Take up the wool and bring it through the last loop on the needle to form an ordinary chain stitch; then put the needle into the 1st upright loop or rib of the 1st row and bring the wool through, when there will be 2 loops on the needle; put it into the next upright stitch, and repeat until there are 6 loops on the needle; then, to increase a stitch, put the needle into the wool *between* the two last upright stitches, and bring the wool through as before; then put the needle into the last stitch and bring the wool through. Work back as the 1st row.

3rd row—Make 1 chain, which will increase a stitch, and, putting the needle into the first upright stitch, raise all the loops to the last; then increase as in the 2nd row, and work back; the work will now be increased at both ends.

Repeat as the last row, until 36 rows in all are worked. This is for the back.

Then work 8 rows of plain tricot, without increasing, by omitting the chain-stitch at the beginning of the rows, and putting the needle into the second upright loop: at the end of the rows also omit the increased stitch.

TO SHAPE THE RIGHT FRONT.

1st row—Put the needle into the 2nd upright loop, and raise the loops until there are 34 on the needle; then work back.

2nd row—Work as the last, but at the end of the row take the two last stitches of the 34 together on the needle, and work them as one stitch so as to decrease it.

3rd and 4th rows as the 2nd row.

5th row—Decrease at the beginning of the row by taking the 2nd and 3rd upright loops on the needle, and bringing the wool through both at the same time; raise the rest of the loops to the end, and work back.

Work 6 rows plain without shaping, repeat the 5th row and 6 rows plain after it, 7 times more, that is, decreasing a stitch at the beginning of every 7th row; the left selvedge should be quite straight.

Then, to shape the end, decrease a stitch at the beginning and end of every fourth row until it is reduced to a point.

THE LEFT FRONT.

1st row—Commence on the stitches of the back, leaving 12 of them for the back of the neck, and raise the rest as usual to the end; then work back.

Work 2 rows, decreasing a stitch at the beginning of each; the rows just now be kept straight at the beginning; but at the end of every 7th row one stitch is to be decreased to correspond with the other side.

When these 7 rows are worked 8 times, then decrease at the beginning and end of every fourth row until it is reduced to a point.

THE ERMINE SPOTS.

Use the white wool doubled, leave an end, and make 10 chain stitches; then work a single stitch in the 1st chain stitch to make it round; draw the wool through to fasten it. Place this loop on the tricot, and drawing the ends through to the wrong side, knot them together; then, with the black wool and a rug needle work an ordinary chain stitch on the tricot and over the centre of the white loop, so as to attach them together. Repeat the spots as in the engraving.

THE BORDER.

Commence with the black and white wools at one end of the tricot, so as to crochet on the selvedge of it, and work a plain row all round, making a stitch of black and one of white alternately.

Then commence at the right end, so as to work on the inner side and round the neck.

1st row—White wool, work 5 chain, miss 3 and 2 plain; repeat to the left end.

2nd row—White. Work in the 5 chain; 1 plain, 4 treble, and 1 plain; then 1 chain, and, missing the 2 plain of the 1st row, repeat.

THE OUTER BORDER.

This is worked separately, and afterwards sewed to the tricot.

1st row—Commence with the coloured wool, make 6 chain, and raise 6 loops as in the 1st row of the centre; then work back until there are only two loops left, take the white wool and bring it through them.

2nd row—White. Make 3 chain stitches for the edge, then put the needle *between* the two upright coloured loops and bring the wool through in a loop; repeat until there are 6 on the needle. Work back until only 2 loops are left, and bring the coloured wool through.

3rd row—Coloured wool. Make 3 chain for the edge, then put the needle in each of the 5 upright white loops, bringing the wool through as usual; when there are 6 loops on the needle, work back until there are only 2 loops; bring the white wool through.

Repeat the two last rows until sufficient is made to go round the edge, leaving it full at the back to make it lie flat.

The pelerine should fasten at the back with a cord and tassels, or it can be buttoned.

6. Lady's Under Petticoat—Knitting.

By Mlle. Riego de la Branchardière.

MATERIALS—3lb. of coloured and 1lb. of white 4-ply fleecy; a pair of knitting pins, No. 2, Bell gauge; for the edge, Walker's Penelope needle, No. 0. This petticoat is worked in Stripes, the coloured ones running down, and the white ones across.

For the narrow Stripes, cast on 30 stitches with the white wool.

1st row—Pearl all the stitches. After the 1st row always slip the first stitch of each row.

2nd row—Knit all the stitches plain.

3rd row—Pearl all the stitches.

4th and 5th rows—Knit both rows all plain.

6th row—Pearl all the stitches.

7th row—Knit plain.

8th row—Pearl all the stitches.

These 8 rows form the pattern, and are to be repeated for three-quarters of a yard; then work 9 patterns more, but each time the 2nd row is repeated knit 2 stitches together at the beginning and end of the row, so as to decrease it two stitches each pattern; cast off the remaining stitches. Work 7 stripes more the same. The broad Stripes with the coloured wool. Cast on 130 stitches, and work the 8 rows of pattern until 5 stripes are made, counting both sides of the work; then cast off, make six stripes the same, and sew them between the narrow stripes.

For the Edge—With the coloured wool and crochet needle work along the 1st row of the stripes, a row of 1 chain and 1 plain; then two rows more the same, working the plain stitch in the chain stitch of the previous row.

Finish the top with an elastic band.

Quilts for poor People.—The quilts for poor people made of old muslin dresses are worked as follows: Wash the dresses to get all the starch thoroughly out, then tear them up into strips from 1 to 1½ inches wide, according to the texture. Sew the strips into one length, wind into balls, and knit it into strips of about twenty stitches (backwards and forwards like a garter). Use large wooden pins 1in. in circumference. The strips must be about 5ft. or 6ft. long, and it requires six for a good-sized quilt. Muslins of any colour, grenadines, and even thin cambrics, will do. Tarlatans do not answer nearly so well. Thin woollen materials, such as barege, will do, but they must not be mixed with muslins. The different colours may be used for a stripe of each, or if all the strips of muslin are mixed in joining together, they work into pretty *chiné* patterns.

Slippers.—Durable slippers, for ladies or gentlemen either, may be made by sewing silk braid, of any colour, or black or white, down to canvas, taking every alternate stitch, and crossing it with a colour in crochet purse silk that contrasts well with the braid chosen. The braid is laid flat along each row to the shape of the shoe drawn out on the canvas, and must be neatly turned at the corners. Sky-blue braid, crossed with white, looks well; still prettier is darker blue, with gold-colour silk, purple with gold, cerise or scarlet with black, or black braid crossed with those colours.

Only an Egg-shell.

Few of our readers who have not seen specimens of the work we are about to describe would believe that such a number of charmingly pretty little treasures could be made from common, neglected egg-shells. A few experiments, however, made in accordance with the hints we are about to give, accompanied by the exercise of very little ingenuity, will not fail to show how varied and pleasing the results may be; in fact, an almost endless variety of fairy vases, cups, and urns, may be fashioned from the pure, white, parian-like material nature has modelled to the hand so cunningly, needing only deft fingers and good taste to complete the work so well begun, and render it admirably available for our purpose. The annexed cut (Fig. 1) represents a vase or "violet cup" made from the shell of a pullet's egg. To make such a one, a large, well-shaped white egg should be selected, and a small orifice carefully broken at the larger end, through which the contents may be poured into a cup or other convenient utensil put aside for domestic use (we use the shell only), and any loose membrane which may hang about the interior carefully removed. The shell must now be neatly cut round, until sufficiently far down, with a sharp, short-bladed pair of scissors, clipping very cautiously until the margin is quite even and true. A narrow binding of thin gold paper must now be gummed round, and turned in over the cut edge of the shell, taking care to nip the paper here and there in order that it may be attached evenly and fit free from creases. When the bordering is finished and the gum used in attaching it is quite firm and dry, the "socket piece," A, may be commenced This should be composed of white wax, such as is used in the manufacture of wax flowers. From this, when thoroughly warmed and softened, a cup-shaped stem should be formed round B, as at A. Into this the pointed end of the shell should be securely gummed, and the edge accurately fitted by moulding. B is the *core* used to give stability to the foot stalk. It is made from a common round button, with a piece of deal or other soft wood fashioned, as shown in the cut, to fit firmly in the hole in the centre of the

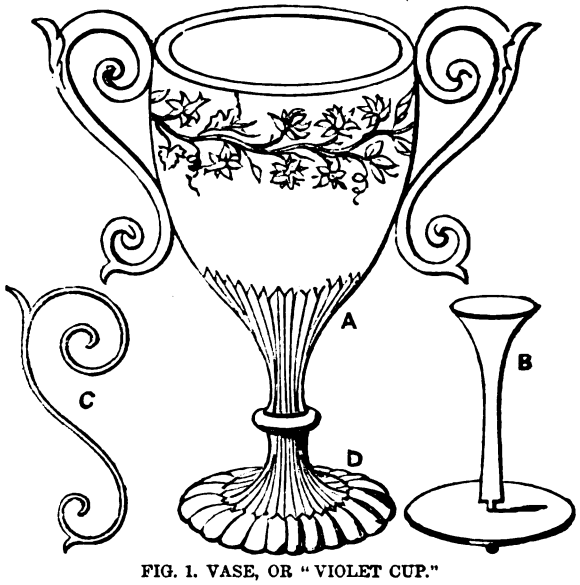

FIG. 1. VASE, OR "VIOLET CUP."

button, where it should be fixed with a drop of gum, cutting off flush any portion of wood which may project beyond the bottom surface. When fixed in its place in the centre of the stalk and covered with wax, the small end of the egg-shell would rest on the head of the stick, whilst the button would rest on the ground in the centre of the foot D, forming, so to speak, a foundation on which all the mouldings and ornamental patterns have to be made. A narrow-bladed penknife, one or two crochet needles with the barbs removed, and some narrow-pointed slips of hard wood, will be found very useful and efficient instruments for the purpose, warming the knife point or needles as occasion may require in a cup of hot water. The handles of the vase are first made of twisted bonnet wire with its covering of thread on, as at C. These, when properly fashioned, are suspended from threads, and dipped in molten wax, allowed to cool, re-dipped, and so on until stout enough to cut and mould with the tools. When finished, small flat surfaces of attachment must be cut with the knife, and the handles secured to the vases with thick, strong gum. The main stem of the wreath surrounding the vase is made of white silk, and the leaves and flowers of neatly-cut rice paper, which are readily fastened on with gum, applied on the point of one of the needles. Such little tendrils as may be required are easily made by twisting a very slender strip of wax round a moistened needle, and then carefully drawing it off in the form of a corkscrew. Fig. 2 is a sort of urn-shaped vessel, made from the large end of a goose egg, with both the foot and cover fashioned from pieces of egg-shell. The foot E, has a small hole made in its upper surface, in which the end of the upper shell, or body of the urn, rests. A round collar of wax, either plain or ornamented, surrounds the joint, as at F, and affords a hold for the gum. The flowers are of rice paper, as in Fig. 1, and the little ram's heads and the pine on the cover are made from moulded wax. Vessels thus constructed are admirably adapted for holding violets or other small flowers. A crocus root, put with damp moss in one of them, shoots up and flowers charmingly. When the violets or other cut

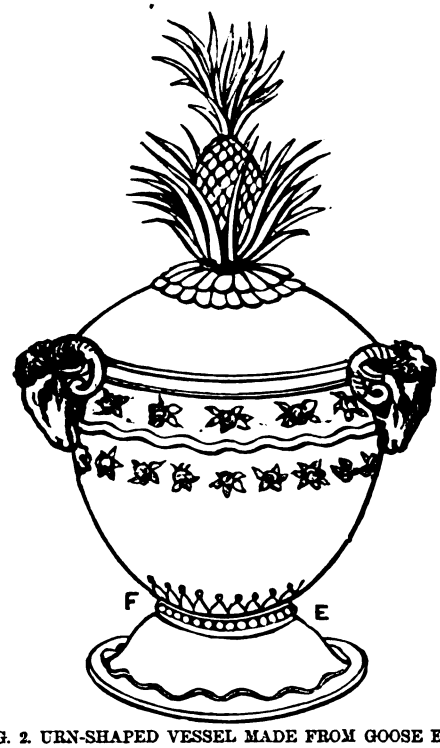

FIG. 2. URN-SHAPED VESSEL MADE FROM GOOSE EGG.

flowers are placed in them, the ends of the stems should be thrust in the orifices of a bit of fine sponge; this, when deposited in the bottom of the vase, and saturated with water, keeps the flowers fresh for some time, doing away with the fear of the water being upset or the ornamental work of the vase injured. Some ladies may wish to draw or paint figures or flowers on the shells. For pencil drawing no preparation is needed, but when paintings in water colours are about being made on them the colours take better if the shells are previously washed in a little soda or potash water, in order to remove the oily matter usually covering the surface, when, after being thoroughly cleansed in clean cold water and then dried,

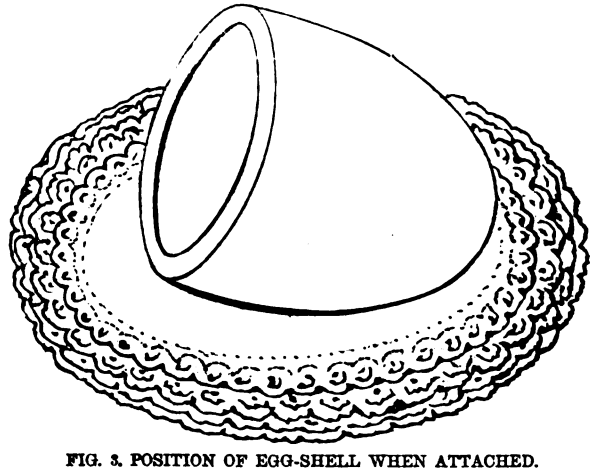

FIG. 3. POSITION OF EGG-SHELL WHEN ATTACHED.

the colouring process may be proceeded with as on ordinary paper. Fig. 3 represents the position in which the egg-shell is attached to an ornamental er embossed card, after having a rustic cottage or Swiss châlet placed in it. These so-called "fairy cot shells," when tastefully turned out of hand, are perfect little gems, and would command eager purchase at bazaars or fancy fairs. To make these the shells, after being bound with gold paper like the vases, should have a little nicely selected "fern leaf moss" (so called from the shape of its fronds), which is to be found about the roots of fir trees and in old shrubberies, placed in the extreme end of the shell, so that the fern-like fibres may lay nicely; then paint in water colours, on a bit of thin Bristol board, a miniature cot or Swiss châlet, in proportion to the size of the interior of the egg-shell, and, when finished, cut it out on a board with a sharp penknife, and with one of your needles place it with

Digitized by Google

a little gum. Well back in the small end of the shell, arranging the moss on each side so as to droop forward like larch trees. A liliputian bridge and rustic hand rail may be fastened in like manner across the middle distance, and the moss fronds opened out and gummed back to the sides of the shell at the fore-ground. A little figure painted in gay colours may be introduced with advantage. If the arrangement is properly made, the cottage appears as in perspective, and the moss as an eltin grove of feathery pine trees and ferns. The designs and hints which we have given are intended rather to point out the road to a graceful and easy art than to lay down an arbitrary set of rules for following it out, as we feel sure that the leading principles of construction here given will enable our fair readers to fabricate a host of charming little novelties from the shells of eggs.

WILL-O'-THE-WISP.

7. Border (Guipure d'Art).

GUIPURE D'ART remains a popular employment, and it can be adapted to many useful articles of the toilette as well as of furniture. It is easy to accomplish, and is fascinating work, as every stitch tells. After the foundation is netted, it should be stretched tightly on a small wire frame bound with ribbon, which is convenient to hold. Some workers recommend the Flemish thread for producing it. There are eight numbers of this thread used in guipure d'art—viz., 24, 42, 48, 60, 70, 84, 96, and 120. The first, third, fourth, and sixth of these numbers are generally employed for the purpose. Long and square frames for embroidering the netted foundation are to be procured, as well as tasteful boxes for holding this now favourite work.

For the accompanying design the materials required are: Walter Evans and Co.'s Mecklenburgh linen thread, Nos. 4 and 10, a steel netting needle, and meshes No. 12 and 8, Bell gauge; also Walker's elliptic needles No. 6, and a small wire frame about four inches square. As many of our readers are unable to cut the squares, we offer the subjoined directions.

THE NETTED SQUARES.

Fill the needle with No. 6 thread, and using No. 8 mesh, commence on a piece of thread for the foundation. Net one stitch, turn back and net two stitches, both in the first stitch; turn back, net one stitch plain, then net two stitches in the last stitch. Continue working backwards and forwards, and netting two stitches in the last stitch of each row, until it is increased to twenty stitches; after which, net one row quite plain, then to decrease the square, net two stitches together at the end of each row, until it is decreased to two stitches, then net them together without the mesh, so as to make a small stitch. This finishes one square, and eight more will be required. The square should now be washed, stiffened, and pinned out. When dry, sew one of them in the frame, and embroider the pattern on the netting with No. 10 thread and No. 6 needle. All the ornamental stitches used in darning these squares will be found illustrated on an enlarged scale, with the needle placed in working position, so as to obviate the necessity for any further written directions.

For the border see engraving No. 7, page 36; net a straight piece the length required. It takes twenty-two loops in its widest part, and these are decreased to fourteen loops in the narrowest portion. Long wire frames are sold for borders or for parasol covers. The ornamental stitches used in darning will be found illustrated on an enlarged scale in page 38. The stitches at the edge of the border are overcast closely so as to keep it firm.

8. Greek Point.

GREEK POINT is worked on a foundation of linen; the designs are geometric in character, and to form them on an open ground certain of the threads in the linen are drawn, and those that are left are worked over with overcast stitches so as to produce a groundwork of small open squares, which are filled in, according to our illustration, by taking a double thread across the space from the angles, and forming semi-circles when the pattern requires, and, lastly, closely overcasting these half-circles.

Our design is intended either for a dessert D'Oyley, or for an antimacassar. If it is applied to the latter article it must be used in alternate squares with guipure d'art, but if used alone it should be trimmed round with guipure.

9. Crochet Collar.

MATERIALS—Boarshead cotton No. 30, and a steel crochet hook, No. 24, Bell gauge.

To form the shape of this collar the separate rosettes are joined under each other, and only differ in order to place them at the proper distance from each other.

Each of the inner stars consists of 8 little leaves. For these begin with 8 chain, close them in a ring, and then crochet * 5 chain, 1 double upon the third of these 5 chains, 1 treble upon the second chain, 1 double upon the first chain, 1 double upon the following stitch of the round. Repeat from * seven times. At the conclusion of the 8 leaves, loop up the thread as far as the upper point of the first leaf, and work * 2 chain, 1 picot (consisting of 4 chain, 1 single), 2 chain, 1 double upon the upper point of the next leaf. Repeat from * seven times. When all the points of the middle star are joined in this manner, loop the thread to the double stitch of the last round and work 9 chain, 1 double into the next double of last row. This is repeated all round. For the concluding rows of the rosette fasten the thread to the fourth stitch of the chain of last row, and work a leaf consisting of * 1 chain, 5 picots (of 4 chain, 1 single into the first of the 4 chain), with 1 chain between each picot. Fasten this leaf with 1 double into the sixth chain of the scollop of last row, 2 chain, 1 picot, 2 chain into fifth stitch of the next scollop. Repeat from * seven times.

Eleven perfect rosettes are required for the row along the top of the collar, 2 more on each side are needed perfect to form the front of the collar. Of the 3 rosettes which form the point, the inner circles are worked exactly the same as the others, but 2 on each side have the leaves without the picots between them in the outer rows. The centre rosette on each side of the front is worked the same as the others until you come to the outer row, which is a succession of chain-stitch scollops; at two opposite scollops work 3 chain and a little leaf consisting of 1 chain, 3 picots, with a chain between each; 1 chain and 1 double into the stitch at which the leaf is begun; 3 chain, 1 double into the points of the next scollop. To form the rosettes into a nicely-shaped collar, it is a good plan to tack them upon a piece of paper of the shape you desire the collar to be before working the band for the throat.

For the chain round the throat, begin at the upper rosette on the right side of the slope, and work upon the upper point of the second leaf, standing face towards the right, 1 double, 3 chain, 1 picot, turning downwards, consisting of 4 chain (for this the hook must be drawn out of the loop and carried through the last of the previously worked 3 chain, and the loop out of which it is drawn must be finally drawn through the first) * 3 chain, 1 picot turning downwards, 3 chain, 1 picot turning downwards, 3 chain, 1 double upon the point of the next leaf of the same rosette. At the same distance as at this first, join the chain by 1 treble on to the second picot of the following leaf of the same rosette; then, at the distance of only 3 chain, 1 picot and 3 chain, after which, likewise with 1 treble upon the next picot, loop on the adjoining leaf of the following rosette. After this follows again the interval of three times 3 chain and 2 picots, then 1 double upon the upper point of the next leaf. Repeat from *. Then follows 1 treble line, in which the trebles are separated by 1 chain passing over one stitch of the previous row, and a similar treble line at the upper conclusion of which, at the distance of three stitches (treble and chain), a picot is always worked. At intervals it is necessary to pass over two stitches instead of one, to contract the collar slightly round the throat.

To trace Braiding Patterns.

To copy a braiding pattern, a piece of paper of some rather substantial kind, such as bank post, can be placed under the part that is to be copied, both pattern and paper being kept immovable with little weights, and if the design is one that can be halved or quartered, the paper can be folded, so that one piece is all that must be pricked through. The pricking is done with a darning-needle, headed either with a turned boss, or cork, or lump of sealing-wax. A soft cloth should be placed under to prink down to, and the holes are made about an eighth of an inch apart, very clear and distinct. This paper is unfolded, placed on the material on which the design is required, and some pounce powder rubbed through with a stump of rolled flannel or list. I have sometimes used a powder made of chalk, or powdered pumice-stone, a little colour for white materials that wash, and a little resin, rubbed together in a wedgewood mortar, and this, if the paper is carefully raised, can be fixed by passing a hot iron over the linen, or held a little above it. The trouble of this is that the resin makes the needle cling in working, and if this would prove a great objection, a little colour, such as is used by artists in oil, diluted with turpentine, or water-colour, with a little gum added, can be used to trace it over with. A pen, or a stiff brush, can either of them be made use of. Cobalt is one of the best colours for this purpose, as it washes out entirely. Indigo always leaves a blue stain. A pounce-bag may be made by tying a little powder in two or three squares of thin muslin, and tapping this on the surface of the pierced paper, so as to shake the powder through the bag and through the holes of the pricked pattern as well. The paper when carefully lifted clearly up off the material will leave the design apparent in a dotted repeat. Should any accident occur from the paper slipping, the powder must be dusted off, and the process recommenced. For braiding gold upon velvet I have sometimes traced the pattern on tissue paper, tacked it to the velvet, run the shape with fine bright yellow silk, then torn away the paper entirely, and braided upon the velvet, following the outline apparent where the yellow silk has been run. This may sound rather troublesome, but with materials requiring the delicate handling of gold braid and rich velvet, the trouble is not wasted, as there is then no danger of injury to the face of the velvet from paint or pounce powder. Gold braid seems almost to necessitate the use of a work frame, but for Chatelaine bags and other purposes where gold is suitable the imitation of Eastern work it gives is very rich. The needle must be drawn straight up and down for each stitch, and care is required not to catch the point against the braid itself, so as to pull the fine threads, as they are too solid to be pierced by the needle point.—H. L. B.

Tracing Illuminated Texts.—The following is a very easy and cleanly method of transferring text designs. Take a sheet of tracing paper and lay it over the text you wish to copy, and with a light pencil trace it through; then turn the tracing paper, and go over the lines on the other side with a dark pencil. When that is done, lay the tracing paper on the cardboard, and with a hard pencil go over the lines again, when the text will be found legibly traced on the card. This plan answers much better than the black paper. White tracing paper can be obtained at any stationer's for 3*d.* a sheet.

10. Crochet D'Oyley.

By Mlle. Riego de la Branchardière.

MATERIALS—For a fine size use Walter Evans and Co.'s Boarshead crochet cotton, No. 18; Walker's Uncotopic needle, No. 4. For a coarser size, cotton No. 10; needle No. 3.

THE SQUARES.

Commence with 13 chain.

1st row—Turn, miss the last chain-stitch, and work 12 plain crochet stitches on the foundation chain; turn back.

2nd row—Make 4 chain; then on the last row, miss 1 and work 1 treble (1 chain, miss 1, and 1 treble 5 times); always take both edges of the plain stitches; turn back.

3rd row—1 chain, and on the last row work 12 plain; turn back.

4th row—Work as the 2nd row.

5th row—Work as the 3rd row.

6th row—Work as the 2nd row; then leave 2½ yards of thread, which will be required in the joining.

Work 15 squares more the same.

THE HALF CROSSES.

Take one of the squares, and with the thread that was left work 1 chain and 6 plain on the last row of it; then, to form one of the half crosses which attach the squares at the edge of the D'Oyley, make a dot thus: work 7 chain, then put the needle into the 3rd stitch of these 7 chain and work a single stitch; leaving 2 chain. Repeat whenever directed to "make a dot." All these stitches should be worked tightly. Make a second dot, then 11 chain, and work 1 single in the 7th stitch of it to form a 3rd dot. Make a dot as the 1st dot, then 2 chain. Take a 2nd square and join to the centre of the last treble stitch of the 2nd row of it. Make 2 dots as before, then 2 chain and 2 single on the centre of the 6 chain between the 2nd and 3rd dots. Make two dots, then 2 chain and 1 single on the top of the last plain stitch of the square, 6 plain more. Make a dot as before, then 2 chain, join to the last stitch of the foundation of the 2nd square. Make another dot, then 2 chain and 1 single on the last plain stitch of the 1st square. Fasten off.

Take the cotton left at the 2nd square, and working with it repeat the half cross, attaching a 3rd square.

Work with the thread left at the 3rd square, and repeat, joining a 4th square.

THE CROSSES.

Take a 5th square, and with the thread left make a dot, then 2 chain; join to the first stitch of the foundation of the 1st square. Make another dot, 2 chain, and on the square 1 single, 6 plain. Make 2 dots, then 13 chain, 1 single in the 9th stitch of these 13 chain to form a 3rd dot. Make a 4th dot as before; 2 chain; join to the centre treble row of the 1st square; make 2 dots as before; then 2 chain and 1 single on the 6th stitch of the 8 chain left between the 2nd and 3rd dots. Make 10 chain and 1 single in the 6th stitch of the 10 chain. Make a dot as before, 2 chain, join to the centre of the foundation of the 2nd square. Make 2 dots as before; 2 chain and 1 single on the centre of the last 5 chain between the dots. Make 10 chain and 1 single in the 6th stitch. Make a dot as before; 2 chain, take a 6th square, and join to the centre of the last treble in the 2nd row of it. Make 2 dots; 2 chain and 1 single on the centre of the last 5 chain between the dots; 2 chain and 1 single on the 5 chain after the 2nd dot. Make 2 dots; 2 chain and 1 single on the top of the plain stitch of the square; 6 plain more. Make a dot; 2 chain, join to the 6th square. Make a dot; 2 chain, 1 single on the square. Fasten off. Take the thread left at the 6th square and work another cross. Repeat the Cross until all the squares are joined.

The half crosses at the sides, when no cotton is left, must be formed by a separate thread attached to the centre of a square, and then worked as previously directed; when finished, all the ends should be run neatly in the wrong side of the squares.

THE BORDER.

1st round—Commence at the 1st plain stitch of the last row of the 1st square; make 6 chain, then work 1 treble in the centre of the half cross, 6 chain, 1 treble in the same stitch as the last, 6 chain, 2 single on the point of the next square. Repeat all round.

2nd round—All plain stitches; at the end work 2 single on the first 2 plain.

3rd round—5 chain, miss 2, 1 plain, 7 chain, join to the centre of the last 5 chain; and for the dot, make 4 chain and work 1 single in the 1st stitch of these 4 chain; then on the 7 chain work 2 single. Make a 2nd dot; then 2 single on the 7 chain. Make a 3rd dot, 1 single; then 2 chain, and on the plain stitches of the 2nd round, miss 2, 1 plain. Repeat from the commencement of the round twice more; then work 4 single between the scollops, and repeat all round.

Alum Baskets.—Wrap the wire completely with worsted; prepare a strong solution of alum in a wide-mouthed jar; place a stick across the mouth of it; suspend the basket from the stick by a piece of string; cover the basket entirely with the solution; leave it for four and twenty-hours. To make them blue, instead of alum use sulphate of copper; green, sulphate of iron.

11. Note Case.

EMBROIDERY on ticking in imitation of Persian and other Oriental designs is a very popular style of work at the present moment, and most beautiful effects are gained by the introduction of velvet stripes edged with gold, and likewise of stripes of Mosaic cameo and Breton narrow ribbons. The materials required for the note case illustrated in engraving No. 2 are a strip of red and white striped ticking, six inches wide and ten in length; the same of white sarsenet for lining; black ribbon velvet No. 2; gold thread, gold beads, gold braid; white, black, green, and blue netting or Berlin silks; gold cord for edge, and an ornamental gold button for fastening down the flap. Illustration No. 3 gives the design full working size. The first two red stripes of the bed ticking are covered with black ribbon velvet, and the velvet is ornamented with crosses worked with gold threads, separated by French knots in white silk; herring-bone stitch in blue silk covers the white stripe of ticking between the two rows of black velvet, and the stripe following is decorated with feather stitch in black silk. The two following red stripes in the ticking are edged at both sides with gold braid, and a star in green silk with a gold bead in the centre is worked at regular intervals along the red stripes, while blue herring-bone stitches are embroidered on the white stripe between; and with this effective arrangement of colours the note case is decorated. The lining should be quilted, and the case folded in the form of an envelope.

---

12. Sofa Cushion or Couvrepied.

(In stripes of Tricot and Point Muscovite.)

MATERIALS—6 thread fleecy or double Berlin wool in three colours, filoselle of one colour. Hook No. 8, Bell gauge.

Make a chain of 15 stitches, and work in common tricot for the length required; the pattern is worked in filoselle in cross stitch according to the design, and can be easily followed from the engraving.

The Point Muscovite stripe is worked lengthwise. Make a chain the length required (the engraving shows 32 stitches); for this two well-contrasting colours must be chosen. This stripe is all worked in Point Muscovite, which is as follows: Always working through the whole stitch, crochet 1 double, then put the needle in the next stitch of the chain; draw a loop through, and work 4 chain stitches in this loop; at the fifth cast off the loop upon the needle, drawing it through by a loop to the double stitch; then again, 1 double in the next stitch of the preceding row; again, 1 five-fold loop in the following stitch, and so on alternately. In the following row work the double in the loop stitches, and the loop stitches in the double stitches of the preceding row, so that the loop stitches always appear reversed, commencing each row from the same end.

2nd row—Point Muscovite in the light wool.

3rd and 4th rows in dark wool.

5th row—3 stitches in dark wool, 2 ditto in light wool, * 5 dark stitches next, 2 light ditto; repeat from star the whole row, carrying the wool along at the back.

6th row—2 stitches in dark wool, 3 ditto in light, * 4 dark ditto, 3 light; repeat from * to the end.

7th row—1 dark stitch, 4 light ditto, * 3 dark ditto, 4 light; repeat from * for the row.

8th row—2 dark, 3 light stitches, * 4 dark, 3 light; repeat from * to the end of row.

9th row—3 dark stitches, 2 light, * 5 dark, 2 light; repeat from * to the end of row.

10th and 11th rows in dark wool.

12th row in light wool.

13th row in dark wool. Sew the stripes together, arranging the diamond patterns to come alternately, as shown in engraving (*See* p. 40.)

---

13 and 14. Lace Tuckers in Tatting.

THESE designs are intended for ribbon or velvet, run in the centre as shown in the engraving. (*See* p. 41.)

FIRST PATTERN.

Materials—Walter Evans and Co.'s Boarshead cotton, Nos. 16 or 20, tatting pin No. 2, and a small shuttle.

1st oval—Commence a loop, work 6 double, 1 pearl, 6 double; draw close. Always leave about one quarter of an inch of the cotton before commencing. Reverse the work, turning the oval down.

1st rosette—Commence a loop, work 3 double (1 pearl and 3 double, 5 times); draw close. Reverse the work.

2nd oval—Work as the 1st oval.

2nd rosette—Commence a loop, work 3 double, join to the last pearl of the rosette, 3 double (1 pearl and 3 double 4 times), draw close, reverse.

Repeat the oval and 2nd rosette until the length is made, and to round the end make 4 rosettes.

The second side is worked the same, still repeating the 2nd rosette, but in working the oval, instead of making a pearl loop it must be joined to the pearl loop of the oval on the opposite side.

SECOND PATTERN.

Work the 1st side as directed for the previous pattern, but in making the second side, the second rosette only is to be worked and the thread joined to the pearl loop of the oval after each rosette is formed.

15. Scarf in Knitting.

MATERIALS—8 ply Berlin wool or 4 ply fleecy, selecting any two colours that contrast for the ends, the centre being made with one of the colours only; two knitting pins, No. 8, Bell gauge.

Cast on with the wool 74 stitches, that is three stitches for each pattern, and two over for the edge stitches.

1st row—Bring the wool in front of the pin in the right hand, then turn the wool quite round the pin so as to bring it in the front again, and pearl 2 stitches together; * the wool will now be in the front; turn it round the pin so as to bring it in the front again, pass the needle down the next stitch, and take it off without knitting it; then pearl the next 2 stitches together, and repeat from * to the end of the row.

2nd—Bring the wool in front of the pin and turn it round as before, then pearl 2 stitches together; * turn the wool round the pin, bringing it in the front; then slip the next stitch, thus, put the pin down at the back of the stitch, and, bringing the pin in the front, take off the front part of the stitch without knitting it, this stitch slipped is a long loop; then pearl the 2 next stitches together, and repeat from * to the end of the row.

All the rows are the same as the second.

Knit 6 rows of each colour alternately for about one quarter of a yard, then working the same stitch, but only one of the wools, knit about one yard, and make the other end to correspond with the beginning. Cast off.

THE EDGE.—Use the same colour as the centre, and Walker's Uncotopic needle, No. 1. Crochet on the edge of the knitting a row of 5 chain and 1 plain, then two rows more the same, working the plain stitch in the 5 chain of the preceding row.

For the Fringe, cut the wool in lengths of about eight inches, and loop them into the last row of crochet.

16. Tatting Insertion.

By Mlle. Riego de la Branchardière.

MATERIALS—For curtains, couvrepied, antimacassars, or other furniture trimming, use Walter Evans and Co.'s Boarshead crochet cotton No. 1, Walker's tatting pin No. 3, and a large shuttle.

For petticoats, morning dresses, etc., use Evans' cotton No. 12, tatting pin No. 2.

THE CENTRE STARS.

The Small Oval—Fill the shuttle and leave an end of about one yard of the cotton; commence a loop, work 4 double, then 1 pearl and 4 double alternately until 4 pearls are made; when finished draw quite close. Thread the end of cotton left at the commencement with a rug needle or a second shuttle, and take it in the right hand; then hold the thread of the first shuttle in the left hand for a "straight thread," and work 3 double stitches; leave the end of thread and take the first shuttle in the right hand.

The Large Oval—Commence a loop, work 4 double, join to the last pearl of the previous oval, then 7 double (1 pearl and 2 double alternately 4 times) 5 double more to make 7 in all, then 1 pearl and 4 double; draw close. Take the other thread in the right hand, and holding the first shuttle for a "straight thread," work 3 double as before; then take the first shuttle again.

Small Oval—Commence a loop, work 4 double, join to the last pearl of the previous oval; 4 double, then (1 pearl and 4 double 3 times); draw close. Take the other thread, and work 3 double as before. Repeat the large and small ovals until six of each are made. To fasten off, draw the end of the cotton sufficiently tight to form the circle, allowing the work to lie flat, then join to the 1st oval, and knotting the two cottons together, cut them off.

The Dots—Fill the shuttle, and join the cotton to the first pearl loop of one of the small ovals.

1st dot—Commence a loop, work 3 double; then (1 pearl and 3 double 3 times); draw close; join to the next pearl of the small oval; then make another joining to the 1st pearl of the large oval.

2nd dot—Commence a loop, work 3 double; join to the last pearl of the previous dot; then 3 double, 1 pearl, 3 double, 1 pearl, 3 double; draw close; join to the next pearl of the large oval.

3rd and 4th dots—Work 2 dots as the 2nd dot, and after the 4th dot is joined make another joining to the next pearl of the small oval.

Repeat these dots all round, then fasten off; make as many stars as will be required for the size; in repeating the stars they should be attached together by joining the last dot but one of the star that is being made, to the 3rd dot of the previous star. (*See* engraving.)

THE EDGE.

1st oval—Commence a loop, work 6 double, 1 pearl, 7 double, take the 1st star and join to a dot of it. The dot to be attached is the 9th dot counting from the one joined to the 2nd star; then work 7 double, 1 pearl, 4 double; draw close. A ¼in. of cotton must be left between each of the following ovals.

2nd oval—Commence a loop, work 4 double, join to the last pearl of the previous oval; 4 double, join to the next dot of the star; 4 double, 1 pearl, 4 double; draw close.

Work 4 ovals more the same as the last, joining them to four of the dots.

7th oval—Commence a loop, work 4 double, join as before, then 7 double, join to a dot: work 6 double, 1 pearl, 6 double; draw close.

8th oval—Commence a loop, work 6 double, join, then 9 double, join to the next dot but one of the star, then 4 double, join to the 2nd dot of the next star, work 9 double, 1 pearl, 6 double; draw close.

9th oval—Commence a loop, work 6 double, join; then 6 double, join to a dot: 7 double, 1 pearl, 4 double, draw close.

Commence again at the 2nd oval of the edge, and repeat to the end.

Work the other side to correspond.

THE HEADING.

Use Walker's Penelope needle, No. 2 or 3, hold the tatting so as to work along the spaces of thread left between the ovals, and crochet 4 plain stitches in each space, and 1 plain in each of the ovals alternately to the end.

Then on this plain row work a row of 3 chain, miss 3 and 2 treble, repeating to the end.

17. Raised Border.

FOR materials see preceding directions. This pattern is worked the short way.

Commence with a chain of 21 stitches.

1st row—Miss the last 6 chain, and work 1 treble, 2 chain, 1 treble in the same stitch as the last, *, 3 chain, miss 3, 2 treble in one, 5 chain; and, to form the dot, work 1 single on the top of the last treble stitch; then 2 treble in one, repeat from * once more; and for the edge, 3 chain, miss 3, 1 treble, turn back.

2nd row—7 chain, miss 4, 1 treble on the last treble but one of the first row, 3 chain, miss the dot, and work 2 treble in the 3 chain between the 4 trebles of last row; then for the dot, 5 chain and 1 single on the top of the last treble stitch, then 2 treble more in the same 3 chain; work 3 chain, miss the dot, and work 1 treble on the last of the 4 treble; 3 chain, miss 4, 1 treble in the 2 chain; then 2 chain and 1 treble, in the same 2 chain as the last, turn back.

3rd row—6 chain, 1 treble in the 2 chain; then 2 chain, 1 treble in the same 2 chain; 3 chain, miss 4, 1 treble on the next treble stitch, 3 chain, miss 3, 1 treble, 3 chain, 1 treble on the last stitch of the 4 treble; 3 chain, miss 3, and 1 treble twice. Turn back.

4th row—7 chain, miss 4, 1 treble on the last treble but one; 3 chain, miss 4, and in the next 3 chain but one; work 2 treble, a dot, and 2 treble, then 3 chain, miss 4, 1 treble, 3 chain, miss 4, 1 treble in the 2 chain; then 2 chain, 1 treble in the same 2 chain. Turn back.

5th row—6 chain, miss 1, and in the 2 chain work 1 treble 2 chain, and 1 treble, then 3 chain, and in the next 3 chain but one, work 2 treble, a dot, and 2 treble; 3 chain, miss the treble stitches, and in the next 3 chain work 2 treble, a dot, and 2 treble, then 3 chain, miss 3, and 1 treble. Commence again at the second row, and repeat the 4 rows until sufficient is made for one side of the pillow. Then, to form the corner, work at the right selvedge, plain stitches instead of treble, and instead of the 7 chain work only 4 chain.

THE EDGE.

1st row—Commence in one of the 6 chains at the left side of the border. Work 8 chain and 2 plain in each loop of 6 chain, repeating all round.

2nd row—Work in the 8 chain, 5 plain, then a dot and 5 plain more. Miss the 2 plain between the chain, and repeat.

18. Lattice Border.

MATERIALS—Walter Evans and Co.'s Boarshead crochet cotton, Nos. 12 or 14, or Mecklenburg linen thread, No. 6; Walker's Uncotopic needle, No. 3.

1st round—Make a chain the length of the four sides of the pillow, and work 1 single in the first stitch to make it round.

1st round—All plain crochet.

2nd round—All long stitches, and at each of the four corners increase by working 3 stitches, in each stitch 3 times.

3rd round—Work 4 plain on the long stitches of the last row, then an extra long stitch, putting the needle into the top of the plain stitch of the first row; work a second extra long in the next plain stitch of the first row, then on the long stitches of the second row, miss 2, and work 4 plain; continue the 2 extra long stitches and the 4 plain all round. This forms the running for the ribbon.

4th round—Work 5 chain, miss 2, and 1 plain; repeat all round, and increase at the corners.

5th round—Work 3 chain, then 1 treble in the centre stitch of the next 5 chain; work 6 chain and 1 treble in the centre stitch of the same 5 chain as before; then 3 chain, 1 plain in the centre of the next 5 chain; repeat all round.

6th round—Work 8 chain and 1 plain in the centre of each 6 chain of the last round; this finishes the outer side. For the inner side repeat the 4th, 5th, and 6th rounds, but decreasing at the corners instead of increasing.

19. Pillow Borders in Crochet.

By Mlle. Riego de la Branchardière.

THE effect of these trimmings round a pillow is shown in the small engraving; and lace being in general use for the purpose, it is desirable that it should be strong and durable in quality, therefore tatting or crochet is much better suited for ordinary use than machine-made lace. If used to ornament linen, the work should be made with Mecklenburg thread, and in the lattice border a narrow-coloured ribbon is to be run into the centre row.

Digitized by Google

21. Insertion—Crochet.

MATERIALS—Boarshead cotton, No. 14, and a steel hook. Begin with the stars, which form the middle stripe and consist of two rows.

1st row—7 chain close in a ring, looping 1 loop through the first and last of these 7 chain. Then follow * 9 chain, 1 double through both the upper threads of the ring; repeat from * 3 times; now work 16 chain; with the last 7 stitches of this chain form the ring for the second star. The first half of the second star is a repetition of the first half of the 1st star, with this exception—the first loop of the 2nd star is joined by the 4th chain with 1 double to the 5th chain of the 4th loop of the 1st star (this joining must be repeated with every succeeding star); then follows 3 more loops of 9 chain and 1 double. In this manner continue the work until you have the length you require. Then turn the work round and work the other side of the star. For the last star, work 3 more loops the same as before, then 4 chain and 1 double into the 5th stitch of the connecting chain; this finishes the last star. * 5 chain, 1 double into the next stitch of the ring of 7 chain, 2 loops of 9 chain, 1 double into the two following stitches, 4 chain, 1 double into the fifth of the next connecting chain; repeat from *. The finishing star will require 3 loops of 9 chain, 1 double, to complete it.

3rd row—1 double upon the outer upper point of the star lying towards the right; * 4 chain, 1 double upon the point of the following loop of the same star, 6 chain, 1 double upon the point of the next loop of the following star. Repeat from *.

4th row—1 treble, 1 chain, passing over 1 chain of last row.

5th row—2 treble upon the 1st stitch of the last row; * 4 chain, passing over 3 chain of last row, 2 treble in next stitch; repeat from *.

These last three rows must be repeated on the other side of the stars.

The edge rows should all be begun from the same end, therefore the thread must be cut off after each row is finished.

22. Toilet Cushion—Tatting.

MATERIALS—Walter Evans and Co.'s Boarshead cotton No. 14, or tatting cotton No. 50, tatting pin No. 2, and a small shuttle.

THE STARS.

1st dot—Fill the shuttle, and, commencing a loop, work 2 double (1 pearl and 2 double 3 times); draw close; turn this dot down under the left thumb.

1st oval—Commence a loop, work 4 double (1 pearl and 2 double 5 times); 2 double more, draw close. Reverse the work.

2nd dot—Commence, work 2 double, join to the last pearl of the previous dot; 2 double (1 pearl and 2 double twice); draw close.

2nd oval—Commence, work 4 double, join to the last pearl of the oval; 2 double (1 pearl and 2 double 4 times); 2 double more, draw close. Reverse.

Repeat the second dot and second oval until 18 dots and ovals are made, which will be sufficient to form the circle; leave an end of cotton.

The Centre, 1st oval—Fill the shuttle, and, commencing a loop, work 8 double; join to the pearl of the first dot; 8 double, draw close. Work 5 ovals more the same, joining to every third dot; when the six ovals are made fasten off, and then attach the two ends of the circle together and fasten them off.

Nine stars will be required to form the cushion, and they are then sewn together, as shown in the engraving.

The cushion should be covered with coloured silk, and the sides ornamented with a ruching of the same colour as the lining.

23. Edging of Crochet and Braid.

MATERIALS—Scolloped braid; Boarshead cotton No. 24; fine steel crochet hook.

1 double upon the nearest upper point of the braid, 1 chain, 1 double treble nearly to the bottom of the next lower scollop. 1 picot, consisting of 4 chain looped on to the upper thread of the treble, 1 triple treble through middle of the under scollop. 1 picot, 1 double treble even with the first double treble, 1 picot, 1 chain. Repeat from the beginning.

For the under row or footing work on the other side of the braid. * 1 double upon the nearest point, 2 chain, 1 double treble in the under part of the next scollop through the braid; 2 chain. Repeat from *.

24. Edging with Waved Braid.

MATERIALS—Waved braid must be selected of a suitable scollop for the pattern; Boarshead cotton No. 16, fine steel hook.

For the upper part begin with * 1 double upon the nearest upper point of the braid; 1 chain, 1 double treble under the lower scollop through the braid; 1 picot of 4 chain, 1 single through the upper thread of the treble; 1 chain, 1 double treble likewise in the under part of the scollop through the braid; 1 picot, 1 chain, 1 double treble again through the deep under part of the scollop; 1 picot, 1 chain. Repeat from *.

For the footing, begin at the opposite side of the braid with * 1 double upon the nearest point; 4 chain, 1 treble under the nearest scollop through the braid; 4 chain. Repeat from *.

For fixing Chalk Drawings.—Fill a large dish, free from grease, with boiling water; hold the drawing in the steam for some minutes, then draw it through the water with the drawing uppermost; after this is done place on a carpet until dry. The work will be improved, as it softens it considerably.

25. Crochet Fringe.

MATERIALS—Boarshead cotton No. 10, steel hook No. 20. Make a chain of the required length.

1st row—1 double, 5 chain, passing over 3 stitches; repeat throughout the row.

2nd row—* 1 double upon the third of the nearest 5 chain stitches; 3 chain, 3 double upon the third or middle of the next 5 chain; 3 chain, 1 double upon the middle of the next 5 chain; 3 chain. Repeat from*. At the end of the row turn the work.

3rd row—1 double upon the middle of the last 5 chain; * 3 chain. 2 Russian stitches upon the third of the next 3 chain, and next to the 3 double of preceding rows. The Russian stitches are worked thus: Insert the hook in the double, draw the thread through, then again draw it through the two loops upon the hook; this is repeated for the second stitch. 1 shell stitch, which is formed by working 3 double treble stitches into the double stitch in which the 3 double stitches were worked and lying over them. 2 Russian stitches upon the following double; 3 chain, 1 double upon the 3 of the next chain. Repeat from*, and turn the work.

4th row—*5 chain, 3 Russian stitches upon the 2 double and preceding chain stitches lying before the shell pattern; 1 treble behind the shell in the horizontal stitch lying free of second row; 3 Russian stitches upon the next 2 double and following chain stitch. Repeat from*, and turn the work at the conclusion of the row.

5th row—* 3 chain, 5 Russian stitches upon the treble and the 2 double lying before and after; 3 chain, 1 double upon the third of the next 5 chain. Repeat from*. At the end of the row turn the work towards the right.

* 3 chain, 1 treble into the first of the 5 Russian stitches; 5 chain, 1 treble: this treble is worked into the fastening stitch of the just finished treble, and forms one of the picots into which the fringe is looped. 1 treble into the next Russian stitch, 5 chain, 1 treble worked as before for the next fringe picot. 1 treble into next Russian stitch, 3 chain, 1 double into the double between the chains of last round. Repeat from*.

Knot the fringe, which must be 16 threads thick and 4in. long, on to the two scollops of 5 chain.

26. Crochet Insertion.

MATERIALS—Boarshead cotton No. 12 or 14; steel crochet hook No. 23, Bell gauge.

This insertion is worked lengthwise, and should be always worked on the same side, therefore the cotton must be fastened off every row. Make a chain of the requisite length.

1st row—Alternately 1 treble and 1 chain, passing over 1 chain of last row.

3rd row—Double stitches throughout the row.

4th row—3 double, * 5 chain, passing over 3 stitches of the previous row, 1 double treble into the 4th stitch, 5 chain, pass over 3 stitches, 5 double in the 5 following stitches. Repeat from *.

5th row—2 treble upon the first 2 double of the preceding line, * 5 chain, 3 double upon the next double treble and the chain stitch lying before and after it, 5 chain, 3 treble upon the 2nd, 3rd, and 4th of the next 5 double; repeat from *.

6th row—1 treble upon the 1st treble of the preceding line, * 5 chain, 5 double upon the next 3 double, and the chain stitch lying before and after, 5 chain, 1 treble upon the middle of the next 3 treble; repeat from *.

7th row—2 treble upon the 1st treble and the following chain stitch of the preceding line, * 5 chain, 3 double upon the middle of next 5 double, 5 chain, 3 treble upon the next treble and the chain stitch lying before and after; repeat from *.

8th row—3 double upon the 1st and 2nd treble and the following chain stitch of the preceding line, * 3 chain, 1 double treble as in the 2nd line upon the middle of the next three double, 3 chain, 5 double upon the next 3 treble and the chain stitch lying before and after; repeat from *.

9th row—Double stitch throughout.

10th row—Alternately 1 treble and 1 chain, passing over 1 stitch of previous row.

Banner Screen.—A handsome banner screen may be quickly and inexpensively made of ticking. Lay upon the ticking three or four strips of broad velvet, and work between them any of the stitches commonly used for ticking work. Scarlet velvet with black and scarlet coral-stitch looks well. Line it with thin silk, and put a fringe along the bottom. Ticking with a scarlet stripe in it is not difficult to procure. The velvet should form the outer edge on each side.

Knitted Antimacassar.—An antimacassar knitted in Berlin wool in what is called the railroad stich, has a very good effect, and is extremely easy to do. Materials—Berlin wool in the long skeins, scarlet and white, blue and white, or any two colours that contrast well; wooden pins, No. 9, Bell gauge. Cast on with the darkest colour as many stitches as will make the antimacassar of the desired width (20 stitches will be about a finger length), provided they will divide into *fours*, and leave three additional stitches for one edge. Do 6 rows, purl and plain alternately, so that they will all be purl on the right side of the work; then change the colour, and do 6 rows all plain on the right side; continue in this way, changing the colour after each six rows, till the antimacassar is as long as you require it. In casting off (which must be done very loosely), cast off the first three stiches, then let one drop, casting on a fresh stitch to replace the one that was dropped; cast off three more, drop one, and continue thus till all are cast off; then take down all the dropped stitches to the beginning of the work.

27. Crochet Insertion.

MATERIALS for insertion of the size of engraving—Boarshead cotton No. 20; steel hook No. 24, Bell gauge. Make a chain of 10 stitches, close in a ring, 3 chain for first treble, 2 treble into the ring, 1 picot of 5 chain (the picot is formed thus: after working the 5 chain, fasten it by 1 single firmly into the upper thread of the last worked treble). * 3 treble into the ring, 1 picot; repeat once more from *. 3 treble. This completes the upper half of the rosette. * 15 chain; close the last ten of this chain into a ring to form the centre of the next rosette. The 3 next stitches of the 15 chain are for the first treble of this second rosette. When the ring is joined the cotton will be on the lower side of the ring. To bring it into place for working the next stitch, draw the hook out of the stitch which is upon it, insert it in the first stitch of the ring, put it again through the stitch from which it was withdrawn, and pull this stitch through the other upon the hook. 3 chain to form the second treble stitch. This must be joined by taking the hook out and passing it through the upper thread of the 3 chain, which forms the 1st treble; insert the hook again into the stitch from which it was withdrawn, and pull that stitch through the first upon the hook; 1 treble, 1 picot, 3 treble, 1 picot, 3 treble, 1 picot, 3 treble. Repeat from the last * until you have worked the insertion the length you require. Work 1 picot, turn the work round.

* For the second side of the rosette work 3 treble, 1 picot, 3 treble, 1 picot, 3 treble, 1 picot, 3 treble; fasten by 1 single into the first treble of the other side of rosette. 2 chain, 1 single (this forms the second half of the connecting picot), which finishes one rosette. Repeat from * throughout the row.

For the edge * 1 double in the upper stitch of the middle picot, 10 chain. Repeat from * throughout the row.

The outer row consists of 1 treble, 1 chain, alternately, passing over one stitch of previous row.

These two rows are repeated on the other side.

28. Trefoil Guipure Edge—Tatting.

MATERIALS—Walter Evans and Co.'s Boarshead crochet cotton, No. 18, and a small shuttle. Fill the shuttle, but keep the reel on for a straight thread.

1st dot—Commence a loop, 8 double, 1 pearl, 5 double, draw close.

Stalk (on straight thread)—5 double, reverse.

Trefoil—Commence a loop, 5 double, 1 pearl, 5 double, draw close; commence a loop, 3 double (1 pearl, 1 double 3 times), 2 double, draw close; commence a loop, 5 double (1 pearl, 2 double twice), draw close, and reverse.

Stalk (on straight thread)—5 double, * join to the end of first stalk and the middle of dot, 7 double, 1 pearl, 6 double, reverse.

2nd dot—Commence a loop, 8 double, join to the last pearl of trefoil, 5 double, draw close, reverse.

Stalk (on straight thread)—5 double, reverse.

2nd Trefoil—Commence a loop, 5 double; join to the next pearl of last trefoil, 5 double; draw close. Commence a loop, 3 double (1 pearl, 1 double, 3 times), 2 double, draw close. Commence a loop, 5 double (1 pearl, 2 double twice), draw close, reverse.

Stalk (on straight thread)—5 double, join to the middle of dot, 7 double, 1 pearl, 5 double, reverse.

Repeat from 2nd dot, until there is the length required.

For the heading—Fasten the thread to the 1st pearl in stalk, and, with a fine crochet needle, work 5 chain, 1 plain crochet into the next pearl; repeat to the end.

29. Crochet Border and Fringe, for Couvrepieds, Antimacassars, &c.

By Mlle Riego de la Branchardière.

MATERIALS—Walter Evans and Co.'s Boarshead cotton, No. 10; Walker's Uncotopic crochet needle, No. 3; for a finer size use No. 16 cotton, and No. 3½ needles; or, if coarser, use No. 4 cotton and No. 2 needle.

FIRST CIRCLE.

Commence with 12 chain, and make it round by working a single stitch in the 1st chain stitch.

1st round—Work 18 plain stitches in the foundation round; at the end 1 single on the 1st plain stitch.

2nd round—Work 7 plain, miss 2 and 1 plain, 6 times.

3rd round—4 chain and 1 treble in the first loop of chain; then (1 chain and 1 treble 5 times in the same loop of chain as before); *miss 1, and in the next loop of chain work (1 chain and 1 treble 6 times); repeat from * in each loop of chain. At the end 1 chain and 1 single in the 4 chain at the commencement of the round.

4th round—7 chain, miss 3 and 1 treble; then (4 chain, miss 3 and 1 treble, 16 times); at the end 4 chain and 1 single in the 4th stitch of the 7 chain.

5th round—4 chain, miss 1, 1 treble; then (1 chain, miss 1 and 1 treble, 42 times).

6th round—14 chain, miss 8, and 7 plain, 6 times.

7th round—(2 chain, miss 1 and 1 treble, 7 times in the 1st loop of chain); then 2 chain and 1 plain on the centre of the 7 plain. Repeat all round.

8th round—Miss 1 and in the 2 chain, work (1 plain, 2 treble, and 1 plain); repeat all round and fasten off.

Repeat the circles until sufficient are made for the length, then attach them together by sewing them firmly.

THE FRINGE.

Make a row of 3 chain, miss 3, and 1 plain, in the centre of the treble stitches of the circles, and repeat along one side of them. Cut the cotton in lengths of about six inches, then put the needle into the loop of 3 chain: take 3 folds of the cotton, double them on the needle, and then bring them through in a loop, then bring the ends through this loop and draw them tight.

Warm knitted Under-dress.

WITH two No. 8 knitting pins, with heads, and German lamb's wool in half-ounce skeins on the thinnest fleecy which can be bought, cast on 120 stitches, and knit 16 ridges. (A ridge is a row and back again.)

To commence a gusset for the bosom, knit 28 stitches. Turn the knitting (as to return), slip 1 stitch from the right-hand to the left-hand pin, pass the wool back round this stitch, and replace this stitch on the right-hand pin. This is to prevent a hole, and is to be done at every return when only part of a row is knitted. Knit the 28 stitches. Knit 24 stitches and return. Knit 20 stitches and return. Knit 16 stitches and return. Knit 12 stitches and return. Knit 8 stitches and return. Knit 4 stitches and return. After this the entire rows are to be knitted. Knit 4 ridges. Knit 4 stitches and return. Knit 8 stitches and return. Knit 12 stitches and return. Knit 16 stitches and return. Knit 20 stitches and return. Knit 24 stitches and return. Knit 28 stitches and return. Knit 22 ridges.

Cast on 30 stitches for the shoulder strap, taking care that it is at the same end of the pin at which the gusset was knitted. Knit 8 ridges. Cast off 55 stitches, and knit the rest of the row.

To knit in a gusset for the hip:—Knit 60 stitches and return. Knit 56 stitches and return. Knit 52 stitches and return. Knit 48 stitches and return. Knit 44 stitches and return. Knit 40 stitches and return. Knit 36 stitches and return. Knit 32 stitches and return. Knit 28 stitches and return. Knit 24 stitches and return. Knit 20 stitches and return. Knit 16 stitches and return. Knit 12 stitches and return. Knit 8 stitches and return. Knit 4 stitches and return. Knit 3 ridges, taking all the row. Knit 4 stitches and return. Knit 8 stitches and return. Knit 12 stitches and return. Knit 16 stitches and return. Knit 20 stitches and return. Knit 24 stitches and return. Knit 28 stitches and return. Knit 32 stitches and return. Knit 36 stitches and return. Knit 40 stitches and return. Knit 44 stitches and return. Knit 48 stitches and return. Knit 52 stitches and return. Knit 56 stitches and return. Knit 60 stitches and return.

Knit one row (not ridge) and cast on 32 stitches. Knit 72 ridges. Cast off 32 stitches, and knit the rest of the row.

Knit 60 stitches and return. Knit 56 stitches and return. Knit 52 stitches and return. Knit 48 stitches and return. Knit 44 stitches and return. Knit 40 stitches and return. Knit 1 row (not ridge) and cast on 55 stitches. Knit 8 ridges. Cast off 30 stitches, and knit 22 ridges.

Knit 28 stitches and return. Knit 24 stitches and return. Knit 20 stitches and return. Knit 16 stitches and return. Knit 12 stitches and return. Knit 8 stitches and return. Knit 4 stitches and return. Knit 4 ridges. Knit 4 stitches and return. Knit 8 stitches and return. Knit 12 stitches and return. Knit 16 stitches and return. Knit 20 stitches and return. Knit 24 stitches and return. Knit 28 stitches and return.

Knit 16 ridges, cast off, and sew it up.

THE SLEEVE.

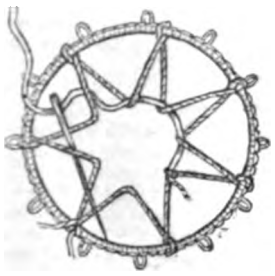
Cast on 40 stitches. Knit 26 ridges. Knit 28 stitches and return. Knit 24 stitches and return. Knit 20 stitches and return. Knit 16 stitches and return. Knit 12 stitches and return. Knit 8 stitches and return. Knit 4 stitches and return. Knit 6 ridges. Knit 4 stitches and return. Knit 8 stitches and return. Knit 12 stitches and return. Knit 16 stitches and return. Knit 20 stitches and return. Knit 24 stitches and return. Knit 28 stitches and return. Knit 26 ridges and cast off.

Lace Stitches—Danish Embroidery.

DANISH embroidery is becoming popular, perhaps in compliment to H.R.H. the Princess of Wales. It is not such a well-made, clearly defined work as either crochet or tatting, but it is a change, and changes, even if not progressions, are generally welcomed. These lace stitches will be found useful for joining together medallions of either crochet or tatting. To commence with No. 1, first make a circle with either tatting or by working buttonhole stitches over three circles of crochet cotton; now tack this circle on some *toile cirée* with a fine needle and embroidery cotton, and make seven long loop stitches of equal length, according to engraving, and fasten these down by means of an inner circle formed by darning the needle in and out of the loop stitches. When the circle is formed, bring the

Digitized by Google

needle to the top of the nearest point, and darn in and out of every long stitch, as in engraving No. 2. When all are filled in, repeat the seven



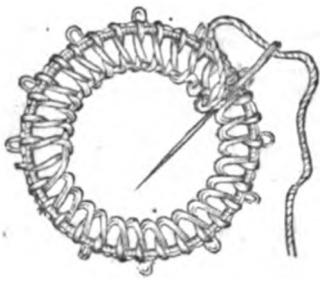
No. 1.

No. 2.

looped stitches on a miniature scale, and finish with a smaller plain circle to draw the whole to a point in the middle. Untack the circle and it will be complete.

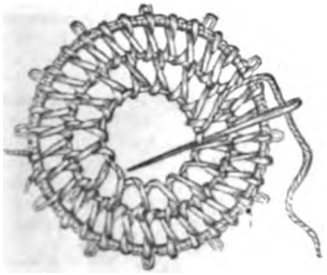
No. 4 is the same variety of work. To produce it, a circle must be pre-

No. 3.

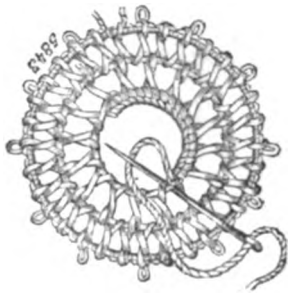


No. 4.

pared either with tatting or buttonhole stitches, and inside the circle thirty-six long loose buttonhole stitches are worked; fasten these by passing the

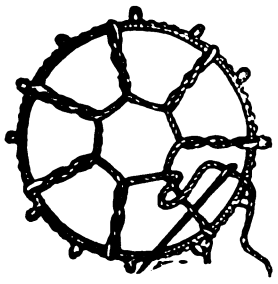


No. 5.



No. 6.

needle through each loop to form another ring. This is followed by a second round of buttonhole stitches, one being taken between every alter-



No. 7.

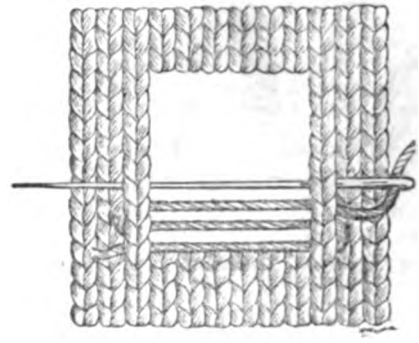
No. 8.

nate stitch of the outer row. The working is shown in illustration 5. After the needle has passed through every stitch, and the third circle secured, finish off with a round of close buttonhole stitches, as illustrated in engraving No. 6.

No. 7 is another variety of Danish embroidery. The manner of working the circle is so clearly illustrated, and as similar stitches are used to the preceding ones, there is no necessity for further explanation. These stars should be worked in very fine cotton, and are useful for joining sprays of tatting, crochet, and white embroidery, and are frequently used for ornamenting the ends of white muslin neckties.

Darning Stitch for mending Stockings.

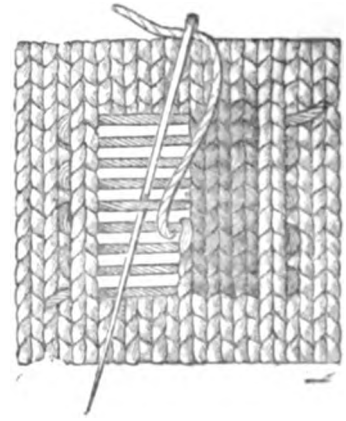
To darn stockings well and neatly is just one of those accomplishments which too many neglect, but about which no pains should be spared to acquire thoroughly. Crinoline, steel, and stiff petticoats of all descriptions are most destructive to stockings, and in order to remedy the harm they do, and the holes they make, it is a positive duty to learn to repair the mischief in such a manner that even the traces of it will be imperceptible. The usual proceeding when a hole has to be stopped up is to make lines of cotton in either a horizontal or perpendicular direction, and then to cross these lines the contrary way. This is the ordinary manner, but there is a much better and more artistic one, which is to imitate the stitch in which the stocking is woven, and with this to fill up the gap; by doing so, it is quite possible to darn a hole over, so that no traces of the mending are perceptible. The two engravings, Nos. 1 and 2, illustrate the manner of



No. 1.

achieving this. The way to proceed is to procure a smooth ball of wood, somewhat in the form of an egg; any turner can make one to order (we do not know if such things are sold ready-made in England, but they are common enough in Germany, where stockings are almost invariably darned in the manner we are describing); cotton must be selected to match precisely that with which the stocking itself is woven. Place the hole to be mended on the ball of wood and hold the stocking tightly over it with the left hand, then darn backwards and forwards evenly, and not too closely, taking care to insert the needle at the commencement of every woven or knitted stitch, and not in the centre of it. These darned lines should run horizontally, and should commence and terminate a few threads above and below the hole.

No. 2 illustrates the manner in which these horizontal lines are crossed



No. 2.

—the real darning stitch. It is easy enough to do, the only difficulty is to draw the cotton through evenly, and to acquire this perfectly will require a little practice. When one horizontal line of the cotton has been crossed or filled up the stocking is then turned, and the process repeated in the contrary direction, the same stitch being continued throughout until the hole is concealed. Ladies, and young ones especially, should bear in mind that to darn a stocking neatly is more creditable to their skill as needlewomen than to execute the most dainty piece of fancy work that was ever designed.

Dress and Fashion.

THE MOVEMENTS OF FASHION, 1867-1868.

As years roll on imperious Fashion continues to exercise that complete despotism over the civilised world for which she has so long been notorious. Her power is never disputed; the strongest as well as the weakest-minded of individuals succumb to it helplessly and generally instinctively. To argue, to reason, or to try to suppress any particular fashion, is a folly rarely attempted, because it is felt that the undertaking would be madness, and the result utter failure. The growth of this undisputed power has been the growth of ages; it dates back from the remotest antiquity. We have not space here to trace its progress in Athens and Rome, but we all recognise that for the present Fashion flourishes in Paris, and from that attractive centre of life decrees what the rest of the civilised world is to wear—the form, colour, and materials of their garments. No matter how unbecoming any one of its whimsical laws may be, if it condemns *brunes* to turn *blondes*, and *vice versâ*, the law is submitted to, and recourse is had to all manner of crafty artifices to help to full obedience.

What Fashions have repeated themselves, what forms have been patronised during the past year, it is now our task to relate. Let us commence with saying that there is a good deal of latitude allowed in a lady's dress in the present day; the current fashions lack individuality of style; they are an amalgamation of various epochs, the antique and the modern, the Louis XV. and the first Empire, a spice of Watteau, a trifle of Spanish, are all mixed up in the popular toilette at the close of the year 1867, and the result, if not high art, is very piquant. Crinoline has waned away, until it is a mere skeleton of what it used to be—at least when it is worn in daylight—but in the evening it flourishes as large as ever. Short dresses are now accepted in England, although, for a length of time, they did not take, and a positive distaste for them was evinced. But the common-sense view of the question has prevailed, trains, though exceedingly graceful when the ground they sweep is clean, are entirely out of place and cumbersome when they come in contact with dirty streets and muddy crossings. We are happy, therefore, to be able to announce that a reformation has been wrought, and that English ladies may now be seen wearing high Polish boots, with skirts reaching to the ankle, walking independently, with no anxious fear that their skirts may have dropped into the mud, or that a handsome dress may be ruined on its first appearance in public.

The most fashionable colours during the present year have been Bismark brown and claret. The Prussian Prime Minister has stood sponsor to a hue which has been universally adopted by women of all ages and all complexions; never did a colour attain such an extensive popularity—flowers, leaves, gloves, boots, bonnets, dresses, and mantles, have one and all received the Bismark dye. It is the brown of Russia leather with a dash of yellow ochre in it; and to French women, who, as a rule, are not conspicuous for beauty of complexion, it has proved eminently unbecoming. Blue and green, and a new pink have all been attempted, but Bismark has decidedly carried the day in colour. Claret, or as it is called in Paris *Vin de Bordeaux*, is now asserting itself as a rival; it is a powerful one, as the hue is rich and effective, but up to the present it has by no means superseded the popular brown.

Bonnets are smaller, and chignons larger than last year. In the former the small *fanchon* shape has prevailed, and gold has been the trimming *par excellence*. Tawdry finery very, but still the fashion. Gold or rather gilt has taken the form of leaves, flowers, berries and insects, beads and buttons, and been lavished on lace, tulle, silk, straw, terry, and velvet bonnets to satiety. Gold ornaments have likewise invaded hats, and even now are to be seen in winter bonnets, the fashionable materials for which are fur and feather. Sealskin bonnets, chinchilla bonnets, and grebe bonnets, with strings to correspond, are all to be seen; a small humming-bird, or an openwork gilt band, studded with steel, being their principal ornaments. Bonnets are likewise made of pheasants and peacocks' feathers, and ornamented with lace and coloured satin. These varieties are novel, but for winter wear velvet will always carry the day; and the new claret velvet bonnets with the mantilla lace veils at the back, and a judicious ornamentation of velvet and gold leaves, are in infinitely better taste. There has been a new feature in bonnet strings during the year, the wide strings tied in a formal bow shadowing the chin have disappeared altogether, and given place to lace lappets fastened two inches below the chin with either a satin bow or a tuft of flowers; the bonnet is neatly tied on with a pair of narrow strings fastened in a bow either above or below the chignon.

Short loose jackets have been the universally worn outdoor coverings during the year; they have been made principally of the same material as the dress, and trimmed to correspond with it; but now this stumpy, ungraceful garment is likely to be superseded by the Empire redingote—nothing more or less than a pelisse with roll collar in front, and a sash at the back. For the present, it is made in black velvet, and trimmed with rich black silk, and altogether forms a handsome outdoor covering, especially when a pretty petticoat peeps from beneath it.

Ordinary walking dresses are made short, and a small round crinolines worn under them. Velvet is now frequently to be seen as the material, and fur for the trimming of the *robe-courte*. As gores are in high favour and plaits consequently "gone out," but very little material, comparatively speaking, is required for a short dress; hence rich fabrics are more easily obtained than when sixteen and twenty yards were required to make a dress. Those who cannot afford velvet and fur content themselves with striped and spotted velveteens, linseys, serges, &c. The short dress, when composed of a thick material, is frequently trimmed so as to simulate a second skirt.

Sashes now form a very important item in a lady's toilette; they are tied in the centre of the back of the waist, in a large bow—what is called a baby bow; the ends are fringed or otherwise decorated, and are sometimes used lor looping-up a train skirt. They are rendered still more conspicuous by being frequently worn of a colour that contrasts with the dress. The ends, in many instances, are as long as the skirt.

Several novel accessories to the toilette deserve a special notice on account of the favour they have gained during the past year. First, there are the Breton jackets, made for outdoor and indoor wear, the thickness of cloth varying, but the embroidery ornamenting them always the same in style; small Breton men and women in their national costume, and arabesques of all forms worked in bright coloured silks, together with small silver coins, form the fantastic ornaments to these somewhat picturesque jackets. The Marie Antoinette fichus are also popular; they are made of silk and velvet, as well as of muslin and lace. The Empress of the French affects them, and wears one frequently, both over a high and low dress. They were introduced by the unfortunate queen whose name they bear a few years before the French Revolution broke out. Then there are large gilt sash rings, of three sizes, suspended from slight gilt chains, and much worn with evening toilettes, as supports to the ends and bows of the sash. There is neither beauty nor use in them, but they are the fashion.

Amber ornaments have been in some measure superseded by the carved ivory ones for which Dieppe is so famous; and not only are brooches and earrings, chains and crosses, to be seen in this pure and beautiful substance, but card-cases and purses are made in it. Nothing is more appropriate, nothing more exquisite. So far as space permitted, we have given illustrations of the popular fashions of the day, but there is every probability to believe that these fashions will be but evanescent, for the Imperial lady of France has, on more than one recent public occasion, shown a wish to restore hoops. If the attempt is successful, we shall have to record a complete revolution in the fashions during 1868.

Description of Headdresses.

When 1866 drew to a close it was imagined that the lady's headdresses had attained their maximum in bulk, but the experience of the year 1867 has taught differently. More frizettes, more false additions, more elaborate styles, and the back hair arranged nearer to the summit of the head, is what all must have remarked who have watched such matters during the past twelve months. In the accompanying illustrations, five styles of coiffures are given, all in vogue at the present moment.

No. 1. The "Berenice" coiffure, a mixture of the antique and Louis XV. styles, the front being Greek and the back Louis XV.; small curls surround and fall on the forehead; the hair is combed back from the temples in a bandeau, and above the curls there is a wide plait forming a coronet. The chignon is composed of wide bows with light ringlets falling over them, arranged as a scaffolding one above the other to the very top of the head; an extremely long curl falls on the right side. A gold band studded with precious stones is added in front, between the plait and the curls.

No. 2. The "Jeannie" coiffure is a most becoming manner of arranging the hair when a high dress is worn. The hair is waved in large waves, and bound loosely over the temples; at the right side there are curls, and only one at the left. The chignon consists of three rouleaux, with a plait in the centre.

No. 3. To arrange the "Marguerite" headdress, which is very stylish, the front hair is divided at each side into two parts. The upper division forms a full bandeau on the forehead, and the lower one is combed back from the temples. These are secured by a bandelet, which encircles the head, and which at the left side is ornamented with silver marguerites. A rouleau of hair surmounts these bandeaux, and terminates with a high chignon. Two long plaits from behind the ears fall as low as the waist in front.

No. 4. In the "Galatée" headdress all the hair is curled, and the ringlets are combed and arranged so that they fall at the back of the head. A thick plait is bound round the head, so as to keep the front and side curls in their respective places.

No. 5. The "Metternich" headdress is composed of a chignon made of four rouleaux of hair placed one above the other; two long plaits are fastened on the chest by a small bouquet of flowers to match the wreath over the forehead; the front hair is arranged in eight curls; the wreath separates the chignon from the front hair.

Pearls.—Eau-de-cologne is an excellent thing to clean pearls with. Gently rub them with a little eau-de-cologne and a bit of very fine flannel, or, better still, little rolls of wadding or thick blotting paper tightly rolled up.

Clear Starching.—To a good-sized saucepan full of strongly-made starch add a piece of white wax fully the size of a large walnut (an end of composite candle would do, but wax is better), and dissolve it well in the starch, and then pour in a wine-glass full of brandy. Starch the clothes as usual with this mixture. The wax gives the satin-like, glossy surface to the petticoat, &c., and the brandy imparts the great stiffness.

New Styles of Hats.

No. 1. The "Travelling" hat is made of white straw studded all over with tiny blue beads. It is trimmed with an *aigrette* of pheasants' feathers, and with a blue silk scarf fringed at the ends; the latter is carelessly entwined round the brim.

No. 2. The "New Leather" hat is trimmed with velvet of the same shade. The velvet forms a *coquille* in front and a bow at the back. A leather hat is one of the novelties of the season in Paris.

No. 3. The "Mantille Collier" is of white fancy straw, and bordered with a wreath of black grapes and vine leaves. A black lace mantille, embroidered with jet, is attached to the back of the hat, and fastened in front with a small bunch of grapes.

No. 4. The "Metternich" toque is made of bronze straw, and trimmed with a plait of brown velvet. A gold bee is fastened at the left side of the turned-up brim.

No. 5. The "Toque" hat is trimmed with grey velvet, which is gracefully arranged round the crown, according to the illustration. A bow of similar velvet in front, forming an aigrette to a plume of black feathers, with small gold flowers intermingling.

Promenade and Evening Toilettes.

No. 1. *Morning Toilette.*—A grey sultane short costume. The upper skirt s ornamented with grey satin bands cut on the cross, corded at both edges, nd arranged in a graceful pattern; the petticoat is entirely plain. The asaque has coat-shaped sleeves opening at the sides; the ornaments of the kirt are reproduced on it; a grey straw hat, with a long crape scarf round t, enlivened with blue satin bows. The ends of the scarf float at the ack.

No. 2. *Afternoon Toilette.*—A long blue silk dress, trimmed with a cross and of the same, which is corded at both edges with white satin. The bodice ens in front, and is trimmed with a similar cross band, in the centre of hich there are stars of the composition called "white jet." The waistand, with long sash ends, is bordered with a cross band, which corresponds n style with the trimming on the dress.

No. 3. *Evening Toilette.*—This toilette consists of a blue silk skirt that escribes a train, and is bordered with a blue silk and crêpe ruche. The unic and low bodice, which are cut in one piece, are of white silk; the unic is looped-up gracefully at the back and sides with sash ends of white lk bordered with cross-bands of blue silk. The front breadth falls as a uare, and is quite plain. The low bodice and short full sleeves are completed with a square *berthe*, which is crossed in front and tied at the back e a Marie Antoinette *fichu*; this *berthe* is white silk, bordered with blue. he hair is arranged *à la grecque* with bandelettes, studded with precious ones.

No. 4. *Evening Toilette.*—A long dress *à la Récamier*, very short at the ist, and with short full sleeves. The material is maize silk, and the lly trimming is a white silk sash, embroidered with maize silk, and inged to match. This sash is suspended by gilt rings, and the ends are tached by a link and a key, both gilt. These novelties are very eccenic and inappropriate additions to a lady's toilette, but they are the fancy the moment, and we should fail as chroniclers if we omitted to illustrate em to our readers.

Management of Ladies' Hair.

ung ladies are often in trouble about their hair between the ages of enteen and thirty. The hair may be unruly; it may come out; the lp may be at fault, or the fat glands act improperly.

The hair may be too dry and get brittle; this arises sometimes from the free use of spirit washes of various kinds, or from dyes. The remedy plain. The great complaint is that the hair gets thin. If there be any ility present, the hair will mostly thin out. In these cases it is as well, a time at any rate, to keep the hair rather shorter than usual, and to e general tonics. If there be indigestion present this must be remedied; euralgia, quinine should be taken. The most troublesome instances of of hair on record have followed in the wake of violent attacks of ralgia of the head, brought on by disappointment or some mental excite- or depression. In these cases very much may be done by the use nally of remedies that give tone to the nervous system, such as nux ca, bark, quinine, and steel. After these have done good service, applications, especially ammonia, are serviceable.

is a fashion with very many young ladies to wear their hair in ent styles that necessitate frequent variation in its length. Now, this ductive of much harm. At one time nature has to furnish a large, ner times a small, crop, and hence is puzzled, or so unhitched or lanced that she does not afford a supply of nourishment when called to do so, and lapses into a state of indifferent weakness in consence.

he one great cause of thinning of the hair is unquestionably general lity. We advise, in the majority of such cases, that a teaspoonful of ture of gentian, with about ten drops of diluted hydrochloric acid, aken twice a day in a wine-glassful of water, and the scalp rubbed with e such as the following lotion night and morning; Distilled vinegar, 2oz.; tincture of nux vomica, 3dr.; tincture of capsicum, 7dr.; otto of roses, 2 drops; and rosewater, 4oz. It is almost identical with the nux vomica lotion of Corbyn and Co., the chemists, Bond-street, the very best preparation of its kind.

Now, the heated and crowded rooms at balls and parties are in some cases very injurious to a good state of the hair. The gas acts very hurtfully in those cases in which the hair and scalp are very dry. The only plan here is to use to the scalp such a simple preventive as the glycerine lotion we have recommended.

At no time is general thinning of the hair more marked or more frequent than after confinements, or in mothers who are nursing when in a somewhat debilitated condition. Here general tonics are needed. The following lotion, of a stimulating character, may be employed with great advantage at the same time: Distilled vinegar, 2oz.; rum, 1oz.; glycerine, 2dr.; tincture of lytta, 4dr.; elder-flower water 4oz.; or, tincture of bark, 4dr.; cherry-laurel water, 4oz.; glycerine, 2dr. It will be seen at once that the treatment of almost all cases of general thinning of the hair is not merely local but constitutional, and that we may pour and besmear tons of the most nutritious liquids and pastes, pomades, and the like upon an unfortunate head without doing much good. It is necessary that the machinery itself be given the power to work healthily and happily, and such power is given from the nutritive organs in the centre of our bodies, and by the vital fluid that flows in our veins and arteries.

General thinning may also come from the disordered state of the circulation, consequent upon the inflammation of the scalp accompanying eruptions. The treatment here is that of the several eruptions.

The natural fatty secretion may be deficient. When this is the case evaporation goes on more readily, the cuticle gets irritated, chokes up the hair follicle, the formative papilla at the bottom of the follicle is damaged, and the hair lost more or less. Here the most soothing remedies at the outset are needed, and then gentle stimulants. The ordinary "borax and camphor" lotion of the nursery is the safest and the best application to use without special advice; and this brings me to say one word more about washes. Spirit lotions we again condemn, but those which have distilled vinegar in their composition we praise. They are just as cleansing, and do not interfere with the fatty secretion to the same degree as the others. As a nice cooling and cleansing wash, the following may be recommended: Eau de Cologne, 1oz.; distilled vinegar, 2oz.; tincture of arnica, 1dr.; honey water, 2oz.; cherry-laurel water, 3oz. This will make about a half pint lotion.

In conclusion, we would just repeat that a few remedies, used philosophically, will effect the greatest possible good. We have indicated what seemed to us the more interesting points in reference to the management of the hair. If we are asked for the best application in the way of pomades, we should say the Benzoated pomade, or lime cream, of Savory and Moore; as a wash, distilled vinegar and cherry-laurel water; and as a stimulant for promoting the growth of the hair, the "Nux lotion" of Messrs. Corbyn and Co., Bond-street, by far the best.

Grenadine.—To wash a grenadine dress it must be washed first of all, and dried before being starched; then it is put through clear thin starch, and clapped with the hand until dry; and, lastly, it is put through starch a second time, and it always comes out like new.

To renovate Black Silk.—Rub the silk all over on the right side with a solution of ammonia and water (two teaspoonfuls of powdered ammonia to a quarter of a pint of warm water), and smooth it on the wrong side with a moderately hot iron, and the silk will regain a bright black appearance.

Tussore Silk.—Indian silk should be washed in a good lather of soft water; mangled while quite wet, and then immediately ironed. This quick process prevents the spotting, by ironing when partially dry. Dresses of this material should be washed before made up, for two reasons; first, because it shrinks considerably; second, because as long as the dress remains in the material it shows every spot of rain; besides which, the oftener it is washed, the more silky it becomes in appearance.

Mauve and Magenta Muslins.—It is always rather a hazardous proceeding to wash these very delicate articles, the colours of the muslins being so bright that it is scarcely possible they should retain their full beauty after the process. The best plan is that of washing them very quickly in cold soapsuds, never allowing them to soak at all. They should be rinsed in soft water, containing a little salt, which should be dissolved in it, wrung as lightly and as gently as possible, and invariably dried out of doors, in a shady place, where the sun cannot come upon them.

To Clean Ostrich Feathers.—Dissolve some fine white soap in boiling soft water, and add a small piece of pearlash. When the water is just cool enough for the hand to bear it, pass the feathers through it several times, squeezing them gently with the hand. Repeat the same proccess with a weaker solution of soap, and then rinse the feathers in cold water, beating them across the hand to get rid of the water. When they are nearly dry, draw each fibre over the edge of a small blunt knife (a silver fruit-knife is best), turning it round in the direction you wish the curl to take. If the feather is to be flat, place it between the leaves of a book, to press it.

The Kitchen.

Recipes for cooking Vegetables.

STEWING is one of the best ways of cooking many vegetables, for being thus *cuits dans leur jus* none of their flavour is lost. Vegetable marrows, turnips, carrots, beetroots, previously baked potatoes, Jerusalem artichokes, parsnips, cucumbers, and onions, make capital dishes when properly cooked without the agency of water.

Take some vegetable marrows, not too old (what this vegetable gains in size by age it loses in flavour), cut them up in pieces the size of a small egg, having first peeled them. Rub a saucepan with garlic, put a goodly piece of butter and a little flour in it, and throw in your pieces of vegetable marrow when the butter is melted, adding pepper, salt, and grated nutmeg. Take care they do not catch or burn, which is avoided by tossing and adding more butter if necessary. In about a quarter of an hour throw in a handful of Parmesan cheese or two, according to the quantity. If they look too dry add a small quantity of milk, and let the stew simmer till the marrows are quite done, when you serve with or without *croûtons* (sippets) round the dish.

The foregoing recipe is applicable to all the vegetables mentioned above, with the exception of onions.

A combination of several vegetables, such as beetroots and potatoes, or carrots, turnips, and potatoes, or parsnips and turnips, &c., treated by the above method, will produce very nice *entremets de légumes*. In most cases of stewing vegetables the least bit of sugar will be an improvement, but it must be used as if it were Cayenne pepper, under pain of spoiling the dish.

Another very good way of dressing those vegetables, which the French call *racines* (roots), mostly mentioned above, and also potatoes, is to cut them with what is called, I believe, a vegetable scoop, into the shape of one ounce bullets, and toss them in plenty of butter till quite done, adding during the process salt, pepper, a little grated nutmeg, and a very little powdered sugar.

By this process the small white onions which are used for pickling can be made into a very nice dish to be eaten by itself, or they can be used after being thus cooked as a garniture for stewed beef, mutton cutlets, &c.; and this reminds me of an excellent good soup which was invented by a noble French *gastronome* of the old school, the Marquis de Cussy. It is very easily prepared, by no means expensive, and will be appreciated by the most fastidious.

Soupe à la Cussy.—Pick and clean a dozen or more small white onions, such as are used for pickling; cut them in the very thinnest slices you can, and put them into an enamelled saucepan with a tablespoonful of powdered loaf sugar and a goodly lump of fresh butter; keep shaking the saucepan until the onions are of a fine golden colour; then add to them as much hot water as you want soup. Let it give one boil, add one or two liqueur glasses of the best French brandy, pepper and salt judiciously, and pour into the soup tureen over a small quantity of bread, cut in the shape of small dice and previously fried in butter until they also have a golden hue. I have grated Parmesan cheese served with this soup, for those to take who like.

The following will be found a more elaborate way of dressing the large Spanish onions: They should be parboiled first in water and salt for about ten minutes; then the core, or centre, of each onion should be removed with the same instrument used in coring apples, a tin cylinder, half an inch in diameter, care being taken to leave the bottom part intact. This done, arrange the onions in a saucepan, in which you have previously melted a piece of butter, and mixed with it a tablespoonful of flour; fill up the cavity of each onion with a mixture of bread crumbs, anchovies, cut up small, capers, and pepper and salt; add a mixture of half stock, or broth and half claret made hot; put in, tied up in a bundle, some parsley, sweet herbs, and a few cloves, and set your saucepan on the fire to simmer gently, until the onions are thoroughly done when you remove the bundle of herbs, and dispose the onions carefully on a dish; pour the sauce under them and serve.

Vegetable marrows, cucumbers, and tomatoes make very nice dishes if treated by stuffing. It is a very good way of utilising scraps of meat which are always going begging, so to speak, in most kitchens. Of course all depends upon the making of the stuffing, call it *chair à quenelles farcie*, forcemeat, or what not. The following will be found a good common form to go by:—Remove every particle of fat, skin, and gristle from the scraps of meat to be used, then pound the meat in a mortar and force it through a wire sieve; pound again what will not go through until you have thus sifted nearly all your meat. Have some fine bread crumbs, and to two parts of meat add one part of bread crumbs and one part of butter; mix the whole thoroughly in a mortar, flavour it according to taste, with salt, pepper, spices, and sweet herbs, all finely powdered, and moisten with milk or cream, adding one or more yolks of egg according to quantity, and when the mixture is of the consistency of a smooth thick paste it is ready for use. All sorts of meat, poultry, game, or fish may be used either alone or in combination according to the purpose the *farcie* is wanted for. The introduction of some lean ham will not be amiss in certain cases. When trouble is an object, an easy and coarser substitute will be found in sausage meat.

To stuff vegetable marrows or cucumbers, they should be cut in halves lengthways, and having scooped out the inside, they should be filled with the above meat, and baked in a well-buttered dish, to be served with Spanish sauce or tomato sauce over them.—*The G. C.*

Salads and Salad Sauces.

ENGLISH SALAD SAUCE.

POUND in a mortar the hard-boiled yolk of an egg; mix with it a saltspoonful of salt, a teaspoonful of mustard flour, a mashed mealy potato, two dessertspoonfuls each of cream and olive oil, and a tablespoonful of good vinegar.

REMOLADE DRESSING.

Beat a fresh raw egg, add a teaspoonful of mixed mustard, and three tablespoonfuls of Italian olive oil, when worked together quite smooth, dilute it gradually with enough strong vinegar.

SWEET SALAD SAUCE.

Mix together two good tablespoonfuls of olive oil, the raw yolk of an egg, a little pepper, one tablespoonful of the best vinegar, a pinch of salt, and a dessertspoonful of moist sugar.

ANCHOVY MIXTURE.

Two raw eggs, a good teaspoonful of essence of anchovy, two tablespoonfuls of olive oil, and one of vinegar. Mix all together till quite smooth.

SWISS SALAD DRESSING.

Pound in a mortar two ounces of cheese; add a tablespoonful of vinegar, a small quantity of salt and pepper, and by degrees dilute it with olive oil.

PIQUANTE SAUCE FOR SALADS.

Two hard-boiled yolks of eggs and two raw ditto, mashed smooth, together with a tablespoonful each of cream and salad oil; and sufficient Chili and tarragon vinegar to make it pretty sharp.

REMOLADE VERT.

Well clean and chop some chervil, burnet, tarragon, and chives; take a dessertspoonful of each, pound them in a mortar, add some salt, coarse pepper, a tablespoonful of mixed mustard, half a teacupful of oil, two tablespoonfuls of olive oil, and the yolks of three raw eggs. When a smooth paste is formed, dilute it with sufficient vinegar, and strain it through a sieve.

MAYONNAISE FOR SALADS.

Beat together the juice of a lemon and the raw yolks of two eggs; then by slow degrees drop in enough oil to convert the composition into a kind of cream; but stir gently and continuously while the oil is being added. Vinegar may replace the lemon juice if more convenient.

SIMPLE OIL SAUCE.

Pound together a shallot, a pinch of any savoury herbs fancied, the hard-boiled yolks of two eggs, and enough vinegar and oil to render it sufficiently fluid. The flavour of this or any of the preceding mixtures may be heightened by the addition of pepper, tarragon vinegar, or a small proportion of any of our well known stock sauces, such as soy, ketchup, &c.

RAVIGOTE SAUCE.

Clean and well chop some salad herbs; put a teaspoonful of each into a saucepan with salt, pepper, and a good tablespoonful of meat jelly; stir all together, and when the jelly is melted add two tablespoonfuls of Italian olive oil, and one ditto of good strong vinegar. When thoroughly mixed, pour it out to be used when wanted.

ORDINARY EGG DRESSING.

Separately chop the yolks and the whites of two eggs. Do not mince them too small. Strew them among your salad in the bowl, and first sprinkle in a tablespoonful of cream, and afterwards the same quantity of white wine vinegar.

FRENCH SALAD.

Lettuces of the cos kind are by the French termed *romaines*, while those of the cabbage form are the lettuce proper of French cookery. The former are preferable for plain salads, and the latter more suitable for a Mayonnaise or other ornamental dish. Choose some medium cos lettuce, divest them of all the outer leaves, reserving only the white hearts. If possible avoid washing these, but pull them to pieces, and, should they require it, wipe them with a soft cloth; then tear each leaf into lengths of about an inch and a half, place the lettuce in a salad bowl, strew upon the top a little shred chibble or shallot, and add a small proportion of tarragon and chervil leaves. Season it at table with salt, Nice olive oil, and vinegar, stirring it thoroughly together before it is served; as much oil again as vinegar should be employed.

MACARONI SALAD.

Boil two ounces of the large pipe Italian macaroni; let it grow quite cold; cut it into uniform lengths, put it into a salad bowl with some lettuce hearts in slices, a couple of tomatoes cut thin quarter-wise, and the strained juice of lemon, with the grated rind of one half; pour over it sufficient salad oil and vinegar at table, and serve it with Gruyère cheese.

SALADE AUX HARICOTS.

Soak for a night in cold water a teacupful of white haricot beans, remove the skins, place the beans in a saucepan with enough water to cover them; do them slowly until sufficiently tender, drain and let them grow cold; put them into a dish, add lettuce leaves and the usual salad ingredients, and send it to table dressed with a Mayonnaise or other salad sauce.

APPLE SALAD.

Slice some sour apples as thin as you possibly can, sprinkle them with Cayenne pepper, and arrange them in a dish together with some fresh shallots, sliced exceedingly thin; plentifully moisten them with lemon juice and oil, and put round them a rim of lettuce hearts and pickled red and green capsicums, both quartered. When this salad is intended to be sent to table with cold roast pork or goose, a few tender sage leaves, slightly bruised, may be introduced among the other things.

Digitized by Google

Salade à la Cardinale.

Take the hearts of four small white cabbage lettuces. See that they are perfectly clean. Quarter them; arrange them in a dish, together with two very small onions sliced as thin as possible, and mask them with a sauce made as follows: Pound a piece of boiled beetroot in a mortar; to a tablespoonful of it add two of Italian olive oil and one of vinegar; strain it through a tammy, and use it as a salad dressing. Tender stalks of celery broken into short lengths, and served with this sauce, will form an attractive winter salad.

Jerusalem Artichoke Salad.

Clean and peel half a dozen freshly-dug Jerusalem artichokes; boil them in milk; drain them, and when cold slice them thin; dredge them with plenty of red or white pepper; arrange them in a dish together with a small raw onion, cut very thin; dress the salad with a good green ravigote sauce, in which there is plenty of good Italian olive oil.

Sportsman's Salad.

Get some fresh watercresses, wash them perfectly clean, and drain them pretty dry in a cloth; place them in a salad bowl, together with a medium-sized onion chopped up, and two ounces of undressed kippered salmon sliced as fine as possible, and again divided into small pieces; add oil and vinegar, and stir it up well together. The flesh of mackerel, haddock, or any other kippered fish similarly employed, will answer as well. The quartered yolks of hard boiled eggs may be used as a garnish round the margin of the dish.

Home-made Yeast.

Good-made Yeast.

To two gallons of cold water add ½lb. of moist sugar, and 1oz. of salt. Set it over the fire, and stir in 1lb. of flour, as it heats. Let it boil for an hour, stand till quite cool, and then bottle it for use. Half a pint of this yeast will be required to raise 9lb. of flour.

Yeast for immediate Use.

Pour a quart of boiling water over 4oz. of malt, and 2oz. of hops; set it over the fire and let it boil half an hour; strain, and mix with it ½lb. of flour; then cover and place it near the fire till it ferments and rises, when it will be fit for use, in the same proportion as brewer's yeast.

Unfailing Yeast.

This recipe, which appeared in the *Times* newspaper, has, we understand, been tried with much success, but much attention is needed in the preparation. "Boil 2oz. of the best hops in four quarts of water for half an hour, strain it, and let it cool down to new-milk warmth; then put in ¼lb. of salt, and ½lb. of moist sugar; beat up 1lb. of fine flour with some of the liquor, and mix all well together. This should be done on Monday. On Wednesday add 3lb. of potatoes, boiled and mashed; let it stand till Thursday, then strain, and bottle it for use, but do not cork it till the yeast has done working. It must be stirred frequently while making, and kept near the fire. Before using shake the bottle well. It will keep in a cool place for two months, and is best at last." The bread made with this yeast requires a longer time to rise in the sponge and in the dough than when common yeast is used, and is best baked in tins.

Cold Mutton.

If you wish to be very economical with a leg of mutton, you should carve it pretty much as you do a ham, then the next day put it for twenty minutes into a vessel containing boiling water, take it out and sprinkle some salt and a little flour over it, and put it to roast for twenty minutes before a good fire, basting frequently with some dripping melted for the purpose. The result will be a very fair second edition of roast leg of mutton. Some, however, may object to carving mutton after the fashion of ham, and in that case a hash, or a mince, are the only ways of turning cold mutton to account; but there are many ways of hashing mutton and other meats, and of mincing them too.

The great desideratum of a second-hand dish, so to speak, is, that it should not taste as such. The only means to avoid that taste is to remove carefully from the cold meat you are going to use every part that has seen the fire, as well as gristle and fat. Let every slice be carefully trimmed, and let them all be as near as possible similar in size and shape. Then make your hash, and, even if you are not expert at combining sauces and spices, at any rate it will not have a warmed-up taste.

The following is a formula for warming up mutton and other meats:—Cut an onion in slices, and fry it in butter till it assumes a deep brown colour; then put in a tablespoonful of flour, and when it is well amalgamated with the butter, and a little less than half a pint of stock broth, or even water previously warmed; stir a few minutes on the fire, and then proceed to flavour your sauce with walnut or mushroom ketchup, tomato sauce, Worcester sauce, spices, and pepper and salt, in such proportions as taste may suggest and practice will teach. A little *suc colorant*, or some burnt onion browning, may be put in if the sauce is not of a sufficiently deep colour. When the flavouring is completed, strain the sauce through a fine colander into a saucepan, and place in it your slices of meat. Keep the saucepan at a moderate heat till it is time to serve, and send up your hash with a garland of bread sippets, fried in butter, round it. The longer the meat lies in the sauce the better will your dish be.

Rich Buns.

Mix 1½lb. of dried flour with ½lb. of sugar; melt 1lb. 2oz. of butter in a little warm water; add six spoonfuls of rose-water, and knead the above into a light dough, with half a pint of yeast; then mix 5oz. of carraway comfits in, and put some on them.

Skimmer Cakes.

Make the dough as for hard dumplings, butter the skimmer, and lay on it the dough flattened to the thickness of half an inch. When done the cake will slip off the skimmer. It is eaten with cold butter and sugar.

Pudding, &c., without Eggs.

Equal quantities of bread crumbs, chopped apples, chopped raisins, &c., without sugar, flavoured with grated lemon peel or spice to taste. These ingredients must be thoroughly well stirred; the moisture of the chopped fruit binds them. Butter a basin and boil an hour and a half for a pudding containing ½ lb. of each of the ingredients named, which will be of moderate size. Serve with wine sauce.

Queen Cakes.

Mix 1lb. of dried flour, the same of sifted sugar, and of washed clean currants. Wash 1lb. of butter in rose-water, beat it well, then mix with it eight eggs, yolks and whites beaten separately, and put in the dry ingredients by degrees; beat the whole an hour; butter little tins, teacups, or saucers, and bake the batter in, filling only half. Sift a little fine sugar over, just as you put it into the oven.

Marble Savoury Jelly.

Take half a pig's head, if fresh so much the better, with the ears and two or three feet; boil these in as little water as possible until you can slip out the bones, take it out and remove the bones, and boil them in the liquor until it is reduced. Cut the meat when cold into squares, season it to taste, put the liquor to it, and when boiling pour all into a mould. The stronger the liquor the better.

Lemon Pudding.

Beat the yolks of four eggs: add 4oz. of white sugar, the rind of a lemon being rubbed with some lumps of it to take the essence; then peel, and beat it in a mortar with the juice of a lemon, and mix all with four or five ounces of butter warmed. Put a crust into a shallow dish, nick the edges, and put the above into it. When served turn the pudding out of the dish.

Transparent Pudding.

Beat eight eggs very well; put them into a stewpan, with ½lb of sugar, pounded fine, the same quantity of butter, and some nutmeg, grated. Set it on the fire, and keep stirring it till it thickens. Then set it in a basin to cool; put a rich puff paste round the edge of the dish; pour in your pudding, and bake it in a moderate oven. It will eat light and clear. You may add candied orange, or citron, if preferred.

Orange Cheesecakes.

When you have blanched ½lb. of almonds, beat them very fine, with orange-flower water, and ½lb. of fine sugar, beaten and sifted, 1lb. of butter that has been melted carefully without oiling, and which must be nearly cold before using it; then beat the yolks of ten, and whites of four eggs; pound two candied oranges, and a fresh one with the bitterness boiled out, in a mortar till as tender as marmalade, without any lumps; and beat the whole together, and put it into patter pans.

Buttered Orange Juice, a Cold Dish.

Mix the juice of seven Seville oranges with four spoonfuls of rose-water, and add the whole to the yolks of eight and the whites of four eggs, well beaten; then strain the liquors to ½lb. of sugar pounded, stir it over a gentle fire, and when it begins to thicken put about the size of a small walnut of butter; keep it over the fire a few minutes longer, then pour it into a flat dish, and serve to eat cold. It may be done in a china basin in a saucepan of boiling water, the top of which will just receive the basin.

Macaroons.

Blanch 4oz. of almonds, and pound with four spoonfuls of orange-flower water; whisk the whites of four eggs to a froth, then mix it, and 1 lb. of sugar, sifted, with the almonds, to a paste; and, laying a sheet of wafer-paper on a tin, put it on in different little cakes, the shape of macaroons.

Colouring for Cheese.

An ounce of real Spanish arnotta will colour 50lb. of cheese. Tie up the arnotta in a little thin linen rag, and put it over night into half a pint of warm water. In the morning put the arnotta water into the tub of milk along with the infusion of rennet, indispensable in making cheese. For a deeper tint dip the bag into the milk, and squeeze it as long as any colour runs out.

Cochineal Colouring.

Take 1oz. of cochineal and pound it to a fine powder. Put it into an earthen or porcelain vessel that is quite clean and entirely free from grease. Add a small saltspoonful of potash or soda, and pour in a pint of clear soft water. Set it over the fire, and when it has come to a boil add a quarter of an ounce of powdered alum, and let it boil ten minutes. Then, while it is boiling hot, stir in 3oz. of powdered loaf-sugar. Bottle it when cold, and keep it closely corked. You can then have it always at hand as a fine red colouring for icings, blanc-mange, creams, jellies, and other sweetmeats.

Country House.

To make Bottled Cider very brisk.

When you are bottling the cider, put a large raisin into the bottom of each bottle before you pour in the cider; then cork it tightly. In bottling spruce or molasses beer put in also a raisin.

Orange Biscuits, or Little Cakes.

Boil whole Seville oranges in two or three waters till most of the bitterness is gone: cut them, and take out the pulp and juice; then beat the outside very fine in a mortar, and put it to an equal weight of double refined sugar, beaten and sifted. When extremely well minced to a paste spread it thin on china dishes, and set them in the sun or before the fire; when half dry cut it into what form you please, turn the other side up, and dry that. Keep them in a box with layers of paper. They are for desserts; and are also used as a stomachic, to carry in the pocket on journeys, or for gentlemen when shooting, and for gouty stomachs.

To preserve Bouquets.

When you receive a bouquet sprinkle it lightly with cold water, then put it in a vessel containing some soapsuds, which nourish the roots and keep the flowers as good as new. Take the bouquet out of the suds every morning, and lay it sideways in fresh water, the stock entering first into the water; keep it there a minute or two, then take it out, and sprinkle the flowers lightly by the hand with pure water. Replace the flowers in the soapsuds, and the flowers will bloom up as fresh as when gathered.

Recipe for Furmety or Firmity.

Get a quart of the best wheat, plump and fresh; see that there is no chaff in it. Simmer it in a small quantity of water till quite tender—it is desirable that the water should be nearly absorbed by the wheat; and at the same time that it should not be suffered to burn. When cold it will be a very stiff jelly. It is not material whether the firmity be proceeded with as soon as the wheat is tender, or whether it be left to cool (the wheat is often sold ready boiled for making this dish). To one quart of wheat allow two quarts of new milk; if the wheat is cold, break up the jelly. Simmer together with a stick of cinnamon and a ½lb of currants (or sultanas) or 6 oz., merely cleaned and dried. As the wheat is apt to burn it should be done in a double saucepan, or a brass kettle is the next best thing, and keep it stirred the whole time; when the currants are plump and the ingredients well blended, beat the yolks of five eggs with two or three spoonfuls of cream, and gradually mix with a little boiling firmity, and then with the whole. Stir it together for two or three minutes till it thickens, but be careful that the eggs do not curdle, which they will do if suffered to boil; sweeten with loaf sugar. Pour it into a china bowl or a soup tureen, and grate some nutmeg over it. It is generally eaten hot, though sometimes cold (much nicer hot). It is customary to have it on Mid-Lent Sunday.

For fixing Chalk Drawings.

Fill a large dish, free from grease, with boiling water; hold the drawing in the steam for some minutes, then draw it through the water with the drawing uppermost; after this is done place on a carpet until dry. The work will be improved, as it softens it considerably.

To teach Goldfinches.

Have it braced and fastened to a bucket board, where the seed is placed in a box, and the bird lifts the lid before obtaining it; it procures its water by raising a small pail from a glass suspended to the bottom of the board. Any dealer will brace your bird and procure you a bucket board at a small price. The usual food of a goldfinch is flax and canary seeds: it is also fond of hemp seed, which it would soon learn to take out of your mouth.

Food for Pet Bullfinches and other Birds.

The late Mr. William Kidd recommended a mixture of canary, summer rape (sometimes called bird turnip), millet and flax seed, and groats (or grits), as food. The summer rape is not sold at all the seed shops, but should not be omitted. The Germans use little else for their famous "pipers." This seed, with the canary and groats, should be in equal quantities. Of the flax and millet half the quantity suffices. The groats are of course without husks. Birds are very fond of it, and thrive on it. Especial care should be taken to keep them plentifully supplied with gravelly pebbly sand and old bruised mortar, such as is found in the remains of old walls. This lime, and the small pebbles in the sand, are necessary for digestion. Avoid hemp seed, which is very heating: it should only be given as a treat with the finger, two or three seeds daily. No loaf sugar, but a very little moist sugar now and then. Pet birds are very fond of a little bit of bread and butter moistened first in the mouth. Well-washed watercress, groundsel, and chickweed may be freely administered, the latter ripe and in flower. A little lettuce occasionally. Green food should be removed from the cage after twenty-four hours, or it becomes injurious. Sometimes birds sicken and pine from minute vermin. In such case examine the feathers by passing over them a long needle, blowing them backwards. If any be thus discovered, remove the bird to another cage and cleanse the infected cage with rectified spirit of naphtha, applied with a pencil brush, so that every nook and crevice be filled (this after washing the cage). Repeat this daily for a week, then expose it in the air and sun for ten days. Meanwhile apply sweet or salad oil to the bare or affected parts of the bird daily, to allay irritation. By the time the cage is ready the bird will probably be well, and the bare places no longer be inflamed. The following is the mixture of seeds: summer rape, 4oz., canary seed, 4oz., groats, 4oz., millet, 2oz., flax seed, 2oz.; combined, 1lb.

Remedy for Burns.

Mix common kitchen whitening with sweet oil, or, if sweet oil is not at hand, with water. Plaster the whole of the burn and some inches beyond it, all round, with the above, after mixing it to the consistency of common paste, and lay it on, an eighth, or rather more, of an inch in thickness. Take care to keep the mixture moist by the application, from time to time, of fresh oil or fresh water, and at night wrap the whole part affected in gutta percha or flannel to keep the moisture from evaporating.

Chilblains.

Turpentine well rubbed in is an effectual remedy for chilblains, but it should not be used after the part affected ceases from itching.

Hydropathic Treatment of Chilblains.

Bind the whole foot in a thick, warm, wet bandage, then wrap it in a dry towel, so as to exclude the air and prevent the foot from chilling. Keep both the bandages on for several hours. Of course it does not apply to broken chilblains. The efficacy would be increased by using gutta-percha tissue or oiled silk as the outer covering, in the place of the dry towel.

Cure for Corns.

The strongest acetic acid applied night and morning with a camel's hair brush; in a week the corns will disappear.

To make an Alum Basket.

Make the body of the basket of iron wire, split willow, or a small basket already made; then take some lamp cotton and work it over every portion of the basket; make a strong solution of alum, say half a pound, with a pint of very clear, clean water, and boil it until the alum is entirely dissolved; filter the solution at least once. The mixture must then be put into a deep pan; and the basket must be wholly immersed in it, without allowing it to come in contact with any part of the pan, supporting it with strings to the handle, or any other weight. Let it thus remain for twenty-four or thirty hours, when the alum will be found crystallised over the basket covered with the cotton. N.B. Should other colours be preferred, sulphate of copper is used instead of alum; the crystals will be of a blue colour. Logwood, indigo, turmeric, vermilion, or saffron will colour according to taste.

To clean Diamonds.

If the diamonds be set transparent, they should be first well brushed with whitening, and then washed in hot water and soap, being immediately afterwards put into boxwood sawdust, which has been placed for a short time before the fire. If the setting be opaque, water should be carefully avoided, and the stones cleaned with whitening applied with a slightly-damped brush, and polished subsequently with a perfectly dry one.

Spots on Engravings.

Make a frame with ¾in. deal—say 3ft. by 2ft., and 4in. deep—open top and bottom. Stretch some thin muslin over the top, secured by tin tacks on the sides and ends (not on the top) of the frame. Take the engraving off the strainer, and lay it face upwards on the muslin. A copper about 2ft. in diameter will do, filled with water to within one-fifth of the top; place the frame and print over the mouth of the copper, and let the water heat until it boils, and keep it boiling until the spots disappear. If the spots have existed for many years the process may be expedited by very gently pouring water over the whole face of the print, the surplus water running into the copper. When the spots have disappeared, take away the frame and let the print remain untouched until very nearly dry; then put it into a portfolio or between boards, and it will dry quite smooth. Any attempt to remove or lift the print after it is wetted will almost to a certainty tear it. By this process prints for years defaced by dirt and damp spots have been completely restored, and the ink itself has appeared nearly as fresh as on the day the print came off the plate.

Work for Bazaars.—The following is a good article for a lucky bag at a bazaar; it is very easy to make, and most inexpensive. It is a pence purse, but quite different from, and newer than, the jug pattern one sees so often. A half-ounce skein of shaded Berlin wool (which will make two of these purses) and a crochet needle, No. 16, Bell gauge, are all that will be required for the manufacture. Make 3 chain stitches, and join them to make it round; go on working in plain crochet stitch round and round, rather loosely, increasing (by putting two stitches into one) very frequently at first, and by degrees not so often, to keep the circle flat, till it is 2¾in. in diameter; break off the wool, fasten off with a needle at the back, and commence the other side, which must be done exactly in the same way, till it corresponds in size with the first one. Then turn back and do 12 stitches; turn again, miss the first stitch and do 11; return, missing the first stitch; and so on backwards and forwards till you have but 4 stitches (this forms the flap); then make 7 chain as a loop for the button, attach it to the last of the 4 stitches, and fasten off very securely. Place the first circle in front of the one with the flap, so that the stitch you left off at should come to where the flap begins; then unite the two by putting the crochet through a stitch of each and working it; make 5 chain, miss a stitch in both circles, and do 1 plain, working through a stitch of each as one; continue this all round (which forms an open edge), till you come to the other side of the flap; then make 21 chain for the handle, fasten it to the other side into the same stitch with which you commenced the joining, and work back on the 21 chain, and fasten off securely and neatly. A fancy button is put in the centre; steel wears and looks best. The colours in the shaded Berlin wool are very bright, and the light and dark shades, working in without any regularity, give the purse a *chiné* appearance that has a good effect.

WOOD CARVING.

Chapter I.—Necessary Tools, Etc.

FOR A BEGINNER in this art the outfit need not be very large. Additions to the number and varieties of form can be obtained as the want is felt, and the certainty acquired of a desire to continue the work and reach some kind of proficiency in it. For a start a dozen tools would be ample, and these should cost from nine to twelve shillings, and about fifteen shillings ready handled and set; a Turkey stone for whetting them, and a razor-strop, or some arrangement of hard leather, and emery paste, to keep up the edge, and a piece of stone rounded at the edges to fit inside the gouges and sharpen them, are required; also a carver's mallet, and some convenience for fixing the work very firmly, so that using the mallet to the tools will not move it. I think the most useful tools to begin with would be about six gouges of different curves, one parting tool, three flatting tools, one about half-an inch wide, another a quarter of an inch, and the third the eighth of an inch or a trifle more. None of these last three are perfectly straight-edged, but all form portions of a circle more or less extended. If placed on a flat piece of wood so that one corner touches, and pushed on by the thumb applied to that end, they will describe a circle. The remaining two to make up the dozen had better be a small gouge bent in the neck, and a small flat tool as narrow as can be got also bent. They should be sharpened on both edges, or chamfered with a double bevel, as the workmen would most likely call it, so that the cutting edge is a wedge, not a straight line, with one side sloped away to meet it. The reason for this form is that the single edge has, by reason of its shape, a constant tendency to draw down, and it will often be found difficult to make a cut with such a tool come again to the surface, whereas the double edge goes in and comes out again with equal facility, and does not, after the fashion of the other, always seem to have gone deeper than was intended.

If an old table, very firm on its legs, be devoted to the purpose, it would save any anxiety about spoiling the top, and would also afford the convenience of being able to put two or three screws up through from underneath, and thus securing anything like a butter dish or bread platter, the face of which ought not to be injured. Of course, if a small work-bench can be had, it is the best beyond all comparison; but I am trying to name three plans that will enable carving to be carried on without one. The top of a box might sometimes be made available; and, to raise it to a convenient height, it might be placed on trestles or solid wooden chairs.

The most common way of fastening down work is a handscrew, the jaws of which are made of beech; and there are two screws that act in opposition to one another. The screw near the opening must be set to the exact width of the work and table, and the other a little more screwed out; then place the jaws so as to inclose the woods to be kept together, and screw in the hand farthest from the work, so that by forcing the farther ends apart, the jaws are caused to approximate. However, this may prove a difficult contrivance to be used practically; and a screw clamp (an article often used to fasten down the wood if it requires filing after fret-cutting) will, perhaps, be easier to handle; but it must be remembered that a block of wood should always be placed between the clamp-head and the carving; if not, the pressure of the steel will compress the wood sufficiently to destroy the grain. Another very good plan, especially if the work has been previously fret-cut, is to glue down the whole to a loose piece of firm board, say, a piece of wainscoat oak, with a piece of newspaper between; and then with common screws and a screwdriver, fasten the oak down to the work-bench or table. When done, the work can be easily separated from the board by a long thin-bladed knife passed into the paper; and if the glue has held all over, the danger of little bits giving way is so very much decreased. It should be placed under a weight whilst the glue is setting. Again, a piece of long narrow wood screwed down along one end of the bench for the work to push against is very useful, acting as a stop. A gilt-headed nail is often useful, driven into the bench close against the work, so as to keep it up to the stop.

A clamp of the smallest size costs 1*s.*, but is rather too small to be of great use, and about a 2*s.* size is, perhaps, the most generally serviceable, and one or two are almost requisite.

Chapter II.—Wood, and Method of Working.

Having given in the first chapter a full account of the necessary tools for carving, I now proceed to explain the peculiarities of the kinds of wood preferable for working, and also the way to hold the tools whilst forming a pattern. I think a piece of straight-grained pine, which is a name for the superior deal, is almost the best to commence in—the softness is encouraging, but the tools must be beautifully sharp to cut without tearing it. Sycamore is the white wood of which bread-plates and butter-dishes are made, and is a great deal tougher and closer-grained than pine. Lime-wood is very white and fine, but not always to be met with, and pear is very pleasant, and cuts "like cheese;" it should be very well seasoned. The orchard trees that are cut down in England are often chopped away without any attention to the time of year, and, if not properly dried, it will twist almost more than any other wood; still the pleasure of working some particular and well-remembered tree may make it worth while to run the risk. Some of the English and American walnuts are almost intermediate between the white woods above enumerated and the hard ones proper; but some of the finely-figured walnut is as hard as anything, and difficult to cut. Oak is the hardest of all, and may be considered as beyond a lady's power, unless in very small things. Mahogany varies extremely between hard and soft, and rosewood is now little used. Birdseye and plain maple are rather hard but pleasant to work. Hickory or acacia is very tough. Box, a light yellow wood, is fine grained and hard, but pleasant when used for small things. Dutch box is the best; it works rather like ivory, and sometimes a thin coat of polish will make it look very golden and beautiful. There is scarcely any other wood sufficiently common to require alluding to, and the fact must be kept in mind that after walnut or any hard wood, the tools will not be keen-edged enough to cut pine without a good setting. The double-edged tools will show their superiority, if both kinds are in use, in not snipping or breaking away at the edges, and if some one particular tool has a habit of doing this without its occurring in the same degree to any other, the temper of that tool may be justly supposed to be in fault more than the worker. To produce the rough appearance with which the ground of most work is finished off, and which throws up and sets off the pattern, though if the ground can be cut beautifully smooth, I am not sure that I do not prefer it in light woods, a punch is required, made out of a bit of iron rod, about a quarter of an inch diameter, and three or four long; if the head is a little rounded it will do less harm to the mallet than if merely cut. The other end should have two lines filed out in the form of a cross, and carried sufficiently deep to produce four points not quite sharp. There are many other varieties of punch patterns, but this is perhaps the simplest. A single point would also be found useful to fill in between stems or close up to leaves, where the four-pointed punch would not have room to reach the wood. The manner of using it is:—place it in contact with the wood, and strike it one decided blow with the mallet, not sufficiently hard to break the grain of the wood, but still enough so to make a clear decided impression; then move it so as to clear the first, and make a second mark close to the first, and continue this all over the ground as evenly as possible, taking care not to involve the edge of the carved pattern in the pricks. Messrs. Holtzapffel and Co., 64, Charing-cross, have made some very ingenious varieties of punches for wood-carving; by the use of them a pattern may be worked along the edge of a shaped bracket or a shelf with very little labour; or for a moulding round a picture-frame considerable effect can be produced by their aid alone; and in such parts as those mentioned a carved border is often difficult to reach, and they would be found really a great assistance to beginners in carving for finishing off work if not used for wood too hard to receive an impression of the kind. Messrs. Holtzapffel showed me specimens executed in sycamore which seemed quite suitable for the purpose.

I cannot too strongly impress upon workers never to cut except with the tool held so that both hands are behind it; any carelessness in allowing a hand or a finger to be upon the front of the tool, or holding the wood in front, is almost sure to incur its deserved fate—a cut; and the habit should be formed at first, and adhered to, of having the work firmly fixed, and then having the tool kept in its place by one hand about an inch or two above the cutting part, and the other holding and pushing the handle from its remote end. If the mallet is in use, the tool is grasped near the junction of the steel and the handle; and sometimes instead of taking the mallet in hand for one or two hits, the part of the hand is used inside the wrist and about the lowest part of the thumb—it is what may be termed the heel of the hand, and will give a succession of taps or slight blows without any harm to itself. It is just the place where an ordinary kid glove buttons, but of course it should be gently used at first for work it is not accustomed to. It is a great advantage to be able to hold the tool indiscriminately either in the right or left hand, and should be acquired if possible. A pretty good pianoforte player will find no difficulty in this if the corresponding change is made in the attitude and elevation of the shoulders, and it also strengthens the hands and wrists for the piano.

Fretwork is generally done sitting; but in carving, unless very small things are in hand, the position of standing will be often found obligatory, as it enables the carver to reach across to the other side of the work, and cut in many directions that are necessary, without the trouble of changing the fixed position of the carving.

It is very advisable to use gloves, not tight-fitting kids, but loose, easy leather, either dogskin or something of the kind. Foster, 218, Oxford-street, keeps some gardening gloves that are very suitable. They come a little way up the arm; the smooth side of the leather is usually inside; and they are considered stout enough to turn a strong rose-thorn. Doubtless there are many other varieties, and many other shops where they may be had; but, as linendrapers would not keep them, I think I have named a shop where they are in stock generally.

The proper way to hold them I have partly described above. Usually one hand is used to guide the tool, and should be about three inches, more or less, above the cutting part, and the other is used to propel it along. To form the curve of a stem, or large leaf, or any other part into which, or rather along which, no tool will exactly fit, but only passes, by joining a succession of interrupted curves, one of the flattest tools should be chosen and held nearly perpendicular, so that one corner touches the work and the other is clear of it. Now push it along, holding it down with the upper hand at an even depth, and propelling it along with the unoccupied hand, the fingers rested firmly on the work behind the tool, and the thumb pushing it on in the desired line, touching the steel part of the tool about an inch above the cutting part and behind it; perhaps this may be difficult for a person who has never seen it done to comprehend, but if the knack can be acquired, it will be found of constant service.

Either edge of most of the tools is used promiscuously, so that to cut a hollow a gouge is used with the points up in the air, or to round a circular curve like a bent stick, it is reversed, and the points are kept downwards.

Digitized by Google

In the case of the hollow a tool must be chosen of rather a sharper curve than the hollow to be made; but in an outside curve, that of the tool should be larger, so that the points are not continually catching in passing on.

CHAPTER III.—GRAIN OF THE WOOD, ETC.

The manner of holding the tools having been explained, I proceed next to write of the grain of the wood, which I am afraid will be a constant source of trouble to those who are not already in some degree familiar with it, and the handsome character of showy woods depends, in a great degree, on the irregular conditions of the fibres which lie in so many different directions to the surface in the same piece of wood that it is difficult to produce a straight, smooth cut in any given direction for more than a short distance. A knot anywhere in the neighbourhood, although it may not be apparent at the surface, will have thrown all the fibres near into such disarrangement that the cutting direction must be every instant varied; indeed, they may be considered to lie in the form of a saucer round the knot, and may also be influenced by other knots which are separated into the adjoining plank. In some of what are called the hard, smooth-grained woods, the fibres are so compressed and packed closely together that they may be cut in all directions of the grain with nearly equal facility: but the weaker and more open fibres of deal and other soft woods cannot withstand a cutting edge applied to them parallel with themselves or laterally, as they are torn up and leave a rough unfinished surface. The tool used for them must be very keen and applied at a low angle so as to attack the fibre at the end, and if both sides of the work require to be cut, it will almost always be found necessary to reverse its and, after cutting one side in one direction, to carve the other in the opposite one; but experience will, after a few trials, afford a clue to the best mean, of producing a clean, smooth, bright cut.

The tool must really be made to cut, not merely to rend and tear its way through; and in order to do this in the finishing off, a slight sideway motion must be imparted to the tool as well as the mere straightforward pressure. Cutting a slice of bread exemplifies this; for though the knife be placed on the loaf and considerable force exerted, still, in order to produce a cut, especially if a thin slice is desired, the knife must also be drawn across, or else at the best a rough torn lump will be all that results from the downward pressure; but the keener and finer the edge of the knife, the smaller the amount of drawing from side to side that will be required. Charles Holtzapffel says, in the second volume of his work on "Turning and Mechanical Manipulation," that "the action of a cutting tool in motion is twofold. The moving force is first exerted on the point of the wedge to sever or divide the substance particle from particle; the cohesion of the mass now directly opposes the entry of the tool and keeps it back. But the primary motion impressed on the tool having severed a shaving, proceeds to bend or curl it out of the way; the shaving ascends the slope of the wedge, and the elasticity of the shaving confines the tool in the cleft, presses it against the lower side, disposes it to pursue that line, and therefore to dig into the substance. The principles of action of all cutting tools, and of some others, whether guided by hand or machinery, resolve themselves into the simple condition that the work is the combined copy of the form of the tool and of the motion employed; or, in other words, that we exactly put into practice the geometrical definitions employed to convey to us the primary ideas of lines, superficies, and solids, namely, that a line results from the motion of a point, the superficies from the motion of a line, and the solid from the motion of a superficies."

In the first roughing-out a tolerably large portion may be removed at one cut, but afterwards care must be taken that the thickness of the shaving removed is not greater than will easily adapt itself to the shape of the upper side of the tool, for if it is too thick the slit will precede the edge and accommodate itself to the grain of the wood regardless of the wishes of the artist to develop his own idea.

The extreme improbability of two carvings in wood ever accurately resembling each other is so great as to give a great pleasure in the work, for as no two faces are exactly the same, however they may resemble each other, because the feelings of the mind give them a difference in expression —for form in face is little without that expression which governs the whole countenance and gives motion and character to each particular part of it, continually varying its general appearance so that the same face is constantly changing; thus will the mental characteristics be impressed on this work, and an embodiment of thought be produced to take its rank in the world, from the idealised conception previously formed.

But in how few cases can the manual skill be found joined to the artistic perception and available to carry it out.

One method much used by the German and Swiss carvers to produce a rough, irregular bark-like appearance on stems or other slightly rounded surfaces is executed by holding a gouge nearly perpendicular to the work, and with the upper hand it is moved forward first a trifle at one edge, and then the same at the other, so as to leave a mark like herring-boning, as it is called in needlework, and the cutting edge of the tool being kept close to the wood and even lightly pressed upon; in addition to the herring-bone line there will be a slight burr raised up before it. This plan must be judiciously employed so as not to appear too frequently, and when brushed it will be very effective.

CHAPTER IV.—SHARPENING TOOLS, PURCHASE OF WOOD, ETC.

The materials necessary for keeping up the sharp edge of the tools seems naturally to form the next point for discussion, as it will be found constantly requisite to have recourse to some means of doing so even after an hour or two of work. There are some stones introduced now from America that are considered very good; but they vary extremely between fine and coarse, and those of a really first-rate quality are quite as dear as the old Turkey stone, which is rarely otherwise than suitable for the purpose of sharpening carving and other fine tools.

Turkey oilstone, little more of the natural history of which is known than that it is found in the interior of Asia Minor and brought down to Smyrna for sale, is usually in pieces about ten inches long by three inches wide; about half this size would be convenient for carving tools, and the stone should be let into a block of wood for two-thirds of its depth, and kept there either by a bed of plaster of Paris, into which the stone is dropped whilst the plaster is still moist, or else glaziers' putty. A wooden lid is usually made for it to keep it from dust, and sometimes a piece of buff leather is fixed on the lid to wipe the tool free from oil. The oil used with the stone should be neats' foot, I believe; but I generally take olive oil as being most easily obtained.

One or two slips of oilstone are also required, which are inch-wide thin pieces, with the edges rounded so as to adapt them to the curvature of the gouges, and each slip may be rounded at both edges to different curves. These last cost about a shilling; the larger piece would be worth from four to six shillings. The stones differ very much in quality, some being so hard as scarcely to take any hold of the tool, or bite, as it is called; and others are altogether as soft. For narrow tools, a medium quality, rather inclining to be hard, should be chosen.

The oil should be removed from the face of the stone shortly after every time that it is used; for if it is allowed to dry on the stone, it will, after a time, become clogged, and will not bite until a new face has been given to it by rubbing it down with sandstone and water.

A bit of beechwood, cut by the tool itself to its own shape, will often touch up the edge very usefully, drawing the tool backwards along it, and the leather and emery powder will finish it off. A strap is often fixed at one end, held in the hand by the other, and the gouge drawn backwards over it, and this will be found a very useful plan.

In London I find Messrs. Holtzapffel, 64, Charing-cross, keep walnut wood, sycamore, bird's-eye maple, and satin wood in stock for fret-cutting or carving, and their wood is quite to be depended upon for being in proper condition and thoroughly seasoned, and probably the other tool-shops do so too. Oliver and Co., 89, John-street, Tottenham-court-road, have one of the largest woodyards in the West-end of London, at least in that neighbourhood. Their prices for woods are for three-eighths' thick and a quarter of an inch, which were the thicknesses I inquired about as being generally useful—

	⅜ of inch.	¼ of inch.	
Walnut, American	6*d.* ...	5*d.*	per superficial foot.
Mahogany (Honduras) ...	4*d.* ...	3½*d.*	„ „
Satin Wood	8*d.* ...	6*d.*	„ „
Bird's-eye Maple	8*d.* ...	6*d.*	„ „

I believe they will sell quite small quantities, or even if they do not divide a slab in the finer woods, it would often be found in pieces of not more than six superficial feet, and would be preferable to buying smaller pieces, which must be proportionably dearer. I have carved several frames of quite a large size—one for a chimney glass—and had them gilt; and for this purpose if pine is not used, a nice piece of sycamore is often very agreeable.

If a pattern of this kind of size is to be undertaken, the best way is either to get the outline cut at one of the steam fret-cutting establishments, or else to get a carpenter to bring it to the proper outline with a suitable saw.

A second thickness is usually arranged to form the rabbet at the back of the front one, and both are outlined together.

A scroll pattern frame for an oval looking-glass is a pretty and uncommon piece of work. If the labour is not too great, a group of flowers may be arranged at the top, scroll-work round the sides, and below the glass a small shelf is supported by a little bracket-like piece to hold either lights or an ornament, a parian figure or china vase, of which it is desired to show both sides. Carving is pre-eminently slow work; there is really a great deal of cutting in the work, and then it always seems difficult to find the exact moment at which to leave off. This little thing might be made a more perfect shape, or that roughness made neater and smoother over, though sometimes it would be better resolutely to leave matters alone and be content with a respectable effect.

The time occupied by the handwork and consequent expense—time being money to those whose living depends upon it—accounts probably for the small amount of wood-carving that had until lately been done in England. Some of the mirror frames, and other decorations executed about 150 years since, are extremely elegant, and can still be seen in country houses. Of that date of furniture there is one design of lily flowers and long free-flowing leaves, fluted in their length and turned over, that can hardly be surpassed; and one great beauty in it is its freedom from lumpiness, which is a great snare to designers now.

There is some very beautiful carving, said to be by Gibbons, in the chapel of Trinity College, Oxford; and this I mention, because it is much less generally known than that in the library of Queen's College, at the same university. There is a pierced screen of cedar, I think, at Trinity College, that is very remarkable, as both sides are quite different in design, though the same piercings are made to serve for them equally. The wreaths of flowers and fruit near the east end have been painted a delicate pink, for the usual reason of checking the wormeating and mould of the wood; but I fancy now there is some way of doing this that does not interfere so much with the outline as the colouring. H. L. B.

ACTING CHARADE.

PILGRIM.

PERSONÆ.

DE COURCY. | ISABEL. | MARIAN (waiting woman). | FOOL.

SCENE—A drawing room. ISABEL and MARIAN engaged in working tapestry.

Isabel (sighs).—Alas! ten weary months have pass'd away,
And Arthur comes not! Savage war perhaps
Hath murder'd all my hopes, and buried that
Which should have gladden'd all my future life.
Or slavery mayhap may be his lot;
Who knows but even now that noble head
Lies low in some foul dungeon! Hark! I hear [*A horn is heard.*
The warder's horn. Fly, my good Marian, fly! [*Exit Marian.*
A messenger, perchance, from Holy Land,
Bringing us news the sacred war is done,
And Saladin a captain to our king.

Enter FOOL, wringing his hands.

Alack! alack! my lady! Alack! alack! [*Throws himself on a settle, and weeps.*

Isabel.—Good Heavens, good Fool! Why weep'st thou? Tell me quick.

Fool.—Alack! alack! Such news as I've been told.

Isabel.—Woe worth the day! Is't mournful news, good Fool?

Fool.—The worst that I've been told for many a year! But I was warn'd
I must not tell my lady. [*Weeps.*

Isabel.—News of the East? Tell me but this, sweet Fool. [*kerchief.*

[*Lays her hand on his shoulder, and covers her eyes with her hand-*

Fool.—Yes! of the yeast! good sooth, hast rightly hit it;
The yeast it is. Hark! I will tell thee all—
Then know—

Isabel.—Ah, what?

Fool.—The cook—the cook hath spoil'd
The batch o' bread, and all the wheaten cakes,
By reason of the yeast—which hath turn'd sour.

Isabel (boxes his ears angrily).—Fool! and I wept for terror.

Fool (rubs his face, shrugs his shoulders).—Talk of fools!
Methinks these women take the shine from us.
There she stood trembling in her shoes but now,—
Calls me "sweet fool! good fool!" and pats my shoulder,
Because she thought belike the news I brought
Was all of bloody death and ruthless war!
And now, because it be not bad enough
To suit her fancy, cuffs me on the head,
And turns as sour as the yeast itself! [*Exit.*

Enter MARIAN.

Marian (hesitating).—Madam, a messenger from Holy Land,
An aged pilgrim, fain would speak with you!

[*Isabel sinks into a chair, and signs for the pilgrim to enter.*

Enter DE COURCY, disguised as a pilgrim, his face concealed by a cowl.

De Courcy.—Fair dame, these trembling limbs from Eastern shores
Have wander'd to your castle gates, to give
You news of One who, in the Holy Land,
For ten long months hath served our Lion King.

Isabel (eagerly).—Arthur de Courcy! Thanks, aged father, thanks!
Good news, I trust, you bring? At least he lives?

De Courcy (gloomily).—Aye, he lives.
And yet I say not that my news is good.

Isabel.—His health perchance has suffer'd?

De Courcy,—Nay, his health
Is sound; and cruel war that spared
His life, hath spared his stalwart limbs as well;
He hath not suffer'd.

Isabel (anxiously).—And yet, good father, yet—
Something thou hidest. Ah! I prithee tell
Me all thy tale, and spare my trembling heart.

De Courcy.—Cold, cold must be the coward heart of him
Who wins the love of maiden fair as thou,
And then forgets. For many a day, methinks,
No tidings of De Courcy hast thou heard?

Isabel.—None, none!

De Courcy.—And yet De Courcy is returned!
Not long ago his footsteps pressed the shore
Of this his native land. Oh, cold and false!
Why comes he not to glad thy faithful soul?

Isabel.—Not cold—not false! Ah! sooner dead than this!

De Courcy.—Ah, gentle lady, hard must be the stroke
That dashes from thy youthful lip the cup
Of hope, and bids thy loving heart despair. [*Kneels.*
See, lady, here upon the rushes low,
I kneel to crave thy pardon for the blow
This aged hand unwillingly must deal.

Isabel.—Only speak on—be quick, and ease my woe!

De Courcy.—Know then, sweet maid, not many days agone
I saw De Courcy in a maiden's bower,
Gazing with looks of love into a face
He deems as fair as thine.

Isabel.—Ah, me! ah, me!

De Courcy.—Nay, more; at those loved feet
These aged eyes beheld him kneel for grace
Even as I kneel to thee; as white a hand
As thine, sweet lady, lay within his own. [*Takes her hand.*

Isabel (weeps).—Oh! false! false! false!

De Courcy (in his natural voice).—Not false, but true as steel!
She sat whose feet he kneels, whose hand he holds,
Owns too the well-loved name of Isabel!

Isabel (starts up).—Ah, me! I know that voice! Fling back thy hood—
De Courcy! (*Faints into his arms.*) [*Curtain falls.*

AGE.

PERSONÆ.

Mrs O'SULLIVAN. | LOUISA (her daughter). | LORD DE LYLE. | Footman.

SCENE—A drawing room. Mrs O'SULLIVAN, LOUISA.

Mrs O'Sullivan.—Well, my dear girl, I do hope you will prove to-day that the precepts I have endeavoured all your life to instil into your mind have not been thrown away. You are now twenty years of age—a very critical time in the matrimonial market, let me tell you, my dear; for there are many men who would not think of looking at a girl when she was once out of her teens. You may never have such another opportunity as long as you live, and I trust you will make the most of it. It is true Lord de Lyle is no longer a young man, but he has all the cheerfulness and buoyancy of youth, and as Lady de Lyle, with twenty thousand a year at your disposal, you will, I am assured, enjoy a most enviable lot. Hark! I hear the sound of wheels. I trust now, my love, you will behave yourself as my daughter should. [*Exit.*

Louisa.—Yes, two thousand pounds a year is a very charming thing, no doubt; but for all that, dear mother, I am afraid you will never see me Lady de Lyle. If the dear old gentleman were forty, or even forty-five; but seventy-three! No, no, my dear mother, I could not manage that! I would just as soon marry my grandfather, and so I shall take care to tell him. In fact, it seems to me that will be the only way to frighten him off the track. Oh, here he comes, I suppose!

Footman shows in LORD DE LYLE.

Lord de Lyle.—Louisa! (*Toddles across the room.*) Ah, my dear young lady! as charming as ever, I see. (*Takes her hand, and presses it in both his.*)

Louisa.—I hope you have borne the journey pretty well, considering——

Lord de Lyle.—Considering the heat of the weather and the badness of the roads, pretty well, Miss Louisa, pretty well, I thank you.

Louisa.—Twenty-five miles is a long journey for a man of your time of life.

Lord de Lyle.—Some men might find it so, but, as you see, I am as fresh as a lark, Miss Louisa—as fresh as a lark (*snaps his fingers*)—he! he! he! What a thing it is to be blessed with good spirits! He! he! Your dear mamma quite well, I hope?

Louisa.—Quite well, thank you, Lord de Lyle. But do let me beg you to take that comfortable arm-chair. I am sure you must feel quite exhausted.

Lord de Lyle.—Pshaw! my dear girl! one would think I was made of barley-sugar! (*Seating himself.*)

Louisa (places him a footstool).—There, *do* put your poor old feet up upon that.

Lord de Lyle.—Tut, tut, tut; one would think I was ninety. Ha, it is very good of you to be so careful of my comfort. And n dear young lady, may I beg of you to take a seat and listen to m for a few minutes? I have a proposition to make to you.

Louisa (sits down, and draws a chair close to his).—Going to tak the play?

Lord de Lyle.—Bless the girl, no! I wished to ask you ——

Louisa (interrupting him).—Ah, *I* know; for a little weak brand water!

Lord de Lyle.—No, my charmer; no. It is something far more c table than *that* I am going to ask for. (*Taking her hand.*)

Louisa (screams, and snatches it away).—Oh, my bad finger!

Lord de Lyle.—Dear, dear, how unfortunate I am! Do forgive dearest girl, and answer me only one question. Tell me, Louisa, can you do you—feel any sentiment for me beyond indifference?

Louisa.—Oh, yes! indeed I do. I always feel a ——; but are you sure now, you won't be offended?

Lord de Lyle.—How could I be offended at anything *you* could say?

Louisa.—Well, then, I always feel the deepest respect for—for—

Lord de Lyle.—Well, my charmer? Let me beg of you to finish your sentence.

Louisa.—For—for old people.

Lord de Lyle (offended).—Old people!

Louisa.—Yes, indeed; and I always feel a great affection for you, besides, because—

Lord de Lyle.—Because?

Louisa.—You have always reminded me so much of poor dear grandpapa. (*Wipes her eyes.*)

Lord de Lyle (rings the bell. Enter Footman.)—My carriage!

Enter Mrs O'SULLIVAN. Exit LOUISA at the same moment.

Mrs O'Sullivan.—My dear lord, have I to congratulate you as my future son-in-law?

Lord de Lyle.—No, madam, no! I have come to the conclusion that I am too old to marry. At any rate, your daughter is a great deal too young for *me*, so you must excuse my wishing you a very good morning. (*Bows. Exit hastily.*) [*Curtain falls.*

PILGRIMAGE.

This scene is most effectively performed in dumb show.

For the shrine, a good effect is produced by laying a figure, dressed in white drapery, so as to resemble a marble effigy, on a covered table, or succession of steps, so arranged as to represent a tomb.

Then a procession of nuns and pilgrims should march solemnly round the room, chanting the while, and after bowing or kneeling for a moment at the shrine, retire. The room should be darkened for this scene, but each person in the procession should carry a torch or long candle.

A nun's dress is easily contrived by pinning a towel tightly round the forehead, so as to conceal the hair entirely, then pass a second under the chin, and pin it at the top of the head. This, with a long veil of black stuff, and a black skirt, is all that is necessary.

Postal Regulations.

Inland.

Rates of Postage from all parts of the United Kingdom, the Channel Islands, and the Isle of Man.

Letters under	½ oz.	prepaid	1*d.*
„ „	1 oz.	„	2*d.*
„ „	1½ oz.	„	3*d.*
„ „	2 oz.	„	4*d.*
„ „	2½ oz.	„	5*d.*

and so on, at the rate of 1*d.* for every additional half-ounce or fraction of half an ounce. No limit exists to the weight of paid letters, but no inland letter must exceed 2 ft. in length, or 1 ft. in breadth or depth. All inland letters must be prepaid in stamps, except letters posted at St. Martin's-le-Grand before 5 p.m. daily by one individual or firm collectively, postage of which amounts to 2*l.* or upwards.

Letters by private ship, under ½ oz., 6*d.*, except Belgium and Holland. Newspapers 1*d.*

Unpaid Letters.—Persons sending letters by post unpaid, which from any cause cannot be delivered, are liable to pay the postage so charged, under the 3rd and 4th of Victoria, cap. 96, and the 10th and 11th of Victoria, cap. 85; and, under the 1st of Victoria, cap. 36, this may be recovered, with costs, by a summary process before a magistrate.

A letter when posted is considered the property of the person to whom it is addressed, and the receivers may not therefore give back a letter under any circumstances whatever.

Redirected letters subject to a second postage at the rate charged for prepaid letters.

Soldiers' or seamen's letters are subject to a postage of 1*d.* if prepaid and under ½ oz.; by private ship 1*d.* gratuity in addition must be paid. Letters from abroad sent by or addressed to soldiers or seamen, when unpaid, are charged 2*d.* If sent to or through a foreign country, they are liable to foreign rates in addition, but to no further charge upon redirection.

Letters from soldiers or seamen to the United States are subject to the United States' rate of 2½*d.* in addition to the usual reduced rate, the whole to be paid in advance when posted in this country.

By using embossed post-office envelopes all risk of the stamp being detached is avoided; this is an important matter, since letters addressed to places abroad are altogether stopped if the stamp has fallen off. rural messenger is now authorised to sell stamps and embossed s.

tered Letters.—Inland, colonial, and ship letters can be registered yment of 4*d.* for inland, and 6*d.* colonial and ship letters, beyond tage.

istered letters for France, and countries through France, must be id with double the amount of the ordinary postage, and those for sia, and countries through Prussia, must have the foreign registration nd postage paid in addition to the British. Registered letters for sia must be prepaid with double the amount of the ordinary postage. gistered letters must be posted half an hour previous to the ordinary ters, but are received at the General Post Office, and at the chief district d branch offices in London, up to the latest time for posting, on payment n additional fee of 4*d.*

Newspapers (stamped) sent by post must be made up in covers open at the sides, have the impressed stamp visible, and no marks of writing (other than the address) thereon, or anything inclosed, or it subjects them to letter postage. British newspapers, when duly stamped, are forwarded free throughout the United Kingdom (except those delivered within three miles of the place where posted, which are charged 1*d.*) Unstamped newspapers, if weighing under 4 oz., may be forwarded between places in the United Kingdom by affixing 1*d.* postage-stamp. For places abroad, the impressed stamp is valueless, as the postage must be prepaid by postage labels.

Books, &c.—Printed books, pamphlets, magazines, reviews, &c., whether British, foreign, or colonial, may be forwarded by post between places in the United Kingdom (made up in the same manner as newspapers), if prepaid in stamps, at the following rates:—

Under	4 oz.	prepaid	1*d.*
„	8 oz.	„	2*d.*
„	12 oz.	„	3*d.*

and 1*d.* for every additional 4 oz., or any less weight; no parcel to exceed 24in. any way, but may contain more than one book, &c.

A Book Packet may contain writing (when not of the nature of a letter), and any number of separate books or other publications, prints, or maps, and any quantity of paper, parchment, or vellum (to the exclusion, however, of letters, whether sealed or open).

United States of America.—The charge for newspapers is as follows, and which must be prepaid:—For each newspaper duly registered, not exceeding 4 oz. in weight, 2*d.*; for every additional 4 oz. 2*d.* On books and packets or samples of merchandise the following rates are charged and paid in advance:—For a packet not exceeding 4 oz. in weight, 3*d.*; above 4 oz. and not exceeding 8 oz., 6*d*; every additional 4 oz., 3*d.* These rates now comprise the whole charge to the place of destination, unless liable to the customs duty in America.

The postage of letters to America is now reduced to 6*d.* for each letter under the ½ oz. prepaid.

The following rates of postage (which must be paid in advance) are chargeable upon newspapers, books, and other printed papers to Belgium, France, and Algeria:—For a packet of registered newspapers—

Under	4 oz.	1*d.*
„	8 „	2*d.*
„	12 „	3*d.*

and so on, 2*d.* additional for every subsequent 8 oz., or fraction of 8 oz., in the case of France and Algeria; but newspapers for Belgium are charged at the rate of 1*d.* for each newspaper under 4 oz.

The following rates of postage (which must be paid in advance) are chargeable upon newspapers, books, and other printed papers for the German States, *viâ* Belgium, or the French offices in Turkey, Syria, and Egypt:—

On each newspaper, not exceeding 4 oz.	... ...	2*d.*
Over 4 oz. and under 8 oz.	... ...	4*d.*
„ 8 „ „ 16 „	... ...	8*d.*

and so on, 4*d.* being charged for each paper for every subsequent 8 oz. or fraction of 8 oz.

For a packet of registered newspapers, for Italy (ex Papal States), Austria, and the Netherlands, *viâ* France, Baden, Bavaria, Hohenzollern, and Würtemberg, 2*d.* for every quarter of a pound or fraction thereof.

Colonial and Foreign Mails.

The day mail for France, Belgium, Holland, Germany, and North of Europe, *viâ* Ostend, are dispatched at 7 a.m. Letters and newspapers may be posted at the chief office, St. Martin's-le-Grand, until 7 a.m., and at Lombard-street, the district offices, and in the pillar-boxes, until 5 a.m. Correspondence for dispatch by these mails must be posted the previous evening at the receiving houses.

Note.—For proper dispatch of foreign and colonial letters, it is necessary to observe that:—

If the 2nd and 17th of the month fall on a Sunday, the West India mail is dispatched the next morn.

If the 7th fall on a Sunday, mails for Granada, St. Lucia, Trinidad, Demerara, and St. Vincent, by French packet, are made up the previous evening.

If the 15th fall on a Sunday, the mails for Mexico, Jamaica, St. Thomas, Havannah, and Hayti, *viâ* France, are dispatched the previous evening.

If the 7th fall on a Sunday, the mails for the Pacific and New Granada, by French packet, are made up on the previous evening.

If the 20th fall on a Sunday, the Australian mail (*viâ* Southampton) and the Cape of Good Hope and Natal mails (*viâ* Southampton and Mauritius) are dispatched the previous evening.

If the 26th fall on a Sunday, the Australian mail (*viâ* Marseilles) and the Cape of Good Hope and Natal mails (*viâ* Marseilles and Mauritius) are dispatched the following evening.

If the 4th, 12th, 20th, and 27th fall on a Sunday, the India mail (*viâ* Southampton) is dispatched the previous evening.

If the 3rd, 10th, 18th, and 26th fall on a Sunday, the India mail (*viâ* Marseilles) is dispatched on the following evening.

If the 8th fall on a Sunday, the mails for Aden and Mauritius by French packet will be made up on the previous evening.

If the 18th fall on a Sunday the mails for Aden, Calcutta, Madras, Singapore, Ceylon, China, and Yokohama, by French packet, will be made up on the previous evening.

If the 9th fall on a Sunday, the Brazil mail is dispatched the next morning.

2,000	5	9	7	0	27	1	0	0	0	2	3
1,000	2	14	9	2	14						

THE RULE.—Multiply the Sum by the number of Days and the Product by the Rate of Interest, then separate the two last Figures to the Right hand, and the rest you will find in the Table.

EXAMPLE.—What is the Interest of £271 for Ninety Days, at 7 per cent. per Annum?

Multiply £271, the Sum,
By 90, the Time.

Then multiply 24,390
By 7, the Rate,

1707 | 30

Then in the Table against { 1000 you will find .. £2 14 9 2 14
700 ... ... 1 18 4 1 10
7 ... ... 0 0 4 2 41

The Answer is ... £4 13 6 1 65

British Weights and Measures.

LINEAR MEASURE.

	Furlongs.	Chains.	Poles.	Yards.	Feet.	Inches.
Foot	...	...	...	...	...	12
Yard	...	...	...	...	3	36
Pole or Rod	...	...	...	5½	16½	198
Chain of 100 links	...	...	4	22	66	792
Furlong	...	10	40	220	660	7920
Mile	8	80	320	1760	5280	63360

A League is 3 miles. A Hand (used in measuring horses), 4 inches. A Fathom, 2 yards, or 6 feet, or 72 inches.

A pendulum which vibrates seconds of mean time in the latitude of London, at the level of the sea and in a vacuum, measures 39·1393 inches.

LAND OR SQUARE MEASURE.

	Roods.	Chains.	Poles.	Yards.	Feet.	Inches.
Square Foot	...	...	...	...	...	144
Square Yard	...	...	...	...	9	1296
Square Pole or Rod ...	...	...	..	30¼	272¼	39204
Chain of 10,000 Links...	...	...	16	484	4356	627264
Rood	...	2½	40	1210	10890	1568160
Acre	4	10	160	4840	43560	6272640

A Square Mile is 640 Acres or 3,097,600 Square Yards.

CUBIC OR SOLID MEASURE.

	Inches.		Feet.	Inches
Cubic Foot...	1728	Cubic Yard	27	46656

A Ton of Shipping is 42 Cubic Feet. A Barrel's bulk is 50 Cubic Feet.

CLOTH MEASURE.

	Qrs.	Nails.	Inches.		Qrs.	Nails.	Inches.
Nail	...	...	2¼	Ell	5	20	45
Quarter ...	...	4	9	French Ell .	6	24	54
Yard ...	4	16	36				

LIQUID MEASURE.

	Gallons.	Quarts.	Pints.		Gallons.	Quarts.	Pints.
Gill	...	...	¼	Hogshead of			
Quart	...	...	2	Ale	54	216	432
Gallon	4	8	Hogshead of				
Firkin or				Wine ...	63	252	504
¼-Barrel ...	9	36	72	Puncheon ...	84	336	672
Kilderkin or				Butt of Ale ...	108	432	864
½-Barrel ...	18	72	144	Pipe or 2			
Barrel ...	36	144	288	Hogsheads .	126	504	1008
				Tun or 2 Pipes	252	1008	2016

DRY MEASURE.

	Qrs.	Bus.	Pks.	Gals.		Qrs.	Bus.	Pks.	Gals.
Peck	...	...	...	2	Quarter ...	...	8	32	64
Bushel ...	...	...	4	8	Load or Wey	5	40	160	320

The Imperial Gallon is the legal standard measure both for dry goods and liquids. It contains 277·274 cubic inches of distilled water when the barometer stands at 30 inches and thermometer at 62°. Under the same conditions an Imperial Gallon of water weighs 10 Avoirdupois pounds, or 70,000 grains. A cubic inch of water weighs 252,458 grains. A cubic inch of air weighs 0·310 grain.

AVOIRDUPOIS WEIGHT.

	Cwts.	Qrs.	Pounds.	Ounces.	Drachms.
Ounce (437½ grains)	...	...	...	...	16
Pound (7000 grains)	...	...	...	16	256
Stone	...	...	14	224	3584
Quarter	...	...	28	448	7168
Hundred weight	...	4	112	1792	28672
Ton	20	80	2240	35840	573440

This weight is used for all substances except gold, silver, and precious stones. Drugs are sold by this weight, but medicines are compounded by Apothecaries' weight.

TROY WEIGHT.

Marks.		Ounces.	Dwts.	Grains.
dwt.	Pennyweight...	...	...	24
oz.	Ounce...	...	20	480
lb.	Pound	12	240	5760

Troy weight is used for money, precious metals and jewels. Also in philosophical experiments, though the more convenient decimal divisions of the French gramme are almost universally preferred by scientific chemists of the present time. The diamond carat weighs 3 and 1-5th grains.

APOTHECARIES' WEIGHT.

Mark.		Ounces	Grains.	Mark.		Ounces.	Grains.
oz.	Ounce ...	...	437½	lb.	Pound ...	16	7000

This is the new Apothecaries' Weight, as revised by the Council of Medical Education in 1864. The ounce and the pound are the same as in Avoirdupois Weight. A grain is the same in all weights.

MISCELLANEOUS ARTICLES.

Aum of Hock ...	about 30 gals.	Pipe of Madeira	92 gals.
Barrel of Tar ...	... 26¼ „	Pocket of Hops	1½ to 2 cwt.
Box of Raisins ...	... 56 lb.	Puncheon of Brandy	100 to 115 gals.
Cask of Rice ...	7 to 8 cwt.	„ Rum...	90 to 100 „
Chest of Congo Tea...	about 80 to 100 lb.	„ Whisky, about	120 „
„ Hyson ...	60 to 80 „	Quire of Paper	24 sheets.
Drum of Figs ...	6 to 14 „	Ream of Paper ...	480 sh. or 20 qr.
Firkin of Butter ...	... 56 „	Roll of Parchment	... 60 skins.
Fodder of Lead ...	... 19½ cwt.	Sack of Flour ...	... 280 lb.
Gross ...	...144, or 12 doz.	Tierce of Sugar ...	9 to 12 cwt.
Hogshd. of French Wine,	43 to 46 gals.	„ Coffee ...	4 to 9 cwt.
Load of Hay or Straw	36 trusses.	Truss of Old Hay ...	... 56 lb.
Load of Bricks	500	„ New Hay	... 60 „
		„ Straw	36 „

A Butt of Sherry contains 108 gallons, or about 52 dozens.
A Pipe of Port „ 115 „ „ 57½ „
Hogsheads one-half, and Quarter Casks one-fourth part of these quantities.

The last column in the preceding table gives the average value of each foreign coin in English money, to the nearest farthing: *i. e.*, the actual worth of the pure gold or silver contained in each, without regard to the alloy necessarily employed to render the pure metal sufficiently hard and durable for a circulating medium. This will suffice for converting small sums of foreign money into equivalent British values, but for larger amounts, greater accuracy will be obtained by making use of the middle column, "FINE WEIGHT," in the following manner:

To convert Seven United States Eagles into British Sterling.—The fine weight, *i. e.*, the quantity of pure gold in the United States Eagle is 232·20grs. The fine weight of the English Sovereign is 113·00grs. We have then the proportion:

Fine Weight of Sovereign, 113·00 grains. : Fine Weight of Seven Eagles, 232·20grs. + 7 :: : £1 : £14 7*s.* 8¼*d.*

NOTE.—Austrian money circulates in Hungary and Transylvania.

1 N. German Thaler, 1½ Austrian Gulden, 1¼ Gulden of S.W. Germany.

In China and Japan payments are made by weight. The Tael is the principal weight used for this purpose. In Japan there are gold and silver coins as well, but none in China.

The Ducat and Gulden of S.W. Germany are both used in Baden, Bavaria, Frankfort, Hesse Darmstadt, Nassau, and Wurtemberg.

The Ducat is also current in Austria, Bohemia, Hamburg, Hanover, Hungary, Saxony, and Transylvania.

The German Crown and Half Crown are current in Austria, Baden, Bavaria, Brunswick, Frankfort, Hanover, Prussia, and Saxony.

The Thaler is current in all parts of Germany and Austria.

The South-American Republics include the Argentine Confederation, or La Plata, Central America, Chili, Ecuador, New Granada, Paraguay, Peru, Uruguay, and Venezuela

Time Table.

	Days.	Hours.	Minutes	Seconds.		Days.	Hours.	Minutes.	Seconds.
Minute	...	...	...	60	Day ...	...	24	1440	86400
Hour...	...	...	60	3600	Week	7	168	10080	604800

A common year is 52 weeks 1 day, or 365 days. Every year which will divide by 4 without leaving any remainder is a leap year, and contains 366 days, except the last year of every century when it will not divide by 400. A century contains 36,524 days, or, when its last year is a leap year, 36,525.

Postal Regulations.

FOREIGN MAILS.

AUSTRALIA.—Mails to these colonies are now dispatched every fourth Friday *viâ* Marseilles, and every fourth Saturday *viâ* Southampton.

CAPE OF GOOD HOPE.—Mails are now forwarded to the Cape of Good Hope by direct packet on the 25th of each month, as well as on the 10th.

CEYLON.—Mails to Ceylon are now dispatched every alternate Friday *viâ* Marseilles, and every alternate Saturday *viâ* Southampton. For alterations in postage, see "India."

CHINA AND JAPAN.—Mails for China and Japan are now dispatched every alternate Friday *viâ* Marseilles, and every alternate Saturday *viâ* Southampton.

HONDURAS.—The postage of all letters addressed to Honduras has been reduced to 1*s.* per ½ *oz.*

INDIA.—Mails to India are now dispatched every Friday *viâ* Marseilles, and every Saturday *viâ* Southampton. The postage of letters to India and Ceylon has been raised from 6*d.* per ½*oz.* to 9*d.* when sent *viâ* Southampton, and from 10*d.* to 1*s.* 1*d.* when sent *viâ* Marseilles. The scale now advances by ½*oz.* instead of 1*oz.*

MALTA.—The packets between Marseilles and Alexandria have ceased to call at Malta, and mails are consequently no longer sent to Malta *viâ* Marseilles; but in lieu thereof a mail is dispatched to Malta every Tuesday *viâ* Messina. The mail *viâ* Southampton is now dispatched every Saturday.

MAURITIUS.—The English contract for the conveyance of mails to and from Mauritius *viâ* Galle has terminated, and mails to and from Mauritius are sent only by French packet. No correspondence for the Cape of Good Hope is now sent by this route.

Our Portraits.

THE ARCHBISHOP OF CANTERBURY.

(See page 11.)

An archbishopric does not fall to the lot of many, and of such as attain the office few acquire with it privileges, dignities, immunities, and emoluments at all approaching those of Canterbury. The origin of this see is traced from Austin the monk, about A.D. 569, at which time Canterbury was the capital of the kingdom of Kent. A still older date is to be ascribed to the introduction of our religion into Canterbury. The long array of archbishops, extending over fifteen centuries, includes names of undying celebrity; and the glorious cathedral which now graces the archiepiscopal city was begun by no less eminent a person than Lanfranc. It of course succeeds a still more ancient structure. The province of Canterbury contains a score of bishoprics, and its head enjoys a large number of privileges. He is Primate and Metropolitan of all England, is the first peer of the realm, and takes precedence of all dukes not of the royal blood, and of all the great officers of State. He is styled "Grace" by Divine providence, and crowns kings and queens, who are his proper parishioners.

This important and honourable post has been conferred upon the Right Hon. and Right Rev. Archibald Campbell Tait, Lord Bishop of London, the see having become vacant by the demise of Archbishop Longley. Dr. Tait is a Scotchman, having been born in Edinburgh, on December 22, 1811. He was youngest son of Crawford Tait, Esq., Writer to the Signet, his mother being a daughter of Sir Islay Campbell, Bart. He received his early education at the Edinburgh High School and Academy, under Archdeacon Williams. In 1827 he entered the Glasgow University, where he attended the lectures of Sir D. K. Sandford and Mr. Buchanan. In 1830 he was elected an exhibitioner to Balliol College, Oxford, where he became in succession scholar, fellow, and tutor. In 1833 he took his B.A. in first-class honours. In 1836 he became M.A.; in 1842, D.C.L.; and in 1856, D.D. He took orders as deacon in 1836, and as priest in 1838. He was at one time public examiner of the University of Oxford. While resident as tutor in that city, he distinguished himself by his opposition to the then novel principles of the Tractarians. He was, indeed, one of the "four tutors" who first called the attention of the authorities of the University to the famous Tract No. 90, which Mr. Newman had written for the purpose of showing that holders of Romish doctrines could subscribe the Thirty-nine Articles. In this controversy he displayed exemplary candour and frankness, and treated those whose views he opposed with consideration and respect. In 1838 he would have succeeded Sir D. K. Sandford in the Greek chair at Glasgow, but his English orders were an obstacle. When, however, Dr. Arnold died, in 1842, the responsible appointment of Head Master of Rugby School was conferred upon him, and he retained it with honour until 1850. While at Rugby he married a daughter of Archdeacon Spooner, brother of the well-known member for Warwickshire. In 1850 he accepted the Deanery of Carlisle, in which he acted in the most exemplary manner. As an author he published "Five Sermons", in 1843; "Suggestions offered to the Theological Student under present Difficulties" in 1846; "Four Sermons" in 1847; and "Lessons for School Life" in 1850. He has also published Charges and miscellaneous articles. On Dr. Blomfield's resignation of the see of London in 1856, Dr. Tait was nominated to the vacancy. In his new office he at once exhibited qualities of a high order, and has for a long time been one of the most conspicuous and energetic members of the episcopal bench. The great act, if not the great glory, of his episcopate was the origination in 1863 of a fund known as the Bishop of London's Fund. This fund is for supplying the deficiency of church accommodation in the metropolis. For this purpose it was proposed to raise a million pounds sterling in ten years. Already a very large amount has been obtained, and aid has been rendered in the erection of numerous churches.

THE KING AND QUEEN OF PORTUGAL.

(See page 14.)

Young, liberal, and intelligent, Louis I. of Portugal governs his kingdom constitutionally, and is adored by his subjects. He was born on the 31st of October, 1838, and is the second but eldest surviving son of Donna Maria, Queen of Portugal, and of Don Fernando, Prince of Saxe Coburg, who at his marriage received the honorary title of King of Portugal. His elder brother, Don Pedro V died six years ago of a fever, leaving the present King to succeed him.

King Louis, accompanied by his elder brother, visited this country in 1854, when he bore the title of Duke of Oporto. At that time he had attained the rank of captain in the Portuguese navy, and commanded the steam war sloop Bartholomeo Diaz. In 1862 the King married Pia, youngest daughter of Victor Emmanuel of Italy, and by her he has two sons, Carlos and Alphonse, born respectively September 28, 1863, and July 31, 1865. The Queen was barely fifteen when she married, and for the last two years has been suffering from extreme nervousness.

The principal acts of the present King's reign are the treaty of Tientsin, by which China ceded definitely the island of Macao; the decree of April, 1863, by which passports were suppressed both for natives and foreigners; and, lastly, the King's adhesion to the European Congress, proposed by France, November 18, 1863.

THE EMPEROR AND EMPRESS OF AUSTRIA.

(See page 15.)

Charles Francis Joseph, Emperor of Austria and King of Hungary, was born August 18, 1830. He was not the direct heir to the throne, but was called to reign when eighteen years of age, on the abdication of his uncle Ferdinand, and after his father, the Archduke Francis, had refused to succeed. He found, from the commencement of his reign, his position a most difficult one to fill. Hungary refused to recognise him as sovereign, and formed herself into a republic, under the leadership of Kossuth. It was only through the armed intervention of Russia that the Emperor's power was established, and it required all the skill of the veteran general Radetsky to keep a firm hold on the Italian possessions. Assisted by various able statesmen, he centralised the government of his heterogeneous nationalities at Vienna, and commenced a series of reforms. On the 24th of April, 1854, the Emperor married Princess Elizabeth Amelia Eugenie, one of the beautiful daughters of Duke Maximilian of Bavaria. The Empress was born at Munich, on the 24th of December, 1837, and is seven years younger than her husband. The Imperial couple have three children, and the third, a daughter, was born a few months ago in Hungary. The eldest is the Archduchess Gisella, born in 1856, and the second is the Archduke Rodolph, born two years later.

CROWN PRINCE FREDERICK OF DENMARK AND PRINCESS LOUISA OF SWEDEN.

(See page 18.)

It is not always that marriages in royal families give such complete satisfaction to both houses concerned as is the case with the approaching union of "the two children of Scandinavia," as the Crown Prince of Denmark and the Princess Royal of Sweden are called. At Copenhagen, when the address in reply to the last speech from the throne was brought forward, both Houses of the Diet congratulated the Danish King on this betrothal, adding that "they hailed the event as a new guarantee for unity and brotherhood, and as conducive to the powerful development of the independence of the two Scandinavian kingdoms." The Crown Prince of Denmark is well known to this country as the brother of our much-loved Princess of Wales. He is the eldest son of the reigning King of Denmark, and on the 15th of July last was betrothed to Princess Louisa of Sweden. This princely pair are well matched in years; the bride elect is not yet seventeen, while the bridegroom is somewhat over twenty-five.

The father of Princess Louisa Josephine Eugenie is King Charles XV. of Sweden, and her mother is Queen Louise—a Princess of Orange, and a daughter of Prince Frederick of the Netherlands. She was born on the 31st of October, 1851, and has been brought up in a simple manner; her appearance is pleasing, her disposition full of amiability and goodness. Neither of her parents cares for state and ceremony; they live in an unostentatious manner, the King devoting his leisure hours to painting and writing, the Queen taking much delight in her home duties, and attending to the wants of the needy among her subjects; and thus the Princess has been reared and grown into womanhood as unaffectedly as though her parents had not occupied the high rank and position they do. The Salic law obtains in Sweden; therefore the Princess Louisa would not in any case have succeeded to her father's throne.

The Danish Crown Prince, Christian Frederick William Charles, was born on the 3rd of June, 1843; he holds the rank of general in the Danish army, as well as *chef* in a Russian regiment of hussars.

Young as he is, the Prince has already seen the dark side of life, for he was at his father's side during the painful war of 1863-64, and his conduct throughout was deserving of all praise. He is much beloved in his own country for his extreme kind-heartedness and amiability of disposition. He commenced his education at the Mariboes Institution in Copenhagen, his father being at that time Prince of Sonderburg-Augustenburg. Besides attending a military school, the young Prince received professional instructions from Generals Stiernholm and Von Lund. On the 19th of October, 1860, he was confirmed in the private chapel of the King's residence at Copenhagen, and on the same day he received his commission as lieutenant of a Danish regiment of infantry from the hand of Frederick VII. Year by year he rose in his profession, until at the end of 1867 we find him with the rank of general. During the early part of 1863 Prince Frederick came to this country, and entered the University of Oxford as a student, but did not remain long there, as the war of 1864 recalled him to Denmark. During his last visit to his sister, the Princess of Wales, in June, 1868, he again visited the University, not this time to study, but to receive a diploma conferring upon him the degree of D.C.L.

PRINCE HUMBERT OF ITALY AND PRINCESS MARGARET OF SAVOY.

(See page 19.)

The marriage of the heir to the Italian throne with his cousin the Princess Margaret took place on the 22nd of April, 1868, at Turin. Prince Humbert is a Piedmontese by birth; he remained a Piedmontese until the battle of Custozza, June 29, 1866, and then he became Italian. The Prince is now in his twenty-fifth year, as he was born on the 14th of March, 1844, one year after his sister Princess Clotilde, who is now married to Prince Napoleon. His mother was an Austrian Archduchess, who died in 1855. The Princess Margaret is seventeen years old. Her father, the Duke of Genoa, a brother of King Victor Emmanuel, died in 1855, and her mother, Princess Elizabeth of Saxony, married in 1856 the Marquis de Rappalo.

DEJATCH ALAMAYAHU, PRINCE OF ABYSSINIA.

(See page 22)

When Dr. Johnson's charming story of "Rasselas, Prince of Abyssinia," was in the ascendant, we little expected to witness the day when a real Rasselas—a living Abyssinian prince—would find a home or an asylum upon our shores. This, however, has come to pass, and the fortunes (or misfortunes) of war have brought among us the youthful Abyssinian prince whose portrait from the life is here presented to our readers.

Theodore, the father of the young prince, was a man of humble origin, though related to a provincial governor, by whom he was recommended to the vizier of the kingdom. This vizier was Ras Ali, in whose favour Kassa, for such was Theodore's original name, rose so rapidly that he obtained one of his daughters in marriage. Some time after he rebelled against his father-in-law, and defeated him in battle, as he did also the Prince of Tigré. Two days only after defeating this last, he was anointed and crowned as Theodore II., King of the Kings of Ethiopia. His subsequent career it is not needful for us to pursue. At his death, at the fall of Magdala, the young prince and the queen his mother passed into the keeping of the British forces. The queen was called Toronech, which means "You are pure," and was a daughter of Oubie, the Prince of Tigré, whom, as we have just said, Theodore overcame in battle. This woman was of a proud and haughty spirit, and looked down upon her husband as an upstart. No wonder that the marriage was an unhappy one. After the birth of her only son, Alamayahu, she lived apart from her husband, and resided with her little boy at Magdala. It is hoped, but not certain, that the King and Queen were reconciled at last, as it is known they spent some time together just before his tragic end. The unfortunate lady did not long survive her husband. She was already doomed, a victim to consumption, and died on the march towards the coast, leaving her little son in charge of Capt. Speedy. Her Majesty was a lady-like woman of about six-and-twenty, with very fair complexion, full eyes, fine aquiline nose, and beautiful hand. What most attracted attention, however, was her magnificent hair, arranged in neat plaits, and, instead of being tied in a knot at the nape of the neck, as is the fashion of the country, it fell in a cascade of glossy ringlets over her shoulders. Her usual dress was the simple white cotton dress of the country, gathered in a fold at the waist by a band.

The name of the child, Alamayahu, means, "I have seen the world," and was the endearing appellation given him by his mother, to whom he was all the world. The child would receive a different name at his baptism; this being given in accordance with the custom of Abyssinian mothers, who confer some pet name upon their children, by which they are afterwards better known than by their baptismal names. The other word "Dejatch" is frequently prefixed to the names of chiefs and princes, and is a term denoting his dignity. The young Alamayahu arrived in England on Tuesday, July 14, on board Her Majesty's ship Urgent, which reached Plymouth that day. He was in charge of his guardian, Capt. Speedy, to whom he is exceedingly attached. He was also attended by an Abyssinian man-servant, Shelika Kassa. On landing, the prince was taken to breakfast with some principal persons, and then to see the dockyard. The child appeared to be delighted with his new country, exclaiming, "O, this beautiful country! I shall never go back." They say, too, that when the man-servant, an intelligent man, went over the arsenal, he sorrowfully observed, "Theodore should have seen!" We must not forget that there was a third stranger on board the ship, in the person of a little Abyssinian slave girl, who was a *protégée* of Sir Robert (now Lord) Napier's. From Plymouth the Prince, with Lord Napier and Capt. Speedy, travelled to Portsmouth, and on to Osborne, where they were introduced to the Queen, and had the honour of dining with her. This was on the 16th of July, and the next day the party visited Her Majesty again. Our kind-hearted Queen treated the little orphan with characteristic affection, and seemed much interested in him. It was originally reported that he was to proceed from Abyssinia to Bombay, but eventually it was resolved that he should come to England, where he will be carefully educated under the patronage or recognition of Her Majesty, and will, therefore, receive all that consideration and attention which his birth and misfortunes claim for him. In person he is rather tall of his age, slender, and well-proportioned. There is a childish expression in his countenance, and a certain amount of vivacity. His complexion is dark, not black, but tawny. His lips are somewhat thick, and his ears large, but they look larger than they are, perhaps in consequence of the extremely little hair upon his head. Our portrait excellently renders his photographic likeness, and will show what his features are better than any verbal description can do.

The throne of Abyssinia is an ancient one, and to that throne Prince Alamayahu is the lawful heir, though he may not sit upon it.

THE PRINCE IMPERIAL OF FRANCE.

(See page 24)

The Prince Imperial of France, Napoleon Eugène Louis Jean Joseph, is the only son of the reigning Emperor of the French, by the Empress Marie Eugénie, daughter of the Count Manuel de Montijo. He was born in Paris on the 16th of March, 1856. For the past three years he has joined in several public ceremonials, sometimes taking part with his parents, and sometimes conducting them alone. On every occasion he has acquitted himself nobly to the satisfaction of all concerned. He is an intelligent boy, carefully trained in all manly exercises, and has the advantage of being educated by cultivated minds and men of distinction. His manners are easy and unaffected, full of child-like grace, never shy, but by no means forward; consequently he rarely fails to win the hearts of those who come in contact with him. "The child is father to the man," so runs the old adage; and if this should prove true in the present instance, the Prince Imperial of France bids fair to add to, rather than detract from, the historic name he bears. Of this Prince's future who can predict?

MLLE. CHRISTINA NILSSON.

(See page 26)

All lovers of music who have frequented London during the two past seasons are now familiar with the name of the Northern nightingale, the fair Swedish songstress who captivated so many audiences by her fascinating style, her genius, and by the artistic rendering of the music she sang.

Christina Nilsson was born in the south of Sweden, on the 20th of August, 1843. Her parents were peasants, and, to use her own words, she was brought up "surrounded by the ceaseless wants that wait upon poverty." At a very early period of her life, Mlle. Nilsson gave indications of the musical talents with which she is gifted. She played the violin when a mere child with great taste and feeling, and also acquired a certain proficiency on the flute without any regular instruction in either instrument.

When she was fourteen years of age, accompanied by her brother, she made a tour, and earned a considerable sum of money, as both her vocal and instrumental performances were even then remarkable. It was in June, 1858, that her fine voice attracted the attention of M. Torneljelm, with whom subsequently an arrangement was made for her instruction in several branches of education. She received gratuitous lessons in music and singing from Mlle. Waleruis, who always prophesied a brilliant future for her young pupil. Her progress in her art, and also in the acquirement of modern languages, was most rapid; she was soon removed to Gothenburg, and on her return to Stockholm, eighteen months afterwards, she became a pupil of M. Berward, the Director of Concerts in that city. In 1860 she sang before the Swedish royal family, who were so pleased with her performance, that the following day she was sent for to the palace to sing privately to their Majesties.

Mlle. Nilsson's musical education was completed in Paris, in which city she made her *début*, and with such marked success that she soon obtained an engagement at Her Majesty's Theatre for the season of 1867—with what results the music-loving, opera and concert going world now knows. Her voice is a pure soprano, her style of singing is full of sentiment, and her treatment of the various characters she impersonates is characterised by a high artistic feeling; she is an artist in the highest sense of the term. In person Mlle. Nilsson is of the true Northern type—fair, with blue eyes and flaxen hair; she is graceful in bearing, and her countenance, particularly when she sings, beams with expression.

GUSTAVE DORE.

(See page 27)

The name of Gustave Doré is known wherever books are read and gems of literature prized. His productions are ubiquitous, the natural consequence of a prodigal genius and of a versatility that is seemingly exhaustless. As a book illustrator he has no living competitor.

Paul Gustave Doré was born at Strasburg, in January, 1832. When he was thirteen he accompanied his father to Paris, where he remained to complete his studies at the Charlemagne Lyceum, and in 1848 he commenced contributing comic sketches to the *Journal pour Rire*. In the same year he also sent drawings to the Salon. "Les Pins Sauvages," "Le Lendemain de l'Orage," "Les deux Meres," "La Prairie," were the first compositions he publicly exhibited; but it was not until the Salon of 1857, at which he produced his "Battle of Inkerman," that his works obtained a mention. Since that year he has contributed several important pictures yearly to the Salon, besides which he has illustrated books and journals in a most profuse manner, showing a versatility of talent and prolific genius, such powers of work and industry, as few artists in any age have ever been gifted with. Besides covering the walls of his studios, which are situated in various parts of Paris, as if by magic, with paintings of every style and manner and of every size, from tiny landscapes and home scenes to historical paintings of colossal dimensions, all of which sell as quickly as painted, and are replaced as quickly as sold, he has illustrated several immortal works in a style that places him far beyond any living competitors. His efforts and industry appear gigantic when we commence from the year 1854 with "Rabelais," and enumerate all that he has done. "The Wandering Jew," Balzac's "Contes Drolatiques," the "Contes" de Perrault, Montaigne's "Essays," "Voyage to the Pyrenees," Dante's "Inferno," "Don Quixote," "The Holy Bible," Milton's "Paradise Lost," Chateaubriand's "Atala," "The History of Croquemitaine," "The Adventures of Munchausen," Tennyson's "Vivien" and "Guinevere," La Fontaine's Fables, "Fairy Realms," have succeeded each other with such rapidity, that before time has allowed us to grasp one set of pictures another set is placed before us. There are abundant richness of fancy and marks of genius in all he produces; we can compare him with no living artist, and in the romantic school he is equally above all those that have gone before him. Critics contend whether his masterpiece is "Don Quixote" or "Dante." In our opinion the latter work should take the precedence; the grasp of imagination, the vigorous power of depicting multitude and space, air, light and darkness, the grouping of figures, the gloom and brightness, the art of bringing those wild, heart-rending scenes where innumerable souls are driven before "the stormy blast of hell," so vividly before the mind's eye, leave an overpowering sense of the artist's transcendent merit, and create impressions that are ineffaceable.

Our Portraits.

THE ARCHBISHOP OF CANTERBURY.

(See page 11.)

An archbishopric does not fall to the lot of many, and of such as attain the office few acquire with it privileges, dignities, immunities, and emoluments at all approaching those of Canterbury. The origin of this see is traced from Austin the monk, about A.D. 569, at which time Canterbury was the capital of the kingdom of Kent. A still older date is to be ascribed to the introduction of our religion into Canterbury. The long array of archbishops, extending over fifteen centuries, includes names of undying celebrity; and the glorious cathedral which now graces the archiepiscopal city was begun by no less eminent a person than Lanfranc. It of course succeeds a still more ancient structure. The province of Canterbury contains a score of bishoprics, and its head enjoys a large number of privileges. He is Primate and Metropolitan of all England, is the first peer of the realm, and takes precedence of all dukes not of the royal blood, and of all the great officers of State. He is styled "Grace" by Divine providence, and crowns kings and queens, who are his proper parishioners.

This important and honourable post has been conferred upon the Right Hon. and Right Rev. Archibald Campbell Tait, Lord Bishop of London, the see having become vacant by the demise of Archbishop Longley. Dr. Tait is a Scotchman, having been born in Edinburgh, on December 22, 1811. He was youngest son of Crawford Tait, Esq., Writer to the Signet, his mother being a daughter of Sir Islay Campbell, Bart. He received his early education at the Edinburgh High School and Academy, under Archdeacon Williams. In 1827 he entered the Glasgow University, where he attended the lectures of Sir D. K. Sandford and Mr. Buchanan. In 1830 he was elected an exhibitioner to Balliol College, Oxford, where he became in succession scholar, fellow, and tutor. In 1833 he took his B.A. in first-class honours. In 1836 he became M.A.; in 1842, D.C.L.; and in 1856, D.D. He took orders as deacon in 1836, and as priest in 1838. He was at one time public examiner of the University of Oxford. While resident as tutor in that city, he distinguished himself by his opposition to the then novel principles of the Tractarians. He was, indeed, one of the "four tutors" who first called the attention of the authorities of the University to the famous Tract No. 90, which Mr. Newman had written for the purpose of showing that holders of Romish doctrines could subscribe the Thirty-nine Articles. In this controversy he displayed exemplary candour and frankness, and treated those whose views he opposed with consideration and respect. In 1838 he would have succeeded Sir D. K. Sandford in the Greek chair at Glasgow, but his English orders were an obstacle. When, however, Dr. Arnold died, in 1842, the responsible appointment of Head Master of Rugby School was conferred upon him, and he retained it with honour until 1850. While at Rugby he married a daughter of Archdeacon Spooner, brother of the well-known member for Warwickshire. In 1850 he accepted the Deanery of Carlisle, in which he acted in the most exemplary manner. As an author he published "Five Sermons", in 1843; "Suggestions offered to the Theological Student under present Difficulties" in 1846; "Four Sermons" in 1847; and "Lessons for School Life" in 1850. He has also published Charges and miscellaneous articles. On Dr. Blomfield's resignation of the see of London in 1856, Dr. Tait was nominated to the vacancy. In his new office he at once exhibited qualities of a high order, and has for a long time been one of the most conspicuous and energetic members of the episcopal bench. The great act, if not the great glory, of his episcopate was the origination in 1863 of a fund known as the Bishop of London's Fund. This fund is for supplying the deficiency of church accommodation in the metropolis. For this purpose it was proposed to raise a million pounds sterling in ten years. Already a very large amount has been obtained, and aid has been rendered in the erection of numerous churches.

THE KING AND QUEEN OF PORTUGAL.

(See page 14.)

Young, liberal, and intelligent, Louis I. of Portugal governs his kingdom constitutionally, and is adored by his subjects. He was born on the 31st of October, 1838, and is the second but eldest surviving son of Donna Maria, Queen of Portugal, and of Don Fernando, Prince of Saxe Coburg, who at his marriage received the honorary title of King of Portugal. His elder brother, Don Pedro V. died six years ago of a fever, leaving the present King to succeed him.

King Louis, accompanied by his elder brother, visited this country in 1854, when he bore the title of Duke of Oporto. At that time he had attained the rank of captain in the Portuguese navy, and commanded the steam war sloop Bartholomeo Diaz. In 1862 the King married Pia, youngest daughter of Victor Emmanuel of Italy, and by her he has two sons, Carlos and Alphonse, born respectively September 28, 1863, and July 31, 1865. The Queen was barely fifteen when she married, and for the last two years has been suffering from extreme nervousness.

The principal acts of the present King's reign are the treaty of Tientsin, by which China ceded definitely the island of Macao; the decree of April, 1863, by which passports were suppressed both for natives and foreigners; and, lastly, the King's adhesion to the European Congress, proposed by France, November 18, 1863.

THE EMPEROR AND EMPRESS OF AUSTRIA.

(See page 15.)

Charles Francis Joseph, Emperor of Austria and King of Hungary, was born August 18, 1830. He was not the direct heir to the throne, but was called to reign when eighteen years of age, on the abdication of his uncle Ferdinand, and after his father, the Archduke Francis, had refused to succeed. He found, from the commencement of his reign, his position a most difficult one to fill. Hungary refused to recognise him as sovereign, and formed herself into a republic, under the leadership of Kossuth. It was only through the armed intervention of Russia that the Emperor's power was established, and it required all the skill of the veteran general Radetsky to keep a firm hold on the Italian possessions. Assisted by various able statesmen, he centralised the government of his heterogeneous nationalities at Vienna, and commenced a series of reforms. On the 24th of April, 1854, the Emperor married Princess Elizabeth Amelia Eugenie, one of the beautiful daughters of Duke Maximilian of Bavaria. DEJATCH ALAMAYAHU, PRINCE OF ABYSSINIA.

(See page 22)

When Dr. Johnson's charming story of "Rasselas, Prince of Abyssinia," was in the ascendant, we little expected to witness the day when a real Rasselas—a living Abyssinian prince—would find a home or an asylum upon our shores. This, however, has come to pass, and the fortunes (or misfortunes) of war have brought among us the youthful Abyssinian prince whose portrait from the life is here presented to our readers.

Theodore, the father of the young prince, was a man of humble origin, though related to a provincial governor, by whom he was recommended to the vizier of the kingdom. This vizier was Ras Ali, in whose favour Kassa, for such was Theodore's original name, rose so rapidly that he obtained one of his daughters in marriage. Some time after he rebelled against his father-in-law, and defeated him in battle, as he did also the Prince of Tigré. Two days only after defeating this last, he was anointed and crowned as Theodore II., King of the Kings of Ethiopia. His subsequent career it is not needful for us to pursue. At his death, at the fall of Magdala, the young prince and the queen his mother passed into the keeping of the British forces. The queen was called Toronech, which means "You are pure," and was a daughter of Oubie, the Prince of Tigré, whom, as we have just said, Theodore overcame in battle. This woman was of a proud and haughty spirit, and looked down upon her husband as an upstart. No wonder that the marriage was an unhappy one. After the birth of her only son, Alamayahu, she lived apart from her husband, and resided with her little boy at Magdala. It is hoped, but not certain, that the King and Queen were reconciled at last, as it is known they spent some time together just before his tragic end. The unfortunate lady did not long survive her husband. She was already doomed, a victim to consumption, and died on the march towards the coast, leaving her little son in charge of Capt. Speedy. Her Majesty was a lady-like woman of about six-and-twenty, with very fair complexion, full eyes, fine aquiline nose, and beautiful hand. What most attracted attention, however, was her magnificent hair, arranged in neat plaits, and, instead of being tied in a knot at the nape of the neck, as is the fashion of the country, it fell in a cascade of glossy ringlets over her shoulders. Her usual dress was the simple white cotton dress of the country, gathered in a fold at the waist by a band.

The name of the child, Alamayahu, means, "I have seen the world," and was the endearing appellation given him by his mother, to whom he was all the world. The child would receive a different name at his baptism; this being given in accordance with the custom of Abyssinian mothers, who confer some pet name upon their children, by which they are afterwards better known than by their baptismal names. The other word "Dejatch" is frequently prefixed to the names of chiefs and princes, and is a term denoting his dignity. The young Alamayahu arrived in England on Tuesday, July 14, on board Her Majesty's ship Urgent, which reached Plymouth that day. He was in charge of his guardian, Capt. Speedy, to whom he is exceedingly attached. He was also attended by an Abyssinian man-servant, Shellika Kassa. On landing, the prince was taken to breakfast with some principal persons, and then to see the dockyard. The child appeared to be delighted with his new country, exclaiming, "O, this beautiful country! I shall never go back." They say, too, that when the man-servant, an intelligent man, went over the arsenal, he sorrowfully observed, "Theodore should have seen!" We must not forget that there was a third stranger on board the ship, in the person of a little Abyssinian slave girl, who was a *protégée* of Sir Robert (now Lord) Napier's. From Plymouth the Prince, with Lord Napier and Capt. Speedy, travelled to Portsmouth, and on to Osborne, where they were introduced to the Queen, and had the honour of dining with her. This was on the 16th of July, and the next day the party visited Her Majesty again. Our kind-hearted Queen treated the little orphan with characteristic affection, and seemed much interested in him. It was originally reported that he was to proceed from Abyssinia to Bombay, but eventually it was resolved that he should come to England, where he will be carefully educated under the patronage or recognition of Her Majesty, and will, therefore, receive all that consideration and attention which his birth and misfortunes claim for him. In person he is rather tall of his age, slender, and well-proportioned. There is a childish expression in his countenance, and a certain amount of vivacity. His complexion is dark, not black, but tawny. His lips are somewhat thick, and his ears large, but they look larger than they are, perhaps in consequence of the extremely little hair upon his head. Our portrait excellently renders his photographic likeness, and will show what his features are better than any verbal description can do.

The throne of Abyssinia is an ancient one, and to that throne Prince Alamayahu is the lawful heir, though he may not sit upon it.

THE PRINCE IMPERIAL OF FRANCE.

(See page 23)

The Prince Imperial of France, Napoleon Eugène Louis Jean Joseph, is the only son of the reigning Emperor of the French, by the Empress Marie Eugénie, daughter of the Count Manuel de Montijo. He was born in Paris on the 16th of March, 1856. For the past three years he has joined in several public ceremonials, sometimes taking part with his parents, and sometimes conducting them alone. On every occasion he has acquitted himself highly to the satisfaction of all concerned. He is an intelligent boy, carefully trained in all manly exercises, and has the advantage of being educated by cultivated minds and men of distinction. His manners are easy and unaffected, full of child-like grace, never shy, but by no means forward; consequently he rarely fails to win the hearts of those who come in contact with him. "The child is father to the man," so runs the old adage; and if this should prove true in the present instance, the Prince Imperial of France bids fair to add to, rather than detract from, the historic name he bears. Of this Prince's future who can predict?

MLLE. CHRISTINA NILSSON.

(See page 26)

All lovers of music who have frequented London during the two past seasons are now familiar with the name of the Northern nightingale, the fair Swedish songstress who captivated so many audiences by her fascinating style, her genius, and by the artistic rendering of the music she sang.

Christina Nilsson was born in the south of Sweden, on the 20th of August, 1843. Her parents were peasants, and, to use her own words, she was brought up "surrounded by the ceaseless wants that wait upon poverty." At a very early period of her life, Mlle. Nilsson gave indications of the musical talents with which she is gifted. She played the violin when a mere child with great taste and feeling, and also acquired a certain proficiency on the flute without any regular instruction in either instrument.

When she was fourteen years of age, accompanied by her brother, she made a tour, and earned a considerable sum of money, as both her vocal and instrumental performances were even then remarkable. It was in June, 1858, that her fine voice attracted the attention of M. Torneljelm, with whom subsequently an arrangement was made for her instruction in several branches of education. She received gratuitous lessons in music and singing from Mlle. Waleruis, who always prophesied a brilliant future for her young pupil. Her progress in her art, and also in the acquirement of modern languages, was most rapid; she was soon removed to Gothenburg, and on her return to Stockholm, eighteen months afterwards, she became a pupil of M. Berward, the Director of Concerts in that city. In 1860 she sang before the Swedish royal family, who were so pleased with her performance, that the following day she was sent for to the palace to sing privately to their Majesties.

Mlle. Nilsson's musical education was completed in Paris, in which city she made her *début*, and with such marked success that she soon obtained an engagement at Her Majesty's Theatre for the season of 1867—with what results the music-loving, opera and concert going world now knows. Her voice is a pure soprano, her style of singing is full of sentiment, and her treatment of the various characters she impersonates is characterised by a high artistic feeling; she is an artist in the highest sense of the term. In person Mlle. Nilsson is of the true Northern type—fair, with blue eyes and flaxen hair; she is graceful in bearing, and her countenance, particularly when she sings, beams with expression.

GUSTAVE DORE.

(See page 27)

The name of Gustave Doré is known wherever books are read and gems of literature prized. His productions are ubiquitous, the natural consequence of a prodigal genius and of a versatility that is seemingly exhaustless. As a book illustrator he has no living competitor.

Paul Gustave Doré was born at Strasburg, in January, 1832. When he was thirteen he accompanied his father to Paris, where he remained to complete his studies at the Charlemagne Lyceum, and in 1848 he commenced contributing comic sketches to the *Journal pour Rire*. In the same year he also sent drawings to the Salon. "Les Pins Sauvages," "Le Lendemain de l'Orage," "Les deux Meres," "La Prairie," were the first compositions he publicly exhibited; but it was not until the Salon of 1857, at which he produced his "Battle of Inkerman," that his works obtained a mention. Since that year he has contributed several important pictures yearly to the Salon, besides which he has illustrated books and journals in a most profuse manner, showing a versatility of talent and prolific genius, such powers of work and industry, as few artists in any age have ever been gifted with. Besides covering the walls of his studios, which are situated in various parts of Paris, as if by magic, with paintings of every style and manner and of every size, from tiny landscapes and home scenes to historical paintings of colossal dimensions, all of which sell as quickly as painted, and are replaced as quickly as sold, he has illustrated several immortal works in a style that places him far beyond any living competitors. His efforts and industry appear gigantic when we commence from the year 1854 with "Rabelais," and enumerate all that he has done. "The Wandering Jew," Balzac's "Contes Drolatiques," the "Contes" de Perrault, Montaigne's "Essays," "Voyage to the Pyrenees," Dante's "Inferno," "Don Quixote," "The Holy Bible," Milton's "Paradise Lost," Chateaubriand's "Atala," "The History of Croquemitaine," "The Adventures of Munchausen," Tennyson's "Vivien" and "Guinevere," La Fontaine's Fables, "Fairy Realms," have succeeded each other with such rapidity, that before time has allowed us to grasp one set of pictures, another set is placed before us. There are abundant richness of fancy and marks of genius in all he produces; we can compare him with no living artist, and in the romantic school he is equally above all those that have gone before him. Critics contend whether his masterpiece is "Don Quixote" or "Dante." In our opinion the latter work should take the precedence; the grasp of imagination, the vigorous power of depicting multitude and space, air, light and darkness, the grouping of figures, the gloom and brightness, the art of bringing those wild, heart-rending scenes where innumerable souls are driven before "the stormy blast of hell," so vividly before the mind's eye, leave an overpowering sense of the artist's transcendent merit, and create impressions that are ineffaceable.

Housekeeper.

Ramequins.

FRIED RAMEQUINS.—There is no mode in which cheese is presented at table so common as in ramequins, which may be varied according to taste. When fried, they are generally prepared by putting into a stewpan a ¼lb. of rich cheese sliced thin, and 2oz. of butter. Shake the pan round till they are melted and mixed; then add the frothed whites of three eggs, beat all together; put into the frying pan small squares of bread on buttered paper; pour the mixture upon the pieces of bread, fry them in butter for five minutes, drain them on a napkin, brown lightly with a salamander, and serve hot. *Ramequins in Cases.*—Scrape a ¼lb. each of Parmesan and Gruyère, Cheshire and Gloucester, or any two kinds of cheese of different flavour, and pound in a mortar with ¼lb. of fresh butter, the crumbs of a French roll soaked ten minutes in boiling cream, and the yolks of four eggs; add by degrees a glass of sherry or Madeira, and when smooth, beat up well with the frothed whites of the eggs; then half fill the small paper pans, and bake in a Dutch oven for a quarter of an hour. Serve immediately, quite hot. *Ramequins of Pastry.*—Make a light puff paste with cream and butter. Roll it out quite thin, and spread over it half the weight of the paste in grated Parmesan or any fine cheese. Fold and roll the paste twice, that the cheese may be thoroughly incorporated with it; then roll out half an inch thick, cut in rounds with a paste-cutter, brush them over with beaten eggs, and bake for a quarter of an hour. Serve hot. *Ramequins with Anchovy.*—Put into a stewpan ¼lb. of grated mild rich cheese, ¼lb. of butter, an anchovy cut very small, and a glass of white wine; stir in, as it simmers, two tablespoonfuls of flour, or as much as will form a paste; then transfer the paste to another stewpan, and beat up with it as many beaten eggs as the paste will imbibe, without becoming too thin; then mould the paste into the form of small eggs, brush over with egg, and bake a quarter of an hour, to be a golden brown. These ought to be light and agreeable ramequins.

Lemon Wine.

MIX well together the rind of six and the juice of eighteen lemons, one gallon of whisky, six quarts of cold water, 3lb. of loaf sugar, a stick of cinnamon, three dozen cloves, 2oz. of bitter almonds, ¼lb. of burnt sugar; when the sugar is well dissolved, add three quarts of boiling new milk. Let it stand for two hours, then strain through a flannel bag until quite clear. This quantity will fill eighteen quart bottles.

To pickle Walnuts.

GATHER them when dry; take a large needle and perforate them in several places. Strew the bottom of a jar with best powdered ginger, crushed cloves, and salt, then put in some walnuts; then again salt, powdered ginger, crushed cloves, and so on, alternately, till the jar is rather more than three-quarters filed, placing plenty of salt and spices at the top; quite fill the jar with the best vinegar, tie a bladder over it, and put it by till November or December; then pour the liquor off, and this boiled up with spices, anchovies, shalots, and plenty of bay leaves, adding cayenne pepper and more salt, will form a most excellent walnut catsup for fish or stakes; then put fresh vinegar, spices, and bay leaves to the walnuts, fill the jar, and in a fortnight they will be fit to eat, and are far superior to those that are soaked in salt and water, as they are usually done, besides gaining a most excellent fish sauce from the first vinegar.

Lettuce Ginger.

THE following recipe, if exactly followed, can scarcely be distinguished from Jamaca ginger. Peel off the outer coat of the tender stalks of lettuces running to seed, cut in 1in. or 2in. lengths; throw it into water; for each 1lb. throw in a teaspoonful of cayenne pepper, and a little salt. Let it stand two days. Strain and wash in clean water. Clarify an equal weight of fine loaf sugar. Take 1½oz. of good ginger for every 1lb.; soak it in boiling water and slice it; boil with the sugar fifteen minutes. Pour it boiling hot over the lettuce, which must be well drained. Keep back the ginger, which boil with the syrup three times (at intervals of two or three days), and pour boiling hot on the lettuce. At the last boiling add the juice of two or three lemons. If the syrup is allowed to cool, it spoils the colour of the ginger.

Apple Ginger.

To 4lb. of apples have 4lb. of sugar, one quart of water, and 2oz. of best essence of ginger. First pare the fruit, cutting out every particle of core; then shape it to resemble the small kind of preserved ginger. Boil the sugar and water nearly twenty-five minutes, until it is a nice syrup, then put in the apple; be sure and not stir it much. Add the essence of ginger. If 2oz. be insufficient, add more. It will take nearly an hour to boil, until it becomes yellow and transparent. There will be some pieces that will not clear; put them by themselves, as they spoil the look of the rest. It will require skimming. American or Ribstone apples are the best to use.

Currant Jelly.

PICK fine, red, but long ripe currants from the stems; bruise them and strain the juice from a quart at a time through a thin muslin; wring it gently, to get all the liquid; put 1lb. of white sugar to each pound of juice; stir it until it is all dissolved; set it over a gentle fire; let it become hot, and boil for fifteen minutes; then try it by taking a spoonful into a saucer; when cold, if it is not quite firm enough, boil it for a few minutes longer.

Red, White, or Black Currant Jam.

STRIP your currants and put them into your pan, with ¾lb. of sugar to 1lb. of fruit; add your sugar after your fruit has boiled a few minutes; boil altogether, mashing your fruit with a wooden spoon; boil all gently for half an hour, then fill your jars.

Currant Wine.

DISSOLVE 8lb. of sugar or honey in fifteen gallons of boiling water, to which, when clarified, add the juice of 8lb. of red or white currants; then ferment for twenty-four hours; to every two gallons add 2lb. of sugar, and clarify with the whites of eggs.

Currant and Gooseberry Compote.

PUT one quart of red currant juice to 5lb. of loaf sugar; set it on the fire, and when the sugar is dissolved put in 8lb. of red, rough, ripe gooseberries, let them boil half an hour, then put them into an earthen pan, and leave them to stand for two days; then boil them again until they look clear; put them into pots and let them stand a week to dry a little at the top, then cover them with brandy papers.

Bavarian Mode of preserving Rennet.

A PRACTICAL American dairy farmer recommends strongly the Bavarian mode of preserving rennet. He writes as follows:—"In saving rennet we are of the opinion that the Bavarian method will prove of great value to our dairymen. We have adopted this method of curing in our own dairy, and we find it not only of less trouble, but the skins are more perfectly cured and more easily packed away than when salted in the usual way. The curing consists in simply turning out the contents of the skin, wiping off all specks or dirt with a cloth, and then blowing up the skins or filling them with air like a bladder. The ends are tied with a string, and little salt applied to this part only. The skins treated in this way will soon dry out perfectly, and are as sweet and clean as can be desired. If there is any truth in the assumption that salt neutralises the action of the rennet, then rennets treated on the Bavarian plan must be much more effective than those cured in the old way. Again, when the rennets on the Bavarian plan are dry, the air may be expelled and the skins packed away in a small space, and can be kept clear of insects. The trouble with salted rennets is that the salt in wet weather accumulates dampness, and if particular care is not taken to keep them in a dry place, they drip, and consequently lose strength. Rennets preserved on the Bavarian plan of curing are said to be stronger as well as sweeter than any other."

Fish—Normandy Fashion.

TAKE 5lb. of fish of various kinds, clear of bone and skin; put 5oz. of butter into an earthenware dish, and set it on the coals; when the butter is melted add to it from the dredger a dessert spoon of flour, stirring the while; then a pinch of grated nutmeg, salt, pepper—black and red, but very little of the latter—a dessert spoon of chopped parsley, and a tablespoonful of mushroom catsup; then put in your fish, cut in pieces as large as your two fingers; pour on the whole a glass of sherry or Madeira, and a small wineglass of good French brandy. Cover your dish; put dough all around the edge of the cover to keep in the steam, and then put the dish into a moderate oven. When done, serve in the dish in which it was cooked.

Fattening Spring Chickens.

THE following plan for fattening spring chickens is the most successful of any in England: "The chickens designed for being fattened should be well and liberally fed from the earliest period. It is a mistake to imagine that they can be kept low when young, and got up to a great size by liberal feeding when put up to fatten. The fowls so treated are stunted in their growth, the bony framework becomes set or fixed, and they never afterwards attain a large size; whereas with liberal feeding they become fit for the fatting-coop at the age of about four months in summer, and from five or six in winter. It cannot be too strongly impressed upon those who are desirous of obtaining chickens of first-rate quality, that fowls are only in perfection for the table before they have attained their complete development. The male birds should be put up when 'their tails begin to turn,' namely, just when the two long sickle-feathers or streamers begin to top the straight feathers of the tail; and the pullets before they have laid. The fatting-coops should stand on legs to raise them a convenient height from the ground, so that the dung may be removed daily; or each may have a shallow drawer underneath, which is daily filled with fresh earth—an admirable plan, which we first saw used at the Clumber aviaries. The most scrupulous cleanliness must be observed, otherwise disease will be produced. The fowls when first cooped had better be left some hours without food. By this time they will have become very hungry, and will eat with avidity; whereas, if food is placed before them on their first imprisonment, they often refuse it for some time. The best food for them is coarse oatmeal mixed with scalding milk or water; barley-meal is good, but not equal in its fattening properties to oatmeal. This is evident from the fact that the latter contains 6lb. of fat in every hundred, the former only 2lb. The birds should be fed at regular intervals. The first meal should be given very early—at five o'clock in summer, at daybreak in winter; the second at noon; the last just before dusk. Discretion should be exercised in the quantity given. It should be fully as much as the fowls can eat, and no more. Should any be left from one meal to another, it should be thrown out to the other fowls, the trough scalded out, and fresh food given. Great care should be taken to prevent the troughs

Digitized by Google

becoming sour. In order to do this they should frequently be scalded, and dried in the sun. On this system of feeding, a fowl will become perfectly fatted in from a fortnight to three weeks at the outside. When fatted it should be immediately killed; for not only is it unprofitable to keep it any longer, but it deteriorates very rapidly, losing weight and becoming hard and coarse in the flesh. Before being killed, the fowls should be kept for fifteen or sixteen hours without food or water. If this precaution is not taken (and it is unfortunately often neglected), the food in the crop and intestines ferments. When this is the case in summer, the fowl in a few hours turns green, and the value is much lessened."

Preservation of Ice.

THE three great principles on which the preservation of ice depends are:—1. The surrounding it with the most perfect non-conductors of heat. 2. The inclosing it, so that there can be no rapid movement of air around it. 3. The removal of the water caused by its melting.

No refrigerator or ice box will prevent or even retard the melting of ice which does not combine the following conditions:—1. It must have double sides, bottom, and lid, with the space between the two casings filled by some non-conducting substance capable of being closely packed, in order to prevent the action of the external temperature. 2. The inner lid or cover must be practically, if not hermetically, air tight, in furtherance of the same result. If external air enters, it will bring its own temperature with it. 3. There must be a drainage pipe at bottom to carry off instantaneously every drop of water formed by the melting of the ice, and this pipe must either be fitted with a "trap" or curved in such a way as to prevent air from coming in where the water goes out.

Ice has two "natural enemies," warm air and water, but the latter is by far the more deadly. Water at 40 deg. will melt ice with ten times the rapidity of air at 80 deg. Dry sawdust is not a bad protector, and for ice in large quantities is the best; but for blocks not exceeding 50lb. "there is nothing like flannel."

Let us endeavour to carry out these principles into practice, and show how a perfectly efficient refrigerator, that will keep ice for weeks, can be made at a merely nominal cost. Take a stout wooden tub of the size required, place a grating of crossed sticks at the bottom, so that the block of ice may rest on them, or if rough ice is used let it be placed in a basket on the crossed sticks; have a wooden spigot placed in the side of the tub, as near the bottom as possible; this is to draw off the water from the melting ice, and the tub should be slightly inclined, so that the water drains towards the spigot. A metal tap should not be used, as it would conduct heat to the interior. The sides and bottom of the tub should be encased in as many folds of old blanket as can be wrapped around, and these should be so closely arranged that there is no opening by which the hot external atmosphere can reach either the sides or bottom of the tub. A wooden lid should fit down about 2in. into the inside of the tub, and above it should be a layer or cushion of many thicknesses of old blanket sewn together; and if a second lid is used to press this down on the first, and assist in closing the opening, so much the better.

As thus constructed, the tub will keep ice for many days, and meat, butter, drinks, wines, &c., may be put into this rough but perfectly efficient ice chest to cool. Its efficacy will of course depend on the number of folds of blanket with which it is surrounded, and the manner in which they are applied, so as to prevent the access of the warm external air to the sides or bottom of the tub. In places where ice is exceedingly valuable, this simple contrivance may be made still more effective by constructing a cover of many layers of old blanket, stitched together so as to form a "cosy" such as used for teapots, only sufficiently large to cover the tub, and to rest closely on the ground all round. An ice tub made in this manner will not cost more than a few shillings, and may be made by anyone possessed of the faculty of construction, almost without any expense except that of time and labour.

To salt Butter for Winter Use.

BUTTER intended to be kept must have the buttermilk thoroughly removed. This, experience has proved, can be far more efficiently done by kneading immediately after it is removed from the churn than by washing, the milk being pressed out and mopped up with a canvas cloth, which is constantly wrung out dry. After kneading, the butter, if intended to be used fresh, should have 3oz. or 4oz. of salt mixed with every 14lb. For keeping, the butter should be taken from the churn, and well kneaded immediately, the milk being squeezed out thoroughly; half the allowed quantity of salt should then be added, and well mixed up with the butter; by the next morning this will have extracted much of the moisture and become brine. The butter should then be again worked up, the whole of the liquid expelled, and the remainder of the salt added. It should then be potted, and kept in a dry, cool store. The quantity of salt usually employed is ½lb. to every 14lb. of butter.

It cannot be too strongly impressed on the dairymaid that the keeping of the butter in a good state is entirely dependent on the kneading out of the buttermilk. The more completely this is done, the better and longer will the butter keep. Butter should be potted for winter use late in August or early in September, before the leaves fall, as if these are eaten by the cows they are apt to give the butter a bitter taste. Some writers recommend that the butter should be put into pots in layers 2in. thick, with a layer of salt between each layer of butter, which will cause the latter to separate when cut out, and which will not require so much salt to be added to the mess. Butter potted in this way should be cut out in the layers, and not dug down from the top to the bottom.

Instead of salt some use a mixture of salt, sugar, and saltpetre; but we prefer good salt, which is quite sufficient if the milk is properly kneaded out. Those who like to try the mixture may use ½lb. of salt, 2oz. of saltpetre, and 2oz. of sugar to every 16lb of butter.

A Cheap Baked Custard.

BOIL two pints of milk with the rind of a small lemon, and a stick of cinnamon, and 4oz. of sugar. Let it cool, and strain it; beat the yolks of 8 eggs, and mix in the milk gradually; have shallow tart dishes lined with paste; pour in the custard, grate a little nutmeg over, and put into the oven immediately. Bake in a slow oven half an hour. Serve it cold.

A Good Baked Custard.

BOIL two pints of good new milk, with 4oz. of powdered sugar, a teaspoonful of salt, the rind of a small lemon, and a teaspoonful of ratafia. Beat well the yolks of 8 eggs, and stir into them a quarter of a pint of cream; stir round rapidly a few minutes, then pour the whole into a deep dish or mould. Bake for ten minutes. Leave it to grow cold, then turn out, and serve with jam round it.

Should you require one of a richer character it may be made as follows: Boil one pint of new milk and a pint of cream, with the pared rind of half a lemon and a little grated nutmeg; beat 8 eggs with a wineglass of brandy and sugar to taste. Mix all together thoroughly, and bake in a pie-dish lined with puff paste for half an hour.

Preservation of Seasoning Herbs.

PARSLEY.

THIS herb under ordinary treatment is a biennial. After sowing it takes a long time to germinate, the plants rarely showing for six or seven weeks after the seed has been committed to the ground. When well grown, the plain-leaved plants should be thinned out, leaving only the double or curled-leaved variety. When required for use the leaves of parsley are generally chopped small for stuffing forcemeat balls, parsley and butter, &c. This chopping is a troublesome process, and it takes up the cook's time often when most required; and, if the parsley is not well and finely chopped, the presence of hard stalks in the food is very disagreeable. Now, by the plan adopted in our own kitchen, parsley is ready for use at all times of the year, without the trouble of chopping, is perfectly free from stalks, of a beautiful bright green colour, and extremely finely divided. In fact, except for fried parsley, for garnishing, or for use in a bunch to flavour soup, &c., fresh parsley is never used in our kitchen. The plan adopted is as follows: When the parsley is in its prime it is carefully cut, on a dry sunny day, the dead and dirty leaves rejected, and the remainder dried rapidly before a clear, bright fire, in small portions at a time; or it may be put in the side oven if the heat is very mild, and the door left wide open to favour the escape of moisture, and so facilitate the rapid drying of the herb. On exposure to the heat the leaves immediately become limp and flaccid; in this state they should be turned over till they become quite dry and brittle, great care being taken they are not heated to such a degree as to become brown. When quite dry they should be, whilst still warm, rubbed to powder between the hands, sifted through a very coarse sieve, and the fine powder closely corked down in small bottles. As thus prepared it is a green powder, which, when wetted, retains all the beautiful bright green colour of the fresh leaves, and has not lost one particle of its flavour.

Do you want to make parsley and butter? add a pinch to the milk when adding the butter, and you have it. Are you making an *omelet aux fines herbes*? put as much as will lie on a shilling with your eggs and milk or cream, as you beat them up, and you will have one in perfection. For making stuffing or forcemeat balls you have only to add the powder to the bread crumb, and you will have as bright a green stuffing as could be made with the fresh leaves; in fact, there is no herb that dries so perfectly as parsley, and none that loses so little of its flavour during the process, provided it is properly done. Many persons may think that drying in the sun is preferable, but this is a great mistake. The sun alters the colour, and from the length of time the parsley takes to dry, the flavour is impaired; in fact, so injurious is sunlight to dried vegetables that it is desirable to paste some dark paper round the bottles they are kept in, unless these are placed in a dark cupboard.

MINT.

Mint does not dry as well as parsley; it becomes darker in colour, and alters its flavour considerably. Still dried mint is requisite for pea-soup and for other flavouring.

OTHER HERBS,

Such as *thyme*, *marjoram*, *sage*, *lemon thyme*, *savory*, &c., are generally dried in bundles in the sun, and then tied up to the ceiling. The plan is a very bad one every way. Herbs, as we have stated, lose much of their flavour by the intense power of the sun; then when the bundles are tied up they get full of dust and dirt, and the leaves drop off till little more than a bundle of sticks remains. The best plan to be pursued is to dry them quickly before the fire, taking especial care not to scorch them: then, when quite dry, to rub off the leaves with the hands and keep them in tightly-corked bottles. By this means their flavour is prevented from escaping, and they are always ready for use free from dust and dirt.—*Celery* for flavouring cannot be preserved this way, but in this plant the oil that gives the flavour is stored up in cells in the seeds, so that a pinch of these added to soup during the progress of making gives all the flavour required. Or, if preferred, the bruised seeds may be steeped in brandy, and a few drops of the strong essence thus obtained used as flavouring.—*Tarragon*, like shallots and chillies, may have the flavour extracted by steeping in vinegar.

ACTING CHARADE.

SHOWER.

PERSONÆ.

Rev. CHARLES MIMKINS	Miss BRIGGS
Hon. Miss THISTLETHWAITE	Manservant.

SCENE — A drawing-room Miss BRIGGS (engaged with worsted work, sitting on the sofa); Miss THISTLETHWAITE (in walking costume, a large cotton umbrella in her hand).

Miss Briggs.—Why, Alicia dear, I have only just discovered that it is raining, or I should have sent John to the church door with an umbrella for you.

Miss Thistlethwaite (*dreamily*).—An umbrella, dear? Oh, no, thank you—a—I have one already, you see. (*Throws herself into a chair.*)

Miss Briggs (*laughing*).—Ha, ha, ha! Yes, dear, it is visible enough, certainly. What a specimen it is!

Miss Thistlethwaite (*indignantly*).—Specimen, indeed! (*Smoothing it tenderly.*) It is, I am sure, the very best—a—oh, I see it *is* cotton. It was lent to me in the kindest manner (*sighs deeply*) by, I am sure, the very best of men.

Miss Briggs.—Dear me, my love, I am really quite curious! Who *can* be the owner of that adorable umbrella? Not—surely not the Reverend Charley Mimkins? Now do, for gracious sake, tell me all about it.

Miss Thistlethwaite.—Really, Maria, you *are* so silly. I wish you would not always be so ridiculous. You make fun of everything one says.

Miss Briggs.—Well, there then, I won't; only do tell me everything from beginning to end. How on earth such a very shy man ever took courage to make such advances I can't make out.

Miss Thistlethwaite.—Such advances? Oh, you mean the umbrella. Well, I will tell you how the whole thing occurred. Just as I was about to leave the church it came down in a rather sharp shower of rain; and I was obliged to wait a little in hopes of its clearing. Well, while I was standing in the porch, I heard the church door shut, and, turning round, I saw Mr Mimkins—his face crimson with emotion—standing close behind me. In the most graceful manner he presented his umbrella, observing that I had none, and that he was sadly afraid I might get wet. I blushed and stammered, and told him what I thought—that his precious health was of far greater importance than that of a foolish girl like me—and I positively refused to deprive him of it; and finally it ended in my finding myself on his arm, and under it we walked through the shower to the garden gate—he holding it over me. Oh, Maria; the most enchanting walk I ever took! You cannot imagine what it was to find myself for the first time, as it were, under one roof with him alone! (*Sighs audibly.*)

Miss Briggs.—Why, Alicia, this is beyond a joke. My dear girl, there can be no doubt that you are downright in love with the man!

Miss Thistlethwaite.—Well, dearest Maria, I cannot deny that ever since I first sat under that truly excellent man, I have always felt the profoundest interest in him.

Miss Briggs.—Why, he must be sixty if he's a day.

Miss Thistlethwaite.—I should feel it all the greater honour if he could stoop to think of such a child as me.

Miss Briggs.—Good gracious! and then he is so frightfully shy. I don't really believe he has ever ventured to speak to you before! He always reminds me somehow of Dominie Sampson, he is so awfully stiff and solemn. And then he stammers too occasionally, in the most frightful manner!

Miss Thistlethwaite.—Ah, Maria, this is the only thing that gives me any hope, for I am convinced that this only occurs when his feelings overpower him too much for speech.

Miss Briggs.—I don't really believe that, with the exception of his paltry stipend, he has a farthing in the world.

Miss Thistlethwaite.—He is rich in every quality that I care for, Maria.

Miss Briggs.—Nothing but a country curate.

Miss Thistlethwaite.—Livings are easily found, my love.

Miss Briggs.—Only fancy, if the Hon. Alicia Thistlethwaite should end by marrying ——

Miss Thistlethwaite (*rising*).—The most honourable, gentlemanlike, and adorable creature in the world! Ah, my dear Maria! volatile as you now are, you will one day know how impossible it is to change when once the heart is fixed. As for *money*, I have, thank goodness, enough for both! (*Opens the umbrella, and stands with it over her head. At this instant the door opens behind her without her perceiving it, and the footman appears showing in Mr. Mimkins; but before he can announce him Miss Thistlethwaite continues her speech.*) Ah, Charley Mimkins! willingly would I follow you round the world, though this were the only roof you had to shelter me! (*Gazes ecstatically at the umbrella.*)

Miss Briggs (*who has vainly made signs at her to stop*).—My dear Alicia! Good gracious! What a sensational crisis! I think the very best thing I can do is to take myself off. [*Exit.*

Manservant.—Mr. Mimkins, madam.

[*Miss Thistlethwaite starts round, drops the umbrella, and sinks into the chair with a faint scream.*

Enter Mr. MIMKINS.

Mr. Mimkins (*stands before her, nervously playing with his hat; drops first one glove, then the other, and finally his hat falls and rolls away. Gazes at ceiling as if searching for an idea*).—Lady! like a perennial shower of rain upon a parched land, your words have fallen unwittingly upon my ear. Dare I conceive it possible those words were not uttered entirely in jest?

Miss Thistlethwaite.—In jest! Oh, Mr. Mimkins, I am indeed ashamed of myself! If I have revealed to you the secret of my heart, I need not say how inadvertently it was. I had not the smallest idea any one was near but my friend Maria. Oh, dear! what *must* you think of my folly and indiscretion?

Mr. Mimkins (*kneels slowly at her feet, and lays his hand upon his heart*)—Miss This—this—thistlethwaite! Ali—li—li—cia, if I may so call you! had it not been for the sweet condescension you manifested while accompanying me from church this morning under this umbrella (*presses it fervently to his bosom*), I should never have ventured to raise my eyes to an individual in every respect so far above me. But, ah, sweetest creature! if indeed that proud and lovely head will stoop to the shelter of my humble roof (*rises and opens wide the umbrella*), you will confer indeed an incomparable blessing upon this true and faithful heart.

Miss Thistlethwaite (*rises and takes his arm*).—Ah, Mr Mimkins, I can but repeat what I said to my friend just now. I would willingly share your roof, though it were no larger than the shelter you gave me this morning under this delightful umbrella.

Enter Miss BRIGGS.

Miss Briggs—Any admittance, young people? Ah! I need not ask any questions, I see; so I may as well congratulate you at once, which I do (*pressing Miss Thistlethwaite's hand*) with all my heart.

[*Turns confidentially to audience.*

Really, they do look so frightfully happy that I have quite made up my mind to *one* thing. I shall always go to church without my umbrella *in future*, in hopes of a shower bringing me a caro sposo as well. May I venture to recommend all young ladies here present to follow that excellent example.

[*Mimkins and Miss T. remain talking confidentially under the umbrella. Miss Briggs points to them, making a low curtsey. Curtain falls.*

BATH.

Miss PRIM, Miss WEASEL, Mrs GENERAL BROWN, Miss CLUTTERBUCK, playing at whist.

(In order to obtain the best effect in this scene, the dresses should be of the last century.)

Miss Prim.—The odd trick is ours, I think?

Mrs Brown.—Belongs to us, I fancy, Madam. (*Aside*) Old cheat!

Miss Prim.—Well, I have had enough whist for to-night.

Mrs Brown.—Double, treble, and the rub! I think we've done pretty well, eh, Mrs Clutterbuck? Double, treble, and the rub!

Miss Weasel.—And what do you think of our beautiful city, Miss Prim?

Miss Prim.—Well, it's all very well in its way, Miss Weasel; but give *me* Cheltenham.

Mrs Brown.—Cheltenham! Why, my dear Miss Prim, you surely can't compare the two?

Miss Prim.—No, ma'am, you're quite right, I certainly can't. He, he, he! (*Fans herself.*)

Mrs Brown. Why, my dear madam, look at our public gardens! What have you in Cheltenham to compare to them?

Miss Prim.—Dear me! I must say I consider our elegant promenade at Cheltenham is worth a thousand of your public gardens.

Mrs Brown, Mrs Clutterbuck, and *Miss Weasel.*—Is it *possible?*

Mrs Brown.—But, my dear Miss Prim, look at Milsom-street. What, have you in Cheltenham to compare to *that?*

Miss Prim.—Why, I would back our shops at Cheltenham against yours any day. I consider them *vastly* superior.

Mrs Brown, Mrs Clutterbuck, and *Miss Weasel* (*all together*).—Is it *possible?*

Mrs Brown.—Well, then, Miss Prim, our pump room! our world-renowned pump room! What do you say to that?

Miss Prim.—The pump room itself is all very well, certainly; but—ahem!

Mrs Brown,—*Well,* my dear madam? *Well?*

Miss Prim.—The society, ma'am—the *society* is so vastly inferior.

Mrs Brown.—Inferior, madam! in what way, may I ask?

Miss Prim.—The society at Cheltenham is so very much more select and genteel, my dear madam!

Mrs Brown, Mrs Clutterbuck, and Miss Weasel.—Indeed!

Mrs Brown.—Humph! Perhaps I may never have been so fortunate as to meet with any very first-rate specimens from that mighty genteel town!

Prim.—Oh! as to that, ma'am, I've no doubt you wouldn't be at all capable of appreciating them if you had!

Mrs Brown (*rises in a dignified manner*).—Mrs Clutterbuck, ma'am, will you allow me to ring for a sedan? (*Turns her back upon Miss Prim, and*

Digitized by Google

rings the bell.) And the next time you invite me to tea and cards, my dear madam, I must request you will only invite really genteel people to meet me. Cheltenham gentility, miss! (*To Prim.*) I wish you a very good evening. (*Curtseys ironically.*)

Prim.—Old cat! (*Throws the cards at her.*) [*Curtain falls.*

SHOWER-BATH.

PERSONÆ.

Miss JEMIMA GRIZZLE (elderly spinster) | JULIA | Capt. SPOONSBY HAMMOND (lady's maid).

SCENE — A passage or corridor, with doors opening at right and left Windows looking into a garden set. At one end a large shower-bath, with curtains.

Enter, at L. H, HAMMOND, a letter in her hand.

Hammond.—No—not here! Why, where can my young lady be? Out walking, I shouldn't wonder, with that old cat. Silly old thing! What between her rouge, and her wig, and her furbelows and flounces, it's my belief Miss Grizzle thinks she's still in her teens. Lawk-a-daisy! to think how foolish some people are. (*Looks at letter.*) "Give that to your sweet young lady," says the Captain to me; "and here, Hammond," says he, "is a trifle to buy a new ribbon with for yourself," says he. And very handsome of you, too, Capt. Spoonsby. Such beautiful pink paper! Quite the Lilly-dee sort this! (*Reading address.*) "To the fairest." La! how pretty it do read, don't it? Out of some of them poetry books, I'll be bound; and, oh, don't it smell derlicious! (*Sniffs audibly.*) Musk, and hotter of roses, and all sorts. Accordin' to my hexperiences, the milingtary always *do* do this kind of thing so uncommon well. That's because of *their* hexperiences, I dessay. (*Lays letter down on window-sill, walks up to shower-bath.*) La! this is the new shower-bath my young lady has had put up. A whole bucket of water it takes to fill it, they say. (*Bell rings.*) O lawk, there's that everlasting door bell! [*Runs out, leaving note on window-sill.*

Enter Miss GRIZZLE, in pink muslin dress; slightly rouged; front of gold-coloured ringlets; hat with pink ribbons in one hand, parasol and basket of flowers in the other.

Miss Grizzle (*sings in a cracked voice as she enters*), "Oh, I will marry my own love." (*Sets down basket, takes up letter.*)—What have we here? "To the fairest! (*Smirks and bridles.*) Ah! *We* know who is beautiful for ever. (*Opening it.*) From that darling Spoonsby, *I* know. "Your faithful Frederic." I thought so! I knew from the first instant he saw me he was *struck*. He, he, he! Ah! *I* know. (*Shakes her head knowingly, sits down, and reads with eyeglass.*) "Sweetest angel." Ah, that's how they always begin. "I have something of the greatest importance to communicate. Can you arrange to see me for a few moments alone any time this afternoon?—Your faithful Frederic. *Postscript*—Hammond is sworn to secrecy. You can safely trust her." The fact is, poor young man, he can no longer resist confessing his attachment, and I have no doubt he intends making me an offer this very afternoon. To be sure, there is some little difference in our ages; but if he doesn't find it out, what does that signify? Really (*admiring herself in the glass*), when a fine woman is well got up, I defy anyone to guess within fifteen or twenty years of her age. But I must go and find Hammond, and send her off at once with a message to that darling fellow.

[*Exit at R. H. door. In going out she drops letter on floor.*

Enter, at L.H., JULIA.

Julia (*in walking dress*).—Oh! they have put up the new shower bath, I see. I must experimentalise to-morrow morning. Dear me, who *can* have dropped this charming little note? (*Picking it up.*) What an extraordinary thing! "To the fairest," in Freddy's handwriting. Why, who can have dared to open it? (*Reads it through hastily.*) I must find Hammond, and ask her all about it. (*She goes towards the door.*)

Enter hastily, at L.H., HAMMOND.

Hammond.—La! I am so thankful you've found it, miss. Miss Grizzle, you know, miss, she found it on the window-sill, where I had just laid it down for a hinstant, and she takes it all to herself, opens it, and reads it, and in a jiffy off she comes to me, and, says she, "Run off to Captain Spoonsby's lodgings immediate," says she, "and tell him, in answer to his letter," says she, "to come as quick as he pleases to the harbour in the garden," says she, "and there he shall find me waiting," says she. Dear, what a turn she give me! I saw in a moment how she'd been took in, and he'll come to you, miss, at once to ask what *was* to be done.

Julia (*laughing*).—Ha, ha, ha! Well, luckily, there is no *harm* done. Poor dear Aunt Jemima! Well, you know, Hammond, she will be safe in the garden now the whole afternoon, which will be all the better for us. She will not find out her mistake till he is safe off the premises, and meanwhile we shall have the whole house to ourselves. (*Takes out her note book and scribbles a line on a page, which she tears out.*) I was thinking, perhaps, in case of interruptions, you might as well show the Captain up here, Hammond. (*Gives her the paper. Looking at watch.*) Dear me! why, it is past three now, so you had better run off at once with that note.

[*Exit Hammond.*

Enter Miss GRIZZLE.

Miss Grizzle (*looking at her watch*).—Half-past four, I declare! I don't imagine he can be here till after parade, so I will just give myself a few last finishing touches, and then fly down to the summer-house, and wait till he joins me there. (*Looks out at the window.*) Why, dear me! here is Miss Julia coming up the garden talking to Hammond. Why, plague take the girl! I sent her to practise the organ in the church, and thought she was safe till dinner time. She looks quite excited, and is talking so fast. What can have occurred? Here they come upstairs. I will just get behind the door of my room, and hear what it is all about.

[*Enters room hastily, leaving door ajar.*

Enter JULIA and HAMMOND.

Hammond (*continuing conversation*).—I went as fast as ever I could pelt, miss, and the Captain said *he* shouldn't let the grass grow under his feet. Oh! here *is* the Captain, miss, I do declare—a walkin' up the gravel walk as fast as can be.

Julia.—Well, then run down to the door at once, Hammond, and beg the Captain to walk up into the corridor. I am just going into my room to take off my things; and you can come and call me, you know. (*Exit Hammond.*) How tired poor dear aunt Jemima must be of waiting all the while in that earwiggy old summer house! Ha, ha, ha! I can't help laughing when I think of it! How amused Fred *will* be! To think of her fancying his note was to *her*! Ha, ha, ha! [*Exit, laughing, at R. H. door.*

Enter Miss GRIZZLE.

Miss Grizzle.—Oh, indeed!—you little minx, you! You can't help laughing, can't you! You'll laugh on the wrong side of your mouth, I suspect, miss, soon! I see how it is. She fancies dear Fred is in love with *her*! I should like to see her astonishment when she finds out the truth! A good idea strikes me. I really can't see a thing from behind that door so I'll just pop behind the curtains of the new shower-bath, and hear what my young man has to say for himself.

[*Gets into shower-bath and closes the curtains.*

Enter HAMMOND and Captain SPOONSBY.

Hammond.—Miss Julia will be with you in one moment, sir. If you'll please to sit down a minute, I'll tell her you are here. [*Exit at R. H. door.*

[*The Captain stands with his back to the shower-bath, looking out at the window. Miss Grizzle peeps from between the curtains, kisses her hand in his direction, and vanishes abruptly as the door is heard to open.*

Enter JULIA.

Capt. Spoonsby (*advances rapidly and takes her hand in his*).—My dearest girl, I am so much obliged to you for letting me come; but the fact is I have received some most important news from head quarters, and before answering the letter I must positively have a little chat with you.

Julia.—Dear me! what can I have to do with Her Majesty's despatches? Before you begin your "chat," though, I have such a piece of fun to tell you. Only think! old aunty found your note by chance and opened it, thinking it was meant for her! She sent off a message to you by Hammond immediately, to say she would meet you in the summer-house this afternoon, any time you liked. And there she is now, I have no doubt, still awaiting your arrival, like Patience on a monument.

Capt. Spoonsby.—Ha, ha, ha! Capital, by Jove! Fancy Patience in a yellow wig, though. But, dearest girl, I have much more important matters to talk about than old Miss Grizzle.

[*They walk towards L.H. door, whispering and talking. While their backs are turned Miss Grizzle looks cautiously out from between the curtains, and shakes her fist at them.*

Miss Grizzle (*aside*).—You'll laugh on the wrong side of your mouth yet miss, *I* can tell you!

[*As they turn she retreats hastily, leaving a portion of her dress visible through the curtain. Julia makes signs to Spoonsby. After a little suppressed laughter and whispering, he makes a sign that he will pull the string of the bath. Julia claps her hands, to show her appreciation of the idea. They walk towards it.*

Capt. Spoonsby.—So this, I conclude, is the new patent shower-bath you were telling me about, Miss Julia?

Julia.—Yes! I have not tried it yet, but they say it is a remarkably efficient one.

Capt. Spoonsby.—Let us see if the string answers England's expectations!

[*Pulls the string suddenly. A violent shriek is heard, the curtain is thrown back, and Miss Grizzle rushes out, half drowned; and, pointing violently, her cap in one hand and her front of curls in the other, she faints into a chair, and hammers the floor with her heels.*

Julia.—Oh, aunty! Eavesdropping? I'm quite shocked. Well, next time, if you take my advice, you will choose any place to hide in rather than a patent shower-bath! [*Curtain falls.*

List of 100 of the Best Subtropical Plants.

THE very best and most indispensable are marked with an asterisk. The full collection here enumerated, or even the half of it, is such as few who have not "plenty of glass" can enjoy, but many may grow a select number of the more effective kinds.

1.*Acacia lophantha, does freely in open air, and is very graceful and suitable for mixture with flowers. It is easily raised in abundance from seed.
2. Aralia macrophylla, stands beautifully in open air, but does not grow freely there.
3.* — papyrifera, one of the best and freest of all.
4. — reticulata, ditto; to No. 4 the remark on No. 2 will apply.
5. Tupidanthus calyptratus, grows a little in the open air, and stands well.
6. Anthurium Hookeri, a noble species; stands well.
7.*Caladium esculentum. Of the best; fine for association with sculpture, vases, &c. Likes rich soil, warmth, and shelter.
8. Monstera deliciosa, a fine stove fruit, may be placed in the open air in summer with impunity.
9. Philodendron Simsii, stands well out in England.
10. — macrophyllum, ditto; is a very fine plant.
11.*Colocasia odorata, when old looks peculiarly distinct and magnificent, in consequence of being elevated on a bold stem.
12. Pothos acaulis, suffers a little, and should be placed in a well sheltered and warm place.
13.*Cycas revoluta, as useful in the conservatory as out of doors: will embellish the first through the cold months and form a distinct and graceful subject in the centre of a choice bed of flowers all the summer.
14. Carludovica palmata.
15. Erythrina crista-galli, and its varieties, flower well in England, as well as around Paris.
16.*Ficus elastica, stands beautifully, makes growth in the open air, and is useful at all seasons, indoors or out.
17. — nymphæfolia, scarce in private collections, but very fine.
18. Alsophila australis, tree and large stove fern, which may be placed in the open air in thoroughly well sheltered and shady positions if it can be spared for such purposes.
19. — excelsa, ditto.
20. Cyathea dealbata, ditto.
21. Dicksonia antarctica, ditto.
22. Balantium culcitum, ditto.
23. Neottopteris australasica, ditto.
24.*Phormium tenax, a most useful plant for this purpose, and for every purpose of ornament, whether indoors or out.
25*Musa Ensete, the great Musa of Abyssinia, discovered by Bruce; the noblest of all subtropical plants.
26. Areca lutescens.
27. Caryota urens.
28. — sobolifera.
29. Chamærops humilis.
30.* — Fortunii
31. — Palmetto.
32. Corypha australis.
33. Latania borbonica.
34. Phœnix dactylifera.
35. — sylvestris.
36.*Seaforthia elegans, a palm which stands our summer climate without injury, and is of course among the most useful of ornamental plants indoors at all other seasons.
37.*Solanum marginatum. The solanums are amongst the most useful of the subtropical plants, but sometimes our seasons are too cold and stormy for them. Only the very best are mentioned here.
38. — robustum.
39.* — macranthum.
40. — macrophyllum.
41.* —Warscewicziodes.
42. — crinipes.
43. Abutilon striatum and its varieties, such as Duc de Malakoff and others, flower and grow freely out of doors in summer, and are more enjoyable when so grown than they are indoors
44*Agave americana, with variegated varieties, was used for placing in the open air in summer long before any of the other subjects named here, and when well grown looks very imposing
45. Brexia madagascariensis, a good plant, and stands well.
46. Cassia corymbosa, flowers pretty freely, but is scarcely distinct enough to be first rate.
47. — floribunda, ditto.
48. Colea Comersonii, a plant with very noble leaves, and as yet rare.
49.*Ferdinanda eminens, one of the best and most popular.
50.*Echeveria metallica, very distinct in colour and appearance, and grows well out of doors in England.
51. Farfugium grande.
52. Grevillea robusta.
53. Hedychium aurantiacum, a well known old stove plant, which, placed in a favourable position, opens its flowers freely in the open air; that, however, does not make it worth growing for this purpose, except in large collections.
54. — Gardnerianum, ditto.
55. Lomatia Bidwilli has finely dissected and handsome foliage.
56. — silaifolia, ditto.
57. Selinum decipiens, an umbelliferous plant, of distinct character and handsome leaves.
58.*Melianthus major, of very handsome foliage and agreeable glaucous colour. Out of doors in a dry place it gets cut down annually by frost, but comes up again in spring and makes a very presentable show of dwarf and well clothed shoots, and is in fact much handsomer when seen in this state than when grown indoors.
59*Uhdea bipinnatifida, a free-growing, large-leaved, and very useful plant for this purpose.
60. Nicotiana Wigandioides.
61*Polymnia grandis, also first-rate.
62. — maculata, ditto.
63. Rhopala corcovadense, one of a type of fine-foliaged stove plants that may be placed out of doors in summer in a sheltered spot.
64.*Ricinus communis, in many varieties, is perhaps on the whole the most useful and easily raised of all subtropical plants.
65. Sanseviera zeylanica.
66.*Senecio Petasites.
67. — Ghiesbreghtii.
68. Sparmannia africana, produces its singularly pretty flowers freely in the open air.
Sonchus laciniatus.
69. Tradescantia discolor, very useful as a bordering plant to beds of subtropical flowers, from the attractive colouring of the backs of its leaves.
70. — zebrina.
71. Verbesina gigantea.
72.* — verbascifolia.
73.*Wigandia caracasana, one of the noblest of fine-leaved plants when grown in the flower garden in summer.
74. — urens.
75.*Canna Annei superba. Of this, and the other nine Cannas, little need be said, especially as they are alluded to elsewhere. It is by far the most useful group of plants of all used in this way.
76.* — limbata.
77.* — robusta.
78.* — musæfolia hybrida.
79.* — nigricans.
80.* — grandiflora floribunda.
81.* — Geant.
82.* — discolor floribunda.
83.* — metallica.
84.* — rubra superbissima.
85.* — Dracæna australis. The nine Dracænas here given are all fine, and very useful in their way.
86. — indivisa.
87.* — Draco.
88.* — braziliensis.
89. — nutans.
90. — Rumphii.
91. — erithorachis.
92.* — cannæfolia.
93.* — lineata.
94. Stadmannia Jonghii.
95. Papyrus antiquorum.
96. Araucaria excelsa. Where there are nice specimens of this plant in the conservatory, they may be used out in summer with much taste.
97. Chamæpeuce diacantha, a plant of very striking aspect.
98.*Cordyline indivisa. This fine thing will stand beautifully out of doors in summer, even in the far north.
99. Dahlia imperialis.
100. Bocconia frutescens.

Pæonies, Pyrethrums, Irises.

MOST of us have an idea that Pæonies are gaudy, disagreeable-smelling flowers, scarcely worthy of a place; few know that any of them have a fragrance as rich and welcome as any orchid. Yet such is the fact. The show of colour is of the richest tone and most varied hues, from deep crimson to white with lilac pencillings. When in perfection they grow from 3ft. to 5ft. high, and flower profusely, especially when established for a year or two in rich ground. They are particularly suited for embellishing the margins of shrubberies or open spots along wood-walks, while also fine for the borders. They are not fitted for the present style of bedding out, and should, as a rule, not be introduced to it. The following selection will be found useful:

Amabilis grandiflora, sulphur white shaded rose.
Anemoneflora, yellow.
Comte de Paris, blush with bright citron centre.
Duchesse d'Orléans, deep rose and blush centre.
Elegans superbissima, rosy blush and salmon centre.
Gloria mundi, pale rose and citron centre.
Grandiflora nivea plena, delicate lemon blush.
Lutea plenissima, sulphur.
Potsii plenissima, deep crimson.
Prolifera tricolor, white and lemon centre.
Reine des Français, white and rose lilac.
Tenuifolia Smouthii, bright rose crimson.
Van Geertii, pale rose.
Walneriana, lilac rose and white centre.

Then we have the Pyrethrums, a class of quite recent introduction, and all bred from the old single Pyrethrum roseum—the insect killer, as it is sometimes called. Having all descended from one parent, they have not that rich and striking variety which is seen among the pæonies, but they differ a good deal too, and vary in colour from a deep glowing crimson to pale-blush and white. The double section is the most popular, but the single ones are quite as beautiful. They all form first-class border plants, and are worthy of general cultivation. They will not fit well either the spring or bedding garden, but help to fill up a gap between the two, and should be associated with things that flower in June—Irises, Hemerocallis, Campanula, and the like. In some places they now adopt a system to which some apply the term "carpet." It means having a groundwork of some dwarf and comparatively unimportant plant on and through which to place in, a somewhat scattered manner, taller and finer things, like tulips, asters, and what not; and in this way some really charming effects have been produced. In like manner it is possible to introduce these Pyrethrums; they may also be grown in pots, and to full perfection, and in small town gardens they might be used for the plunging system, *i. e.*, the filling of important beds in the open air with plants in pots, and changing their contents frequently. The following selection embraces the best:

Alfred Salter, bright red rose.
Annie Holborn, white with lilac blush centre.
Boule Souffré, sulphur, with full anemone centre.
Candida plena, fine large white.
Carminatum plenum, large and fine dark carmine.
Eximium, carmine red.
Floribunda plena, rose pink, branching habit.
Fulgens plenissima, large dark red.
Madame Fourcade, white, with high centre.
Madame Munier, large rosy blush.
Maxima plena, dark rose, dwarf and fine.
Mont Blanc, pure white.
Pelé, red rose.
Princess Alexandra, large white.
Rosa alba, rose-pink, and white centre.
Versailles Defiance, lilac rose, large flower.
Carnea nana, dwarf blush.
Giganteum rubrum, large red.
Kleinholtz, bright crimson, distinct.
Mars, glowing crimson.
Millerii, light rose pink.
Sparkler, bright red crimson.

To make Italian Bread.

TAKE 1lb. of butter, 1lb. of powdered loaf sugar, 1lb. 2oz. of flour, 12 eggs, ½lb. of citron and lemon peel. Mix as for pound cake. If the mixture begins to curdle, which it is most likely to do from the quantity of eggs, add a little of the flour. When the eggs are all used, and it is light, stir in the remainder of the flour lightly. Bake it in long, narrow tins, either papered or buttered; first put in a layer of the mixture, and cover it with the peel cut in large thin slices; proceed in this way until it is three parts full, and bake it in a moderate oven.

To remove Ink and other Stains.

INK stains can be removed out of woollen materials, carpets, table covers, &c., by applying milk, thus—with a rag or fine cloth gently sop up the ink, then have, according to the size of the stain, some milk in a bowl: gently touch the spot with the rag which has been thoroughly steeped in the milk, continue gently to wet the spot, then take a clean towel and wipe all over; if well done no stain will remain. To take ink out of linen or muslin, if still wet, put the stained place into the milk; if dry, boil the milk and place the article in the milk while boiling. To take stains of fruit out of muslin, table serviettes, or pocket handkerchiefs, steep for twelve hours in fresh cold water, which should be in a large pan, or tub, or basin, according to the size of the article.

Cure of Warts.

PARE the hard and dried skin from their tops, and then touch them with the smallest drop of strong acetic acid, taking care that the acid does not run off the wart upon the neighbouring skin, for if it does it will occasion inflammation and much pain. If this practice be continued once or twice daily, with regularity, paring the surface of the wart occasionally when it gets hard and dry, the wart may be soon effectually cured.

There is a "Medico-Pencil" for the cure of corns and warts, now sold at all chemists' and most stationers'. We cannot say whether it would cauterise or not, but the point is so small that it could be easily applied to the wart itself, without any risk of touching the skin around it, which is often the reason of caustic applications being painful.

The Lady's Work Table.

NOVELTIES IN FANCY WORK, 1868-69.

AT THE CLOSE OF LAST YEAR, Breton embroidery was greatly in vogue as the most ornamental and easily produced variety of fancy work. It consists of geometrical designs worked in *Point Russe*, with silks of the brightest hues; the groundwork being either cashmere of some bright shade, such as scarlet or lapis lazuli blue, or else black or white. The design is first copied on the cashmere; the cashmere is then lined with white cambric, and the pattern is worked with silk by taking a succession of long back stitches over the thin traced lines. For sofa cushions, banner screens, note cases, and mats, this Breton work is still in great favour, and remains in the ascendant.

Ticking work has been considerably developed since last year. In this country the striped black and white bed ticking is used as a foundation; silk braids and ribbon velvets of various colours are sewn in straight lines upon the foundation, and these are ornamented with various fancy stitches, every ticking worker the least skilled in her art claiming to be the inventor of at least half a dozen of these cunning devices. Persian patterns are very suitable to this style of work. The dividing lines are covered with gold braid and beads, and in several instances very beautiful articles have been produced. In Paris the work has recently been introduced, but the ticking used is striped stone colour and white, the lines run alternately, and are about 1in. wide. Silk alone is used for working, and neither velvet nor braids are introduced. Ticking work is much used for mats, screens, slippers, and book sachets.

The cloth *appliqué* work is also very popular; the beautiful silk braids that are now manufactured and used with the cloth add much to the effect. These braids are usually stitched on with very tasteful and ornamental stitches.

There is a new variety of crochet introduced, and called crochet-tatting. It has all the appearance of tatting, but it is worked with a crochet hook instead of with a shuttle. As it is a novelty but few patterns have been published up to the present time, but a specimen will be found among our illustrations. The directions comprise various diagrams, clearly illustrating the manner of working. For edgings, cuffs, &c., this tatting-crochet is likely to be extremely popular.

Point lace-work is now in every one's hands—it is no longer "select;" but is not the less beautiful for having become common. Last year we mentioned that Mlle. Riego, the inventor, had introduced a new guipure tape, with an open edge at both sides, which greatly facilitated the production. This tape has been eagerly taken into favour, and several improvements made in it, such as the introduction of an open pattern down the centre, thus adding much to the lace-like effect of the work. Many ladies now arrange their own designs from old point lace, and during last year more than one book has been published on the subject. Point lace is now produced with black silk braid as well as white linen, and is most useful in the former material for trimming velvet cloaks, dresses, &c. The great danger now that it has become common, is that like crochet, the work will deteriorate, but those who pursue the art should bear in mind that the neater and finer it is worked, the more like real lace will be its effect.

Mignardise braid introduced into crochet work, and arranged to form antimacassars, insertions, and edgings is a novelty, and likely to supersede guipure d'art. It is extremely pretty, and some designs will be found among our illustrations. The use of guipure d'art is now extended; it is worked in coarser materials, and forms borders for velvet or satin window curtains and portières. It has the advantage of preserving the material, and can be easily washed. In materials for fancy work there have been some few novelties, particularly in fancy canvases. There is the leather canvas, the Chinese canvas (which looks like silk canvas of a canary-yellow shade), and there is a new brown canvas; the main object in all of these novelties is to prevent the necessity of grounding, which is always a monotonous employment.

Our Coloured Pattern—Design for Coverlet (Tricot).

THIS is worked in single Berlin wool, and a fine tricotee needle, No. 18. Coarser materials may be used, but would not have the same effect. Green, black, and white single Berlin wool are required; and gold, red, and blue filoselle.

Commence with the COLOURED STRIPE. With the green wool make a chain of 7, raise all the stitches, and work the length required in plain crochet tricoter. Then work with black, the same length as the green, 2 stripes of 4 stitches each in the same stitch. Take the gold filoselle (3 threads only in thickness), and work on each side the black stripes in this manner: 1 single crochet in the 1st outside loop of the stripe; then put needle *into* the stripe just under the 2nd long loop in the 2nd row. Work a single (it will give the appearance of a double or long crochet), repeat these two stitches, alternately, the whole length. Work on each of these rows of gold filoselle a row of double crochet, or plain crochet, by Mlle. Riego's terms. Take care that the long loops of gold are exactly opposite each other. Work a cross stitch in the centre of the black stripe, commencing the bottom of the stitch in the same hole as the long loop of gold; 1st cross stitch red, miss a black loop; 2nd cross stitch blue, miss a black loop; 3rd cross stitch red, miss a black; 4th cross stitch green; and repeat these 4 stitches throughout the stripe; sew the black stripes on each side the green.

The WHITE STRIPE is plain crochet tricoter, 26 stitches wide, and is to be embroidered in cross stitch by the detail.

TO WORK THE BORDER OF GREEN AND BLACK.

Commence in the corner with black, 2 chain; take up the 1st chain on the needle, and work back.

2nd row—Make a loop in the chain that goes between the 2 long loops; then take up the last loop; work back.

3rd row—Take up first loop after the one on the needle; make another as in the last row, before the last loop. Take up the last; work back (W.B.).

4th row—Increase 1 again at the end of the row; W.B. Work the length of the stripes and 2 rows more, then decrease for the next corner, take up 3 only, W.B.; take up 2, W.B.; draw the wool through the loop on the needle, then take up the other 3 stitches successively, and W.B.; draw the wool through the loop on the needle, take up 2nd loop, W.B.; take up 3 loops, W.B.; take up 4 loops, W.B. Now plain crochet again until the length is completed, when decrease again for the next corner. When the four sides are completed, fasten off at the end of the decreasings in the corner, and sew neatly to the commencement of the black. Work round the black with gold and black (as the stripes); then work the green stripe, commencing in the same manner as the black, but continuing to increase until there are 7 loops on the needle; decrease in the colours exactly in the same manner as the black; sew to the black striped work; then work the outside black stripe, like the other, but of course longer; embroider each.

1. Fanchon à la Marie Antoinette (Greek Lace),

FOR HEAD-DRESS OR BONNET.

By Mlle. Riego de la Branchardière, by appointment to H.R.H. the Princess of Wales.

MATERIALS—For white lace, 3 pieces of French lacet No. 10, and 1 piece No. 12; Walter Evans & Co.'s crochet thread, Nos. 24, 30, and 36, and Evans' linen thread No. 6.

For black lace, a piece of Maltese braid, and fine Maltese silk. A shuttle, tatting pin No. 1, and Walker's elliptic-eyed needles No. 8, will be required for either lace.

Prepare the pattern by copying the white lines which represent the lacet. For the centre, which is composed of eight small scallops, the broader lacet is used. The four lines of the narrower lacet which form the Ovals must be braided at the same time, so that they may be interlaced as in the engraving. All the joins should be made in the under lines, where they cross, so that the outer lines may cover them.

THE TATTING.

The Centre Star—1st œillet—Fill the shuttle with No. 24 crochet thread. Commence a loop, work 5 double stitches, then (1 pearl loop and 3 double, alternately 5 times); 3 double more, draw it close.

2nd œillet—Commence a loop close to the last, work 5 double stitches, join to the last pearl loop of the 1st œillet, 3 double, then (1 pearl and 3 double, alternately 3 times); 1 pearl, 5 double, draw close. Work 6 œillets more the same as the last, except that in the 8th œillet, instead of working the last pearl loop, a joining is to be made to the 1st pearl loop of the 1st œillet. Make it round by knotting the ends together and sewing the foundation thread over to make it firm, which finishes the Star. There will be a small opening in the centre, about a third of an inch in diameter. Place this Star in the centre of the pattern and tack it down. The thick Bars which connect the centre Star with the scallops of wide lacet are to be worked with the linen thread, and formed by three twisted threads taken from the Star to the scallops; these threads are then to be interlaced across until they are covered. Then with crochet thread No. 36 work a round of Bruxelles Point on the inner edge of the lacet, and with the same thread make the Rosettes in each of the eight spaces, and also in the centre of the Star. Then, on the outer edge of the same line of lacet, with No. 30 thread, work a round of Petit Point de Venise.

The Scallops—1st œillet—Fill the shuttle with No. 24 crochet thread, and commence a loop, work 3 double, then (1 pearl and 3 double 5 times); draw close.

2nd œillet—Commence one-eighth of an inch from the last, and work 3 double, join to the last pearl, 3 double, then (1 pearl and 3 double 4 times); draw close. Work 3 œillets more as the last, which forms the 1st scallop. Then, leaving half an inch of thread, repeat from the 1st œillet, until there are 8 scallops. When finished, tack it to the pattern, and sew the foundation thread to the petit point.

Then, with No. 30 thread, work Petit Point de Venise on the edge of the fine lacet, and to connect the two lines work a row of Point d'Espagne, making the stitches on one line, and after every stitch passing the needle through the opposite line.

The Stars in the 4 Large Rounds—Work as the centre Star at the commencement, but make only 6 œillets instead of 8; when finished, tack it in the centre of one of the Ovals, then sew over the stitches of the petit point, attaching them to the pearl loops of the Star, by twisting the thread.

Inside the *Ovals*, with No. 30 thread, sew over the petit point, and connect it with three Maltese Bars; then, with No. 24 thread, work the Point de Venise on the petit point. With No. 36 thread work the Rosettes and Maltese Bars which connect the pattern.

3. Round Hat in Crochet Tricotee.

4. Infant's Boot in Tricot and Point Muscobite.

Digitized by Google

2. Tricot Veste for a Little Girl.

By Mlle. Riego de la Branchardière, by appointment to H.R.H. the Princess of Wales.

MATERIALS, for the centre, 4oz. of mauve, claret, or light blue, 3 ply fleecy, a long tricot needle, the stem of which measures No. 7, Bell gauge. For the Border, one skein of white fleecy and two skeins of partridge wool, Walker's crochet needle, No. 1, and one dozen of buttons.

This veste is commenced at the back of the waist and increased at both sides to the shoulders, working in the ordinary tricot stitch.

THE CENTRE.

Commence with the coloured fleecy, and make a chain of 6 stitches.

1st row—Miss the last chain, *, put the needle into the next stitch, and bring the wool through in a loop on the needle; repeat from * until there are 6 loops on the needle. And to "work back," take the wool on the needle and bring it through the last loop of the 6; then take up the wool and bring it through two of the loops at a time, until there is only one left on the needle.

2nd row—Keep the loop on the needle, and put the needle into the upright loop or rib next the one which forms the edge; bring the wool through in a loop, when there will be 2 loops on the needle*; put the needle into the next upright loop, and bring the wool through; repeat from * until there are 6 loops, then work back, as in the 1st row.

3rd row—Take up the wool and bring it through the last loop on the needle, to form an ordinary chain stitch; then put the needle into the first upright loop or rib of the second row and bring the wool through, when there will be 2 loops on the needle *, put the needle into the next upright stitch, bring the wool through and repeat from *, until there are 6 loops on the needle, then to *increase* a stitch put the needle into the wool *between* the 2 last stitches, and bring the wool through as before; then put the needle into the last stitch and bring the wool through. Work back as in the 1st row.

Repeat the 2nd and 3rd rows—that is, increasing 2 stitches every alternate row until 20 rows in all are worked.

Then work 14 rows as the 3rd row—that is, increasing every row.

TO SHAPE THE RIGHT SHOULDER.

1st row—Work on the last row, and raise 21 loops as in the 2nd row, then work back.

2nd row—Work as the last, but at the end of the row take the 2 last stitches of the 21 together and work them as 1 stich, so as to decrease it for the neck.

Work 4 rows more, decreasing at the end of each.

Work 3 rows without shaping, then raise the loops as before. Take a piece of wool and make 6 chain stitches with it, then raise these 6 stitches so as to add them to the last row of the neck; work back; and to form the front of the veste, work 34 rows of the same stitch, decreasing one stitch at the *beginning* of every 6th row. This finishes the right front.

TO SHAPE THE LEFT SHOULDER.

Commence in the 11th stitch of those left at the back, and raise the remaining 21 loops. Work back. Work 5 rows, decreasing a stitch at the beginning of each row; then 3 rows without shaping, and at the end of the last row make 6 chain, raise 6 loops on it, and continue the row as usual.

For the left front work 34 rows, decreasing a stitch at the end of every 6th row.

THE BORDER.

1st row—Use the white wool, and work a row of plain crochet all round the outer side of the veste, putting the needle into the second stitch from the edge of the work, so as to leave a selvedge at the back.

2nd row—Use the partridge wool, and work a plain row on the selvedge of the veste, keeping the white row in the front.

3rd row—With partridge wool work a plain row on the last row.

4th row—Use the same colour as the veste; for the points, make 4 chain, and in the first stitch of these 4 chain work 4 treble; then on the 3rd row, miss 1 and work 1 plain; repeat these points.

5th row—White wool; 1 chain and 1 plain on each point.

6th row—Partridge wool; 3 chain, miss 1, and 1 plain; repeat. Work this border on the inner side of the veste.

THE BAND.

With the white wool make a chain the size of the waist, and work a row of treble crochet; then work a plain round on both sides with the partridge wool, then, with the same colour as the veste, work a round of 3 chain, miss 1, and 1 plain.

THE POCKET.

Use the same colour as the veste. Make 14 chain, and work in the tricot stitch a strip of 7in., then 7 rows, decreasing a stitch at the beginning and end of each row. Fold this in the shape, and join the sides together.

Work the border round the edge, make two straps the same as the waistband, and attach them to it and to the pocket. Sew the fronts and back of the veste to the waistband, leaving the edge row in the front.

3. Round Hat in Crochet Tricotee

FOR A CHILD OF ONE AND A HALF YEARS OLD.

MATERIALS—2oz. white Andalusian wool; 1oz. Azuline blue; a long steel hook, No. 16, Bell gauge; a pair of bone knitting pins, No. 8. With the blue wool make a chain of five, unite, work round in DC. (double crochet), increasing, to keep it flat, until you have 14 stitches; fasten off securely.

Make a chain of 24 in blue wool.

1st row—Take up the 24 loops and the 1st DC. after the join in the round, work back, join on the white before the last loop on the needle, draw through the two last blue. 2nd row—Take up 4 (with one on needle), [1] work back. 3rd row—Take up 6, work back. 4th row—Take up 8, work back. 5th row—Take up 10, work back. 6th row—Take up 12, work back. 7th row—Take up 14, work back. 8th row—Take up 16, work back. 9th row—Take up 18, work back. 10th row—Take up 20, work back. 11th row—Take up 22, work back. 12th row—Take up 24, work back. 13th row—Take up 24 and 2nd blue on the round, work back. 14th row—Take up 24, work back. 15th row—Take up 22, work back. 16th row—Take up 20, work back. 17th row—Take up 18, work back. 18th row—Take up 16, work back. 19th row—Take up 14, work back. 20th row—Take up 12, work back. 21st row—Take up 10, work back. 22nd row—Take up 8, work back. 23rd row—Take up 6, work back. 24th row—Take up 4, join on blue, take up all the 24 loops successively, and 3rd DC. on the round; work back; repeat from 2nd row six more times, making 7 quarters, then join neatly to the foundation chain.

Work all round the outside a row of DC. in white, taking up each white loop, but always missing the blue. On this round of DC. work 6 rounds of long crochet in white; fasten off.

For the trimming, cast on 8 stitches on the knitting needles (No. 8) with white.

2nd row—Put the needle in 1st stitch, take the wool pass over the right-hand needle, and over the 1st and 2nd fingers of left hand 6 times, so as to form a thick loop; draw through as usual in knitting; then knit another stitch in the loop before taking up the next stitch; work the whole row in this manner.

3rd row—Plain knitting; these two rows form the trimming. Knit 4 rows of white loops (8 rows altogether), then 24 rows of blue loops; finish the rest in white.

Stitch the fringed border on the last row of long crochet in the cap, and loosely on the row of double crochet; line with white silk, add strings, and it is complete.

4. Infant's Boot in Tricot and Point Muscovite.

MATERIALS—½oz. rose-coloured Berlin wool; ½oz. white ditto; 1 skein black wool; tricot hook, No. 12, Bell gauge; thick single Berlin wool should be chosen.

1st row—Begin with the sole, make a chain of 8 stitches, work 1 row plain tricot in white wool. 2nd row—Plain tricot, increasing 1 stitch at each side by taking up 1 of the horizontal stitches. With the 3rd, and to the 8th row inclusive, work quite plain. There should be 10 stitches in each row. 9th row—Decrease 1 stitch at each end; the remainder of the row plain tricot. 10th row—Plain without decrease. 11th row—Decrease 1 stitch at each end; the remainder of the row plain. With the 12th to the 17th row inclusive, plain tricot, each row having 6 stitches. 18th row—Increase 1 stitch at each end. With the 19th to the 21st row inclusive, work plain, with 8 stitches in each row. 22nd row—Decrease 1 stitch on each side, work the remainder of the row plain. This terminates the sole of the boot.

For the foot make a chain of 9 stitches in rose-coloured wool. 1st row—Plain tricot. 2nd row—4 plain, increase 1 stitch by taking up 1 horizontal stitch, 1 plain, again increase 1 stitch, again 4 plain. 3rd row—5 plain, increase 1 stitch, 1 plain, increase 1 stitch, 5 plain. 4th row—6 plain, increase 1 stitch, 1 plain, increase 1 stitch, 6 plain. 5th row—7 plain, increase 1 stitch, 1 plain, increase 1, 7 plain. 6th row—8 plain, increase 1 stitch, 1 plain, increase 1 stitch, 8 plain. 7th row—5 stitches plain with rose-coloured wool; now with black wool take up the 6th stitch in the usual manner, work out of it 4 chain, retaining the last of the 4 chain upon the hook, 7th plain, 8th like the 6th, 9th plain, 10th like the 6th, 11th plain, 12th like the 6th, 13th plain, 14th like the 6th, the last 5 plain in rose colour. 8th row—Plain tricot working over the rose with rose and the black with white wool. 9th row—In rose colour, increasing 1 stitch on each side of the middle stitch. 10th row—The 9 middle stitches are worked in black with loops, like the 7th row; the sides in rose colour, plain tricot. 11th row—Work over the black with white, and the rose with rose colour. 12th row—Rose colour, increasing 1 stitch on each side of the middle stitch, the remainder plain. 13th row—The 9 middle stitches again in black with loops; the sides in rose colour, plain tricot. 14th row—Work over the black with white, the remainder with rose colour. This row is quite plain. 15th row—With rose colour increase 1, on each side of the middle stitch. The front of the shoe is now finished.

For the sides work in plain tricot; the middle 7 stitches in the front of the shoe remain untouched. In the first row of each side increase a stitch at the outer edge on both sides of the shoe. 2nd row plain. 3rd row—Again increase 1 stitch at the outer edges. 4th row plain. 5th row—Increase 1 stitch at the outer edges. 6th row—Again increase 1 stitch at the outer edges. 7th to 10th row inclusive plain.

Tricot the two sides together up the middle of the back of the shoe. The foot must be joined to the sole with double stitches in rose colour.

The top of the boot is worked in point Muscovite crochet. Begin at the join of the heel and work round with white wool, 1 double in the first stitch, put the hook through the next stitch, and work 3 chain, work the 3rd loop of the chain off with the stitch upon the hook; 1 double in the next stitch again 1 loop, repeat this all round. In the next row the double is worked over the loop stitch and the loop over the double stitch.

Digitized by Google

After working 6 rows of point Muscovite, work 1 row of black, 1 chain, 1 double throughout, passing over 1 stitch of previous row.

Now a row of rose colour, 1 chain, 1 double, the double under the chain of last row; 1 row of white the same as the last row.

For the top row, 1 double under the chain of last row, 3 chain, 1 double under the next chain, repeat all round.

In the top row of the rose-coloured foot part of the shoe, a sort of shell pattern is worked round the sides and back thus with white wool; *5 treble in 1 stitch, pass over 1 stitch, 1 double in the next, pass over 1 stitch, and repeat from *, the front part where the little black loops are left without this ornament.

Now with rose colour, work a row of the shell pattern round the top row of the point Muscovite, and the boot is finished.

5. The Olga Pelerine.

Terms—DC., double crochet; Ed. P., edge plain; W.B., work back; In., increase; De., decrease; LS., left side; RS., right side; ES., each side.

MATERIALS—9oz. 4-thread scarlet fleecy wool. Bone tricot needle, No. 7.

This pelerine is worked in imitation of the much admired Astrakan fur, and the stitch used is called after it, "Astrakan crochet."

Commence with THE BACK.

Make a chain of 15. 1st row—Double crochet.

2nd row—Raise all the loops as in crochet tricotee, to work back. Draw the wool through the 1st loop, then through 2 loops, this forms the edge stitch. * Draw the wool through 1 loop, then through 1 again, then through 2 *. Repeat from * to * until the 2 last loops, which work plain again for the edge. From * to * is in fact only 3 chain, but is worked in returning instead of in taking up the loops.

3rd row—Take up all the long loops in the front, taking care to keep the chain well to the back and drawing the wool tight, or else the chain will work through to the wrong side. W.B. like the 2nd row.

The increasings are made by raising a loop in the chain between the 1st and 2nd and the 2 last loops on the needle; the decreasings by taking 2 loops together in raising the loops, instead of in working back. The 2 first loops and 2 last on the needle are worked plain throughout, unless specially stated, and are termed "edge stitches."

4th row—In. 1 ES.; W.B.; work 25 more rows as the 2nd, increasing 1 ES. each alternate row.

30th row—In. 1 ES.; W.B.

Work 24 more rows, increasing 1 each side every 3rd row.

54th row—Leave no edge stitch, but take 2 loops together twice at each edge; work the rest as before.

55th to 62nd rows—Decrease 1 ES., and work no edge stitch.

63rd row—(No edge.) De. 1 on RS.; take up 16 more; work back, leaving no edge. (There are no more edge stitches worked in the back.)

64th—De. 1 on RS.; take up 13 W.B. Continue to work in this manner, raising 2 less each time, and De. 1 on RS. until there are only 2 loops on the needle. Work these as one, and take up all the loops to the LS. of the work, working the 2 last together. Work back 17. Take up these 17. De. in the last 2. W.B. 14. Continue working back 2 less each time, and decreasing at the LS. until there are only 2 loops, which work as one. Work back the whole row.

Work 6 more rows, decreasing 1 on ES. Then work a row of DC.; do not fasten off, but for

THE LEFT SHOULDER.

Raise 2 loops, work B. 3 (with the one on the needle).

Work the edge stitch on the right side only to the 9th row.

2nd row—Ed. P. In. 1. Take up 3 more, making 7 loops on the needle; W.B.

3rd Ed. P.—Take up 3 more loops beyond those last raised; W.B. Continue to work In. 1 on RS. every alternate row, and raising 3 more every row until all the loops are raised on the shoulder. In the last, or 2th row, take up 4 instead of 3 loops, taking the 4th loop in the edge stitch of the 53rd row of the back. There should now be 28 loops on the needle; W.B.

Work to the 11th row—In. on the RS. alternate rows, and plain for the edge on the left side (continue the left edge stitch throughout).

In the 12th, 13th, and 14th rows—In. 1 on the RS. only.

15th row—In. 1 RS. De. 1 on LS.; W.B.

16th, 17th, and 18th rows—In. 1 on RS. Plain on LS.

19th row—Plain. In working back make 2 chain after the Ed. on the RS.

20th—Take up the 2 chain as loops. Continue to work as before, leaving the Ed. in; W.B. on left side only. After all the loops are worked back make 5 chain.

21st—Take up the 5 chain as loops. De. 1 on LS. in W.B. Leave the edge stitch on both sides. The right side is worked plain from this row throughout the front.

Work 78 more rows—De. 1 on the left side in the 23rd, 26th, 28th, 30th, 32nd, 35th, 38th, 41st, 43rd, 47th, 50th, 53rd, 55th, 57th, 59th, 61st, 63rd, and 65th rows. After the 65th row De. 1 on the LS. every row to the 78th, in which De. 2. Then De. every row until there is only one on the needle. Fasten off.

RIGHT FRONT.

Commence in the 53rd row of the back, and take up 24 loops. W.B. 3, leaving the 1st two for the edge. Work the left front over again, but reverse the directions: where told to raise so many loops, W.B. so many instead, make the increasings for the neck on the left side instead of the right. Leave no edge on the right side until after the 9th row, and make all the decreasings on the right side instead of the left. When the front is finished commence on the left side of the neck, and work a row of double crochet, missing every 4th loop. When worked turn and work, * 1 long in 1st DC., 1 long in 2nd DC. Miss the 3rd loop. Work 1 long in each of the next three loops, * repeat from * to the end. Do not fasten off, but work a single row of crochet down the front, taking each loop and drawing the wool rather tight; work a chain of 8 in the bottom loop, then a row of DC. all round the work, holding the right side towards you. Work 8 chain in the loop at the bottom of the other front, and a row of single crochet up the front. Fasten off.

Take three long pieces of the scarlet wool, each at least six or seven yards, and work them as one thread in chain stitch, for the cord for the neck and waist, adding a tassel at each end; pass the waist cord through the DC. at the bottom of the back and through the loops at the end of each front.

6. Fichu (Tricot).

MATERIALS—2½oz. of red; 1¼ of white 4-thread fleecy; a few skeins of black wool; a skein of red filoselle; bone crochet hook; a jet button; tricot hook, No. 7, Bell gauge.

This fichu is worked in tricot: commence with a chain of 10 stitches with white wool.

1st row—8 stitches upon the 1st 8 chain, with the loop already on, 9 stitches will be on the hook.

2nd row—Increase 1 stitch before and after the middle stitch by working up the upper horizontal threads. This increasing continues throughout the whole of the back part in each row, therefore we shall not repeat it.

3rd row—Increase before and after the outer side stitches, which, with the middle increase, makes in the whole 4 stitches.

4th row—Like the 3rd, but the middle stitch must be worked up and off with red; the foundation begins here; 2 balls of white wool and one of red will be required for the border; all three balls remain on.

5th row—Like the 4th, as regards the increase; the three middle stitches must, however, be worked up and off with red. In the 6th row the outer increase is discontinued, but the 5 middle stitches must be red.

7th row—Like the 6th.

8th row—Like the 7th, but decrease at the two outer sides by working off the 2nd and 3rd stitches together.

9th and 10th rows—Like the 8th.

11th row—The same as the 10th, decreasing at the sides, and increasing in the middle, and working the 7 middle stitches with red.

12th row—Increase 1 stitch at the outer sides, but this must now be done before and after the second outer side stitches; the red foundation must be widened to 11 stitches.

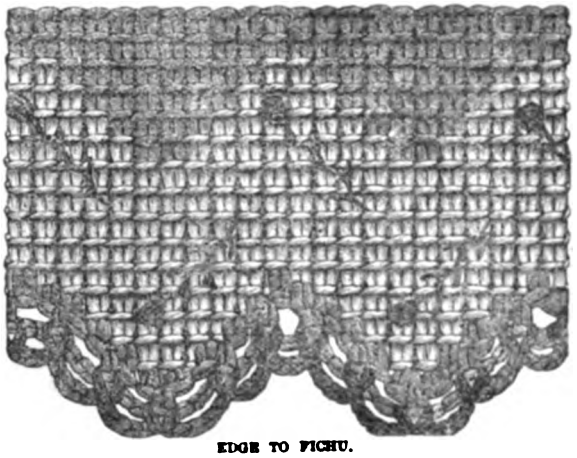
13th to 15th row—Like the 12th.

With regard to the increasing the red foundation advances regularly in these rows upon the white border, the red advances from the 12th to the 15th, and in like manner the white scallop advances outwardly.

In the 16th row the increase is discontinued at the outer sides, and for the future a breadth of 10 stitches must be retained for the border, the red foundation must be increased only 2 stitches in the middle.

17th to the 20th—As appears in the design, the white scallop advances inwards, and the 2 following outer side stitches are worked up together as in the 8th to the 11th.

21st row—Like the 11th, only with the consequent increase of the red stitches. Repeat these last 10 rows, and work for the back as far as the 45th row, whence the shoulder part begins—the foundation is then 81 stitches broad. In continuing the border, after the 15 white stitches, only the next 40 red are to be worked.



EDGE TO FICHU.

46th row—After the white stitches, work only 38 red.

47th row—Work the border as usual, then 36 red stitches.

48th row—Begin the shoulder gore, for which, after working up the 10 white stitches of the border, work 3 red stitches only, and after each time

repeating the 10 white stitches, work 8 red, then 13, then 19, then 24, then 29.

49th row—Work through 34 red stitches as well as the 10 white.

50th row—Like the 49th, and after this the shoulder gore slopes off in an opposite direction. For this, 29 red after the 10 white, then 24, then 19, then 13, then 8; of course the 10 white stitches are worked as before.

51st row—Again quite through, consequently 35 red after the 10 white.

52nd row—Begin the regular decreasing at the side of the slope for the throat, by which means the front part is gradually reduced to a point; for this the 2nd and 3rd stitches of the outer sides are worked up together: this decreasing is repeated in each 4th row. Repeat as far as the 87th, after which in the 88th row decrease in the same manner, and repeat this in every 3rd row as far as the 105th row, then decrease in each 2nd row as far as the 119th row, and from that repeat the decreasing in each row so that the red foundation in the

124th row finishes with 1 stitch; the border, however, is continued as far as the

130th row—The decreasing is continued on the same sides always, and finishes with 4 stitches; the left part is worked exactly the same on the opposite side. Then follows a row of double all round in red, then a similar row of white, beginning at the under part from the right point, round the slope at the throat, ending at the left point. Two more rows are worked round the whole outer side of the *fichu*.

1st row with red wool; * 1 double, under both the horizontal stitch threads of the next stitch, 2 chain over 1 under stitch. Repeat from *.

2nd row with black wool; * 1 loop under the next chain before the double; 1 loop under the next chain after the double; and, by making a fresh chain, work off all the loops together, 2 chain, and reapeat from *. It must be remembered that the chain upon the needle must be worked off with the 2 loops. A jet button is placed upon the finished *fichu* upon the 1st red stitch of the back, and a crochet eye of 6 or 8 stitches under the point. The little feather stitch branches are worked upon the border, as represented in the design, with red filoselle; three close together form the patterns in the design.

7. Cross-over Shawl (Tricot).

MATERIALS—6oz. white 6 thread fleecy, 1oz. black fleecy, a few skeins of black wool twisted with white silk, a reel of grey Angora wool, two jet buttons. Tricot hook, No. 10 (Bell gauge), bone crochet hook.

The wrapper has a white ground with the pattern in grey and black wool. Begin at the lowest part of the back, with white wool, and make a chain of 13 stitches with the long hook. Upon these work for the

1st row—11 stitches through the loops of the 13 chain, then work off all the stitches.

2nd row—Begin a regular increase, which must be repeated in every row of the back. Increase 1 stitch on each side by working through the horizontal stitch thread before and after the outer side stitches.

3rd row—Begin the first pattern of grey wool in the form of a square; for this work the two middle stitches up and off with grey wool. As by this the white foundation is divided into two parts; it is as well to take a second white ball of wool, and these two with the grey wool may remain on.

4th row—Work the four middle stitches with the grey wool; the remainder with white.

5th row—Like the 4th; besides which the stitch before and after the four grey middle stitches are worked with black wool. After working up the first black stitch, crochet the thread for the second through the grey wool, and work off back in the same manner.

6th row—Work the two middle stitches with grey, and the stitch before and after with black wool, the rest white.

7th row—To conclude the square work the two middle stitches with black, the remainder with white.

8th to the 11th rows—Plain, with white wool, increasing at the sides.

12th row—Begin the second line of the square with grey wool. There are two squares in the row, begin upon the seventh and eighth of each side stitch, and work according to the directions for the first square; end at the 16th row.

17th to the 20th rows—The same as the 8th to the 11th, plain, with white wool, increasing at the sides.

21st row—Begin the third line of the square with grey wool. The number of these now amounts to three, the middle one stands exactly over the first one, the two others begin exactly upon the sixth and seventh of each of the side stitches.

30th row—This row begins the fourth line of four squares; of these the two middle begin over those in the second line, the outer ones upon the fifth and sixth of each of the side stitches. After working the pattern work the three white rows between.

39th row—Begins the 5th line of 5 squares and upper part of the back. The 3 middle squares stand in a straight direction over those of the 3rd line, the 2 outer squares upon the 4th and 5th of the side stitches. It must be remembered that with the 41st row the increasing at the sides ends, although the top of the back only ends with the 49th row. With the 48th row begin the right front part with the next 41 stitches, in which the 6th line of the squares of grey wool begins in the same direction as those on the 4th line.

49th row—Begin by working the two stitches next to the outer stitches of the slope at the throat together, this decreasing slopes the front part, and is repeated in each row as far as the 113th row. From the 113th row there will be a decrease on each side in every 2nd row, which will be repeated until the point is reduced to 1 stitch. The squares of grey wool must be regularly repeated as shown in the design. The other front side must be worked in precisely the same manner. When it is finished work a row of double in white all round the wrapper. Then for the border:

1st row—With black wool twisted with white silk in double stitch.

2nd row—White * 4 treble looped entirely round the next double 1 chain, passing over 3 under stitches. Repeat from *. This row does not go round the slope of the throat, but ends when 4 trebles have been worked 5 times beyond the points.

3rd row—Begins and ends the same distance from the point as last row. With black wool twisted with silk, * work 1 double round the next chain, 2 chain, 1 double under the same chain. 2 chain, 1 double, under the next chain, passing over the four treble of the last row, 2 chain, 1 double under the same chain; repeat from * throughout the row.

4th row—This and the following row are worked entirely round the wrapper. * 5 treble under the 2 chain, lying above the 4 treble, 1 double into the chain between the 2 doubles of last row; repeat from *.

5th row—With the black wool twisted with silk 1 double round the horizontal stitch threads before the next treble, * 2 chain, 1 double between the 2nd and 3rd of these, 5 treble, 1 chain, 1 double after the 3rd treble, 2 chain, draw one loop before the next double, draw 1 loop after it, and with the fresh thread put round, work off all the 3 that are upon the hook. Repeat from * over the double stitches round the slope of the throat; this row changes in the following manner: * 1 double round the horizontal stitch threads of the next double, 1 point of 4 chain and 1 double upon the 1st of these, passing over 1 under stitch. Repeat from the last *. Sew two jet buttons on to the outer corners of the back part, and place two little crochet eyes of the chain stitches, at the end of the foundation under the front point.

8. Pelerine in Tricot.

MATERIALS—12oz. 4-thread white, fleecy or Berlin wool, 3oz. violet ditto, 1 skein white filoselle, tricot hook No. 8 (Bell gauge). The pelerine, with the exception of the border, is worked entirely in tricot. The foundation is in white wool, and the little pattern is worked in violet wool, and afterwards embroidered with filoselle.

Begin at the bottom with a chain of 343 stitches with white wool, work 2 rows without decrease or increase.

3rd row—In this row the little stripe pattern begins, and for it divide the violet wool into 16 balls; each of these must remain in its place to be ready to work up, and off with. In this and all the following rows a regular decrease is made by working at the beginning and end of the rows the 2nd and 3rd stitches together; also the 2 stitches on each side of the 172 (which is the middle stitch) must be worked together. The violet stripes are worked 18 stitches apart; they consist of 8 stitches in height and 1 in width, and are kept quite even. Between these patterns 5 plain rows are worked in white wool. Continue working as already described until the 52nd row is finished.

At the 53rd row begin the 6th row of stripes. Beside the decrease described from the beginning, decrease by working together the 9th and 10th of the 18 stitches lying between the stripes. The same decrease is repeated to the end to form the shoulder 3 times—namely, in the 55th, 57th, 59th rows. In the following 7 rows 3 side stitches of the previous rows are left untouched. Finish in the 67th row.

In the front sides of the pelerine work 4 rows of double in white wool, and repeat the stripe pattern as in the foundation in violet wool, leaving a space of 12 stitches between each. These stripes are to be embroidered over as in the foundation with 4 stitches in white, as clearly shown in detail in the accompanying illustration. A row of double stitches in white

wool is worked round the lower side of the pelerine, to which the little chain scallops are attached, also a fringe of 6 loops of wool 4in. long.

FOR THE BORDER.

1st row—* 1 double, 3 chain, passing over 2 double. Repeat from *.

2nd row—1 double stitch on the 1st double stitch of the previous row, *3 chain, 1 double stitch in the middle of the next. 3 chain. Repeat from *.

Round the throat work a row of double stitches; on each side of this row work into 1 stitch, 1 double, 3 treble, 1 double, pass over 2 double, and repeat throughout the row; when this trimming is finished, make a chain of white wool and pass it through the holes, tie at the end of it some tassels; this finishes the pelerine.

9. Counterpane (formed of Squares of Tatting-Crochet).

Terms—DC., double crochet; Cr., corner stitch; St., stitch.

This Quilt is composed of squares of crochet, with little bows or ovals of tatting (worked on the crochet needle) introduced. The squares are joined together, and finished with a fringe. (See No. 9a, page 35).

Before commencing the directions for a square, it would be well to describe the directions for the crochet tatting, so called from its being worked with the crochet needle instead of the shuttle; and consequently with this great advantage, that it will unravel as easily as any other crochet

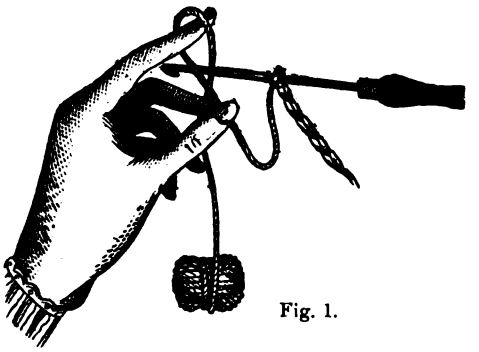

Fig. 1.

work. The figures give the best idea of forming the stitch, which must be worked loosely. Fig. 1 shows the manner in which an oval is commenced;

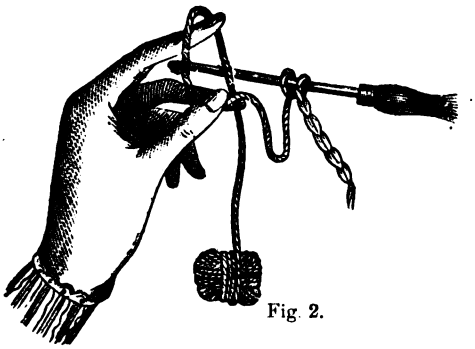

Fig. 2.

Fig. 2 the 2nd half of a double stitch. These two engravings show the formation of 1 double stitch. Work 9 double stitches on your needle

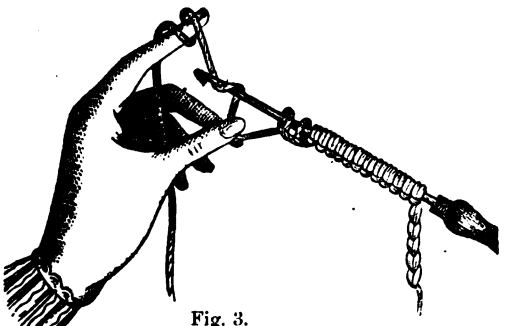

Fig. 3.

(and for each oval). To draw it close take the cotton 2in. from the last stitch, and draw through all the stitches on the needle, as in Fig. 3.

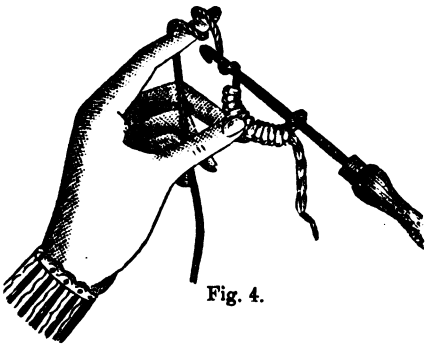

Fig. 4.

Make the stitches regular, and close by, drawing the thread back until the 1 loop now on the needle is tight; then close the oval, as shown in Fig. 4. Fig. 5 gives a few ovals with chain stitches between. Fig. 6 shows the manner of commencing an oval on the work.

Fig. 5.

Fig. 6.

Use knitting cotton No. 20, and a steel hook No. 16. The hook should be the same size from the hook to the handle.

The Square.

Though each row is described in this, it would be well to use the full-sized pattern as a guide for the position of the ovals.

Make a chain of 4.

1st row—2 DC. in each stitch.

2nd row—3 DC. in first st., 1 DC. in second st., 3 DC. in third st., 1 DC. in fourth st., 3 DC. in fifth st., 1 DC. in sixth st., 3 DC. in seventh st., 1 DC. in eighth st., 1 more DC. (the last side of the sq. will always have an extra stitch on the side). Mark this corner, as from it all the rows commence.

3rd row—3 DC. in Cr. st., * 3 DC. on side, 3 DC. in Cr. st.; repeat.

4th row—3 DC. in Cr. st., * 5 DC. on side, 3 DC. in Cr. st.; repeat.

5th row—3 D.C. in Cr. st., * 3 DC. on side. Commence an oval, work 4 double on needle, put the hook into the stitch in the 2nd row exactly below this stitch, draw the cotton through, and keep on the needle; 4 more double, draw close; passing the needle through the row below fastens the oval flat. It can be omitted at pleasure. All the ovals in the pattern have to be fastened in the same manner. 1 DC. in next stitch, working the stitch on the needle from the oval as one of the DC., 3 DC. on side, 3 DC. in corner; repeat.

6th row—Plain DC., working 3 in each corner stitch, and missing the chain made by the oval. Care must be taken, in working the plain rows of DC. after each pattern row, not to work the stitches on the oval, or else the sides will become too large and irregular; every alternate row is plain after the 8th row.

7th row—* 3 DC. in Cr. st., 11 DC. on side; repeat.

8th row—* 3 DC. in Cr. st., 13 DC. on side; repeat.

9th row—* 1 DC. in corner, an oval in corner, 1 DC. in the same corner stitch, 15 DC. on side; repeat.

10th row—Plain DC., work the 3 DC. in the corner *in* the chain belonging to the oval.

11th row—1 DC., an oval, 1 DC. in each corner stitch, 8 DC., 1 oval, 3 DC., 1 oval, 8 DC.; repeat from the commencement of row.

12th row—Like the 10th row.

13th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 8 DC., 1 oval, 7 DC., 1 oval, 8 DC.; repeat.

14th row—Like the 10th (there should be 25 DC. on the sides).

15th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 8 DC., 1 oval 11 DC., 1 oval, 8 DC.; repeat.

16th row—Like the 10th row.

17th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 14 D.C., 1 oval, 3 DC., 1 oval 14 D.C.; repeat.

18th row—Like the 10th row.

19th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 14 DC., 1 oval, 7 DC., 1 oval, 14 DC.; repeat.

20th row—Like the 10th row.

21st row—* 1 DC., 1 oval, 1 DC. in Cr. st., 14 DC., 1 oval, 11 DC., 1 oval, 14 DC.; repeat

22nd row—Like the 10th row.

23rd row— * 1 DC., 1 oval, 1 DC. in Cr. st., 14 DC., 1 oval, 15 DC., 1 oval, 14 DC.; repeat.

24th row—Like the 10th.

25th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 18 DC., 1 oval, 11 DC., 1 oval, 18 DC.; repeat.

26th row—Like the 10th.

27th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 20 DC. 1 oval, 11 DC., 1 oval, 20 DC.; repeat.

28th row—Like the 10th.

29th row—* 1 DC., 1 oval, 1 DC. in Cr. st., 14 DC., 1 oval, 6 DC., 1 oval, 15 DC., 1 oval, 6 DC., 1 oval, 14 DC.; repeat.

30th row—Like the 10th.

31st row—* 1 DC., 1 oval, 1 DC. in Cr. st., 14 DC., 1 oval, 6 DC., 1 oval, 8 DC., 1 oval, 3 DC., 1 oval, 8 DC., 1 oval, 6 DC., 1 oval, 14 DC.; repeat.

32nd row—Like the 10th.

33rd row—* 1 DC., 1 oval, 1 DC. in Cr. st., 14 DC., 1 oval, 6 DC., 1 oval, 8 DC., 1 oval, 6 DC. 1 oval, 8 DC., 1 oval, 6 DC., 1 oval, 14 DC.; repeat.

34th row—Like the 10th, and fasten off.

Join the squares together as in No. 2; the fringe round is No. 1*a*, and is worked as follows:

THE FRINGE.

Work a Ch. the length required, if worked separately, but it should be worked on the quilt itself with a coarser cotton. Take up the first stitch, * draw the cotton through, just double the distance the width of the fringe is to be; keep the cotton on the needle, and twist the cotton round and

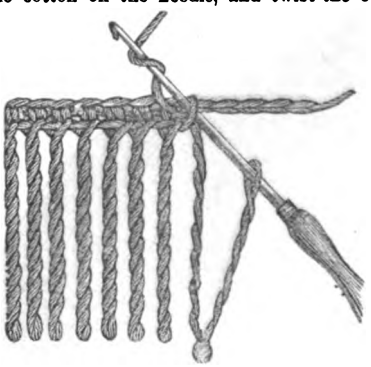

Fig. 7.

round, as shown in Fig. 7. When quite twisted, give a twist in the middle of the length; take up the stitch on the needle again, and work a DC., working in end of the cotton that is on the needle; take up the next stitch and repeat from *.

10. Garibaldi for a Little Girl.

MATERIALS.—Two ivory needles, No. 6 or 7, and 2, two sizes less; about 7oz. of double Berlin partridge wool. The needles numbered by Chambers's registered bell-gauge. This Garibaldi is the average size for a child of six to eight years. if knitted with this thickness of wool and these needles. Cast on 112 stitches loosely. 1st row—Make 1 (by throwing over), slip 1, knit 1; repeat. 2nd row—Make 1, slip 1, knit 2 together; repeat; this forms the Brioche pattern, and you will observe the crossed stitches are always knitted together. Repeat the 2nd row fifty times. In the next row you divide for the sides and back as follows: Repeat the Brioche pattern 13 times.* Knit 2, pull the 1st of these loops over the 2nd. Knit a 3rd stich, and do the same; repeat until you have cast off 9 loops. Observe in the casting off, when you have to knit one of the crossed loops you must knit the *under* one first, then the one formed by throwing over. Knit 2 together, Brioche pattern, 23 times. You have now to cast off again for second armhole, so knit 2, pull over, knit 1, pull over, and repeat until you have cast off 9 loops. Knit 2 together, Brioche pattern to end of row.

1ST SIDE.

This is the piece as far as armhole, which is knitted backwards and forwards, leaving the rest of the jacket untouched. If liked a third needle may be used, but it is not necessary. Brioche pattern for 49 rows. At the end of the 1st row on this side you must make 1, slip 1, *knit* 1 instead of knit 2 together. 50th row—You now begin to shape for shoulder, so this row *must* begin at armhole side. Slip 1, knit 2 together, Brioche pattern, to end of row. 51st row—Brioche, end with knit 2. 52nd row—Knit 2 together, Brioche. 53rd row—Brioche, end with knit 1. 54th row—Knit 2 together, *twice*, Brioche. 55th row—Brioche, end with knit 2. Repeat from 52nd row twice more. You will then have 29 stitches left on your needle.

TO CONTINUE NARROWING FOR SHOULDER AND SHAPING NECK.

1st row—Knit 2 together, brioche. 2nd row—Slip 1, knit 2 together, brioche, end with knit 1. 3rd row—Knit 2 together *twice*, brioche, end with knit 2. 4th row—Knit 2 together, brioche, end with knit 2. 5th row—Knit 2 together, brioche, end with knit 1. 6th row—Knit 2 together *twice*, brioche, end with knit 1. 7th row—Knit 2 together *twice*, brioche, end with knit 2. 8th row—Knit 2 together, brioche, end with knit 2. 9th row—Knit 2 together, brioche, end with knit 1. Repeat from 6th row *once* more. You will now have 11 stitches left, 14th row—Slip 1, * knit 1, pull over, knit 2 together, pull over; repeat from * until you have cast off all the loops.

BACK.

Mind and begin to work this at armhole nearest the side that is knitted. Brioche pattern for 49 rows—*In 1st row end with make* 1, *slip* 1, knit 1. 50th row—Slip 1, knit 2 together, brioche. 51st row—Slip 1, knit 2 together, brioche, end with knit 2. 52nd row—Knit 2 together, brioche, end with knit 2. 53rd row—Knit 2 together, brioche, end with knit 1. 54th row—Knit 2 together *twice*, brioche, end with knit 1. 55th row—Knit 2 together, *twice*, brioche, end with knit 2. Repeat from 52nd row until you have only 39 stitches left on needle. Next row—Knit 2 together, brioche, end with knit 1. Two more brioche rows, slipping the 1st and knitting the last stitches. Cast off loosely, knittinghe two stitches that ome across each other together.

2ND SIDE.

To be worked to correspond with the 1st, beginning at the armhole side. Sew up on the shoulders.

* By Brioche pattern, understand—make 1, slip 1, knit 2 together—is always meant.

NECK.

Take up 56 stitches along the neck, beginning at right hand side, where you first commenced to shape the neck. Plain knit 4 rows, slipping the 1st stitch of each row. Cast off. This neck part must be knitted with the smaller needles.

FOR COLOURED BORDERING.

With coloured wool along *right side* of jacket, beginning at the bottom; take up 61 stitches. Knit 3 rows plain, slipping the 1st stitch in each. 4th row—Slip 1, knit 2, * make 2 by throwing over *twice;* knit 2 together, knit 9, repeat from *, end with make 2, knit 2 together, knit 1; knit 4 rows plain, slipping the 1st stitch in each row. In the 5th row, when you come to the *make* 2, you only knit 1, and slip the other stitch down; the object in making 2 is to enlarge the button-hole. Cast off.

Left side.—Take up 61 stitches and knit 8 rows plain, slipping the 1st stitch of each. Begin to take up at the neck end.

For neck.—Take up 64 stitches in coloured wool, beginning at right hand side; *rib*, that is knit 2, purl 2 alternately for 6 rows; the knitted loops must always come above knitted ones, and the purled above purled. Cast off. If liked more rows can be knitted.

Round the bottom.—Take up about 120 stitches; *rib*, that is, knit 2, purl 2 alternately for 10 rows. Cast off.

For sleeves.—Cast on 48 stitches. 1st row—Make 1, slip 1, knit 1; repeat 2nd row—Brioche pattern, that is, make 1, slip 1, knit 2 together; repeat. Repeat 2nd row 112 times. Cast off by knit 1, * knit 2 together, pull over, knit 1, pull over, repeat from *. Before breaking off the wool draw through last loop the coloured wool, and take up down *bottom* of sleeve 56 stitches. Rib for ten rows. Cast off. The sleeve is sewn up along the cast on and cast off sides. Leave at top of sleeve half an inch unsewn, this half inch at each side when you put in the sleeve you sew along the cast off stitches, at bottom of arm-hole, the seam going directly in the centre, and it gives more room for the arm.

If preferred the coloured bordering of sleeve can be knitted with the smaller needles. It makes the sleeve a better shape.

11. Snow Boot in Ribbed or Russian Crochet.

No matter how Snow Boots are made, they are never very becoming. In country places you often see a knitted sock drawn over the boot to protect it from snow and the wearer from slipping, which it does most effectually. Still there are few country places so isolated that the inelegance of a man's sock can be tolerated. The pattern of a fleecy boot, on page 38, has all the good qualities of a sock, and in a town the disfigurement to the foot is no greater than a shoemaker's snow boot, added to which the expense is most trifling. If additional strength is required in the sole add a piece of felt cut the shape of the boot sole, and stitch on firmly to the knitting or crochet. Strong worsted can be used instead of fleecy wool, then a coarse steel crochet hook must be used. After the boot has been worn it must be dried before a fire.

Materials required—4oz. 3-thread black fleecy, bone crochet hook, No. 13, Bell gauge. Make a chain of 25 stitches.

1st row—Double crochet or DC.

2nd row (take up the loops always from the back of the stitch which forms the rib)—work 12 DC.; work 3 DC. in the 13th or centre loop, rest plain DC.; turn.

3rd row—Plain DC.

4th row—13 DC.; work 3 in centre or 14th loop; 13 DC.

5th row—Plain. Work 34 rows in this manner, increasing in the centre stitch every other row.

35th row—Work to the centre stitch, then make a chain of 20.

36th row—Work the 20 chain in DC. from the back as before, and work to the bottom.

37th plain, 38th plain, 39th. Decrease one stitch at the top of the boot (the 20 chain is for the top).

40th row—Decrease one at the top, and make 5 chain at the bottom of the boot for the heel.

31st row—Work the 5 chain in DC.; work 3 more rows, decreasing at the top every row; then 5 rows plain.

50th row and the two following—Increase 1 each row at the top only.

54th row—Plain.

55th, 56th, and 57th—Decrease one at the top of the boot; then 5 rows plain. Increase 1 stitch at the top of the next 3 rows, leaving the 5 additional at the bottom unworked in the last row of the three rows; then two rows plain, join to the other side the boot (the chain 20); join the sole of the foot together and heel. When joined, put the seam exactly in the centre of the toe and sew that up square. Add a tassel at the top.

This boot may be worked any size by commencing with a chain long enough to go round the toe of the boot over which it is to be worn, always making an odd number of stitches; increase in the centre stitch every other row until you come to the leg. Make a chain the length required for the leg, and work the size required.

It may be also knitted in any stitch by increasing in the manner described.

12. Gentleman's Waistcoat in Crochet Tricotee.

Terms—DC., double crochet; W.B., work back; In., increase; De., decrease; RS., right side of the work; LS., left side of the work; ES., each side.

MATERIALS—1lb. 3-thread black fleecy wool; No. 9 tricotee hook; 3 yards fine mohair braid, half-inch wide; quarter of a yard black material for

Digitized by Google

pockets; 1½ yards black sarsenet ribbon, three-quarters of an inch wide; and some waistcoat buttons.

This waistcoat is worked and *shaped* in one piece, and is given the size most usually required by gentlemen. It can be made larger or smaller as required by using a larger or smaller hook than the one given. When worked according to the directions given below, join the fronts to the back under the arms; bind all round with the mohair braid; hem a piece of ribbon on the wrong side of each front, taking care to hold in the work slightly on the left side, so that both sides are exactly alike; cut the button holes through the ribbon, and seam together round the space left for them in the wool work; add the buttons and pockets. The sleeves are either sewn or crocheted in, taking care to keep the join 2in. to *the front* of the seam under the arms in the waistcoat. To decrease, you work back the 2 loops nearest either edge together. To increase, work a loop in the chain between the loop on the needle and the 1st loop in the work at the commencement of a row, and between the 2 last loops at the end of a row. Commence with

THE BACK.

Make a chain of 69. 1st row—DC. 2nd row—Take up all the loops; work back. Work 8 plain rows.

10th row—De. 1 on ES. 10 more rows plain. 21st row—In. 1 on ES. 7 more rows plain. 29th row—In. 1 on ES. 4 more rows plain. 34th row—In. 1 on ES. 2 rows plain. 37th row—In. on ES. 4 rows plain. 42nd row—5 DC., take up all the loops but 5 last; W.B. Work 3 rows, decreasing 1 on ES. each row.

46th to 54th rows—Plain. 55th row—In. 1 on ES. 56th row—Plain. 57th row—In. 1 on ES. 58th and 59th rows—Plain. 60th row—In. 1 ES. 61st row—Plain. 62nd row—In. 1 ES. 63rd and 64th rows—Plain. 65th row—De. 1 ES. 66th row—De. 2 ES. Work 7 more rows; De. 2 on ES. 74th row—(Still De. 2 at ES.) Take up all the loops; W.B. 8 (counting the 4 stitches used in decreasing as 2). Take up the 8 loops just worked, with 1 on needle; W.B. 6. Take up these 6; W.B. 3. Take up 3; W.B. the whole needleful of loops; De. 2 at the RS.

75th row—Take up 12. WB. 8 (De. 2 at the RS.) Work as the 74th, only taking up less loops each time instead of WB. so many less.

76th row—Take up all the loops and WB.; De. 1 on ES.

77th row—De. 1 on ES.

78th row—Double crochet. After the row of DC. take up 21 loops on the left shoulder, taking up the 2 plain rows (63rd and 64th) as two loops; WB. This is for the left side of the front.

LEFT FRONT.

2nd row—Take up 3 (with the one on needle); WB.

3rd row—In. 1 at RS.; take up 7 with the In. stitch WB.; take up 3 more each row until all the 21 loops are raised, and working 1 In. on RS. every other row.

9th row—In. 1 on RS.; plain on shoulder. 10th row—Plain. 11th row—In. 1 on RS. 12th row—De. 1 on LS. Work the next four rows plain on the shoulder, and In. 1 *every row* on the RS.

17th row—Raise all the loops; WB.; then make 5 chain. 18th row—Take up the 5 chain as 5 loops; raise all the rest as before; WB.

19th, 20th, and 21st rows—Plain. 22nd row—Take up 4; draw the wool through the last 2 loops raised, forming a DC.; work 3 more DC., then raise all the loops as before; WB. to the last D.C., then work 4 chain; work off the 2 last loops.

23rd row—Raise 2 loops; take up the 4 chain as 4 loops; raise the others; WB. Work 8 more plain rows.

32nd row—In. 1 on LS.

33rd row—Same as 22nd row. 34th row—Same as 23rd row; In. 1 on LS.

35th row—Plain. 36th row—In. 1 on LS. 37th, 38th, and 39th rows—In. 1 on LS. in each. 40th row—Take up all the loops, make 3 chain very loosely, pick them up on the needles as loops; WB.

41st row—Same as 40th, making 5 chain instead of 3. 42nd and 43rd rows—Plain. 44th row—Like 22nd. 45th row—Like 23rd. 46th row—De 1 on LS. 47th row—Plain. 48th row—De. 1 on LS. 49th and 50th rows—Plain. 51st row—De. 1 on LS. 52nd, 53rd, and 54th rows—Plain. 55th row—Like 22nd. 56th row—Like 23rd. Work the next 10 rows plain. 66th row—Like 22nd. 67th row—Like 23rd. Work 10 more rows plain. 77th row—Like 22nd. 78th row—Like 23rd. 79th row—Take up 20 loops; then work 18 DC.; rest plain.

80th row—WB. to the DC.; then 18 chain; finish the row; WB. 81st row—Take up 20 loops; then raise the 18 chain as 18 loops; take up the rest and WB.

82nd row—Plain. 83rd row—In. 1 on LS. 84th row—Plain. 35th row—In. 1 on LS. 86th row—Plain. 87th row—Plain. 88th row—Like 22nd, and In. 1 on LS. 89th row—Like 23rd, raising 11 only, with the 1 on needle; WB.

90th row—Raise the last 11 and 5 more; WB Continue to raise 5 more each row until all are raised, taking care to work a button hole in the 99th row. Work two more rows after the button hole, then a row of DC. Fasten off, leaving enough wool at the end of the DC. to join the front to the back.

RIGHT FRONT.

Commence in the 63rd row of back, on the RS. Raise 21 loops; WB 3 only; take up these 3 loops (with one on needle); In. 1 on LS.; work back 6. Work the left front over again from this point, *but* reversing the directions; where you are told to *raise* so many loops W.B. that number instead; where increased on the RS. make it the left, of course omitting the button holes. The first 6 loops of the left edge will be plain after the 17th row. When finished, if sleeves are or are not required, work a row of DC: round the armholes.

THE SLEEVE.

Tricotée hook (No. 6) and a small fine bone needle. With the fine hook make a chain of 26. Work 1 row DC. Then work 36 more rows DC., taking each loop from the *back*, which forms the ribbed crochet. Fasten off.

Raise with No. 6 tricotée hook 38 stitches at one end of the ribs. W.B. 19 rows; In. 1 on ES. every other row.

21st row—Take up all but 3. W.B. all but 3. Take up all but 6. W.B. all but 6. Work in this manner, leaving 3 more each time, until there are 4 on the needle; take up these 4, and then all the loops to the left edge of the work. W.B. the whole row. Work 25 more rows. In. 1 on ES. every other row.

Work the 47th row as the 21st. Then 1 plain row, and a row of DC., which completes the sleeve. Join it, and sew it into the armhole. If more fulness is required in the sleeve, cast on more stitches in the 1st row of tricotée, and work the last 10 rows. In. 1 ES. *every row.*

This waistcoat can be worked in any colour, according to taste, but black is generally preferred.

13. Gentleman's Mitt (Crochet).

[By Mlle. Riego de la Branchardiere.

MATERIALS—3oz. of green or brown 4-ply fleecy or double Berlin wool; Penelope needle, No. 1. For a Lady, use single wool, needle, No. 2.

THE HAND.

Commence with 37 chain stitches.

1st row—Turn, miss 1, 36 plain, turn back.

2nd row—1 chain, 4 single, 32 plain, working the stitches throughout the mitt in raised or ribbed crochet, which is formed by putting the needle into the lower edge of the top of the previous stitches, and working a plain or single stitch according to the direction.

The work should be tight, and this piece measure from 5in. to 5½in. in length. The chain stitch at the beginning of each row is to form the selvedge.

3rd row—1 chain, work all the row in plain raised crochet.

4th row—1 chain, 4 single, the rest plain raised crochet.

Repeat as the 3rd and 4th rows, 7 times more.

19th row—1 chain, 13 plain, then 10 chain, miss 10 stitches of the previous row, and work 13 plain on the remaining stitches. This opening is for the thumb, and the first of the stitches missed should be marked with a piece of thread as a guide for the rest of the thumb.

20th row—1 chain, 4 single, 9 plain, then 10 plain on the chain, and 13 plain on the remaining stitches.

Repeat as the 3rd and 4th rows, 5 times.

31st row—1 chain, 20 plain, 2 single; turn back, leaving 14 stitches.

32nd row—6 single, 16 plain.

33rd row—1 chain, 24 plain, then 14 plain on the lower row.

34th row—1 chain, 4 single, the rest plain.

35th row—1 chain, 24 plain, 2 single; turn back.

36th row—6 single, 20 plain.

37th row—1 chain, 26 plain, then 10 plain on the lower row.

38th row—1 chain, 4 single, the rest plain.

39th row—1 chain, 20 plain, 2 single; turn back.

40th row—6 single, 16 plain.

41st row—1 chain, 24 plain, then 14 plain on the lower row.

42nd row—1 chain, 4 single, the rest plain.

Repeat as the 3rd and 4th rows 4 times, then place the foundation chain and the last row together, and join them by putting the needle in a stitch of each side and working a chain-stitch; and for

THE CUFF.

Work 44 plain stitches on the selvedge of the narrowest side, that is, 2 stitches to each rib; turn back, and work 20 rows more of raised crochet as before, and sew up the edges; then for

THE THUMB.

1st row—Commence at the opening left for the thumb in the stitch marked, work 10 plain on the 10 plain, then 3 plain on the side of the row, and 10 plain on the 10 chain; turn back.

2nd row—1 chain, 11 plain, miss 1, 11 plain, still working in raised crochet.

3rd row—1 chain, 10 plain, miss 2, 10 plain, then work 8 rows plain, then 1 single on the 1st stitch of the row so as to make it round; and work 3 rounds of single crochet not raised, sew the sides of the thumb together.

THE BAND.

Commence on the side of the 1st row of the mitt and work along the selvedge 50 single stitches, that is, 2 stitches to each rib, then 2 rounds more of single crochet worked tight, and not raised. This finishes the mitt.

Work another mitt the same, but, before joining the band, care must be taken to turn the work on whichever side will make it to match the first mitten. The cuff and band may be worked in another colour, if preferred.

14. Guipure Collar in Tatting.

Terms—"Commence," commence a loop; "Reverse," reverse the work; "S. thread," straight thread.

MATERIALS—Walter Evans and Co.'s Boarshead crochet cotton (No. 18), a small shuttle, and a tatting hook.

Large Rose.—Commence a loop (1 double, 1 purl, 7 times), draw close, join to the first purl; and for the round of leaves commence, 6 double, 1 purl, 6 double, draw close, join to the next purl. Repeat these leaves (joining to each purl) until the rose has 7 leaves, then cut the thread and fasten it off in a secure knot at the back of the rose. Make two of these large roses.

Small Rose.—Commence (1 double, 1 purl, 6 times), draw close, join to the first purl; and for the round of leaves, commence 6 double, 1 purl, 6 double, draw close, join to the next purl. Repeat these leaves until the rose has six leaves; fasten off as in large rose. Make four small roses.

Centre part of the Collar Point.—Leave about two yards for a straight thread.

1st Trefoil.—Commence, 5 double, 1 purl, 5 double, draw close, commence 6 double, 1 purl, 6 double, draw close; commence, 5 double, 1 purl, 5 double, draw close, and on straight thread, 6 double.

1st 2 Ovals.—Commence (1 double, 1 purl, nine times), 1 double, draw close; reverse the work and repeat for the second oval.

Single Leaf.—7 double on the straight thread; commence 8 double, 1 purl, 8 double, draw close; and on straight thread, 5 double, 1 purl, 5 double. Commence, 8 double, 1 purl, 8 double, draw close; and on straight thread, 7 double; reverse, and join at the back of the two first ovals; 9 double on straight thread, join to the purl in stalk, and work 3 double more on the straight thread.

2nd 2 Ovals.—Commence (1 double, 1 purl 13 times) 1 double, draw close; reverse the work, and repeat for the 2nd oval.

Double Trefoils—8 double (on the straight thread), 1 purl, 5 double; commence 5 double, join to the 4th purl of last oval; 5 double, draw close. Commence, 7 double, 1 purl, 7 double; draw close. Commence, 5 double, 1 purl, 5 double, draw close; and on straight thread, 5 double, join to the purl in stalk, 5 double.

2nd Trefoil—Commence, 5 double, join to the 4th purl in 2nd oval; 5 double; draw close. Commence, 7 double, 1 purl, 7 double; draw close. Commence, 5 double, 1 purl, 5 double; draw close; and on straight thread, 5 double, join to the same purl in stalk as 1st trefoil; 7 double.

3rd 2 Ovals.—Commence (1 double, 1 purl, 3 times), 1 double, join to the purl in the 3rd leaf of trefoil (1 double, 1 purl, 8 times) 1 double. Take one of the small roses already worked, and join to one of the leaves, taking care to keep the right side up (1 double, 1 purl, 4 times), 1 double, draw close. Reverse the work and repeat for the 2nd oval.

Stalk.—On straight thread, 8 double, join to the next leaves of both the small roses, drawing the straight thread through both purls at the same time, 7 double, join the two next leaves of the roses, 7 double.

4th 3 Ovals.—Commence (1 double, 1 purl, 4 times), 1 double, join to the next leaf of first small rose (1 double, 1 purl, 8 times), 1 double, join to a leaf of large rose, already worked (1 double, 1 purl, 3 times), 1 double, join to the next leaf of large rose (1 double, 1 purl, 3 times), 1 double, draw close. Commence, 2 double (1 purl, 1 double, 5 times), join to the next leaf of large rose (1 double, 1 purl, 9 times), 2 double, draw close, reverse. Commence (1 double, 1 purl, 4 times), 1 double, join to the next leaf of small rose (1 double, 1 purl, 16 times), 1 double, draw close. Tie the shuttle thread and the straight thread firmly together, and cut both off.

Work another centre for the 2nd point of the collar, commencing from the 1st trefoil and working it exactly the same as the 1st centre, until the 4th 3 ovals are to be made, then work.

4th 3 Ovals for 2nd centre.—Commence (1 double, 1 purl, 4 times), 1 double, join to the next leaf of small rose (1 double, 1 purl, 16 times), 1 double; draw close. Commence 2 double, 1 purl, 1 double, 9 times), join to a leaf of large rose; 1 double (1 purl, 1 double, 5 times), 1 double, draw close. Commence (1 double, 1 purl, 4 times), 1 double, join to the next leaf of large rose (1 double, 1 purl, 3 times), 1 double, join to the next leaf of large rose (1 double, 1 purl, 8 times), 1 double, join to the next leaf of small rose (1 double, 1 purl, 3 times), 1 double, draw close. Tie the two threads firmly together, and cut both off.

Edge round collar.

Fill the shuttle and leave the reel on for a straight thread.

Small oval—Commence 3 double (1 purl, 1 double, 5 times), 2 double; draw close. Reverse the work.

Stalk (on S. thread), 5 double.

Dot.—Commence, 2 double (1 purl, 2 double, 3 times), draw close. Reverse.

Stalk (on S. thread), 5 double.

Trefoil.—Commence, 5 double, join to the last purl in small oval, 2 double, 1 purl, 2 double, draw close. Commence, 3 double, join to the purl in last leaf, 3 double, 1 purl, 2 double (1 purl, 3 double twice), draw close. Commence, 3 double, join to the purl in last leaf, 2 double, 1 purl, 5 double, draw close, and reverse the work.

Stalk (on S. thread), 5 double.

Large Oval.—Commence (1 double, 1 purl, ten times), 1 double; take the first centre part of the collar and join to the second leaf of large rose, counting from the first of the three large middle ovals, and leaving two spare rose leaves at the top of the centre (1 double, 1 purl, four times), 1 double, draw close, and reverse the work.

Stalk (on S. thread), 5 double.

Small Oval.—Same as before, except instead of making the first purl, join to the last trefoil; reverse.

Stalk (on S. thread), 5 double; join to the next leaf of large rose, 5 double; reverse.

Trefoil.—Same as first trefoil; reverse.

Stalk (on S. thread), 5 double; join to the next leaf of large rose, 5 double; reverse.

Small Oval.—Same as before; reverse.

Stalk (on S. thread), 5 double.

Dot.—Commence, 2 double, 1 purl, 2 double, join to the 3rd purl in large middle oval, counting from large rose; 2 double, 1 purl, 2 double, draw close, reverse.

Stalk (on S. thread), 5 double.

Trefoil, same as before, reverse.

Stalk (on S. thread), 5 double.

Dot.—Same as before, joining it to 7th purl of last large oval, counting from its stalk, reverse.

Stalk (on S. thread), 5 double.

Small oval, as before, reverse.

Stalk (on S. thread), 5 double.

Dot.—Commence (2 double, 1 purl, three times), 2 double, draw close, reverse.

Stalk (on S. thread), 5 double.

Trefoil, same as before, reverse.

Stalk (on S. thread), 5 double; join to the last stalk (where the dot springs from), 5 double, reverse.

The worker must remember in the future directions that the stalks are always 5 double on the straight thread.

Make a small oval, reverse, stalk, dot (joining it in the middle to the 5th purl in centre large oval, counting from the last dot that was joined to the centre), reverse, stalk, trefoil, reverse, stalk * dot (joining it to the next leaf of small rose), reverse, stalk, small oval, reverse, stalk, dot (joining it to the last leaf of small rose), reverse, stalk, trefoil, reverse, stalk, dot (joining it to the 5th purl of 3rd centre ovals, counting from small rose), reverse, stalk, small oval, reverse, stalk, dot (joining it to the purl in double trefoil), reverse, stalk, trefoil, reverse, stalk, dot (joining it to the middle purl of 2nd centre ovals), reverse, stalk, small oval, reverse stalk (join to the purl in single leaf), reverse, stalk, trefoil, reverse, stalk (join to the middle purl of 1st double ovals), reverse, stalk, small oval, stalk, reverse (join to the 1st leaf of centre trefoil), reverse, stalk, trefoil, reverse, stalk. And for the dot at the point of the collar commence 2 double, join to the purl in the middle leaf of centre trefoil (2 double, 1 purl twice), 2 double, draw close, reverse, stalk, small oval, reverse, stalk, join to the next purl of end dot, reverse, stalk, trefoil, reverse, stalk, join to the same purl in end dot as last time, reverse, stalk, small oval, reverse, stalk, join to the last purl in end dot, reverse, stalk, trefoil, reverse, stalk, join to the last leaf of centre trefoil, reverse, stalk, small oval, reverse, stalk, join to the middle purl of 1st double ovals, reverse, stalk, trefoil, reverse, stalk, join to the purl in single leaf, reverse, stalk, small oval, reverse, stalk, dot (joining it to the middle purl, in 2nd double ovals), reverse, stalk, trefoil, reverse, stalk, dot (joining it to the purl in double trefoil), reverse, stalk, small oval, reverse, stalk, dot (joining it to the 4th purl of 3rd ovals), reverse, stalk, trefoil, reverse, stalk, dot (joining it to the 1st leaf of small rose), reverse, stalk, small oval, reverse, stalk, dot (joining it to the last leaf of small rose), reverse, stalk, trefoil, reverse stalk, dot (joining it to the 6th purl in large oval, counting from small rose), reverse, stalk, small oval, reverse, stalk ‡, dot (joining it to the last leaf of large rose), reverse, stalk, trefoil, reverse, stalk, dot (joining it to the 4th purl of the edge large oval, counting from large rose), reverse, stalk, small oval, reverse, stalk, dot (joining it to the middle purl of the 1st dot made in the edge), reverse, stalk (and for the back of the collar continue the edge), making trefoil, stalk, dot, stalk, small oval, stalk, dot, stalk, and repeating this until there are 17 trefoils. Then, to join the second centre part of the next points, make a stalk, dot (joining it to the leaf of large rose, next to the two rose leaves joined to the three large ovals), reverse, stalk, small oval, reverse, stalk, dot (joining to the third purl from large rose in large oval, reverse, stalk, trefoil, reverse, stalk; repeat from * to ‡, then make a dot without joining it to anything), reverse, stalk, trefoil, reverse, stalk (join to the stalk where the last dot springs from), reverse, stalk, small oval, reverse, stalk, dot (joining it to the fourth purl of large oval, counting from the last dot joined), reverse, stalk, trefoil, reverse, stalk, dot (joining it to the 7th purl of the middle large oval), reverse, stalk, small oval, reverse, stalk, join to the next leaf of the large rose, reverse, stalk, trefoil, reverse, stalk, join to the next leaf of large rose, stalk, reverse, small oval, reverse, stalk; and for the second large edge oval, commence (1 double, 1 purl, 4 times), 1 double, join to the last leaf of large rose (1 double, 1 purl, 3 times), 1 double, join to the next dot in the opposite edge (1 double, 1 purl, 6 times), 1 double, draw close, and reverse, stalk, trefoil, reverse, stalk, dot, joining it to the next dot in the opposite edge. Continue working all along the back of the collar, stalk, small oval, stalk, join to the opposite edge, dot; stalk, trefoil, stalk; join to the opposite edge, dot, &c., until you arrive at the 1st small oval made. Cut both threads off about 2in. from the work, tie the ends firmly through the first small oval (making the knot at the back of the collar), and cut them close off.

The edge to this collar makes a pretty trimming for children's dresses, &c,

Digitized by Google

by adding a heading to it. For the heading, fasten the thread into the middle purl of 1st dot; crochet 1 single, 4 chain stitches, 1 single into the next dot; repeat until it is complete.

15. Insertion (Tatting).

BEGIN at the lower leaf of the centre group of leaves. Work 7 double knots, 1 picot, 7 double knots; draw up.

1st side leaf — 7 double knots, 1 picot, 4 double knots, 1 picot, 3 double knots; draw up.

For the middle leaf—2 double knots, 1 picot, 4 double knots, 1 picot, 3 double knots, 1 picot, 3 double knots, 1 picot, 4 double knots, 1 picot, 2 double knots, and draw up the leaf.

2nd side leaf—Loop through the lower left picot of the middle leaf, 3 double knots, fasten to picot of 1st side leaf, 8 double knots, 1 picot, 5 double knots, 1 picot, 6 double knots; draw up the loop.

3rd side leaf—Draw the loop through the 2nd picot on the left of the middle leaf, 4 double knots fasten to picot of the last worked leaf; 7 double knots, 1 picot, 6 double knots, 1 picot, 3 double knots, and draw up.

For the upper leaf, draw the loop through the upper middle picot, 3 double knots fasten to picot of side leaf, 8 double knots, 1 picot, 8 double knots, 1 picot, 3 double knots; draw up the loop.

The leaves must now be worked on the right side as described for the left side. The middle line of grouped leaves is finished before beginning the side trefoils. Each group of leaves is joined to the other through the upper picot of the upper leaf. For the trefoils joining the middle groups of leaf, work for the 1st leaf 8 double knots, loop to 1st side leaf of middle group, 8 double knots; draw up. For the middle leaves of the trefoil work 8 double knots, fasten to picot of 3rd side leaf 8 double knots.

For the 3rd leaf of the trefoil, 8 double knots, 1 picot, 2 double knots, 1 picot, 6 double knots; draw up the leaf. The arrangement of these trefoils is clearly seen in the engraving.

For the outer line of trefoils 1st leaf, 4 double knots, 1 picot, 4 double knots; fasten to picot of the inner row of trefoils, 8 double knots, and draw up the loop. For the middle leaf of the trefoil work 9 double knots; fasten, according to engraving, to the outer picot of the 2nd side leaf of the middle group; work 9 double knots, and draw up. For the 3rd leaf of the trefoil work 8 double knots, 1 picot, 3 double knots, 1 picot, 5 double knots, and draw up the loop.

To fasten off the separate trefoils cut the cotton and pass the end through the centre of the first leaf, next pass the end left at the beginning into the last leaf so as to cross the ends, knot them together and cut them off.

The little ovals connecting the trefoils finish the pattern. On one side they are made with 3 double knots, 1 picot, 4 double knots, fasten to the side picot of inner trefoil, 7 double knots, and draw up the loop. For the opposite side work 7 double knots, fasten to picot of inner trefoil (see engraving), 4 double knots, 1 picot, 3 double knots, and draw up the loop, fasten to end picot of outer trefoil.

For the edges, work a line of chain-stitch in crochet, fastening it by single stitches through the outer loops of the trefoils and ovals. See that it lies flat.

2nd row—1 treble, separated by 1 chain, and passing over 1 chain beneath.

16. D'Oyley (Guipure d'Art).

No prettier D'Oyleys are made than those of *guipure d'art*; they have a very lace-like effect, and serve to show off the colouring on the porcelain plate rather than detract from its beauty. The novelty in the design No. 3 consists in the raised lines, which run diagonally on the pattern, and are not darned into the foundation. A square of netting (27 stitches) is first made; this is washed and stiffened in the usual manner, and then tacked to a wire frame sold for the purpose. The darning accomplished, the raised lines are formed by fastening two lines of thread across two of the netted square stitches, and darning under and over and backwards and forwards across the double lines of thread, and so making a compact close line of stitches. Cluny thread, No. 30, is used for the darning, and No. 48 for the netted foundation. This novel design is from Mr. Catt's, Sloane-street, at whose establishment can be procured the netted foundation, threads, and frames, &c., and all materials necessary to pursue this fashionable style of work.

17. Insertion (Mignardise Braid).

Terms—Ch., chains; S., single crochet; DC., double crochet; L., long crochet.

MATERIALS—No. 20 Arden's crochet cotton. Join the cotton to the braid.

1st row—3 Ch., 1 S. in next loop on braid, 3 Ch., 1 S. in next loop, 15 Ch., 1 S. in 10th loop, 5 Ch., 1 S. in the 4th loop of the 10 missed, 5 Ch., 1 S. in the 11th Ch. from the 1st of the 15 Ch. just worked, 9 Ch., 1 S. in 4th loop on braid, 3 Ch., 1 S. in next loop, 3 Ch., 1 S. in next loop, 7 Ch., 1 S. in 2nd loop, 3 Ch., 1 S. in next loop, 7 Ch., 1 S. in 2nd loop, 3 Ch., 1 Long in 2nd loop, 9 Ch., 1 S. in 3rd loop, 11 Ch., 1 S. in 8th loop, 5 Ch., 1 S. in 3rd loop of 8 missed, 5 Ch., 1 S. in 6th of 11 Ch., 5 Ch., 1 S. in 3rd loop, 4 Ch., 1 S. in 5th of 9 Ch., 4 Ch., 1 S. in 2nd loop, 5 Ch., (O) 1 S. in 2nd loop, 9 Ch., 1 S. in 2nd loop, 11 Ch., 1 S. in 8th loop, 5 Ch., 1 S. in 3rd loop of the 8 missed, 5 Ch., 1 S. in 6th of 11 Ch., 5 Ch., 1 S. in 3rd loop, 4 Ch., 1 S. in 5th of 9 Ch., 4 Ch., 1 S. in 2nd loop, 4 Ch., 1 S. in 3rd of 5 Ch. marked in the directions with an (O), 4 Ch., 1 S. on long crochet on the opposite side of the braid, 2 Ch., 1 S. in 2nd loop, 2 Ch., 1 S. in 2nd Ch. of the 7 opposite, 4 Ch., 1 S. in 2nd loop, 2 Ch., 1 S. in the 2nd loop of 3 Ch. opposite, 3 Ch., 1 S. in 4th of 7 Ch. opposite, 4 Ch., 1 S. in 2nd loop. Repeat from the first as often as required.

2nd row—Work DC. along the chain stitches forming the outer edge.

3rd row—Work on this row of DC. 1 long in 1st, 1 long in 2nd, 3 Ch., miss 3, 1 long in the 4th, 1 long in the 5th; repeat.

4th row—This row works the other side the braid. Join the cotton to the loop on the braid above the 3rd loop left unworked in the corner of the 1st row when 8 loops are missed. Work the first row again.

5th row—DC.

6th row—Like the 3rd row.

18. Edging (Crochet and Mignardise Braid).

THIS edging is worked with Mignardise braid and crochet as follows: 1st row * 2 treble on 1st loop of braid, 1 chain, repeat from * on 5 more loops, 1 single on the two following loops, 1 chain, this forms 1 scollop; repeat from 2 treble until you have the length required. Take another length of braid and work on each side of it 1 single in each loop, with a chain between. To join the two together take the braid without the scollop and join thus: 1 single, take the loop under 2 single of the scollop, draw it through your needle with a single stitch, 3 single on the plain part of braid, * miss a loop of scollop, on the 4 next of scollop, work 4 treble all into 1 stitch of plain braid, 3 single on the plain part of braid; repeat from * to the end.

19. Edging (Mignardise Braid and Crochet).

THIS edging is made of Mignardise braid and crochet. 1st row.—* 1 treble in 1st loop of braid, 3 chain, 6 treble, with 3 chain between each on the next 6 loops; 2 plain crochet in the next 2 loops; repeat from * till you have the length required. Take another length of braid, and work on each side of it in every loop 1 plain stitch and 1 chain between each. Join the two pieces of braid, then work 1 single stitch on the braid without scollop. Draw your needle through the loop before 1st treble in the row with scollop; work 3 single crochet on plain row, * miss 2 loops of row with scollop, 1 double treble in next loop of braid, 1 single on plain row; miss 2 loops of braid in row with scollop, 1 double treble in next loop of braid; work it into the same stitch as the first double treble by a single stitch; 3 single, miss 1 loop of braid on the row with scollop; draw your needle through the next loop of braid; 2 single on plain row; draw your needle through next loop of braid, 3 single; repeat from *.

20. Antimacassar (Crochet with Mignardise Braid).

THE STAR IN CENTRE OF LARGE CIRCLE.

5 chain, unite, work in round 14 DC. or double crochet.

2nd round—* 1 DC., 5 long, 1 DC. in the 1st DC. of last round; then 1 D.C. in the next DC.* Repeat from * 6 times more.

3rd round—Draw the cotton to the top of 3rd long in a leaf of last round. * 10 chain, 1 single in 3rd long of next leaf.* Repeat, fasten off.

4th round—Join to a loop on the braid, 4 Ch., 1 S. in 5th chain of one of the 10 Ch. in 3rd round, 1 long in next loop of braid, 4 Ch., 1 DC. in 2nd loop from last on braid, *4 Ch., 1 S. in 5th of next 10 Ch., 1 long in 2nd loop on braid, 1 long in next loop on braid, 4 Ch., 1 DC. in 2nd loop. Repeat from *; join neatly.

THE OUTER PART OF CIRCLE.

Join to the braid. In mentioning the loops on the braid, by the 2nd or 3rd is meant the 2nd or 3rd from last worked.

1st round—3 Ch., 1 S. in next loop 10 times, * 2 Ch., 1 S. in next loop 7 times, 7 Ch., 1 S. in 6th loop, * 2 Ch., 1 S. in next loop 7 times, * 3 Ch. 1 S. in next loop 10 times, 10 Ch., 1 S. in 6th loop, * 3 Ch., 1 S. in next 10 times. Repeat from * 6 times more.

2nd round—Commence where the last round was commenced, 1 treble on the single in 1st loop, * 7 Ch., 1 long on 2nd loop, 7 Ch., 1 long on 2nd loop, 5 Ch., 1 long on 2nd loop, 9 Ch., 1 DC. on 3rd loop, 9 Ch., 1 DC. on 3rd loop, 9 Ch., 1 DC. on 3rd loop, 3 Ch., 1 long on 2nd of 7 Ch., 1 L. in 6th of 7 Ch., 3 Ch., 1 DC. on 2nd loop from 7 Ch., 4 Ch., 1 S. in 5th of 9 Ch., worked last on the opposite side, 4 Ch., 1 DC. on 3rd loop, 4 Ch., 1 S. in 5th of 2nd 9 chain, 4 Ch., 1 DC. on 3rd loop, 4 Ch. (0), 1 S. in 3rd loop of 1st 9 Ch., 5 Ch., 1 S. in 6th of 9 chain, 3 Ch., 1 S. in 3rd of 5th Ch., 5 Ch., 1 treble in 3rd loop of 1st 4 Ch. (worked in the 9 chain it has an (0) marked by it in the directions), 5 Ch., 1 treble in 2nd loop, 5 Ch., 1 L. on next loop, 5 Ch., 1 L. on 2nd loop, 7 Ch., 1 long on 2nd loop, 7 Ch., 1 treble on 2nd of 10 chain, 1 treble, in 8th of 10 chain. Repeat from *.

2nd round—The inside of the braid. Join the cotton to a loop on the braid round the star first worked, 5 Ch., take up the loop on the inside of the upper braid in which the 1st of 10 chain is worked in the last round (see engraving), * 1 Ch., 1 S. in next loop, 2 Ch., 1 S. in next loop of star braid, 1 Ch., 1 S. in next loop of up braid, 2 Ch., 1 S. in next loop on star, 6 Ch., 1 S. in 2nd loop of upper braid, 5 Ch., 1 S. in 2nd loop on up braid (the loops will all be on the upper braid now), 11 Ch., 1 S. in 3rd loop, 13 Ch., 1 S. in 9th loop, 5 Ch., 1 S. in 4th of the 9 loops missed, 5 Ch., 1 S. in 7th of the 13 Ch., 4 Ch., 1 S. in 2nd on braid, 3 Ch., 1 long in the 7th of 13 Ch., 1 treble in 6th of 11 Ch., 5 Ch., 1 S. in 4th loop of braid, 5 Ch., 1 long in 4th loop on braid, 13 Ch., 1 S. in 3rd loop on braid, 5 Ch., 1 S. in 3rd on braid, 5 Ch., 1 S. in 7th of 13 Ch., 6 Ch., 1 S. in 4th on braid, 3 Ch., 1 treble in last long stitch on braid, 1 treble in 6th of 11 Ch. first worked, 5 Ch., 1 S. in 3rd loop, and 1 S. in loop corresponding on the opposite side; 5 Ch., 1 S. in 2nd loop; 7 Ch., 1 S. in last loop worked on star braid; 5 Ch., 1 S. in 2nd loop on upper braid; repeat from *

3rd round—The outside edge: Commence in a chain stitch, * 3 Ch, 1 DC. in 2nd Ch. of 1st round, 7 Ch., 1 S. in 5th of 7 Ch., 2 Ch., 1 DC. in same stitch as the last DC., 3 Ch., miss 2, 1 DC. *; repeat.

THE CONNECTING STAR.

Join to the braid; 3 Ch., 1 S. in next loop; work 6 times; O. 1 S. in next loop, 3 loops together, 1 S. in next loop, 3 Ch., 1 S. in next loop, 5 Ch., 1 S. on 5th loop worked from the commencement; 9 Ch., 1 DC. in 5th of 9 Ch., 4 Ch., 1 S. in last loop worked, * 3 Ch., 1 S. in next loop, * repeat 5 times more; repeat from O. 3 more times. The inside is worked by just drawing the loops together with a chain stitch, as in the engraving; join the star to the circles in working, as in engraving.

21. Necktie, or Trimming with Ribbon (Crochet).

Terms—DC., double crochet; Ch., chain; L., long cr.

MATERIALS—Fine crochet cotton, No. 20; fine steel hook.

THE ROSETTES.

A Ch. of 7; unite.

1st round—5 Ch., 1 L. in circle, * 2 Ch., 1 L. * in circle 9 times, 2 Ch., 1 S. in 3rd Ch., at commencement.

2nd round—7 Ch., 1 L. over the L. in last round, * 3 Ch., 1 L. over L.; repeat 9 times; 3 Ch., 1 S. in 4th Ch.

3rd round—* 1 DC., 5 L., 1 DC., all in the 3 Ch., 1 S. on L.; repeat.

4th round—Take the cotton to the back, work 4 Ch., 1 S. on next long just under the S. worked in last round; repeat.

5th round—1 DC., 7 L., 1 DC. in 4 Ch., 1 S. on L.; repeat.

6th round—Take the cotton to the back, work 5 Ch., 1 S. on long in same place as in 4th round.

7th round—1 DC., 9 L., 1 DC. in each of the 5 Ch.; repeat and fasten off. Work as many rosettes as are required.

TO UNITE THE ROSETTES.

Join the thread to the 5th L. in a leaf of the last round in rosette, 19 Ch., 1 S. in the 13th of the Ch., 12 Ch., take up the 5th L. in a leaf in the next rosette, 12 Ch., 1 S. in the loop made on the 19 Ch., 1 S. in the 2nd leaf from last on the 2nd rosette, 12 Ch., 1 S. in the loop again, 12 Ch., 1 S., in the 2nd leaf from the one in which the thread is joined in the 1st rosette, 12 Ch., 1 S. in the loop again, 12 Ch., 1 S. in the 5th L., where you commenced; fasten off. Join all the rosettes together in this manner.

THE OUTSIDE EDGE.

Join to the L. stitch, from which a 12 Ch. is worked, at the top of 1st rosette, 7 Ch., 1 S. in 4th, 7 Ch., 1 S. in same stitch as last picot, 4 Ch., 1 S. in same stitch, 3 Ch., 1 S. in 2nd L. of next leaf, * 5 Ch., draw through the last picot made, 2 Ch., 1 S. in 3rd of 5 Ch., 7 Ch., 1 S. in 3rd again, 4 Ch., 1 S. in 3rd again, 3 Ch., 1 S. in 7th L. of same leaf; repeat 3 more times, taking up next leaf, which will bring you to the bar of 12 Ch., then repeat again, working the 2nd S. after the 3rd Ch. into the 3rd of the 12 Ch.; repeat again, and take up the 8th Ch.; repeat again, take up the 4th Ch. of next bar of 12 Ch. (see engraving); repeat again, taking up the 8th Ch.; repeat again, taking up the 7th L. in leaf of next rosette; then work over again from the commencement of the outside edge; work the other side in the same manner, and run a ribbon in as in the engraving.

22. Edging (Crochet and Mignardise Braid).

MAKE a chain the length required, fasten off, and begin at the commencement of chain for 2nd row, thus:

5 chain worked by a plain stitch into the same hole, 1 plain stitch, begin from 5 chain again to the end of row.

3rd row is merely chains to form the picots or 5 chains of last row together, 3 chains between each picot.

4th row must be worked on the other side of the 1st chain row, thus:

* 4 chain, miss 3 stitches, in the next stitch 2 plain, 4 chain, miss 3 stitches, 3 long in the next 3 stitches from * to end of row.

5th row—Begin on the 3 chain before 2 plain of last row with * a chain of 7 on the 5th stitch of 7 chain, 1 plain stitch. This forms the 1st picot. 5 chain picot on 1st of 5, 5 chain picot on 1st of 5, 2 chain, miss 7 stitches, draw your thread through the next stitch, 6 chain miss 5, and on the next stitch draw your thread through. Begin again at * to the end.

23. Edging (Crochet and Mignardise Braid).

THIS edging is made with mignardise braid and crochet.

The braid is bordered on one side with a chain of crochet, 2 chains between each loop of the braid. The lace side of the mignardise is worked thus:

Fasten your thread to one of the loops, a chain of 5, picot 3 of the 5 into 2nd stitch of the chain, miss 1 loop of the braid into next loop, work alternately 4 long stitches and 4 picots, miss 1 loop, and fasten the last picot into the next loop with a plain stitch; in the same loop begin 5 chain again, and so on till you have worked the length required.

24. Antimacassar.

Terms—Ch., chain; DC., double crochet; L. long; S., single.

MATERIALS—Fine steel crochet hook; Arden's cotton, No. 10 or 12. Make a chain of 10. Unite.

1st and 2nd—Work in the chain 18 DC.

2nd round—* 9 Ch., 1 L. in the 4th from the needle, 1 L. in each of the next 4 Ch., 1 S. in the 3rd DC. on the round, taking up the front of the loop only. Repeat 5 more times.

3rd—Work single crochet all round each leaf. Then pass the cotton to the back of these leaves into a DC. on the round.

4th—12 * Ch., 1 L. in the 4th from the needle, 8 L. on the 8 Ch., 1 S. in 2nd DC. on the round, taking up the back of the loop. Repeat 8 more times.

5th round—Single crochet all round. Fasten off neatly. Join the cotton to the first loop at the top of one of the 9 leaves just worked.

6th round—1 S. in the next, * 9 Ch., 2 S. on next leaf. Repeat.

7th round—3 Ch., 1 L. Then long crochet all round at the last 1 S. in 3rd Ch., to join neatly.

8th round—*, 3 Ch., miss, 1 L. 3 Ch., miss 1, 1 S. Repeat.

9th round—3 S. on 3 Ch. to bring the cotton to the top, * 5 Ch., 1 S. on the L. in last round, * 3 Ch., 1 S. on next. Long. Repeat.

10th round—6 Ch., 1 S. in 3rd Ch. of last round, * 3 Ch., 1 L. on the Long, 3 Ch., 1 S. on 3rd Ch., repeat; in the last 3 Ch. join by 1 S. in the 3rd Ch. at first so forming a Long.

11th round—6 Ch.; 1 S. on L. * 6 Ch., 1 S. on Long; repeat.

12th round—1 L. on S. * 4 Ch., 1 L. in S. again; 3 Ch., 1 Long in next S.; repeat from *.

13th round—Draw the cotton into the 2nd Ch. of the 3 between the 2 Long, * 3 Ch., 1 L. in the 4 Ch., between two Long, 5 Ch., 1 S. in the L. just worked, 5 Ch., 1 S. again in Long, 5 Ch., 1 S. in Long again, 3 Ch., 1 DC. in 3 Ch., between the Long of last row; repeat. When other circles are worked join according to the engraving by drawing the 3rd Ch. of the 2nd 5 Ch. in this row through the corresponding stitch in other circles.

STAR BETWEEN THE CIRCLES.

Make a chain of 8, unite, work 16 DC. in it.

2nd round—5 Ch., 1 L. on next DC., * 2 Ch., 1 L. in next DC.; repeat 14 more times.

3rd round—1 DC. on Long, * 5 Ch., 1 DC. on next Long; * repeat; draw the 3rd of 5 Ch. through a picot on the circle every fourth time of working.

Gentleman's Knitted Mitts.

Terms—P., plain; B., purl.

THE following is a simple and easy recipe for knitting gentlemen's mittens with a thumb, on 4 needles. 3oz. of 4-thread claret, fleecy or any other colour preferred, will be sufficient, and 4 needles No. 15 will be required. These mittens are done in moss stitch, which is alternately a plain and a purl throughout, but if desired they can be knitted plain. Cast 16 stitches on each of 3 needles, and unite them in a round. 1st round—P 2, B 2; repeat; continue the ribbing till 18 rounds are done. 19th round—B, P; repeat. 20th round—P, B; repeat. Repeat 19th and 20th rounds till 26 in all are done. 27th round—B, P; increase by lifting up the cross loop at the bottom of the next stitch, put it on the left hand pin, and knit it as a stitch, * B, P; repeat from *. 28th round—P, B; increase by picking up a stitch as before and knitting it, B, increase again in the same way, P, * B, P, repeat from *. Continue to increase for thumb, as in 28th round, 2 stitches in every 4th round, till there are 18 stitches between the increases (the increasing not to interfere with pattern of hand part or thumb, where P must always come over B), cast on 6 stitches, then divide the 24 stitches on 3 needles and unite them in a round. Knit 11 rounds B and P, as before, and cast off; this completes the thumb. For the hand, take up 6 stitches at the edge of the 6 cast on, and knit them with the 48 stitches that remain for 15 rounds, alternating the stitch as before; then cast off.

Knitted Quilt (Shell Pattern).

USE No. 11 knitting cotton and pins No. 16, which will make a pretty fine looking quilt for a baby's bed. The recipe that I have for the shells is as follows: Cast on 52 stitches. 1st row—Plain. 2nd row—Slip the 1st stitch, knit 3 plain (for border), put the thread over twice and knit 2 together alternately till within 4 stitches of the end, then knit 2 together and 2 plain. 3rd row—Plain (always slip the 1st stitch of each row), knitting 2 together as before when within 2 stitches of the end. 4th row—Same as 3rd. 5th row like the 2nd. 6th and 7th rows—Plain, always decreasing when 4 stitches from the end. 8th row—4 plain (for border), purl to within 4 stitches of end, knit 2 together, 2 plain. 9th row—Plain, knitting 2 together and 2 plain as before at the end of the row. 10th row—4 plain, purl to within 4 of end, knit 2 together, 2 plain. This will complete the 1st rib of 4 purl rows on the right side. The next 4 rows must be plain on the right side, consequently purled at the back, but the 4 border stitches must always be knitted plain, whatever the rest of the row may be; and at the end of each row a stitch must be decreased by knitting 2 together, when within 4 of the end. There are to be 6 complete purl ribs on the right side of the work. When only 8 stitches remain on the pin, take in by knitting the 2 middle stitches together, and do the same in each of the remaining rows till only 2 stitches are left, which are to be knitted together, and this completes the shell. For the half shells to fill in at the sides: cast on half the number of stitches, and proceed exactly in the same manner as for the larger shell, except that the border is on one side only.

Boudoir.

To clean Sheepskin Hearthrug.

TAKE a very strong lather by boiling soap in a little water, then mix this with a sufficient quantity of water, rather more than lukewarm, to wash the mat or rug in, and rub more boiled soap on those portions of it which require additional cleansing. When the mat has been well washed in this water, prepare another in the same way, in which a second washing must take place, followed by a third, which ought to be sufficient to cleanse it thoroughly. Rinse it well in cold water until all the soap is removed, and then place it in another water in which a little blue has been put, sufficient to keep the wool of a good white and prevent its inclining to yellow. After this it should be thoroughly wrung, shaken, and then hung out in the open air with the skin part towards the sun, but not where it is scorching, otherwise it will become hard. It must also be shaken often while dry, if not it will be quite crackly, and it should be frequently turned, being hung up first by one end and then by the other, until it has dried entirely.

How to treat the Hair.

DR. CAZENOVE, of the Hospital of St. Louis, Paris, gives the following clear instructions on the management of the hair of young girls. He says:—"Pass a fine tooth comb, at regular intervals every twenty-four hours, through the hair, in order to keep it from matting or entangling; separate the hairs carefully and repeatedly, so as to allow the air to pass through them for several minutes; use a brush that will serve the double purpose of cleansing the scalp and gently stimulating the hair bulbs. Before going to bed it will be desirable to part the hair evenly, so as to avoid false folds, or what is commonly called turning against the grain, which causes the hairs to break. Such are the usual and ordinary requirements as to the management of the hair. There is, on the other hand, a class of persons who carry to excess the dressing and adornment of the hair, especially those who are gifted with hair of the finest quality. Thus, for example, some females are in the habit, during the ordinary operations of the toilette, of dragging and twisting the hair, so as to almost draw the skin with it; the effect of which is, in the first instance, to break the hairs and fatigue the scalp, and finally to alter the bulb itself. The fine-tooth comb is also freely used, especially where the hair is divided—a part that the most particular attention seems to be bestowed upon. These separations and the back of the neck, whence the hair is drawn, in females, towards the crown of the head, are the parts which first show signs of the decay or falling off of the hair." The most healthy mode of dressing the hair of females, especially young ones, is to let the hair be as loose as possible, or arranged in large bands, so as to allow the air to pass through them. It is a mistake to plait tightly the hair of children under eleven or twelve years of age. The process of plaiting more or less strains the hairs in their roots, by pulling them tight. The hair of girls should be cut at the ends, and allowed to curl freely.

Feather Screens.

TAKE a piece of Bristol board cut into the shape either of a circle, a leaf, or a fan, and upon this arrange the feathers according to taste, sewing them down to it by the stem to keep them secure. The eye round part of the peacock's feather, with a small portion of the stem only, should be used, the lighter parts being stripped from the latter, and employed to fill in with. When this is done, cut another piece of Bristol board exactly the size of the first one, cover it with silk of any colour preferred, in the same manner as the half of a pincushion, paste it firmly over the back, and finish the screens with gilt handles. Portions of very bright metallic green feathers may be introduced with advantage.

How to grain Wood.

OAK.

FIRST have the wood on which you are to practise made as smooth as possible, and then cover with three or four coats of paint ground in oil and turpentine, mixed in the proportion of two-thirds oil and one-third turpentine. If intended for light oak, the ground may be formed by mixing white lead or zinc with Oxford ochre until it becomes a light buff. If a medium shade is wanted add a little Venetian red, to make it rather darker; and for dark old wood add a little burnt umber and orange chrome. When this is dry, the graining colour is to be put on evenly all over, but not too thick. For light oak this may be made of either Vandyke brown or burnt umber, with a little burnt sienna added if you wish to give it a reddish tint, or raw sienna if a yellow tint is preferred; these may be mixed into the paint that is left after putting on the ground, and the darker the share of the graining colour the darker and richer will be the work produced. A little beeswax melted and mixed into the paint will prevent the running of the colour after the graining is done.

Having coated it with the dark colour while the paint is fresh, take a long comb (and if the teeth are here and there missing it will be rather an advantage than otherwise, as it will produce a variety in the size of the veins or lines), and draw it straight, or in a slightly crooked line, across the board from end to end in the direction the grain of the wood is supposed to run. Do this over the whole surface.

Next take a rather fine comb, and go over it again in the same direction, giving the hand a waving or slightly crooked motion. This will remove the stiff look of the first combing. Now take a rag and wrap it around a blunt stick, and, with your pattern before you, try to make the outline figures to be seen in the centre of the wood. Sometimes it can be done more easily by wrapping the rag around the thumb, or some other contrivance may suggest itself to the operator.

After the combing and figuring is done, it is sometimes desirable to blend the graining more, and to give something of a mottled appearance to the work. This is easily done by going over it with a badger's-hair brush very softly. Another way, and one more likely to give satisfaction, is to *over-grain* it when dry with Vandyke brown mixed in sour ale, with a little blue-black added. Before applying this, it will be best to sponge it with a mixture of fuller's earth and water.

The mixture for over-graining is supplied by dipping in the brush and drawing it directly over the surface, and then softening or blending slightly again with the badger's-hair brush.

There being great variety in the figures and gnarled appearance of the wood, there need be no tiresome sameness in the graining of a door or panel; and, with a view to the acquiring of a varied style, it will be well to use as many different patterns of the real wood as possible.

In many specimens there will be seen spots and cracked knots with very distinct shadings around them. These may be made by putting on touches of the darkest shade used, with lines traced in graceful curves around the knots; then comb with a coarse comb up and down, curving the strokes as they pass around the knots. The large knots can be retouched after the final over-graining with a small brush or hair pencil, in order to trace the cracks or lines across the face of them.

When the paint is entirely dry a coat of varnish will bring out the colours finely, and finish it with the proper polish.

There is another style of painting called by painters *distemper*. The difference consists chiefly in the mixing of the paints, the process we have been describing having reference entirely to oil colours, while the other method is by mixing them with size and water, or, what will answer as well, thin glue-water.

Most of the paints which are usually mixed in oil can be prepared equally well in this way. The inner walls of houses can be done with this kind of paint; but great care must be taken before applying the paint that the surface is entirely smooth, and free from grease, lime, or dirt. If there is the least likelihood of grease being there, the wall must be thoroughly cleaned by scraping, or by a wash of pearlash water.

When the wall is thus prepared let a coat of glue-water be put on warm, and when dry the surface should be well rubbed, and smoothed with sand-paper or pumice. The colour may be mixed with thin glue-water as a size, but must not be put on too thick.

To grain oak in distemper, the wood or wall, after the preparation described, should be wet slightly with the sponge and the fuller's earth; then mix together Vandyke brown and a little burnt sienna with a portion of the size, and with a brush or sash-tool, dipped first in the sour ale, spread on the colour, and proceed to comb and over-grain as directed for oil-graining. (These directions are only for the graining; the ground is supposed to have been prepared in oil, as before described.)

This is not as handsome as oil-work, but is done more quickly, and with less expense. When finished with a coat of varnish it will look very well.

WALNUT.

To imitate walnut the same general rules may be followed, only that a darker ground-work is produced by using more Vandyke brown or burnt umber, graining with black, and softening with the badger brush, with a good pattern in the natural wood from which to copy.

MAHOGANY.

Use the same colours for ground-work as directed for light oak, only adding enough burned sienna to give it a reddish tint. Mix together Vandyke brown and a little Victoria lake with oil; put it on when the ground is dry, but not as an even coat—rather in blotches or streaks. Mottle it well by rubbing it off here and there with a rag, and also comb it slightly in parts; then go over it with the badger until all are well blended. By going in the same direction always in using the badger a uniform shading will be given to the figures of the wood. The whole may then be darkened somewhat by going over with a coating of Victoria lake in distemper, finishing off with the badger.

This wood may also be imitated in distemper by staining first with Venetian red, and with Vandyke brown, burned sienna, and Victoria lake to form the grains and figures, mottling the wood while it is wet with the badger. Last of all, touch it, and over-grain with Vandyke brown and a little black.

ROSEWOOD.

Colour the ground with extract of logwood, an even coat; then with a coarse bristle brush put on some irregular streaks of Vandyke brown and black, leaving the red streaks between. Copy now from the real wood, using the over-grainer and fine comb to blend and curl the stripes. Over all this put on a coating of Victoria lake, and finish it with varnish.

When the wood is new and has never been painted, it will be much better to stain it first with the extract of logwood dissolved in spirits of wine, and then apply the dark colours in the way described.

Light mahogany furniture may be readily converted into rosewood by treating in the way described, only that the natural colour of the mahogany will answer well for the ground, and the varnish previously put on the wood will not interfere with the application of the dark veining colours.

Dress and Fashion.

THE MOVEMENTS OF FASHION 1868-69.

THE YEAR that has rolled by so quickly has seen a retrogression in the style of ladies' costume; instead of copying the fashions of our grandmothers, we seek still farther, even a generation back, for our modes. Paris—that centre of civilised life, from which the fickle goddess issues her edicts—has invented nothing absolutely novel; she is content with being a copyist. Her milliners repair to the Imperial Library to consult dusty tomes as to what was worn during the reign of Louis XV. and Louis XVI.; how Mme. Pompadour wore her headdress, and what shape Marie Antoinette's bonnets were. Her dressmakers and hairdressers repair to the royal galleries to study the pictures of that date, for everything now must have the stamp of the fashions that prevailed well nigh a century back. Paniers reign triumphant, bonnets have become hats, crinolines are no longer seen in front, but ingenious devices are resorted to to make them prominent at the back. There is a careless unstudied effect about the toilettes of to-day; "bunched-up" is a term that is applied to the drapery of the skirts; if it is not a very picturesque description, it is a most expressive one. What the French call *tournures*, what some English dressmakers call "dress improvers," and what the less enlightened, but perhaps more practical, call "bustles," are again in fashion. They are usually made of white horsehair, a deep flounce and five *bouillonnés* at the top, and supported by other pads or whalebone. The crinolines are also made with steels at the back, below the waist, so that, with one contrivance and another, the skirt of the dress looks full and *bouffant* behind, and very flat in front and at the sides. The mistake the English dressmakers make is that they line the paniers with stiff muslin, and so contrive that they shall form the *pouf*. The Frenchwoman goes to work more artistically; she makes a substructure of crinoline and *tournure;* she has invented a petticoat to wear over the crinoline that draws with a drawing string, both at the waist and half-way down, and then she drapes the skirt in cunning folds upon this substructure. There is no undue protuberance, no swelling at any given point; merely drapery upon a foundation that of itself protrudes at the back of the figure.

Let us commence with the fashionable colours. There are several names, but few distinct tones. There are the Caroubier, the Sultan, the Pasha, the Grenat—which are all shades of garnet, the lightest (Caroubier) being named first. Then there is the "Yatouma," a sort of brilliant deep orange, much affected by blondes; the "vert Russe," less elegantly expressed by "bottle green;" marine, or sailor blue; and marron—these are the hues now in vogue.

In materials the *satin Amazone*, a woollen fabric with a bright gloss on it, is fashionable in Paris for short costumes, while in this country cloth of various descriptions is considerably more popular. The Parisians have come to the conclusion that cloth is too heavy to drape in the intricate folds imperatively demanded by the paniers, and they prefer a fabric of lighter make; in this conclusion they display their judgment. These materials are for short costumes; but for evening wear, satin, humming-bird velvet, and rich thick gros grains, are all in vogue, and in the colours named above.

As to the make of dresses great distinction is made between what is worn for costumes and what for dressy toilettes; by the latter, I refer to dinner and ball dresses, toilettes for wearing when paying visits, when driving, and upon other ceremonious occasions. The short costumes are now made of one colour and of one material, not with a petticoat that is visible, and contrasts vividly with the rest of the apparel. The skirt of the "costume" barely escapes the ground, the front and side breadths are well gored, and the back breadths, which are not gored, are gathered into the waistband. This skirt, which is an equal length on all sides, is aptly called the "all round." Over this there is a panier tunic, or a casaque with a panier. The bodice fits the figure to the waist, and the basque is either looped with rosettes, or else the back breadths are cut considerably longer than the side ones, so that they can be gathered in and made to look full. Sashes are also worn above this drapery; the ends are short, the bows are at the back, and one loop of the bow stands upright at the back of the bodice, the waistband being fastened in front with a hook and eye, and not with a buckle. Among the illustrations will be found the most suitable form of velvet basquine.

For evening wear the Pompadour style is in vogue; Pompadour satins, with bouquets of flowers, are used for the skirts, the front breadth being self-coloured, to match the prevailing shade of the rest of the toilette. Skirts are made exceedingly long at the back, the train sometimes measuring two yards. Muslin petticoats to wear under these dressy toilettes are made of the same length as the skirt that is worn over them; they are bordered with a deep flounce, and this deep flounce is again bordered with a narrow one. All kinds of devices are resorted to in order to make the train flow out gracefully.

Black watered ribbon has been much used for trimming the evening dresses worn at Compiègne, where the Emperor and Empress of the French have recently received a distinguished circle of guests.

In bonnets and hats there has also been a change. At the commencement of the year the *jauchon*, or half-handkerchief form, was in vogue; now the bonnets are worn all round like small cheese plates, and they are covered with *pouffs* and feathers, and arranged to rise high in the centre of the forehead. In the early part of the year jet and steel and gold ornaments were used for trimming; now these are replaced by humming-birds and feathers of all descriptions. Spanish blonde has disappeared, and veils are now made of the lace, spotted with chenille, and of the "loup" or mask form—that is, only reaching to the mouth. Strings are once more fastened under the chin—not wide strings with a large formal bow, but narrow ribbon with lace lappets formed beneath. In hats there is likewise a marked change; the "pork pies" and turbans have now given place to a peculiar form of toque, with a high slanting crown; the front of this headdress only is trimmed, and that with feathers and aigrettes. Some of the leading milliners in Paris have been essaying to introduce the Marie Antoinette toque, copied from Mme. Le Brun's portrait; but as yet they have only been able to make a compromise—it is not definitely accepted.

In collars there is a change, but by no means a permanent one. Sailor collars have been brought out—by this I mean large linen collars which fall on the shoulders, with a coloured band round them, fastening at the throat with a bow of either cambric or linen to match. This is only a fleeting fashion. Cluny guipure has been discarded for Valenciennes lace, decidedly a change for the better.

And of chignons, and frizettes, and curls, and plaits, what shall we say? They are on a larger scale than ever, and hairdressers have doubled in number, because the demand for "additions" to the natural growth is still something incredible. Where the supply for the future is to come from is a more vexed question than where our grandchildren are to procure their coal. The supply, it is predicted, will cease. In the meantime experiments have been successfully carried on for rendering the false additions which imperious Fashion demands infinitely lighter—the hair is closely and tightly plaited and then boiled; by this process there is a permanent crimp on it, which renders it more voluminous and still lighter for our belles to carry.

Among the accompanying illustrations will be found examples of all the various styles we have referred to. The Eugénie casaque is the exact model of the prevailing style, and illustrates to perfection the tendency of the mode. The waterproof suit is now universally adopted. Children's costumes are only reproductions on a miniature scale of what is worn by their elders. Chignons are larger and curls more plentiful than at the close of last year, and bonnets and hats remain more coquetted headdresses. By presenting our readers with a few well-selected illustrations of the prevailing types, they will be better able to understand them than were we to write pages of verbal description.

Costume a la Watteau.

THE shoes must be black silk, coming high up the instep, with pink kid high heels, and diamond buckles; pink silk stockings, a petticoat of chintz-patterned silk or tarlatane down to the ankles only; a pink silk dress looped up over this, with a pink rose and leaves at each side. The body of the dress is cut Louis Quatorze shape, and trimmed with point lace or muslin. The sleeves reach to the elbow, and a wide lace ruffle falls below it; narrow black velvets round the wrists and throat, fastened with diamonds. A white muslin apron (a tiny round one), trimmed with lace to match the dress, completes this highly-becoming costume. The hair, which ought to be well dressed, is powdered and drawn high up over cushions, with a little "coquette" of pink at the side of the front hair.

Fashionable Headdresses.

(See page 50.)

No. 1. *Chignon (Evening).*—A chignon composed of two plaits over a frizzette It is made in the same manner as the headdress No. 3, only long ringlets are added from the top. This is a very fashionable bridal coiffure, sprays of orange blossoms being added to intermingle with the curls.

No. 2. *Crimped Chignon.*—Chignons are increasing in size, and, as they are likely to attain still more formidable proportions, attention has recently been turned to render them as light as possible, as few things produce a more disagreeable sensation than anything heavy on the head; and, besides, the heat produced by undue weight is most injurious to the growth of natural hair. The accompanying engraving illustrates a new chignon, which only weighs 2½oz.—less than half the ordinary weight; the hair of which it is made measures 24in. in length, and is prepared in a novel and peculiar manner. It is not mounted on a frizzette, but, by reason of this ingenious mode of preparation, it always remains crimped and *bouffant*, and yet so pliable and manageable that a lady can arrange it herself in several different styles, without the aid of either maid or hairdresser. The chignon is mounted on a massive-looking tortoiseshell comb; but here again attention has been paid to render extremely light what is in reality very rich and handsome in effect. This is owing to the balls at the top being hollow, which is a great advantage, as a heavy comb is even more disagreeable on the head than a heavy chignon. For evening wear some of these combs have been mounted with gold stars. The front hair of this new chignon is crimped to correspond with the back; the hair is then dressed to look very full and high at the top of the head; at the left side there is a long curl. Both the chignon and curl are shown in the engraving. It will be observed that only the end is curled; the hair does not commence to turn until half-way down. We are indebted to Mr. Walter Truefitt, of No. 1, New Bond-street, W., for the model of this extremely desirable headdress.

No. 3. *Chignon (Morning).*—This chignon, composed of three plaits, is neat and simple for morning wear. It requires an abundance of natural hair, but now that false locks are accepted, and are very fashionably worn, those to whom Nature has not been over bountiful can purchase the luxury of a fine head of hair. This chignon is composed of hair 16in. in length, and of *crêpes* which are divided into strands. The *crêpes* must be well covered with the hair, and when the three plaits are completed they are mounted on a frizzette and fastened with pins.

No. 4. *Coiffure Léa.*—For the Léa headdress the hair is combed back from the temples, and in front is so closely *crêpé* that the parting is concealed, and the hair has all the effect of small crisp ringlets. The back hair is combed to the top of the head, and is there arranged in large bows or loops. Two long curls commence from the chignon, and fall below the top of the front of the bodice. A *bandeau* of marguerites in diamonds crowns the forehead.

No. 5. *Coiffure Hortense.*—For the Hortense coiffure the hair is turned back in front over a cushion; at the back, at the very top of the head, three or four small curls are fastened, then the chignon is composed of a number of very long curls. Curls are worn in Paris with every variety of toilette, both in and out of doors.

Fashionable Bonnets and Hats.

(See page 51.)

THE great novelty about the bonnets this year is their height in front; some stand quite two inches above the forehead. The style at the back varies between a piece of either lace or blonde covering the top of the chignon, and terminating in lappet strings, which are fastened together with either a flower, brooch, or satin bow, considerably below the chin—or else there is a mantille, sometimes reaching to the top of the collar, and sometimes continued so as to form either a Marie Antoinette *fichu* or a cape. The engravings Nos. 1 and 4 illustrate two of these novelties. No. 1 is composed of pale grey *crêpe lisse*, and is very tastefully trimmed with black lace, a small ostrich feather and a spray of wild roses imitated in mother-of-pearl. No. 4 is made of white tulle and ornamented with rich white blonde, a half wreath of lilac, with mother-of-pearl roses and a green dragonfly intermingling. We are indebted to Messrs. Jay of Regent-street for the models of these very stylish bonnets.

No. 2. *The Mantille Hood.*—The Mantille Hood serves either for wearing in the country or for an opera hood. It is composed of a square of cashmere, either blue or white, edged all round with black guipure. One of the points falls over the forehead, two others are brought under the chin, where they are fastened with a satin rosette; then the fourth point, that at the back, falls upon the shoulders, where it is slightly rounded, and looped up with two or three plaits under a rosette similar to that which decorates the front.

No. 3. *The Trianon Hat.*—The Trianon hat is made of English straw. It is small in form, lowered both at the back and front, and turned up abruptly at the sides. Its ornamentation is composed of a tuft of exquisitely-made small roses, surrounded with foliage, placed in front, and is completed with a mantille of *crêpe* and blonde. The mantille is brought forward to the front, and fixed there with a rose.

No. 5. *Louis XV. Hat.*—This Louis XV. hat is made of white fancy straw; the brim is turned up at the left side only, and trimmed with a ruche of ribbon. The front is ornamented with a large bow, which fastens down a tuft of wheat ears arranged to fall over the crown. This style of hat is very fashionable, but rather eccentric, and is only suitable to a young and pretty face.

Children's Toilettes.

(See page 55.)

Fig. 1. *Little Boy from Three to Four Years old.*—Costume in the kilt style, made of grey waterproof cloth; the skirt is plaited full all round the waist, and trimmed with two rows of gilt buttons. The short jacket terminates with square basques trimmed with tailors' flat braid, and separated by buttons similar to those on the skirt. The jacket crosses in front, and fastens with buttons and button-holes; the *revers* are festooned. The sleeves are trimmed at the cuff only. Small linen collar, turned back over a silk cravat. Hat trimmed with black velvet; the right side is turned up with a bow passed through a mother-of-pearl buckle, which serves to fasten down the small upright scarlet feather.

Fig. 2. *Little Girl of Nine or Ten Years of Age.*—Autumn toilette of dark blue serge, trimmed with white worsted braid. The petticoat is bordered with wide braid, headed by a row of *soutache*, and a similar ornament is repeated on the tunic, which is scalloped at the edge; the front is marked by a cross-band of serge, adorned with silver buttons. High bodice, trimmed to simulate a square one; long sleeves. Large paletôt with round cape, ornamented like a tunic. Black hat, bordered with velvet, surrounded with a blue ruche, and tufts of flowers at the side.

Fig. 3. *Girl from Ten to Eleven Years of Age.*—Costume of salmon-coloured poplin, trimmed with a quilling of green silk edged at both sides, with a cross-band to match. It consists of an under-skirt and a tunic, the latter looped up at the sides with bows of poplin; low bodice, cut round both at the back and front; the short sleeves are replaced by bows; muslin *guimpe*, tucked, and ornamented with a narrow quilling; muslin long sleeves with a similar quilling at the wrist. Hat crossed with black velvet and surrounded with daisies in white velvet; black lace rosette and velvet ends at the back.

Fig. 4. *Boy from Eight to Ten Years of Age, Cloth Costume.*—Knicker-bocker trousers; paletôt crossed with a double row of buttons and button holes, and ornamented with flaps, which cover the pockets; plain sleeves, bordered only at the cuffs. Felt hat, surrounded with a wide galloon, the brim turned up at the sides.

Fig. 5. *Costume for a Baby between Two and Three Years of Age.*—Pale blue Lyons poplin frock, buttoned the entire length of the front; the skirt is bordered with vandykes and cross-bands of satin of a darker shade of blue; the bodice is cut square, and the sash ends correspond with the skirt. Pelerine of the same material, looped up in the centre of the back with tassels; the edge is bordered with small satin vandykes, that fall over a mossy fringe. White felt hat, the brim looped up with two bands of blue velvet that cross the crown; in front there is a rosette with small flowers, and at the back a bow with flowing ends.

To wash Grenadine Muslin.

THE dress must be washed first of all, and dried before being starched; then it is put through clear thin starch, and clapped with the hand until dry; and, lastly, it is put through starch a second time. It certainly takes rather a long time to do it, but when done the dress looks so very well that the laundry-maid is repaid for the trouble.

Pearls.

EAU-DE-COLOGNE is an excellent thing to clean pearls with—viz., by gentle rubbing them with a little eau-de-cologne and a bit of very fine flannel, or, better still, little rolls of wadding or thick blotting paper tightly rolled up.

Clear Starching.

THE manner of starching petticoats and cotton dresses on the Continent is as follows:—To a good-sized saucepan full of strongly-made starch add a piece of white wax fully the size of a large walnut (an end of composite candle would do, but wax is better), and dissolve it well in the starch, and then pour in a wineglass full of brandy. Starch the clothes as usual with this mixture. The wax gives the satin-like, glossy surface to the petticoat, &c., and the brandy imparts the great stiffness.

Hoods.

THE following is a correct list of all the different hoods worn at the minor colleges:—Durham, violet; King's College, London, mauve; Dublin, blue. Hoods worn by graduates of Dublin University: B.A., black stuff lined with white fur or lamb's wool; M.A., black stuff lined with blue silk; B.D., black cloth lined with black silk; LL.B., black stuff lined with white silk; LL.D., scarlet cloth lined with pink silk; M.B., black silk lined with crimson silk; M.D., scarlet cloth lined with crimson silk; Mus. D., white silk lined with crimson.

The Eugenie Casaque.

THIS is the latest creation of the leading house in Paris for wearing with either silk or velvet costumes. It is a good type of the prevailing style of dress, which aims at all that is fantastic and unstudied. Our model is made of black velvet; the bows on the sleeves and the sash are black *gros grain*; the bachelik hood is black lace, turned up round the edge with festoons of black *gros grain*, and trimmed down the centre with a ladder of bows of the same. This style of casaque (which is worn over either a black silk or black velvet skirt) has already been adopted by the Empress.

To perfume Rooms.

PREPARE a brown linen bag, about the size of a pillow-case, and fill it with full-blown roses, so as to make it the size of a hair pillow, flat rather than round, and lay it inside the door of your parlour or sitting-room. If the roses are plucked carefully free from the branch, when the foot presses the bag the odour of the rose is given forth, and the room is sweetly perfumed thereby.

Hair Washes.

THE following is an excellent hair wash: Take of tincture of Spanish flies, ½oz.; lavendor water, ½oz.; water, 1 pint; the quantity of tincture to be increased until the wash produces slight itching. It encourages the growth, and prevents the hair falling off.

There is no better hair-wash than the yolk of a raw egg. First sponge the head with tepid water, then rub the yolk well into the hair, afterwards sponge the head with tepid water again.

Waterproof Costume.

FOR some seasons past American ladies have been wearing entire costumes of waterproof cloth, and in New York it has been no uncommon sight on rainy days to see ladies walking about in paletóts and skirts made of this material. Messrs. Jay, of Regent-street, have lately introduced this most useful of styles into this country. Our model is made of dark grey cloth, and is trimmed with fine black braid, and fastened with durable black horn buttons. The skirt is put on, as shown, only round the waist, instead of round the throat, and the buttoning and securing is the work of a few moments. The paletót of a loose *sac* form is equally convenient. It can be worn equally well without a dress underneath, being a perfect suit in itself.

To remove Oil Stains in Silk.

OIL STAINS can be entirely removed from silks and all dress materials, also leather, paper, &c., by applying pipeclay, powdered and moistened with water to the consistency of thick cream, laid on the stain and left to dry some hours, then lightly scraped or rubbed off with a knife or flannel so as not to injure the surface. If the pipeclay dries off quite light in colour, all oil has been removed; if it comes off dark-looking, then more should be laid on, as grease still remains to be removed. Pipeclay will not injure the most delicate tints of silk or paper.

To clean Felt Hats.

THE hard felt hats are cleaned with cold water and soap rubbed in with a flannel, then well sponged with cold water, and when nearly dry brushed with a hard brush.

The Queen and Royal Family.

THE QUEEN.—VICTORIA, of the United Kingdom of Great Britain and Ireland, &c., Queen, Defender of the Faith. Her Majesty was born at Kensington Palace, May 24, 1819; succeeded to the throne June 20, 1837, on the death of her uncle King William IV.; was crowned June 28, 1838; and married, Feb. 10, 1840, to his Royal Highness Prince Albert. Her Majesty is the only child of his late Royal Highness Edward, Duke of Kent, son of King George III. The children of Her Majesty are:

H.R.H. Victoria Adelaide Mary Louisa, PRINCESS ROYAL OF ENGLAND AND PRUSSIA, born Nov. 21, 1840, and married to H.R.H. William of Prussia, Jan. 25, 1858, and has had issue, Frederick William Victor Albert, born June 27, 1859; Victoria Elizabeth Augusta Charlotte, born July 24, 1860; Albert Wilhelm Heinrich, born Aug. 14, 1862 (dead); Frederica Wilhelmina Amelia Victoria, born April 12, 1866.

H.R.H. Albert Edward, PRINCE OF WALES, born Nov. 9, 1841; married, March 10, 1863, Alexandra of Denmark (Princess of Wales), born Dec. 1, 1844, and has issue, Prince Albert Victor, born Jan. 8, 1864; George Frederick Ernest Albert, born June 3, 1865; Louisa Victoria Alexandra Dagmar, born Feb. 20, 1867, and Victoria Alexandra Olga Mary, born July 6, 1868.

H.R.H. Alice Maud Mary, born April 25, 1843; married to H.R.H. Prince Frederick Louis of Hesse, July 1, 1862, and has issue two daughters and a son.

H.R.H. Alfred Ernest Albert, DUKE OF EDINBURGH, born Aug. 6, 1844.

H.R.H. Helena Augusta Victoria, born May 25, 1846; married to H.R.H. Prince Frederick Christian Charles Augustus of Schleswig-Holstein-Sondenburg-Augustenburg, July 5, 1866, and has issue a son, born April, 1867.

H.R.H. Louisa Carolina Alberta, born March 18, 1848.

H.R.H. Arthur William Patrick Albert, born May 1, 1850.

H.R.H. Leopold George Duncan Albert, born April 7, 1853.

H.R.H. Beatrice Mary Victoria Feodore, born April 14, 1857.

George Frederick William Charles, K.G., DUKE OF CAMBRIDGE, cousin to Her Majesty, born March 26, 1819.

Augusta Wilhelmina Louisa, DUCHESS OF CAMBRIDGE, niece of the Landgrave of Hesse and aunt to Her Majesty, born July 25, 1795; married, in 1819, the late Duke of Cambridge.

George Frederick Alexander Charles Ernest Augustus, K.G., DUKE OF CUMBERLAND, cousin to Her Majesty, born May 27, 1819, married Princess Frederica of Mecklenburg-Strelitz, and has issue a son and two daughters.

Augusta Caroline Charlotte Elizabeth Mary Sophia Louis, daughter of the Duke of Cambridge and cousin to Her Majesty, born July 19, 1822, married, June 28, 1843, to the Grand Duke of Mecklenburg-Strelitz, and has issue a son.

Mary Adelaide, Wilhelmina Elizabeth, daughter of the late Duke of Cambridge, and cousin to Her Majesty, born Nov. 27, 1833, married Prince Teck, June 7, 1866, and has issue a son and daughter.

Her Majesty's Chief Officers of State.

First Lord of the Treasury ...	Right Hon. W. E. Gladstone.
Lord High Chancellor	Lord Hatherley.
Chancellor of the Exchequer ...	Right Hon. Robert Lowe.
Lord President of the Council ...	Lord de Grey and Ripon.
Lord Privy Seal	Lord Kimberley.
Secretaries of State. Home Department...	Right Hon. H. A. Bruce.
Foreign Affairs ...	Earl of Clarendon.
Colonies	Earl Granville.
War	Rt. Hon. Edward Cardwell.
India	Duke of Argyll.
First Lord of the Admiralty ...	Right Hon. H. C. Childers.
President of the Board of Trade ...	Right Hon. John Bright.
Chancellor of the Duchy of Lancaster	
President of the Poor-Law Board ...	Right Hon. George J. Göschen.
Postmaster-General	Lord Hartington.
(The above form the Cabinet.)	
First Commissioner of Works ...	Right Hon. A. H. Layard.
Chief Secretary for Ireland	Right Hon. Chichester Fortescue.
Attorney-General	Sir Robert Collier.
Solicitor-General	Mr. Coleridge.
Lord Advocate for Scotland... ...	Mr. Moncreiff
Lord Lieutenant of Ireland	Earl Spencer.
Lord Chancellor for Ireland... ...	Mr. Justice O'Hagan.

To breed Australian Parakeets.

THE nest-boxes are 4in. square and 10in. long, made of ¾-in. deal, except the bottom, which is 1½in. thick, in order to allow of being hollowed out about 1in. deep, and 3in. across, to form the nest, as they do not make one. This sort of nest does very well, but some use the outer shell of a cocoa-nut, after carefully removing the nut and hard shell. Millet in the ear they are very fond of to eat. As regards their culture, Mr. Tegetmeier, in writing to the *Field*, says:—"The smallest cage in which a pair should be placed is an ordinary canary breeding cage, and that is not half large enough to see these birds fly to advantage. I once had a pair for seven years, in a cage 4ft. long by 20in. in height and depth, and I have at present two pairs in an aviary 10ft. square by 8ft. in height, where they dart about among the branches with almost the rapidity of swallows, and, from the brightness and beauty of their plumage, are the admiration of all who see them. In a large cage or sheltered aviary they breed freely, the only nests they require being empty cocoa-nut shells, with a small hole at one end for ingress and egress. This hole should be turned away from the front of the cage. Little covered boxes, containing at the bottom a piece of thick wood slightly hollowed out for the eggs to lie in, may be used instead of the cocoa-nut shell; or, what is even better in an aviary, a decayed trunk of a tree with a few large auger-holes bored in it. Taking possession of one or other of these cavities, the hen lays four eggs on alternate days, and then sits for seventeen days. The young are at first fed like the young of pigeons, the old bird taking the beak of the young into its own and disgorging the food. The recently introduced birds retain their tendency to breed at the season which is our winter, and if placed in a well-sheltered room will lay in January. Those eggs laid in the open air have not been deposited until the weather has become warmer. In the natural state the chief food appears to be the seeds of grass, with which their crops are always crammed. In confinement they are best fed on canary seed, which they much prefer to millet or any other grain. In feeding they husk the seed with great celerity, and devour a much larger quantity than would serve canaries or other finches of similar size. They are also excessively fond of eating the seeds from any tufts of grass that may be given to them for that purpose, and of the seeds of the common plantain. They have one peculiarity which has not, I think, been recorded, namely, their liking for young bark and the leaf stalks of any ordinary shrub that may be placed in their aviary. I am in the habit of cutting off for them fresh branches of hawthorn, or giving them any waste bushes of currants, &c., when they immediately attack the leaf stalks, and, gnawing them through, scatter the leaves on the floor in large numbers. In breeding from them I need hardly say it is requisite to distinguish the sexes; this is readily done, as, although the plumage is alike in both sexes, the male may be known by having a blue core around the nostrils, whilst that of the hen is white.

Day mails to Ireland, France, and the Continent generally.—Letters and Newspapers for the day mail to Ireland can be posted at the Euston-square Terminus, without fee, till 7 a.m.; and for the day mail to France and the Continent at the Post Office at the South Eastern Terminus, London Bridge, without fee, until 7.15 a.m.

Books, Magazines, Reviews, Pamphlets, etc.

For a packet of any number of copies not exceeding 4oz. ... 1*d.*
" exceeding 4 oz. and not exceeding ..... 8oz ... 2*d.*
" " 8 " " .....16 " ... 4*d.*
" " 1lb. " .....1½lb. ... 6*d.*

and 2*d.* for every additional ½lb., or portion of ½lb.

The postage must be prepaid by stamps.
The cover of packet must be open at the ends, or sides.
A book packet must not contain any letter.
It must not exceed 2ft. in length, or 1ft. in breadth or depth.

Printed proceedings of the Imperial Parliament, sent without covers, or in covers open at the ends, may circulate within the United Kingdom at the above rates of postage. The words "Parliamentary Proceedings" must be written or printed on the cover of the packet, otherwise it will be liable to the letter-rate of postage.

The Book Post to which the foregoing rules related is confined to the United Kingdom.

Books, etc., for the Colonies.

At the following rates, and on the same conditions as the foregoing (except that no packet weighing more than 3lb. can be sent to the East Indies or to New South Wales, and that no book packet can be sent to any other part of the Cape Colony than Cape Town, Port Elizabeth, and Mossell Bay), book packets may be forwarded to every British colony as well as to the undermentioned foreign countries:

To India, Ceylon, New South Wales, Victoria, Tasmania (Van Diemen's Land), South Australia, Western Australia, New Zealand, Mauritius, Hong-Kong, and Labuan.

	Viâ Southampton.	Viâ Marseilles.
For a packet weighing not more than 4oz. ...	4*d.* ...	6*d.*
For more than 4oz. but not exceeding 8oz. ...	8*d.* ...	1*s.*
" 8 " " 1 lb. ...	1*s.* 4*d.* ...	2*s.*
" 1 lb. " 1½ " ...	2*s.* 0*d.* ...	3*s.*
" 1½ " " 2 " ...	2*s.* 8*d.* ...	4*s.*

and so on; two rates being charged for every additional ½lb. or fraction of a ½lb.

To every other British colony, to Buenos Ayres and the other portions of the Argentine Confederation, to Monte Video and the rest of the Republic of Uruguay, to the Danish West Indies (St. Thomas, St. Croix, and St. John), to Hayti, St. Juan de Nicaragua, the Mosquito Territory, to Liberia, and other parts of the West Coast of Africa, and by private ship, to Hamburgh, Bremen, and Lubeck, to Sweden *viâ* Hull, and *viâ* Southampton to Alexandria, Cairo, and Suez.

For a packet weighing not more than 4oz ... ... 3*d.*
" more than 4oz., but not exceeding 8oz.... ... 6*d.*
" 8 " " 1 lb. ... 1*s.* 0*d.*
" 1 lb. " 1½ " ... 1*s.* 6*d.*
" 1½ " " 2 " ... 2*s.* 0*d.*

and so on; 6*d.* being charged for every additional ½lb. or fraction of a ½lb.

Colonial and Foreign Mails.

Australia.—Mails to these colonies are dispatched every fourth Friday *viâ* Marseilles, and every fourth Saturday *viâ* Southampton.

Cape of Good Hope.—Mails are forwarded to the Cape of Good Hope by direct packet on the 25th of each month, as well as on the 10th.

Ceylon.—Mails to Ceylon are now dispatched every alternate Friday *viâ* Marseilles, and every alternate Saturday *viâ* Southampton.

China and Japan.—Mails for China and Japan are now dispatched every alternate Friday *viâ* Marseilles, and every alternate Saturday *viâ* Southampton.

Honduras.—The postage of all letters addressed to Honduras is 1*s.* per half ounce.

India.—Mails to India are now despatched every Friday *viâ* Marseilles, and every Saturday morning *viâ* Southampton. The postage of letters to India and Ceylon per half ounce is 9*d.* when sent *viâ* Southampton, and 1*s.* 1*d.* when sent *viâ* Marseilles. The scale advances by half ounces instead of by ounces.

Malta.—The packets between Marseilles and Alexandria have ceased to call at Malta, and mails are consequently no longer sent to Malta *viâ* Marseilles; but in lieu thereof a mail is dispatched to Malta every Tuesday *viâ* Messina. The mail *viâ* Southampton is now dispatched every Saturday.

Mauritius.—The English contract for the conveyance of mails to and from Mauritius *viâ* Galle has terminated, and mails to and from Mauritius are sent only by French packet. No correspondence for the Cape of Good Hope is now sent by this route.

United States of America.—Letters, 12 cents per single rate of 15 grammes (one half-ounce) in the United States, and 6*d.* (12 cents) in the United Kingdom; prepayment optional. A fine of 5 cents in the United States, and 2*d.* (4 cents) in the United Kingdom, will, however, be levied and collected in addition to the deficient postage on each unpaid, or insufficiently prepaid, letter received by one country from the other. Newspapers, 2 cents each in the United States, and 1*d.* each in the United Kingdom, if not exceeding 4oz. in weight. Book-packets, including printed papers of all kinds, &c., and patterns and samples of merchandise, including seeds and grain, when not exceeding 1oz. in weight, 2 cents in the United States, and 1*d.* in the United Kingdom.

Money Order Office.

Parties having occasion to transmit small sums may do so through the Post Office, with entire safety.

Charge for Money Orders.—For sums not exceeding 2*l.*, 3*d.*; not exceeding 5*l.*, 6*d.*; not exceeding 7*l.*, 9*d.*; not exceeding 10*l.*, 1*s.*

In granting money orders, and in advising of the same, one Christian name in full for either the Payee or the Remitter will be sufficient, instead of all the Christian names being furnished in full, as formerly required.

Our Portraits.

The Princess Maria Alexandrowna.

(See page 4.)

Custom has irrevocably decreed—though perhaps we ought to say Providence, for all marriages are ordained in heaven—anyhow it is decreed that only princesses and princes can marry princes and princesses. This arrangement has its advantages no doubt, but it sometimes involves very serious sacrifices, especially when a young princess is summoned by a will above her own, to leave her country and her kindred, to dwell in a strange land, the wife of a stranger, surrounded by strangers speaking a strange tongue. When a marriage is not merely one of policy, and the result of diplomacy, but an affair of personal attachment, the case is different, and the trial less. Happily, we have reason to believe that marriages of affection are becoming more numerous in palaces than they used to be. We have every reason to believe that this amiable young Princess is about to contract such a union. Certainly, the great House of Russia has not been required by political emergencies to ally itself with Bavaria, although such an alliance is most honourable. The Princess Maria Alexandrowna, or Grand Duchess, is the only daughter of the Emperor of all the Russias, Alexander II., and the Empress Maria Alexandrowna. She was born on the 17th (our 5th) of October, 1853, and is consequently only in her sixteenth year. It is not to be expected that the details of the private life of one so youthful, and in so distant a court as Russia, should have reached us. We only hear that she is beautiful and accomplished, and that her graces of manner and vivacity of spirit have endeared her to the circle in which she has hitherto moved. If her personal attractions and endowments are such as are reported of her, and we have no reason to doubt the fact, she will be a real treasure to her future husband. Louis II., Otho Frederic William, King of Bavaria, to whom the Grand Duchess Maria is betrothed, was born on the 25th of August, 1845, and consequently is in his 24th year. He succeeded to the throne on March 10, 1864, in the place of his father Maximilian II., who had reigned since the abdication of his father Louis I. in the revolutionary year 1848. Queen Maria, the mother of his Majesty, who still lives, is a Prussian princess by birth, having been the daughter of the late Prince William of Prussia. Of the King of Bavaria we have but little to record. He is still young, and, with the qualities which he possesses, he may attain to distinction among the rulers of Europe. His alliance with a powerful Court like that of Russia will doubtless be an advantage to him; and it is no small commendation of him that he has been accounted worthy to form such an alliance. Report speaks well of him every way, and this augurs favourably for the happiness in store for him in the interesting relation in which he is to stand to the Russian princess.

Prince Arthur.

(See page 5.)

H.R.H. Prince Arthur William Patrick Albert, Knight of the Garter, Knight of St. Patrick, Duke of Saxony, and Lieutenant of the Royal Artillery, was born on May Day 1850. He took the name of Arthur, not from the renowned King Arthur of Round Table celebrity, but from the great Duke of Wellington. The Iron Duke, of whom Her Majesty the Queen speaks so honourably and kindly in the "Leaves from the Journal of our Life in the Highlands," was one of the sponsors of his infant namesake. Winterhalter's portrait of the Queen and Prince Consort, with the Duke of Wellington presenting a casket to his royal godson, is one of the most exquisite productions of that admired artist. The name of Patrick was conferred upon our prince in honour of St. Patrick, the patron saint of Ireland. Thus both names were complimentary to the Emerald Isle, and it was not without reason supposed they would be acceptable to our Hibernian cousins, who, as a fact, were not unmindful of the compliment, and boasted that now at length one of our princes was altogether their own.

The education of H.R.H. Prince Arthur has been conducted with scrupulous care, and with that wisdom which has directed the training of every other child of Queen Victoria. In the present instance it was arranged that the education should be a military one, and accordingly in January, 1867, H.R.H. underwent an examination before the Council of Military Education, at their offices in Great George-street, with a view to admission to the Royal Military Academy, Woolwich. The distinguished manner in which the examination was passed was duly put on record as "most satisfactory," and it was ordered that H.R.H. should join the Royal Military Academy on February 11, as a gentleman cadet. Her Majesty was pleased to appoint Lieutenant Picard, of the Royal Horse Artillery, to be officer in attendance upon the Prince during the period of his residence as a student of the Royal Military Academy. Accordingly at the time determined H.R.H., attended by his constant friend Major Elphinstone, left Osborne, and took up his quarters at the Ranger's House, Greenwich Park.

About the period of his entrance upon his academical studies H.R.H. was appointed one of the governors of Christ's Hospital, Her Majesty having expressed a desire to that effect, and having contributed 500*l.* to the funds of that noble institution.

The arrangement that the military profession should have a representative among Her Majesty's children was very satisfactory to the nation, and the Prince was placed under the direction of gentlemen every way competent. His first appointment was as a lieutenant in the Royal

Digitized by Google

Engineers in 1868, from which he was the same year transferred to the Royal Artillery, also as a lieutenant.

The Prince is a Knight of the Order of St. Patrick. This order was instituted by George III., in 1783, as a decoration for Irish nobles, analogous to the orders of St. George and St. Andrew. The motto of the order, which appears upon the collar and the star, is, "Quis separabit?"—who shall separate us? The Prince is now travelling in Canada, and purposes visiting the United States of America.

H.R.H. The Prince of Prussia.

(See page 8.)

Frederick William Nicolas Charles, K.G., Prince Royal of Prussia, was born the 18th of October, 1831. He is the only son of Frederick William, the reigning King of Prussia, and of Queen Maria Louisa Augusta Catherine. In accordance with the custom of his country, he received a military education, and has a whole list of military appointments, the principal of which is that of General of Infantry. In the war with Austria he took the field, and will be remembered with honour, especially as the commander of a division of the army which by a rapid and vigorous movement outflanked the enemy, and mainly tended to bring to a conclusion that unseemly conflict.

On the 25th of January, 1858, he was married to the Princess Victoria Maria Louisa, Princess Royal of Great Britain and Ireland. His family at present consists of five children, as follows: Prince Frederick William Victor Albert, born January 27, 1859; Victoria Elizabeth Augusta Charlotte, born July 24, 1860; Albert William Henry, born August 14, 1862; Frederica Amelia Wilhelmina Victoria, born April 12, 1866; and Joachim Frederick Ernest Waldemar, born February 10, 1868. The Prince is highly respected for his personal character, and claims our particular regard as the husband of the excellent and beloved Princess, the eldest daughter of our Queen. The usual residence of the royal family is at Potsdam, where they have established what we in England call a happy home.

The Prince's high position as heir to the powerful throne of Prussia is worthily occupied by him, and, while not obtruding himself upon the councils of the State, his principles are known to be liberal and his views enlightened. It is said, indeed, that he is more advanced than his father. He is not a man of light and frivolous tastes, but occupies himself with pursuits of a more sober character. We think him blessed in having as his consort a Princess who reflects so perfectly the admirable training she received, and who inherited that domestic spirit which distinguished so remarkably her father's house. As might be expected, his amusements are cheerful and moderate, and his affections are very much centered in his happy home.

The late Earl of Derby.

(See page 9.)

Edward Geoffrey Smith Stanley, the fourteenth earl, died on Saturday, October 23rd, 1869, and was succeeded by Edward Henry, Lord Stanley. The antiquity of his family is very famous, and can be traced to Saxon times. The recently-deceased earl was altogether worthy of his great name and ancestry, and he will occupy a foremost place in the splendid array of English worthies. He was born March 29, 1799, and was therefore in his seventy-first year when he died. He received his education, first at Eton, and then at Christ Church, Oxford, which reckons among its ornaments many great men, as the late Sir Robert Peel, Sir George Cornewall Lewis, and Mr. Gladstone. The grandfather of the subject of this notice married Miss Farren, an actress, and she took a lively interest in her step-grandson's education, a circumstance which probably influenced his style of composition and oratory. While a youth he was fond of sport, and impulsive, but a good scholar, and in 1819 he took a University prize for a Latin poem. A political career naturally invited him, and in 1820 he became a candidate for the representation of Stockport. Every way brilliant and active, he was regarded with much interest, but some feared that his intense love of field sports would mar his progress. His long public career shows how groundless such forebodings were. The fact is, his wonderful readiness of apprehension and power of memory, and other qualities, rendered it needless that he should be for ever plodding over his books. His first speech in Parliament was made in 1824, and was a success; it was called in *Hansard* "a maiden speech of much clearness and ability," and was commended by Sir James Mackintosh. His second speech, on the Irish Church Establishment, was even more highly thought of. In 1825 he married the Hon. Emma Caroline, second daughter of the first Lord Skelmersdale, by whom he had six children, one of whom, Edward Henry, Lord Stanley, succeeds to the title and honours. When, in 1827, the administration of Lord Liverpool was succeeded by that of Mr. Canning, Earl Derby, then the Hon. Mr. Stanley, became Under-Secretary of State for the Colonies, and he remained in office during the five months' ministry of Lord Goderich. It may be noted that in 1827, too, he was returned for Preston. His political occupations not being very continuous, he travelled, and even paid a visit to the United States of America. When a new election came on, he was opposed at Preston by Orator Hunt, and, in spite of very powerful family interest, Mr. Hunt was in a majority. However, he was not so unfortunate in contesting Windsor, for Sir Hussey Vivian retired in his favour, and he was elected. The Reform Ministry of Earl Grey was formed in 1830, and on that occasion Mr. Stanley was selected as Secretary for Ireland, where he had estates, and for some time resided. The cry for Reform was then ringing through the land, and our rising statesman was zealous in its favour. It was a fine chance for him, and he rapidly rose to be one of the first men of the day. Out of doors he displayed a courage, readiness, power, and eloquence which were remarkable, and in the House he was not less to be admired. There are men still living who can recollect the glory he achieved in his conflicts with O'Connell, who found the young patrician a most formidable adversary, and one whom he could not long despise, and soon began almost to fear.

In 1845 he was raised to the Upper House as Lord Stanley of Bickerstaffe, but without resigning his secretaryship. The great Free Trade question was moving the heart of the nation, and Lord Stanley would not follow Sir Robert Peel in accepting the affirmative, and the two effected a political divorce. The Duke of Wellington, with his customary sagacity, saw what use he could make of the event, and by his advice Lord Stanley was accepted as the Conservative leader. Of his transition from the Whigs to the Tories we have no need to write a commentary, but the fact is on record, and the process was gradual. Lord Stanley, as the new leader of the Conservatives, by his courage and perseverance, did much to retrieve their fortunes, and to win for them the position they achieved. In 1851 he succeeded to his title as Earl of Derby, and the next year the Whig party was so *hors de combat* that the Earl was commanded by Her Majesty to form a government. He bravely obeyed, and for a short time fought courageously against tremendous odds, but only for a short time, as he soon found himself on the opposition benches once more. Five years later he saw himself again in office, and surrounded by a band of devoted and able men. In 1859 Lord Derby was ousted again, and remained out of office with his party for seven years—that is, until he resumed the power in 1866. Not long after this he retired from his active leadership, although he continued an adviser and supporter of his party.

Such is a rapid outline of the public career of one of the greatest statesmen of our century. To praise him is needless, and to enumerate his many high qualities is beyond our power. As a scholar he proved his superiority by his tasteful and admirable translations, especially by that of Homer's "Iliad," published a few years ago. He was a poet himself, of unusual merit; but his love of letters and his devotion to public affairs do not absorb him utterly. Those who knew him say he was a genial and charming member of society, with unusual conversational powers. He was to the last much interested in sports and pastimes, and in agricultural matters. He had a taste for the curious and beautiful in art, as became an accomplished gentleman. He was affable and condescending, and his singular generosity in time of public calamity will be long remembered. Even his political adversaries delighted in their calmer moments to do him honour, and all men are exclaiming that we have lost one of the great and good of the world. We know of no stain on his reputation, and slander itself has to hold its breath in regard to him. Religion, philanthropy, art, literature, pastime, and politics bring their honest and hearty tributes to his bier. It is scarcely requisite to say that Earl Derby is known to have been a severely afflicted man—that gout was his tormentor, and that this it was which eventually attacked his vital parts, and, after reducing him to unconsciousness for several days, put a period to his earthly existence.

Madame Norman-Néruda.

(See page 12.)

In presenting the portrait of one of the most able violinists of the age, it is to be regretted that there are no materials at hand for a biographical sketch of the now celebrated Madame Norman-Néruda. The fair *artiste* follows the example set by Miss Helen Faucit, who declines to give the data for a notice of what she considers to be her family history. The actress maintains that it is with her art alone that the world has to do. There is something to urge in favour of the principle laid down by Miss Helen Faucit—we presume we must call her by her public name, for if we mention that of her distinguished *caro sposo* we shall be infringing her rule. If the married names of artists are not to be given, it must follow that those of the parents must be also kept back. If the date of the marriage is not to be printed, so also ought not the date of the birth. Now, as public curiosity to learn something of the antecedents of celebrities is intense, what a mass of agreeable information will be suppressed! And if the theory is applicable to artists, it must also be extended to other notorieties. If political men are to come under the same category, how is history to be written? In the case of our fair lady violinist, who is now looking so benevolently even in the hard lines of the engraver, it would be gratifying to know where and when she was born; what was her early instinct for music; what induced her to take to the man's instrument—the ungraceful fiddle; what has been her musical training; what has been her career; and many other interesting points connected with her professional life. We first heard her in Paris, where she had the great honour of being allowed to play at the Conservatoire Concerts. At M. Pasdeloup's Sunday popular programmes of orchestral music at the Lyrique she has also been heard. In the French capital, indeed, she was the lioness of the season. Her *début* here last year, introduced by the eminent Belgian violinist M. Vieuxtemps, is, of course, fresh in the recollection. Whether she played at the Philharmonic, in St. James's Hall, or in the Crystal Palace, the supremacy of her style was recognised. Madame Norman-Néruda had been on a prolonged tour in the provinces with Herr Hallé before she was selected to appear as the leader in the quartet of the Monday Popular Concerts. There is the exceptional element in the violin-playing of Madame Norman-Néruda, that, whilst her marvellous mechanism enables her to execute all the fantastic *tours de force* of the most dexterous of fiddlers, she can subdue the exuberance of the skyrocket school to the sobriety

excited for the classical chamber compositions. And this fragile form can be seen, in a full orchestra, dominating by her power and intelligence over its force, whilst communicating to her auditory the grand imagery of a Beethoven and a Mendelssohn—who, if they had lived to know Madame Norman-Néruda, would have assuredly composed more than one *concerto* each for the violin.

There is an amount of graceful ease in the *poses* of Madame Néruda in her playing, which at once removes the disagreeable impression caused by a lady shouldering a fiddle and pulling a long bow. The clearness of her fingering, the certainty of her intonation, the richness of her tone, the force and intelligence of her style, are universally recognised. In the *cantabiles* the acute sensibility of the *artiste* is strongly manifested. She is altogether a musical marvel—a consummate violinist, with a noble method. She is thoroughly imbued with that cosmopolitan spirit for music which qualifies her to attack with point and piquancy all schools, and to identify herself completely with the masters whose works she undertakes to interpret. Never were her masterly attainments more strongly manifested than in St. James's Hall, on December 6, 1869, at the Monday Popular Concerts. She was leading violin in quartets by Beethoven and Haydn, and she also took the violin part in Mozart's sonata in F major, where her delicate manipulation was in strong contrast with the hard, cold, mechanical touch of her colleague, Herr Hallé. Her "mezzo voce" singing in the *andante* fell upon the ear like music on the waters; anything more poetical could not be conceived.

Madame Ilma De Murska.

(See page 13.)

THIS lady is Hungarian by birth. Her artistic reputation was first made at Pesth, and she subsequently became the star at the Viennese Opera House. Her tours in Germany have been uniformly successful, and her appearance at Her Majesty's Theatre secured for her an engagement in Paris during the past season at the Italian Opera House, where she took the place of Adelina Patti during the sojourn of the latter at St. Petersburg. Mme. Murska sang at the autumnal season at Covent Garden under Mr. Mapleson's management last year. The speciality of this artiste is in the delineation of the mad scenes of the stage heroines who lose their reason, and are therefore licensed to indulge in eccentric roulades not accepted at lucid intervals, and not precisely recognised as within the canons of legitimate vocalisation. Mme Murska never fails to excite her auditory, however astounded they may be at her daring cadenzas. In the insane moments of Lucia and Linda she is certain to command the attention of her hearers; but to appreciate Murska's style she must be seen in Meyerbeer's "Dinorah," which she acts and sings to perfection until the critical moment when reason is restored, and then she is Ilma de Murska *re livivus*.

The Bishop of Exeter.

(See page 16.)

THE new Bishop of Exeter, the Right Reverend Frederick Temple, D.D., was the late head master of Rugby School. As very much interest has been taken by the general public in this appointment, it is desirable that we should put them in possession of a few details concerning the new bishop's life and public career. His father was formerly an officer in the army, and he was born in Nov. 1821. His early education was at the Grammar School, Tiverton, where, in 1837, he was elected to a scholarship at Balliol College, Oxford. He took his bachelor's degree in term 1842, and was successful in obtaining a double first class. Some time after this he was elected to a fellowship, and was also appointed mathematical lecturer of his own college. In 1846 he was ordained on his college title by the Bishop of Oxford, and obtained an appointment as principal of a Government training college at Kneller Hall, near Twickenham. He resigned this post in 1855, and subsequently became an inspector of schools, which he resigned in 1858, on receiving the honour of an appointment to Rugby School as successor to Dr. Goulburn, Dean of Norwich. Dr. Temple took his degree as Doctor of Divinity in 1858. As Head Master of Rugby School, Dr. Temple has had the happiness to see considerable results, and a very large number of his pupils have attained honourable positions and degrees. He is one of the Chaplains in Ordinary to the Queen. The first, and until now almost the only thing which has helped to centre public interest in him, was the appearance of his name as author of the first essay in the volume of "Essays and Reviews" which raised such a storm nine or ten years ago. The essay in question was one of the mildest in the volume, but it was regarded by strictly orthodox writers as opening the door to all sorts of errors. In consequence it participated in the abundant adverse criticism to which its attendants were subjected. The writer looked upon the religious records of the world as exemplifying a certain doctrine of development, or a certain process of education. Since that appeared, Dr. Temple has published little; his "Sermons preached in the Chapel of Rugby School in 1858, '59, and '60," do little to exalt his reputation. The world knows little of him except that he is a good scholar, of gentlemanlike habits, and that during the last general election he came forward in his county (Warwickshire) as in favour of Mr. Gladstone's scheme for the disendowing and disestablishing of the Irish Church. Of his capacity for administration, and of his oratorical powers, we can only judge from their exercise on a limited scale.

The late M. de Lamartine.

(See page 17.)

THE illustrious poet, historian, essayist, and statesman, Marie Louis Alphonse Prat de Lamartine, expired on the last night of February, 1869. He was born at Mâcon on the 21st of October, 1790. His family name was De Prat, but he assumed the name of Lamartine from his maternal uncle. His father had been a major of a cavalry regiment, and his mother undergoverness of the Princes of Orleans. During the "days of terror" his family lived in seclusion upon their estate at Milly, where he was brought up amid the quiet of a home, as he has described in his "Confidences," and learned to read in the Bible of Royaumont, with its countless illustrations. He finished his education at Belley, under the "Peres de la Foi," and then, after some stay at Lyons, he made his first journey to Italy. This was towards the close of the Empire, and his soul was inspired with that dislike of the *régime* and institutions of the time which afterwards showed itself in the preface to the "Meditations." Glory did not console him for the absence of liberty, and the disfavour shown to thought and poetry set him against mathematics—"those fetters of the soul." On his return from Italy his mind, unsettled and troubled, turned towards the theatre, and Talma welcomed his first attempts as happy promises for the future. But in 1813 the young man was tempted back to Italy by the combined influence of poetry and love. In 1814 the poet returned to France to serve the legitimate monarch, and entered the bodyguard, which he did not leave till after the "Cent Jours." After four years more of reverie, pleasure, and travel, M. de Lamartine took his place among the poets by a first selection of pieces entitled "Méditations Poétiques;" this was in 1820, and the book, for which it was hard to find a publisher, contained "L'Isolement," "Le Désespoir," "Le Lac," &c. It set before the world a new style, and created the lyric French poetry of the age.

It opened to its author the career of diplomacy. As an *attaché* to the Florence Legation, M. de Lamartine wedded in that city a young and wealthy English lady, who had received a brilliant literary and artistic education, and who brought the poet the twofold dower of enthusiasm and of riches. He subsequently became in succession secretary of the embassy at Naples and at London, and *chargé d'affaires* in Tuscany. A considerable fortune, arising from his marriage and the product of his literary labours, allowed him to indulge in all the splendours of aristocratic existence, in accordance with his tastes, but without causing him to abandon the muses. In 1823, appeared his "Nouvelles Méditations," but, in spite of the beauties they enshrined, they were read with lesser enthusiasm than their predecessors. These were followed by two remarkable little poems, the "Mort de Socrate," and the "Dernier Chant de Childe Harold." A passage in the latter, concerning Italy, provoked a challenge from Colonel Pepe, and in the duel which resulted the poet was severely wounded. In 1825 M. de Lamartine wrote the "Chant du Sacre," whereupon he was made Knight of the Legion of Honour. After sundry pieces, he published in 1829 his collection called "Harmonies Poétiques et Religieuses." These were very highly commended, and on his return to France the same year their author was elected a member of the French Academy.

When the revolution of 1830 broke out, he was appointed Minister Plenipotentiary in Greece. The new monarchy made him advances, which he declined, out of respect for himself and for the cause which he had served. Nevertheless, feeling that he was in an age of action, he sought to find scope for his energies without sacrificing his freedom. Thenceforth political preoccupations obtained the ascendancy over poetry, but without entirely suppressing it. He became a candidate for the representation first of Toulon, and then of Dunkerque; but in both cases was unsuccessful. Excluded for the time from public life, he undertook in 1832 a journey to the East, the land of his aspirations and of his dreams. He embarked at Marseilles in May, with his wife and his daughter Julia, on board a ship which he had himself armed and fitted out. He took with him quite an arsenal, a library, and princely presents for the magnates of the regions he was to visit. The *Emir Frangi*—the French emir, as the people called him—travelled like a sovereign, buying houses to stop at, and having at his service caravans of horses all his own. At one time he competed with Asiatic bards, and at another he was warmly welcomed by the strangely visionary Lady Hester Stanhope, who predicted a great European catastrophe, in which he was to be the saviour of his country. The journey lasted sixteen months, and was embittered by the lamented death of Julia, who died at Beyrout, but whose remains were conveyed to France. He nevertheless wrote his celebrated record of travel, the "Voyage en Orient," which was published in four octavo volumes in 1835.

While absent, M. de Lamartine was chosen representative for Dunkerque. In 1835 he published his copious and beautiful poem of "Jocelyn," upon which, if the occasion allowed, we might have much to say. In 1838 he published his "Chute d'un Ange," which was coldly received. In 1839 he brought out his "Recueillements Poétiques." Passing over the details of his active career until 1848, we observe that then he became one of the most energetic and distinguished among the revolutionary party. For his moderation and firmness, as well as for his untiring efforts, he was rewarded with unbounded popularity. But his glory was transitory, and the *coup d'état* of December sent him back to private and literary life. Since then he has published a variety of works, too numerous to be put on record here. His name has been constantly kept before the world, not only by his works but by the publicity given to his private affairs. Not unfrequently his appeals for assistance have excited the pity of those who knew his earlier position. Lamartine was a pure, unselfish, and single-hearted man, who has left no enemy behind him, but many friends. In his old age he supposed himself neglected, unnoticed, and left to struggle with poverty; but it must have been still a consolation to him to feel that the most envious of his critics would not presume to blot out his name from the list of the great and good men of France.

The Garden.

Ferns.

No large plants adhere more firmly to a hard vertical surface, or better sustain themselves in perfect health without any soil, than ferns. In a wild state you find the maidenhair fern and many other species so rooted into mere little fissures in the hardest rocks, that no effort can get out a particle of root. Some of our own small British wild ferns are found on the face of dry brick walls when they are not to be found elsewhere. The pretty little sweet-scented fern, *Cheilanthes odora*, is never found, except on the south side of bare rocks and walls where it is exposed to the full rays of the sun. It is sought for in vain on northern exposures, is rarely found to the east and west, and when found is badly developed. Walls facing due south are covered with this little gem among ferns, and not a vestige of the species occurs on the opposite side. In the middle of winter it is in full vigour, by the end of spring the fronds begin to dry, and through the torrid summer, when the stones of the walls are burning hot, its roots fixed between the hot stones are the only parts with life. Every kind of wall surface in stove, greenhouse, or glass house, may be easily covered with various kinds of ferns, and almost without any attention. Frequently, where ferns are grown on the beds in the centre of houses, the spores fall over the sides of the sustaining wall, and soon young ferns begin to crop out of every interstice. We can readily produce the same result by shaking, or rather blowing, the spores of various ferns on the face of the wall. The old and slimy or mossy wall will naturally offer the best seed beds on which the young ferns may germinate, but the bricks in any house, kept moist, as plant houses usually are, soon become in a condition to develope the ferns. In stoves, or warm houses of any kind, common stove ferns succeed perfectly; for cooler houses, select hardier kinds of greenhouse ferns. In all the maidenhair fern (*Adiantum capillus-Veneris*) may be tried with every prospect of success. The *Adiantum cuneatum*, and other handsome and tender Adiantums, should be tried in hothouses only. In very cool houses some of our own dwarf and choice hardy ferns might be tried in company with hardy exotic kinds. Walls plastered and whitewashed would of course be more difficult to embellish than those of brick, though we have seen ferns straggling over them too.

Tricolour-leaved Geraniums.

It is bad practice to breed variegates in and in; it is, on the other hand, the very best possible practice to make the seed-bearing plant a common dark zonal, with stout, round, smooth-edged leaf, and to take pollen for fertilising it from the highest coloured tricolours and variegates you have. Such sorts as Mons. Barre and Mme. Vaucher—in which the leaf is round and stout, and has a fine dark zone—make better seed-bearing parents than any tricolours. In selecting for pollen parents, we must undoubtedly have well-formed leaves if possible, but colour is of the utmost importance. Our advice to all breeders is to get away from the Mrs. Pollock type as much as possible, for the leaf has an objectionable lobe, and is much notched. Such as Sophia Cusack and Sophia Dumaresque are the kinds to take pollen from, for their colours are splendid, and the leaves are beautifully formed. Those who are of an experimental turn will cross them all sorts of ways, and keep records of results. All we can find space to say, as the result in the concrete of hundreds of experiments, is this—that the same rule holds in breeding for leaves as in breeding for flowers, viz.: the plant which furnishes the pollen has more influence over the colour; the plant which furnishes the seed has the most influence over the form, whether grown in pots or beds, they are so far delicately constituted that they must have a mellow, nourishing, very sweet, and kindly soil. Good light loam, with liberal additions of thoroughly rotten hotbed manure and the very best leaf mould, is the right stuff for all the golden-edged sorts. Sand must be added at discretion. For the silver-edged sorts less manure and more sand should be used. Experience has taught us that when the silver zonals—or silver tricolours, as they are commonly called—are planted out in rich soil, it gives them so much vigour as to render their zones black, which of course is ruin to the warm, sparkling, silvery effect required. It is true that the golden zonals have blacker zones when in rich soil; but then their yellow margins are brighter, and their tones of red stronger, and the black is thereby overpowered. Hence we may lay down the rule that the golden zonals should have a more generous soil than the silver zonals, and that neither class should be planted in soil which could be justly described as rank. In a wet summer all these delicate-habited varieties do better in raised beds than on the level. In selecting varieties preference should undoubtedly be given to *colour*, as more important than form. But we want the best form possible—a margin without lobes and notches, and with no break in its continuity where the stalk is placed. Usually we see there a cleft more or less wide; in a perfect leaf it is difficult to trace where the stalk is.

In selecting, first secure, as the finest golden zonal in existence, *Achievement*, raised by Stevens, and now being sent out by Turner. It is a small leaved variety, remarkable for its splendid tones of red; it shows scarcely a trace of black, and the yellow margin is as sharp and clear as if laid on by an enameller. We can not only recommend this as wonderful in colour, but we have seen it growing out of doors, and its behaviour was such that we feel assured it will be a first rate bedding plant.

Another splendid gold zonal is *Mrs. Turner* (Turner), a most vigorous-growing plant, with intense colours, pure and lasting.

Ettie Beale (Carter) is a most brilliantly-coloured kind, the form very nearly perfect, and the growth neat and compact.

Amongst the silver zonals, the best no doubt is *Miss Burdett Coutts* (F. and A. Smith).

The amateur who speculates in the newest and grandest must also have *Banshee* (F. and A. Smith), and *Excellent* (Turner), for their purity of colouring and free vigorous growth.

The following lists comprise the twelve very best of the cheaper kinds in both classes. Those marked thus * are the best among the best.

Gold Zonals (Golden Tricolours).—Jetty Lacy, Lady Cullum*, L'Empereur, Louisa Smith*, Lucy Grieve*, Miss Watson*, Mrs. Pollock*, Sophia Cusack, Sophia Dumaresque, Sunset, Titania, Queen Victoria*.

Silver Zonals.—Banshee*, Beauty of Guestwick, Caroline Lonfield*, Countess, Glen Eyre Beauty, Impératrice Eugénie*, Italia Unita*, Light and Shadow, Princess of Wales*, Queen Victoria*, Silver Star, Wassand Hall Beauty.

Crocuses.

Of distinct species of crocus readily obtained and easily grown in this country, *C. speciosus* is one of the most ornamental. It is a native of Transylvania, the Crimea, and neighbouring regions, and in these islands flowers abundantly in the end of September or beginning of October. It is the finest of the true autumn crocuses (which must not be confounded with colchicums that flower in autumn). The flowers are bluish-purple, striped internally with deep purple lines. It is not by any means a common plant, and may be difficult to obtain: Mr. Pearson's nursery at Chilwell, near Nottingham, has a large stock, so that anybody might obtain it from him. It would prove particularly suitable for forming edgings and tufts near beds or groups of autumn flowers. It seeds freely, and is not particular as to soils; but in good light loam or peaty soil it thrives to perfection. As the leaves come up strong in summer, unaccompanied by flowers, it may be necessary to caution workmen against the barbarous practice of cutting off the green leaves, as is frequently done with the common kinds. It seeds freely in this country, and may be readily increased in that way.

C. pyrenæus (*C. nudiflorus* of Smith) resembles the preceding, but the flowers are of a redder purple, and not striped. It is found abundantly on the Pyrenees, to a height of 5000ft. or 6000ft, and is naturalised in several parts of England. This, like the preceding, enlivens the fall of the year, the leaves appearing in spring. Care should be taken that this and all small bulbs of any value should not be dug up and destroyed by mistake by careless workmen.

Crocus sativus is the saffron crocus, formerly cultivated in England for the production of saffron; this is the fringed and rich orange style. Is by no means so free to flower as the kinds previously mentioned. We should not attempt its culture unless we could give it a sunny, dry position on a chalky or otherwise very warm soil.

C. versicolor is a pretty and distinct spring-flowering kind, which has spread into a good many varieties, and is abundantly grown in Holland. The ground colour of the flowers is white, but richly striped with purple; the inside of the throat is smooth, by which it can be readily distinguished from *Crocus vernus*, which has the inside of the throat hairy. The fine *C. imperatorius* is a variety or an ally of this, or a nearly-allied species, but it is very rare in cultivation. The fragrant *C. suaveolens* of the Campagna of Rome is another variety or ally of this plant, and, so far as we know, not in cultivation.

C. vernus, the crocus of the Alps of Europe, is the parent of most of the blue, white, and striped kinds most generally cultivated in our gardens. It has sported into a great number of varieties under garden cultivation, and every one of them beautiful.

C. reticulatus (*C. Susianus*) is the little, early, rich, golden crocus with the exterior of its flowers of a rich brownish black. It is the earliest of the commonly cultivated spring crocuses, and is usually known as the Cloth of Gold crocus. It is a native of the Crimea and South-eastern Europe. There are several varieties, and among them a lilac and a white, but these we have never seen in cultivation.

Crocus lagenæflorus is a species which embraces the large yellow and golden crocuses of our gardens, and has given rise to a number of fine varieties, some of them white and striped. It is a native of Eastern Europe. It is the commonest and most vigorous of all the cultivated kinds.

C. biflorus (the Scotch crocus) is a very pretty striped kind, naturalised in a few spots in Britain, but really a native of South-eastern Europe. It is hardy, and flowers freely on almost any soil.

In addition to the above-mentioned, Messrs. Backhouse, of York, offer *C. Aucheri*, *Boryi*, *marathonisius*, *multifidus*, *Schimperi*, *Sieberi*, and *Sprunneri*. They have been but a short time in this country.

The Lady's Work Table.

Introduction.

THE favourite fancy work of the past year has decidedly been modern point lace. There is every probability that it will remain the fashionable and popular work of the year 1870; and for obvious reasons: it is not expensive to produce, and it can be turned to much useful account. When worked with coarse materials it is admirably adapted for decorative furniture; mounted on a band of either velvet or satin it looks well down the centre of either a low easy or a prie-dieu chair. As a border to a table cover, with centre of crimson velvet, the lace also being lined with velvet, it is most effective; for a vallance to a mantelpiece lined with some rich material it is likewise in good taste; for curtain borders, sofa cushions, &c., it is largely used. Then when worked in fine materials there is no end to its applicability to the dress of both ladies and children. Parasols, bodices, caps, handkerchiefs, aprons, necktie, chemisettes, skirts, are all now made either entirely of modern point lace, or trimmed with it. All sorts of old Roman, Venetian, and Spanish laces are copied not only for the style of design, but for the old stitches, so as to give variety to the work. It has been found that a raised cord in the centre of the braid adds much effect to the lace, and we have included among our patterns a cap in raised Venetian point; which cap when worn should be finished off at the left side of the head with a bright coloured satin bow. In novel materials for fancy work, very few have been produced during the past year with the exception of those that come under the head of canvases, and in these there are several novelties. Monotonous grounding in either cross or tent stitch is now seldom seen, and instead all sorts of fancy canvas have been introduced. Several are made of linen and paper, then stamped all over with small holes, and have either a gold or silver facing; these are very effective decorated with a tasteful design in chenille. There are also several new cotton canvases useful for bedroom antimacassars and mats; they are mostly of the honeycomb pattern, loosely woven; and very pretty patterns are worked in them with Pyrenean wool, by simply running underneath the upper thread. Broton work and point russe have likewise been largely patronised; but, as we have before said, modern point lace is *the* work of the year.

Marie Stuart Cap, in Raised Venetian Point Lace.

(Designed by MADAME DE G.)

[FRONTISPIECE.]

DIRECTIONS for working: Take a tracing of the designs, and transfer them on to kid; then tack the linen braid carefully on, and whip it all round with fine linen thread, drawing it flat wherever it is at all full in the turns. The various stitches must be worked next according to their positions in the designs. After these are all finished, sew the raised cord on the middle of the braid as neatly and firmly as possible; then tack a thick thread all round the edge of the designs, and work close button-hole stitch along it, attaching it to the braid, and working the dots at the same time. Work the bars with dots on last. The cap must be pinned on the top of the head and fastened below the chignon with coloured ribbon.

Gentleman's Slipper.

(COLOURED DESIGN.)

THIS slipper may be worked in cross stitch either on canvas or kid, on the latter material it is particularly pretty. The beads are gold; brown, mauve, green, and white filoselle are required for carrying out the pattern. The thin lines decorating the centre of the cross and star are copied with fine gold twist. The slipper should be lined with quilted mauve silk.

1. Baby's Hood.

MATERIALS requred—Two bone needles No. 12, 2oz. of white single German wool; coloured satin ribbon, ½in. wide, for the runners, and wider for the strings and bows.

Cast on 70 stitches. You begin by knitting what forms the roll. 1st row—Make 1 (by throwing the wool over the needle), slip 1, knit 1; repeat. 2nd row—Make 1, slip 1, knit the crossed loops together; repeat (this forms the brioche stitch). Whenever the term brioche is used it means you are to make 1, slip 1, knit the crossed loops together. Knit in the brioche stitch a length measuring 14½in.

STRIPE OF HOLES FOR A RUNNER.—A stripe of holes must now be made as follows: 1st row—Knit plain, knitting crossed loops together. 2nd row—Knit plain. 3rd row—Slip 1, * knit 2, make 1, knit 2 together; repeat from *; end with knit 1. 4th and 5th rows—Knit plain. A stripe of brioche is next knitted, reducing one at each end every alternate row after the two first.

STRIPE OF BRIOCHE.—1st row—Make 1, slip 1, knit 1; repeat. 2nd row—Make 1, slip 1, knit crossed loops together; repeat. 3rd row—Slip 1, knit crossed loops together brioche: end with knit 1, knit crossed loops together. 4th row—Slip 1, knit 1; brioche. End with knit 2. 5th row—Knit 2 together; brioche. End with knit 2 together. 6th row—Slip 1, brioche; end with knit 1. 7th row—Slip 1, knit 1, knit crossed loops together, brioche, end with knit 1, knit crossed loops together, knit 1. 8th row—Slip 1, knit 2, brioche, end with knit 3. 9th row—Slip 1, knit 2 together, brioche, end with knit 1, knit 2 together. 10th row—Slip 1, knit 1 brioche, end with knit 2. 11th row—Knit 2 together, brioche, knit 2 together. 12th row—Slip 1, brioche, end with knit 1. This finishes the brioche stripe. Knit a 2nd stripe of holes as before. End in 3rd row with knit 3. Knit a brioche stripe as before. Knit a 3rd stripe of holes. Repeat the first 6 rows of the brioche stripe, then cast off, knitting the crossed loops together.

CROWN.—This is knitted separately, and sewn in. When doing so commence in the centre at the top, and hold the head-piece towards you. Cast on 12 stitches. Next row. Make 1, slip 1, knit 1; repeat. Repeat the brioche stitch until you have a length of 2½in. To round the crown: 1st row—Slip 1, knit 2 together, brioche. 2nd row—Slip 1, knit 2 together, brioche, end with knit 2. 3rd row—Knit together, brioche, end with knit 2. 4th row—Knit 2 together, brioche, end with knit 1. 5th row—Knit 2 together twice, brioche, end with knit 1. 6th row—Knit 2 together twice, brioche, end with knit 2. Cast off, taking the crossed loops in doing so together. Sew the crown into its place. Hold the hood with the crown towards you, as if on a child's head. At the left-hand side for the neck, beginning two loops before the 1st stripe of holes, take up, and, as you take up, knit 55 stitches—that is 22 stiches at each side of the crown, and 11 along the crown. Knit a stripe of holes same as across the head, omitting the 1st row. After these 4 rows, seam a row, knitting the 3 first and the 3 last stitches.

TO FORM THE CURTAIN.—1st row—Knit 5, knit 1, raise 1 alternately. You raise 1 by before you let the knitted loop down, putting your needle through the back of *same* loop and drawing the wool through; end by knit 5. You will nearly have doubled the number of stitches on your needle, having now 100. 2nd row—Slip 1, knit 2; seam all but end with knit 3. 3rd row—Slip 1, knit 2, make 1, knit 2 together, * make 1, slip 1, knit 1; repeat from *, end with make 1, knit 2 together, knit 3. 4th row—Slip 1, knit 4, brioche, end with knit 5; repeat this 4th row *four* times more. 9th row—Slip 1, knit 2, make 1, knit 2 together, brioche, end with make 1, knit 2 together, knit 3; repeat from 4th row *once* more. 16th row—Slip 1, knit 4, brioche, end with knit 5.

The curtain is now gradually rounded off.

1st row—Slip 1, knit 4, knit 1, knit crossed loops together; brioche; end with knit 1, knit crossed loops together, knit 5. 2nd row—Slip 1, knit 6, brioche, end with knit 7. 3rd row—Slip 1, knit 4, knit 2 together, brioche, knit 2 together, knit 5. 4th row—Slip 1, knit all taking crossed loops together. 5th row—Slip 1, knit 2, make 1, knit 2 together, knit 2 together, knit 1, * make 1, knit 2 together, knit 2, repeat from *; end with make 1, knit 2 together, knit 1, knit 2 together, make 1, knit 2together, knit 3. 6th row—Slip 1, knit all. 7th row—Slip 1, knit 4, * make 1, slip 1, knit 1, repeat from *, end with knit 5. 8th row—Slip 1, knit 4, brioche, end with knit 5. 9th row—Same as first. 10th row—Same as 2nd. 11th row—Slip 1, knit 2, make 1, knit 2 together, knit 2 together, brioche, end with knit 2 together, make 1, knit 2 together, knit 3. 12th row—Slip 1, knit 5, brioche, end with knit 6. 13th row—Slip 1, knit 3, knit 2 together, brioche, end with knit 2 together, knit 4. 14th row—Slip 1, knit 4, brioche, end with knit 5. 15th row—Same as 1st. 16th row—Same as 2nd. Repeat from 11th row *once* more, but knit the last row like the 4th row instead of the 2nd. Next row knit like the 5th, but at the last knit 5. Knit 6 rows plain, commencing each by slip 1, knit 1; pull the slipped stitch over the knitted one. Cast off.

In making up this hood, place a small roll of wadding in the part that is to form the roll round the face. Slant this roll so as to bring the ends to meet the second stripe of holes, and the top just to cover the first row of holes. Bright-coloured satin ribbon should be run into the stripes of holes across the head, round the neck, and curtain. Place bows of ribbon at the back of neck and on the top; run a wider ribbon in the holes inside the roll to tie under the chin. The bows should be made of the wider ribbon.

The hood should be lined with white sarsenet.

2. Baby's Glove.

MATERIALS required—Four needles No. 15, 4 No. 13 required. Care must be taken to use the needles as directed. ½oz. white German wool, ¼oz. of coloured.

With white wool cast 40 stitches on one needle, knit them off on three needles, 12 on two, 16 on the third. Use needles No. 13. Knit 3, seam 1 alternately for 2 rounds.

Take coloured wool. Knit 1 round plain. Seam 3 rounds. With white wool. Knit 1 round plain. Knit 3, seam 1 alternately for 3 rounds. Take coloured wool. Knit 1 round plain. Seam 3 rounds. With white wool knit 1 round plain. Knit 3, seam 1 alternately for 7 rounds.

You are now to take needles No. 15 and coloured wool. Knit 2 rounds plain. Next round—* Knit 2, make 1, knit 2 together; repeat from *. Knit 2 rounds plain. Your may break off the coloured wool. Take needles No. 13 and white wool. Knit 2 rounds plain.

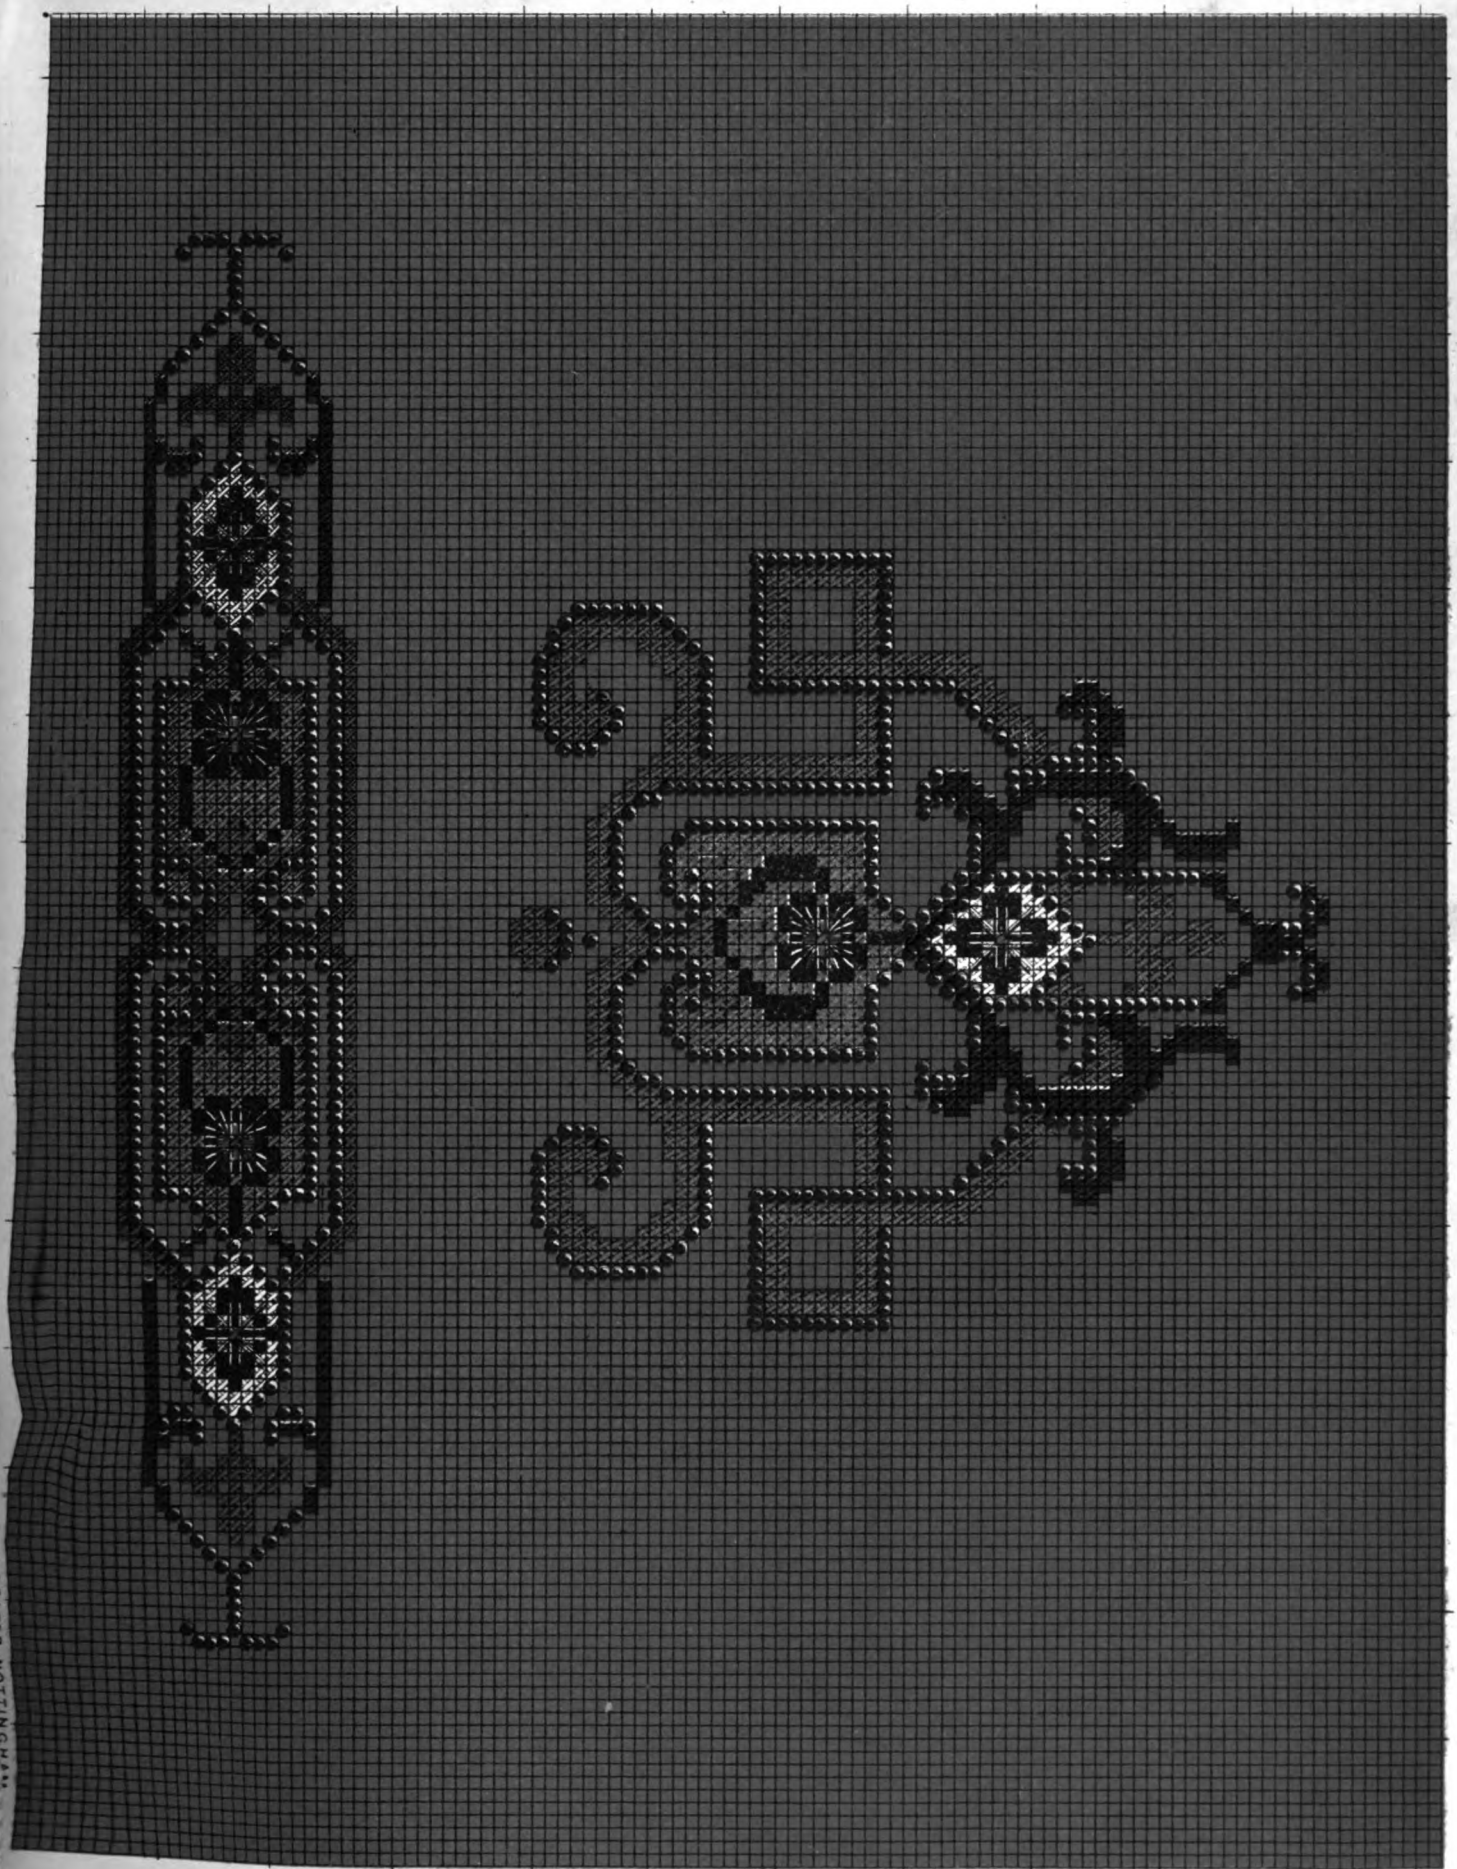
3rd round—Knit 1, seam 1 alternately all round.

4th and 5th rounds—Knit plain. Observe two rounds plain knitting are to be repeated between each increasing round.

6th round—Knit 1, seam 1, raise 1. This is done this first time in the round by when you come to the 3rd stitch, before working it, putting your needle through the loop below, in reality the stitch of the last row, and drawing the wool through it; the second time you raise it is done after you have knitted or seamed a stitch by, before you let the loop down, putting your needle in at the back of the same loop and drawing the wool through. Knit 1, seam 1, raise 1. Knit 1, seam 1 alternately rest of round.

9th round—Knit 1, seam 1, raise 1. Seam 1, knit 1 twice (this means

Digitized by Google



Digitized by Google

Digitized by Google

repeat the seam 1, knit 1 alternately so many times between the raisings), raise 1. Knit 1, seam 1 alternately rest of round.

12th round—Knit 1, seam 1, raise 1. Knit 1, seam 1 three times. Raise 1. Knit 1, seam 1 alternately rest of round.

15th round—Knit 1, seam 1, raise 1. Seam 1, knit 1 four times. Raise 1. Knit 1, seam 1 alternately rest of round.

18th round—Knit 1, seam 1, raise 1. Knit 1, seam 1 five times. Raise 1. Knit 1, seam 1 alternately rest of round.

21st round—Knit 1, seam 1, raise 1. Seam 1, knit 1 six times. Raise 1. Knit 1, seam 1 alternately rest of round.

22nd round—Knit 3, slip on a piece of wool the next 12 stitches, and secure it to prevent their slipping off. These stitches are afterwards taken up for the thumb. Rest of round knit plain.

23rd round—Knit plain.

* 24th round—Knit 1, seam 1 alternately. Knit 2 rounds plain. Repeat from * 5 times more.

You now use the smaller needles to reduce the size at the top of the glove. 1st round—Knit 1, seam 1 alternately. Two rounds plain knitting. 4th round—Knit 3, knit 2 together alternately. Knit 2 rounds plain. 7th round—Knit 2, knit 2 together alternately. Knit 2 rounds plain. Take the larger sized needles and knit 1 round plain with them. Break off a sufficient length of wool, slip all the stitches on it, and draw together.

THUMB.—Use needles No. 13. Take up thumb stitches thus:—4 on each of three needles, adding two more on the 3rd by taking up two where there is the opening. * Knit 2 rounds plain. One round seaming 1 and knitting 1 alternately. Repeat from * three times more. Take needles No. 15, knit 2 rounds plain. 3rd round—Knit 2 together, knit 3 alternately, end with knit 2. Knit 1 round plain. Knit another plain round, but with the larger needles. Draw wool through the loops and fasten off.

To make a left-hand glove, form the thumb at the end of the third needle, instead of at the beginning of the first. Make the 1st, raising when within four loops of the end of the round.

All the needles used in these recipes are numbered according to "Chambers's Registered Bell Gauge."

3. Infant's Boot.

MATERIALS required—Four needles No. 15 for an average knitter; 1oz. of white German wool; ½oz. of coloured.

Begin with white wool, cast on 48 stitches, knit them off on three needles, 16 on each. Observe the back needle is the one with the wool attached to it that you cast on with, and each round commences on the 9th stitch of the back needle: knit plain to it. Knit 2, seam 2 alternately for four rounds. With coloured wool. 1st round—Knit plain. 2nd round—Seam all. 3rd round—Make 1 and knit 2 together; this forms holes. 4th round—Seam all. Take white wool; one round plain knitting; three rounds of ribbing; that is, knit 2, seam 2 alternately. With coloured wool: Repeat the 4 rounds the same as you knit before in the coloured wool; after this you may break off the coloured wool, as it is better than carrying it on. Take white wool; three rounds plain knitting; * one round, knitting 1 and seaming 1 alternately; two plain knitted rounds; repeat from * five times more. With coloured wool: The holes now made are to have ribbon run through to tie round the ankle. 1st round—Knit plain. 2nd round—Seam all. 3rd round—Make 1 and knit 2 together. 4th round—Seam all; break off the coloured wool. Take white wool.

Knit one round plain. This finishes your boot to the heel. You should have 16 stitches on each needle.

Prepare for heel by knitting to the end of your back needle, and from 1st side (or next needle) knit off on back needle, 4 stitches. Knit the other 12 stitches from 1st side needle on another needle. Knit 2nd side needle to within 4 stitches of the end. These 4 you must pass to the heel or back needle, without knitting. You ought to have 24 stitches on heel, and 12 on each side needle. The 2 front needles are not used again until the heel is completed.

The heel is made by working the back needle backwards and forwards. Always slip the 1st stitch in each row, excepting the first time you knit the *first row.*

HEEL.—1st row—Knit plain. 2nd row—Seam all. 3rd row—Knit 1, *seam* 1, alternately. 4th row—Seam all. 5th row—Knit plain. 6th row—Knit 1, seam 1, alternately. Repeat from 1st row twice more. 19th row—Knit plain. 20th row—Seam all. 21st row—Knit 1, seam 1 alternately. 22nd row—Seam all. 23rd row—Slip 1st stitch, knit 15, knit 2 together,* turn your needle and work back; slip 1, knit 8, knit 2 together; repeat from* until you have only 10 stitches left on needle.

TO FORM THE FOOT.—Commence by slip 1st stitch, knit 9, and with same needle, take up, and as you take up knit 12 stitches from side of your heel. Knit 3 stitches off front needle on the same. Knit all the stitches from the two front needles, excepting the 3 last on another needle. These 3 must be knitted on a third needle, with which take up, and as you take up, knit 12 stitches from other side of heel; also knit 5 stitches from next needle on this. You will have 20 stitches on each side needle, 18 on front needle. The next needle is your 1st side needle. Knit one round plain. *1st side needle—Knit 1, seam 1 alternately till within 5 of the end, when seam 2 together, knit 1, seam 1, knit 1. Front needle—Seam 1, knit 1 alternately. 2nd side needle—Seam 1, knit 1, seam 1, knit 2 together, seam 1, knit 1 alternately to end of needle. Observe on this needle, after the knit 2 together (here and when you narrow at the toe), you will sometimes have to begin thus—knit 1, seam 1 (instead of seam 1, knit 1), in order to keep the pattern right. The 1st side needle must always be worked as directed. Two rounds plain knitting. Repeat from* until you have 13 stitches only on each of your side needles. Then one round—Knit 1, seam 1, alternately. Knit two plain rounds. Repeat these 3 rounds seven times more. Now to narrow off for the toe. *1st side needle—Knit 1, seam 1 alternately till within 5 of end, when seam 2 together, knit 1, seam 1, knit 1. Front needle—Seam 1, knit 1, alternately. 2nd side needle—Seam 1, knit 1, seam 1, knit 2 together, knit 1, seam 1, alternately, to end of needle. Two plain knitted rounds. Repeat from* 3 times more.

End with one more round plain knitting done very loosely, draw the wool through the loops, and sew up the toe inside the boot. Put ribbon to tie round the ankle, and place a rosette in the front.

4. Child's Sock Knitted in the Shell Pattern.

MATERIALS required—Four needles No. 15; a size smaller for a loose knitter; 1oz. of Andalusian wool.

Cast 72 stitches on one needle; knit them off on three needles—26 on two, 20 on the third. Knit 2, seam 2 alternately for 32 rounds. Next round—Knit 2, seam 2 alternately until you reach the 9th stitch of the needle which has only 20 stitches on it; knit this 9th and the 10th stitch together. The next stitch is called the centre stitch of the back needle. Each round down the leg commences on it, and it must always be seamed.

* Knit 3 rounds plain (remember to seam the first or centre stitch). 4th round—Back needle, seam centre stitch, knit 3, knit 2 together twice, make 1 (by throwing the wool over the needle), and knit 1 twice. You are now at the end of back needle. Next needle—Make 1 and knit 1 twice, knit 2 together twice, seam 1, knit 2 together twice, make 1 and knit 1 four times, knit 2 together twice, seam 1, knit 2 together twice, make 1 and knit 1 twice. This completes the needle. Knit the next needle exactly the same. You must have 26 stitches always on each of these needles, and, until you begin to reduce, 19 on the back needle. Work the back needle up to centre stitch as follows: make 1 and knit 1 twice, knit 2 together twice, knit 3. Repeat from * five times more.

25th round—Seam centre stitch, knit 1, knit 2 together, knit plain rest of round to within 3 of the end, when knit 2 together, knit 1. This is for the reducing, 26th and 27th rounds—Knit plain. 28th round—Knitted like the 4th, only after and before the centre stitch you will have only 2 plain stitches to knit instead of three. 29th, 30th, and 31st rounds—Knit plain. 32nd round—Same as 28th.

Repeat from 25th round twice more, until you have only 13 stitches left on your back needle. Observe after each reducing there will be one less to knit before and after the centre stitch in the pattern rounds. The last time you must knit 2 together immediately after and before the centre stitch. * 49th, 50th, and 51st rounds—Knit plain. 52nd round—Same as the 4th, only omitting to knit 3 after and before the centre stitch. Repeat from * twice more. If you count the patterns, you will find you ought to have worked 15. 61st round—Knit plain. This finishes your sock to the heel. You will have 13 stitches on back needle, 26 on each of the others.

Prepare for heel by knitting to the end of your back needle and from 1st side (or next needle), knit off on back needle, 10 stitches. Knit the other 16 stitches from 1st side needle on another needle. With a third needle knit 2nd side needle to within 10 stitches of the end. These 10 you must pass to the heel or back needle without knitting. You will have 33 stitches on heel, 16 on each side needle. The two front needles are not used again until the heel is completed.

HEEL.—The heel is made by working the back needle backwards and forwards, knitting and seaming alternate rows until it is long enough, which it will be after working 26 rows. Slip the 1st stitch in each row, excepting the first time you knit the first row. Seam or knit the centre stitch as required. 27th row—Slip 1, knit 20, knit 2 together, * turn your needle, slip 1, seam 10, seam 2 together. Again turn your needle, slip 1, knit 10, knit 2 together; repeat from * until you have only 12 stitches left on needle.

With the needle that has the 12 stitches on the take up, and as you take up knit 15 stitches from side to heel, knit 3 stitches off front needle on the same. Knit plain all the stitches from the 2 front needles, excepting the 3 last on another needle. These 3 must be knitted on a third needle, with which take up, and as you take up knit 15 stitches from other side of heel; knit also 6 stiches from next needle on this. You will have 24 stitches on each side needle, 26 on front needle. The next needle is your 1st side needle; *1st side needle. Knit plain all till within five of the end, when knit 2 together, knit 3. Front needle—Make 1 and knit 1 twice, knit 2 together twice, seam 1, knit 2 together twice, make 1, and knit 1 four times, knit 2 together twice, seam 1, knit 2 together twice, make 1 and knit 1 twice. 2nd side needle—knit 3, slip 1, knit 1, pull the slipped stitch over the knitted one; knit plain to end of needle. Knit plain 3 rounds; repeat from * until you have only 18 stitches on each side needle. This finishes the reducing for the foot.

The 4 rounds between the last asterisks are now to be repeated, only in the pattern rounds do not reduce on the side needles; knit all the stitches plain. These rounds must be repeated until, counting the patterns from the top of socks, you have worked 28, and have the three plain rounds beyond.

THE TOE.—This is all done in plain knitting. Put as many stitches on your front needle as you have on the other two together, taking them as fairly as you can off each side needle, two off one end, three off the other.

You will have 31 on front needle, 15 on one side needle, 16 on the other. Knit 3 rounds plain and up to the front needle.

* To Reduce the Toe.—Front needle—Knit 1, slip 1, knit 1, pull the slipped stitch over the knitted one; knit plain to within 3 of end, when knit 2 together, knit 1. 1st back needle—Knit 1, slip 1, knit 1, pull the slipped stitch over the knitted one, knit plain to end of needle. 2nd back needle—Knit plain to within 3 of end, when knit 2 together, knit 1. Knit two rounds plain; repeat from * twice more. Repeat from * again, knitting only one round plain between the reducing rounds until you have 15 stitches on your front needle, 7 on one back needle, 8 on the other. Knit one round plain, knitting on one needle the stitches off the two back needles. Cast off, knitting the stitches on front and back needles together.

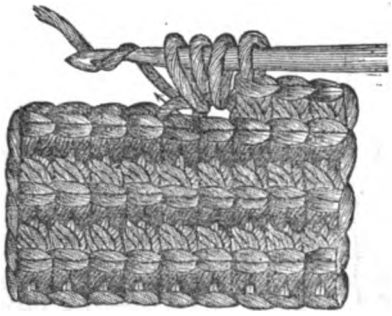
5. Cuffs Crocheted in Imitation of Fur.

You work the cuffs in the same manner as the muff (No. 6), Make a chain of 30 St. This is for the height of the cuff. Work as the muff, until you have enough to pass over the hand. Make a lining of white quilted silk over wadding; sew neatly to the edges of the crochet, make a runner at the top of the cuff, in which you draw through a ribbon, to tie it to the shape of the hand.

6. Muff Crocheted in Imitation of Fur.

This article crocheted in imitation fur is recommended for the warm winter toilettes of young girls, as it is not expensive.

The accompanying illustration gives the stitch in which the muff is



crocheted. With a fine bone hook, No. 12 Boll gauge, and the grey wool, single Berlin (of which you require 6oz.), make a chain of 78 stitches.

1st row—DC. (double crochet), at the end 1 Ch. 2nd row—1 DC. in the first DC., taking up the back of the loop, which is done throughout the work, take up the back of the 2nd loop, draw the wool through, pass the wool round the needle, take up the same loop again, making 3 loops on the needle in this one stitch, draw the wool through these 3, then through the 2 on the needle; take up the whole of this row in this manner. 3rd row—Plain DC. worked from the back of the loop as before. Repeat the 2nd and 3rd row. Work a piece wide enough for your muff, then make it up; for this you require blue silk in the piece, two pair of black tassels, some blue ribbon to run in the runner, and a sheet of wadding. Lay your wadding the size of the piece of crochet you have worked, cover it on both sides with silk, then sew together; make a slot at each outer edge, sew up the piece of crochet, place it over the silk, run the edges of the crochet to the extreme edge of the slot, then pass your ribbon in; add the tassels by the join.

7. Baby's Shoe with Fancy Stocking.

Materials—1oz. of turquoise blue or scarlet, and 1½oz. of White single Berlin wool; five needles No. 14.

For the above the part resembling a shoe is the only portion to be knitted with blue wool. The front is begun by casting on 14 stitches, which are knitted backwards and forwards in rows. 1st row—1 plain, 1 purl. 2nd and every succeeding row, the same, only that a plain stitch must come over a purl, and a purl over a plain stitch of the previous row, so that on both sides the reversed pattern called "moss-stitch" must be kept up. In this manner 36 rows are to be knitted, increasing every 4th row on each side by knitting 2 in the second and last stitch but one of the row. In the 34th row the same increase must take place, so that at the conclusion of the 36th row there should be 34 stitches on the needle. Of these the 12 centre ones must be taken off on a separate needle, and the 11 stitches on each side knitted on in the same pattern for ten rows more, and cast off. For the sides and back cast on 24 stitches, and knit 22 rows as before. The stitches remain on the needle, and the sides are to be sewn on the wrong side to the cast off stitches of the front. Now pick up the stitches that are on each side of the front and the 12 centre stitches, and, dividing them all on 4 needles, purl 2 rounds, and then change the blue for white wool.

For the Stocking.—1st round—1 plain, 1 purl; repeat. 2nd round,—the same. 3rd round—1 plain, 2 purl; repeat. 4th round—Like 3rd. 5th round—same as 1st, being careful that the plain stitches come exactly over those of the 1st and 2nd rows. These four rows are to be repeated regularly for 40 rows (observing that the columns of plain stitches occurring at intervals of 5 stitches must be kept unbroken). 41st round—plain. 42nd round—purl. 43rd round—Thread forward, knit 2 together; repeat. 44 to 49th round—plain, then cast off. A three-plaited cord of blue wool, not quite half a yard in length, must be passed through the row of holes, and tied in a bow in front, with small tassels at the end. An edging is to be crocheted round the top with blue wool, so that it should turn down. Begin at the back with 1 DC. into the under part of one of the cast-off stitches, 5 Ch. passing over the two following ones, 1 DC. 5 Ch., as before, and repeat all round. 2nd round—DC. in the 3rd of the 5 Ch. of previous round, 5 Ch., and repeat. 3rd round—1 long, 3 chain, 1 long in the loop of 5 chain of previous round; 1 long, 3 chain, 1 long in next loop; repeat all round, and fasten off.

The sole must be knitted with blue wool in the same pattern as the shoe. It is begun at the heel with 4 stitches, and is increased and diminished at the first and last stitches of the uneven rows (the 1st, 3rd, 5th, and so on), by either knitting 2 stitches in one to increase, or 2 together to decrease, in the following manner: 1st row increase to 6 stitches, 3rd to 8, 5th to 10, 7th to 12, 9th to 14, and so continue till the 15th row, when decrease the stitches to 11; 17th row, decrease to 9, 19th and 20th, continue the same number; 21st, decrease to 7 and continue that number for 8 rows; 29th, increase again to 9, and 31st row to 11, continuing the same for 4 rows; 35th row, increase to 13, and continue the same for 20 rows; 55th row, decrease to 11; 57th row to 9; 61st to 63rd to 7 stitches, and cast off. The shoe must now be turned on the wrong side and sewn to the sole, running a piece of wool through the stitches of the toe to draw them in to the size of the sole, and fixing the centre of the back of the shoe to the middle of the heel, so as to keep it even. It will be found that this sole gives a very pretty shape to the shoe.

If a larger size be desired, knit exactly the same with No. 13 needles.

8. Knitted Jacket for a Child of Two or Three Years Old.

Materials required—2½oz. of white single Berlin wool, or 3-thread fleecy, ½oz. black single Berlin, and the same quantity of dead gold, blue, ponceau, or any colour preferred for the border, a skein of white filoselle, and 5 needles No. 12.

It will be seen by referring to Fig. 8 (page 21), that this jacket is knitted in white wool and trimmed with the other colours. It is worked the long way (not across) entirely in plain knitting, and as the rows go backwards and forwards, they look alternately plain and purl, and give a ribbed appearance to the work. It is commenced at the straight edge of the front by casting on 72 stitches, and the first 50 rows are knitted plain, always taking off the first stitch, which will give 25 ribbed or purl rows on each side of the work. In the following 9 ribs (a rib includes 2 rows), viz., in the 51st, 53rd, 55th, 57th, 59th, 61st, 63rd, 65th, and 67th rows, an increase must be made in the last stitch but one, by knitting it twice, first from the front as usual, and then from the back before taking it off the needle; this increase is for the rise from the neck to the shoulder. In the 68th row there should be 81 stitches on the needle. With these 28 more rows or 14 ribs are to be knitted plain, and then the armhole will be reached.

For this take off the 32 stitches next to the neck, and put them on a separate needle, or rather run a piece of bobbin or wool through them, as the needle will be wanted afterwards. With the remaining 49, knit as follows, for widening the jacket under the arm: knit two rows with them, and in the 2nd leave 5 stitches next the armhole unknited, turn back and knit to the end, do this 8 times, leaving 5 more stitches unknitted each time, so that at last only 4 stitches remain to be knitted, and returning in the same way in the next 9 ribs or 18 rows, take up all the stitches that were left till there are again 49 on the needle, with which knit one row backwards and forwards. Here for the height of the back and to correspond with the other side, 32 stitches must be added to the 49 by casting on, and with these 81 stitches, 30 rows or 15 ribs must be knitted plain; then for the slope from the shoulder to the neck, in the next 19 rows, 9 stitches must be decreased by knitting together the two stitches before the last, in every alternate row. This decreasing will reduce the number of stitches again to 72, with which 22 rows or 11 ribs must be knitted plain, and this will bring it to the middle of the back. Continue to knit the other half of the jacket to correspond exactly with the half that has been described. Having reached the second front, the stitches must not be cast off, but the border immediately commenced. For this the stitches at the ends of the ribs round the lower part of the jacket must be taken up on two needles, and also the 72 stitches first cast on, on a third (making four in all), and knitted plain with black wool backwards and forwards for 4 rows or 2 ribs.

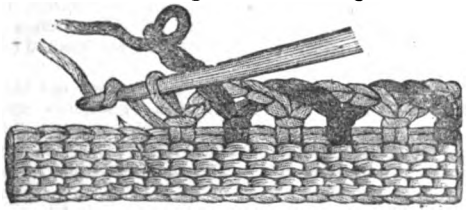
No. 8a. Detail of Jacket (No. 8).

In order that the work may not be strained either at the front corners, or otherwise, it must be observed that at these corners, and also at the first stitch of each of the four needles, except at the top of the fronts, 2 stitches must be knitted in one. This plan must be continued through the whole

Digitized by Google

breadth of the border. Six coloured rows (of whatever colour is chosen for the centre of the border) follow the black, and these are again inclosed by 4 rows of black, after which the stitches must be loosely cast off.

On the coloured rows of the border a herring-bone stitch is to be worked in black wool and white filoselle (see Fig. 8*a*), and a crochet edge in black and the border colour, worked round the outer edge of the jacket, the detail of which will be seen in Fig. 8*b*. For this edge both colours must be



No. 8*b*. Detail of Jacket (No. 8).

in use at the same time; after fastening the coloured wool to the top corner, and making 4 chain with it, fasten on the black in a similar manner, and do 4 chain also with it; take out the crochet needle, place the coloured chain stitches behind the black ones, and missing a stitch of the border, fasten them by a plain stitch to the next, make 4 more coloured chain, and placing the black chain stitches already made behind them, fasten the latter by a plain stitch to the edge, missing one between. By looking at Fig. 8*b* the way this edge is done will be easily seen.

The next thing is to close the shoulders of the jacket, and for this purpose 15 stitches must be taken up from the ends of the 30 plain rows, or 15 ribs, of the shoulder part of the back. With these, 6 rows backwards and forwards, or three ribs, must be knitted, then 15 stitches be taken up from the corresponding front part, and both these sets of 15 stitches knitted together on the wrong side and cast off.

For the sleeves, the 32 stitches of the back and front pieces (together 64), and also those of the shoulder-strap (there will be 5 with the taking-up and casting-off rows), are to be knitted in rows, and the sleeve to be sewn together when completed. It will be found more convenient to divide the stitches on 3 needles, working with a fourth, and, to prevent a mark where the needles divide, it is better to knit 2 or 3 stitches more or less on each needle every time, transferring them to or taking them from the next. When 6 plain rows have been done with all the stitches (which will bring the thread to the lowest part of the arm next the back), do a row backwards and forwards with the 27 lowest stitches, leaving the rest and those of the front unknitted. In the following row knit 5 stitches more (making 32), and return; in the next three ascending rows knit 3 stitches more each time, and in the following rows, 1 stitch additional until all the spare stitches are taken up again. It must be observed, however, that after knitting the 32 stitches, the upper and front part of the sleeve must be increased, in the 2nd, 4th, 6th, and so on, at every even numbered rib, *i.e.* at intervals of 3 rows, by knitting 2 stitches (a plain and a purl) in the second stitch of the row.

Having thus completed the top of the sleeve, and used up all the spare stitches, mark the row and commence decreasing at the back of the sleeve in the same proportion by knitting the 2nd and 3rd stitches together every second rib, and take in also in the front at intervals of 1 row in the same manner. After the top of the sleeve is completed, 52 rows or 26 ribs must be knitted, and then the sleeve be sloped for the wrist in the following manner:—The number of needles may be diminished as the work goes on, and by this time one will be sufficient to hold the stitches. There should be 38 stitches when the wrist is commenced. The decreasing is to proceed regularly in front, whilst towards the back at every rib one stitch must be left unknitted, so that at the 1st rib, 1 stitch, at the 2nd rib, 2 stitches will be left, and so on until in 38 rows, with the help of the decreasings, all the stitches will be spare ones, on which (breaking off the white wool) the border must be knitted with black and coloured wool, in the same manner as round the edge of the jacket, as a facing. As this border, however, is to be turned up, the work on it and the crochet edging must be done on the wrong side, after which the sleeve is to be sewn up.

Round the throat a crochet edging is to be worked, through which a cord or sarsenet ribbon can be drawn to close the jacket. This edging is commenced with a row of plain crochet. 2nd row—* 2 long on the two next stitches, 3 chain, missing 2 stitches; repeat from *. 3rd row—1 plain between the 2 long, 4 plain into the space of the 3 chain; repeat.

If this jacket be required of larger size, use No. 9 needles and double German wool.

9. Baby's Boot.

Materials—½oz. of Saxony wool, 4 ivory or bone knitting needles, No. 9 or 10.

These little boots are knitted with Saxony wool, which is a size between the single and double Berlin wool. They are commenced down the middle of the sole by casting on 57 stitches, divided on two needles. With these knit 12 plain rows backwards and forwards.

13th row—Knit the first 24 stitches plain, and the 9 following 1 plain, 1 purl alternately. The next two stitches are to be knitted together, and the work turned, the 22 concluding stitches of the row being left as a reserve.

14th row—Take off the next stitch of the right-hand needle, knit it and the 8 following plain; then knit 2 together, and 2 plain from the left-hand needle; turn the work.

15th row—Take off the next stitch of the right-hand needle, as before, and knit 11 (including that one) alternately plain and purl, so that both may come exactly over those in the 13th row, knit the next two stitches together, and a purl and a plain from the left-hand needle; turn back.

16th row—Same as 14th, only that 13 stitches must be knitted plain, so that the first 2 stitches of the 15th row may be those that are knitted together (and this rule is to be attended to in all the following rows), then knit 2 plain from left-hand needle, and turn back.

17th row—Same as 15th, only that each time there will be 2 more stitches before coming to the "knit 2 together," and it must be observed that the purl and plain stitches should come exactly over those of the 13th and 15th rows. These two rows must be regularly continued alternately until all the reserve stitches are used up; the last row should be on the right, which is the raised side of the work. The stitches must now be divided on three needles, and knitted with the 4th in rounds instead of rows, for the upper part of the boot. After one plain and one purl round are done, a round must be knitted, alternately bringing the thread forward and knitting 2 together through which to pass a ribbon. After the round for the ribbon, follow 14 pattern rounds the same as before, only that the whole being knitted on the right side of the work, every alternate round must be purl instead of plain. Care must be taken as before to keep the purl and plain stitches over each other. When the 14 rounds are completed, the next 2 are to be plain, and after them 6 rounds in ribs of 1 plain, 1 purl, then 2 purl rounds, and cast off.

The sole and heel must now be sewn together on the wrong side, drawing two or three stitches at the toe together, so as not to make it too pointed; and a narrow sarsenet ribbon, either white or any colour preferred, be run through the row of holes, and tied in front in a bow. These boots may be knitted either in white or any other colour, of which there are beautiful shades in the Saxony wool. If wished rather smaller, use No. 10 needles instead of 9.

10. Knitted Under Petticoat for a Child of Two or Three Years Old.

Materials—Half pound 4-thread fleecy; 5 steel knitting pins, No. 14 (Bell gauge).

The bodice, upper part of the skirt, and the border, forming the bottom of the skirt, are knitted separately. Each pattern in the border requires 14 stitches, and 36 patterns will be needed. The border is worked 6 patterns in depth; 504 stitches must be divided on 4 pins.

1st row—Knit 1, bring the wool forward, knit 4, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 4, wool forward, knit 2, wool forward, knit 4, knit 2 together, slip 1, knit 1, pull the slip stitch over, knit 4, wool forward, knit 1.

2nd row—Knit 2, wool forward, knit 3, knit together, slip 1, knit 1, pull the slip stitch over the knitted, knit 3, wool forward, knit 4, wool forward, knit 3, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 3, wool forward, knit 2.

3rd row—Knit 3, wool forward, knit 2, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 2, wool forward, knit 6, wool forward, knit 2, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 2, wool forward, knit 3.

4th row—Knit 4, wool forward, knit 1, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 1, wool forward, knit 8, wool forward, knit 1, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 1, wool forward, knit 4.

5th row—Knit 5, wool forward, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, wool forward, knit 10, wool forward, knit 2together, slip 1, knit 1, pull the slip stitch over the knitted, wool forward, knit 5.

6th row—Slip 1, knit 1, pull the slip stitch over the knitted. Knit 4, wool forward, knit 2, wool forward, knit 4, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 4, bring the wool forward, knit 2, bring the wool forward, knit 4, knit 2 together.

7th row—Slip 1, knit 1, pull the slip stitch over the knitted, knit 3, wool forward, knit 4, wool forward, knit 3, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 3, wool forward, knit 4, wool forward, knit 3, knit 2 together.

8th row—Slip 1, knit 1, pull the slip stitch over the knitted, knit 2, wool forward, knit 6, wool forward, knit 2, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, knit 2, wool forward, knit 6, wool forward, knit 2, knit 2 together.

9th row—Slip 1, knit 1, pull the slip stitch over the knitted, knit 1, wool forward, knit 8, wool forward, knit 1, knit 2 together, slip 1, knit 1, pul the slip stitch over the knitted, knit 1, wool forward, knit 8, wool forwardl knit 1, knit 2 together.

10th row—Slip 1, knit 1, pull the slip stitch over the knitted, wool forward, knit 10, wool forward, knit 2 together, slip 1, knit 1, pull the slip stitch over the knitted, wool forward, knit 10, wool forward, knit 2 together. Repeat from the 1st row.

The border, if knitted moderately tight, will measure about 5 inches.

The upper part of the skirt is knitted in the length and with a pair of pins, in rows forwards and backwards. It is joined together by sewing stitch to stitch as far as the placket hole. To strengthen it a row of double crochet must be worked round the placket hole. The border or bottom of the petticoat is also sewn to the skirt on the wrong side.

Digitized by Google

For the upper part of the skirt, cast on 40 stitches and knit in rows forward and back until the slip measures sufficient to join stitch by stitch to the border.

For the bodice, cast on 30 stitches, begin from the back, and work about 30 rows. Of course the size must depend upon the size of the child for which the petticoat is intended. When one side of the back is nearly wide enough, cast on 45 more stitches, and work 10 rows of this with the back. The additional 45 stitches from the shoulder strap. Cast off the 45 stitches, and knit for under the arm about 20 rows. The front is continued straight on, and also work under the secoud arm. Then follows the lengthening at the shoulder and the second back part. When this is finished, sew the shoulder straps to the front of the petticoat.

Work a row of double crochet round the top of the petticoat (not over the shoulder straps), and next a row of 1 double and 3 chain, passing over 1 double beneath; this is to run the string into.

For the band, pick up the stitches at the waist with a fine pair of pins, and knit tightly 6 rows forwards and backwards. The finished skirt is sewn to this band.

11. Infant's Boot (Knitting and Crochet).

MATERIALS—¼oz. each white and coloured Berlin wool; 1 pair steel knitting pins, No. 14 Bell gauge; a bone crochet hook.

Knit in rows forwards and backwards.

Cast on 72 stitches with the coloured wool, and knit with it as far as the 8th row in patent knitting.

1st row—Slip 1, * put the wool forward, slip 1 as if you were going to purl it; knit 1; repeat from *; knit 1 at the end of the row.

2nd row—Slip 1, * put the wool forward, slip 1 as if you were going to purl it; knit the stitch with the thread put over in the previous row as 1 stitch; repeat from *, at the end knit 1 plain.

According to the directions for the second knit as far as the 8th row.

9th to the 16th rows—With white wool.

9th row—Like the 2nd row.

10th row—Purl throughout, but the thread put over in the last row must be purled together with the stitch following it.

11th row—This row begins the slanting off. Knit as in the 9th row, and knit the two last stitches but one, including the thread put round, which is not reckoned as a stitch, together as 1 plain stitch.

12th row—The same as the 10th, only at the end of the needle decrease as in the 11th row; continue to decrease in the same manner at the end of every row until there remain 32 stitches in the row.

13th to the 16th—Alternately, like the 11th and 12th.

17th to the 24th row—Patent, like the beginning, with coloured wool. The decreasing must not be forgotten.

25th to 32nd row—With white wool, the same as from the 9th to the 16th row.

33rd to 40th—Patent, with coloured wool.

40th to 60th row—Patent, with white wool, not like the two preceding white stripes, but like the coloured.

61st row—With coloured continue to use the latter until contradicted. From this begin the piece that turns over at the top.

62nd row—Slip 1, * put the thread twice round, and knit 2 together, repeat from * to the end, 1 plain.

63rd row—Slip 1, * purl the row throughout; the thread put twice round the needle is purled as one stitch. These two rows are repeated as far as the 73rd row.

74th row—In this row all the stitches are loosely cast off with coloured wool, and with the same colour crochet through the cast off stitches as follows: 1 double upon the nearest stitch, * 3 chain stitches over, 1 under stitch, 1 double upon the following; repeat from *. Now crochet or sew the outer threads of the sloped off sides from the 1st to the 51st row together.

Through the 60th row a coloured wool chain, 16 inches long, must be drawn; little wool tassels must be fastened to the ends.

The sole is worked in double crochet with white wool, taking always the upper horizontal stitch threads upon the hook, in rows forwards and backwards, and sewn in to the shoe on the wrong side. For this make a chain of 8 stitches, and crochet for the 1st row, 8 double. Turn the work at the end of each row. 2nd row, 10 stitches; 3rd row, 12 stitches; 4th row, 12 stitches; 5th row, 12 stitches; 6th row, 12 stitches; 7th row, 14 stitches; 8th row, 14 stitches; 9th row, 14 stitches; 10th row, 14 stitches; 11th row, 15 stitches; 12th row, 15 stitches; 13th row, 13 stitches; 14th row, 13 stitches; 15th row, 12 stitches; 16th row, 12 stitches; 17th row, 10 stitches; 18th row, 10 stitches; 19th row, 10 stitches; 20th row, 10 stitches; 21st row, 10 stitches; 22nd row, 10 stitches; 23rd row, 12 stitches; 24th row, 12 stitches; 25th row, 14 stitches; 26th row, 14 stitches; 27th row, 14 stitches; 28th row, 14 stitches; 29th row, 12 stitches; 30th row, 12 stitches; 31st row 11 stitches; 32nd row, 10 stitches. Crochet the little rosette upon the instep with coloured wool, and fasten it with a few stitches. For this make a chain of 5 stitches, close them in a ring, and work round this ring 10 treble separated by 1 chain.

12. Chest Warmer with Basque (Tricot).

MATERIALS—1½oz. of scarlet 4-thread, 1½oz. of black ditto, ¼oz. black Berlin wool twisted with white silk; tricot hook, No. 7 Bell gauge, short bone crochet hook, and 9 black flat horn buttons.

Begin the work with the under side of the left front part, and work the whole foundation in alternate rows of red and black in tricot. Make a chain of 22 stitches with the scarlet wool.

1st row—Work up and off 20 stitches as far as the 1st chain stitch, and at the conclusion, hanging immediately together, loop on a chain of fourteen stitches towards the right, through which work up for the 2nd row 14 stitches with black wool, further 19 stitches through the following 19, and 3 stitches through the horizontal stitch thread before the 20th, the perpendicular and outer one of these. There are 36 stitches to work off, and a chain of 7 stitches towards the right to loop on.

3rd row (with red wool)—Work up 7 stitches through the 7 chain, 35 stitches, and 3 stitches through the outer left side stitch, as at the conclusion of the 2nd row. After these 45 stitches are worked off, loop on a chain of 5 stitches.

4th row (we need not mention again that the red and black wool are worked alternately)—Work up the 5 stitches, 44 stitches, and 3 stitches through the outer left side stitch; therefore there will be 52 stitches to work off, on to which loop a chain of 3 stitches.

5th row—Like the 4th: there are 57 stitches to work off and 7 chain to loop on.

6th row—There are 7 stitches to work up, work 56 stitches, and 3 stitches through the outer left side stitch, work off 66 stitches and loop on 2 chain. This ends the under side of the left front part, and further rows from that must have the same number of stitches.

7th row—Work up through the 2 chain and 65 first of the preceding row, and after working off these 67 stitches loop on 2 chain.

8th to the 24th rows—Like the 7th, namely, always leave the 2 outer left side stitches untouched, and at the end of each row loop on 2 chain. This row completes the front ascending side of the left front part; the rounding for the throat, however, requires that a projecting part of three rows should be joined on to the front ascending side, therefore work upon the 8th as far as the 3rd stitch of the left side 6 red stitches, 4 black upon the 1st as far as the 4th of these 6 red, and 2 red upon the 1st and 2nd of these 4 black.

25th row—Work up 51 stitches (the 2 first as at the previous rows through the two chain) at the end, after working these off loop on 2 chain.

26th row—Leaving the outer left side stitch untouched (it is that at the slope of the throat) work up and off 52 stitches at the end loop on 2 chain.

27th and 28th rows—Like the 26th, leaving always the left side stitch, and looping on 2 chain.

29th—Like the 28th; but no chains are looped on. The first stitch of the 30th row is, therefore, worked through the second perpendicular stitch thread of the 29th row, also through the following 53, and there are 55 stitches to work off.

31st row—Plain. This forms the middle of the back.

32nd row—Like the 30th. The other side must now be worked back in reverse order.

The finished foundation has a row of double crochet worked all round in black wool. Work a second row in double, but in red wool, up the front only. The bands up the front are next worked. Work first the right side of the front with the frill trimming.

1st row—Work up in tricot with red wool. This row is worked off with black wool spun with white silk *. Draw a loop through the last worked up stitch; work this stitch off three times; loop the wool round the hook, and work the stitch on the hook off with the one preceding it, the last thread of which is on the hook. Repeat from *. This forms one side of the frill, and turns back upon the front of the *fichu*.

2nd row—Work through the back thread of the preceding red double stitch row with black fleecy, 1 treble upon the 1st stitch, * 1 chain, 1 treble passing over 1 stitch of the preceding row.

3rd row—Red double stitch.

4th row—Like the 1st; against the under part or wrong side follow alternately in double 2 red and 1 black row, upon which there are six buttons; the 7th is used for the band. The row of trebles in the first worked side form the holes, the ruff trimming at the throat consists of the 1st and 4th rows of the piece that turns over, but they must be separated by a red tricot row. The outer sides over the shoulder have the following trimming.

1st to 3rd row—Tricot with red wool.

4th row—Double with black wool.

5th row—With red wool, * 2 double upon the 2 next, 2 chain; repeat from *.

6th row—With black wool twisted with white silk, * 1 double under the first of the next 2 chain, 5 chain, 1 double under the 2nd of these 2 chain; repeat from *.

The belt is worked separately, and sewn on. For this make a chain of 111 stitches, then work in tricot 1 row with red wool.

2nd row—With black wool plain, but the button hole must remain open by working 2 double upon the 3rd and 4th stitches. In working off, therefore, over these stitches, loop 2 chain.

3rd row—With red wool plain tricot, after this work a row of double all round with black.

The basque is worked separately; and sewn on under the band in the middle of the back. For this make a chain of 6 stitches with red wool, work in tricot with black and red wool alternately.

1st row—Red, work up and off the 6 chain, loop on 2 chain.

2nd row—Plain, that is, work up and work off the 2 chain, and the next 6 stitches, after working off loop on 3 chain.

3rd row—Plain, and after all the 11 stitches are worked off loop on 2 chain.

Digitized by Google

4th row—Increase. For this work up the thread before the left side stitch, also through the horizontal thread and loop on 2 chain at the conclusion.

5th to the 8th rows—Like the 4th, each row must be widened 3 stitches.

9th row—Discontinue the looping on of the 2 chain at the end, yet there must be an increase before the left side stitch, as in the previous rows.

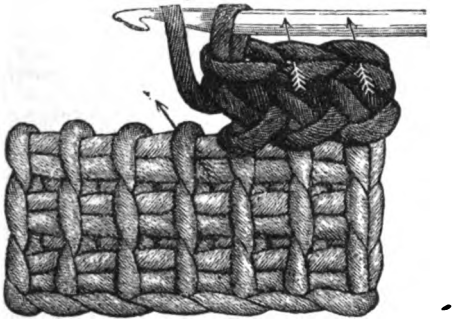
10th and 11th rows—Like the 9th. In the 11th the number of stitches will amount to 30, and this is the middle.

12th row—Like the 10th, and so on, returning crochet all round, with the exception of the straight side, which goes under the belt, first with a black row of double stitch, then with two red rows of tricot, and the 4th and 5th rows of the side trimming over the shoulder.

When the basque is sewn on under the band, 2 buttons must be placed upon the former at a little distance from each other.

13. Marie Antoinette Fichu.

THIS is one of the prettiest crochet fichus we have seen; it crosses over on the chest, and buttons behind. You require two shades of wool for it, white and colour. Work it in single Berlin wool—4oz. white, 1½oz. colour. White and mauve is very effective. Use a long bone hook No. 6, Bell gauge; and a short one the same number. The woodcut annexed shows the full-sized stitch. It is composed of three rows of white crochet



Ecossais, then 1 row of colour in long crochet. This long crochet is worked rather differently to the usual stitch. You put the cotton round the needle, take up a long loop of the previous row, draw the wool through, then through all on the needle at once, instead of two at a time.

The fichu commences in the middle of the back, and is worked from the bottom to the neck. It is worked in one piece. You work the right hand side first. Make a chain of 40 with white wool.

1st row—Take up all the stitches and work back (WB.).

2nd row—Increase 1 stitch at the commencement of the row; this is done by working a loop on the chain between the 1st and 2nd long loops the rest plain; WB.

3rd row—Like the 2nd.

4th row—Join the colour, 1 Ch., then 1 L. in 1st loop, and 1 in each successive loop in the row; fasten off. Take the white wool, which is not cut off, and work the

5th row—Work 1 in chain of last row, and increase 1 in the neck between the two last 2 loops.

6th row—Even.

7th row—Increase 1 in the neck.

8th row—Coloured row; increase 1 at each ond.

9th row—Even.

10th, 11th, and 12th rows—Increase 1 each row in the neck.

13th row—Increase 1 at each end of the row.

14th, 15th, 16th, 17th, 18th rows—Increase 1 each row in the neck.

19th row—Increase 1 in the nock.

20th row—Which is a coloured row. Increase 1 at each end of the row, and when the row is finished make a chain of 96, and fasten off. This chain is the foundation of the front piece for that side, and is gradually worked up.

21st row—Take up the 4 first chain at the end of the row, and work back.

22nd row—Decrease 1 at the commencement; this is done by working two loops together; take up 3 more of the chain in the neck.

23rd row—Increase 5 of chain in neck.

24th row—Decrease 1 at commencement; increase 3 in neck.

25th row—Dec (decrease) 1 at commencement; increase 4 in neck.

26th row—Increase 4 in the neck.

27th row—Dec 1 at commencement; increase 2 in the neck.

28th row—Dec 1 at commencement; increase 4 in the neck.

29th row—Dec 1 at commencement; increase 10 in neck.

30th row—Dec 1 at commencement; increase 5 in neck.

31st row—Increase 6 in neck.

32nd row—Dec 1 at commencement: increase 30 in the neck.

33rd row—Dec 1 at commencement; increase 3 in neck.

34th row—Like the 33rd.

35th row—Dec 1 at commencement; take up all the rest of chain in neck, which should be 6.

36th row—Dec 1 at commencement, rest plain—work like the 36th until the 42nd row.

42nd row—Dec 1 at commencement; leave 47 at the end unworked.

43rd row—Dec 1 at commencement; leave 12, besides the last 47.

44th row—Dec 2 at commencement; leave 5 extra at the end.

45th row—Dec 3 at commencement; leave 4 extra at the end.

46th row—Dec 3 at commencement; leave 4 extra at the end.

47th row—Dec 3; leave 3 extra at the end.

48th row—Dec 4, leave 6 extra; WB. and fasten off; join with colour to the neck in the 1st row, and work a plain coloured row, commencing at the 4th row; do not make a chain in commencing, but at the end of the row, as in this left side which we now begin the increasings are all reversed. Work to the 29th row. Increase in the neck in this row according to the direction, but of course the increasings for the neck come at the beginning instead of the end of the row.

At the 29th row, when you have worked back, make 4 Ch., these 4 Ch. are for the increasing in the 21st row, as you cannot make a long chain so well at this end. Work the chain for the increasings in the neck at the end of each row, and take the chain up in the next row.

On the coloured rows you must work the chain before commencing the long; repeat the whole in this manner. Work the first 47 in double crochet, and in the 43rd to 48th rows work the number of stitches left unworked on the right side in DC. at the beginning of each of those rows.

When this is finished work a row of double crochet all round in white, then a 2nd in colour, and a 3rd in colour.

The fourth row work with colour as follows: 1 DC., *4 Ch., 1 DC. on 2nd, 1 DC., on 3rd DC. on fichu repeat.

The rosette at the back is made by covering a large button with velvet, then make a chain the size of the button, unite, work 2 rows of DC. in colour on it, and the same border as the 4th row. Increasing to keep flat.

Add a button at the end and a loop of ribbon.

14. Over Boot (Crochet).

MATERIALS—Work the boot in fleecy 4-thread or double Berlin wool, of which you require 4 skeins of grey, also ½oz. of black and white single Berlin wool for the top, or any colour you may prefer as a contrast; a fine bone crochet hook, a pair of fleecy soles, and three yards of narrow sarsnet ribbon to match the wool. The boot is worked in ribbed or Russian crochet, which is double crochet, always worked from the back of the loop in each row, instead of the front part of the stitch. You commence at the toe, and make a chain of 13 for the foundation. 1st row—Double crochet, 1 Ch. at the end. 2nd row—6 double crochet, in the 7th stitch work 3 double crochet, then 6 double crochet, 1 chain at the end. 3rd row—Plain; always work a chain stitch in turning at the end of each row. 4th row—Like the 2nd row; only 7 plain before working 3 double crochet in the centre stitch. Continue to work in this manner one plain row, and a row with 3 stitches in the centre stitch, until you have 14 ribs or double rows, therefore 21 stitches on each side the centre stitch. In the row following you commence the leg. For this, work to the middle of the row plain, then make a chain of 18 stitches, work back 17 DC. upon this, then finish the row with double crochet, keeping the rib, then work 26 more rows or 13 ribs, all plain; in the last row join to the other side the foot and up the front in the middle of the leg, and fasten off. You now work the top in single Berlin wool: make a chain of 9 stitches with white, work back 8 DC. upon it, then a row of looped crochet; all the rest of the top is worked in looped crochet; in every 4th row work the 2nd, 5th, and 8th stitches black, and in every 2nd row the 3rd and 7th, which gives the appearance of imitation ermine. When the piece is crocheted the proper width, sew round the top of the boot neatly. If you wish, you can knit or crochet the sole instead of using the fleecy one. You can either knit or crochet the sole in one colour; when finished, sew to the foot. If you use a cork or fleecy sole, bind it round with ribbon, then sew the boot to it.

15. Knitted Mittens.

MATERIALS required—An ounce skein of spun silk, of any colour preferred, and six needles, No. 16.

These mittens, which are commenced at the wrist, are knitted in continuous rounds of 1 turned and 1 purl stitch alternately (for the turned stitch knit the stitch plain from the back, putting in the needle as if about to purl), which makes a fine rib.

Cast on 24 stitches on each of three needles, making 72 in all, and knit six rounds in alternate turned and purl stitches, as above described. In the 7th round increase on each side of the 1st stitch (which is a turned one) by picking up a stitch directly under the last one knitted, and purling it; rest of round, and 5 more rounds, as usual. This increase will give 2 purl stitches together, which will often be the case in the increase, and cannot be avoided, but 2 turned stitches must not come together, as they would be much more noticeable. In the 13th round the increase is to be repeated on the stitches immediately before and after the previous increase, and now the new increased stitch on the one side, and that on the former increase on the other, may be knitted as turned stitches, and the pattern thus kept up, which must be done throughout whenever possible. 14th to 18th round without increase. 19th round—Increase twice as before. Continue in this manner, regularly increasing 2 stitches after every 5th round, which will form a gradually widening gusset required by the shape

Digitized by Google

of the hand. There are to be 13 increases in all, which, with the 5 rounds between each, will make 79 rounds besides the first six. The increases should take place on the 7th, 13th, 19th, 25th, 31st, 37th, 43rd, 49th, 55th, 61st, 67th, 73rd, and 79th rows, and there should then be 98 stitches in all upon the needles. The 26 stitches of the increase are then to be placed on two needles, and 14 stitches cast on a third to complete the round for the short thumb. These 14 stitches are to be knitted plain, while the pattern is to be continued with the other 26, and, after the 1st round, the 14 plain stitches are to be decreased by knitting the first two and the last two together every round (to form a three-cornered gusset) till none remain, which will be the case in the 8th round. Knit 8 rounds in the usual pattern, after the gusset is finished; then follow 2 rounds purled, and the thumb is to be cast off. The 72 original stitches of the mitten, which have been left on two needles, while the thumb has been worked, are now to be increased by picking up the 14 stitches of the thumb gusset, and the whole divided on three needles to work the remainder of the hand part. The 14 stitches taken up from the thumb gusset are to be knitted plain, and, as before, diminished at each side every round, forming a three-cornered piece. As in the thumb, 8 pattern are rounds to follow the completion of the small gusset, and then 2 purl rounds, after which the mitten is cast off.

The edge round the top of the hand, the thumb, and wrist are done with a fine crochet needle in the following manner: 1 DC., or double crochet, in one of the stitches of the cast off round, 5 chain, 1 DC., missing 3 stitches 5 chain, repeat all round. 2nd round—1 DC. on DC. of former round, 6 chain, repeat. The crochet trimming on the mitten itself, to be placed as shown in the figure, consists in like manner of 1 DC. and 5 chain repeated, the double crochet stitch being taken through each turned stitch of the round, to admit of stretching when on the hand. In the second row the D.C. stitch is on the 3rd chain of the previous row, with 5 chain between. The lines on the back of the hand are to be worked in chain stitch with fine black netting silk. This mitten can also be knitted in Shetland wool for the winter.

16. Fichu (Crochet and Tricot).

MATERIALS—2¼oz. grey 4-thread fleecy, 1¼oz. of violet fleecy, ½oz. black wool twisted with white silk, ½oz. of white Berlin wool, tricot hook No. 7 (Bell gauge), bone crochet hook, and a middle-sized jet button. The design represents the back of the fichu—the broad stripes are in grey, the narrow violet, edged with a row of black wool twisted with white silk; the border is black and white. Begin with the back in tricot, make a chain of 11 stitches in grey wool with the long hook.

1st row—Work up 9 stitches.

2nd row—Before and after the middle stitch, the 5th, increase 1 stitch, work these stitches through the horizontal thread upon the hook. This increasing is continued throughout the back part, as shown in the design.

3rd to the 5th rows—The same as the 2nd.

6th row—In double crochet with the black wool twisted with white silk The short hook must now be used instead of the long one, and the perpendicular stitch threads of the preceding row must be taken upon the hook, and the increasing still continued, that the back may be gradually widened.

7th row—With violet wool in tricot, the upper horizontal threads of the preceding row must be taken upon the hook in working this row.

8th row like the 6th.

9th to the 12th rows—Like the 5th, with grey wool.

13th to the 15th rows—The same as the 6th to the 8th, regularly repeating the last 7 rows (9th to the 15th rows) until 7 violet stripes and 2 grey rows over them are worked, which complete the back. Now commence the shoulder part, and crochet in the

53rd row only the 50 stitches lying nearest, with grey wool; in like manner the 54th row, only 49 stitches however.

55th row—With the black wool twisted with silk, 49 of the usual double stitches, always keeping the regularity of the stripes, which we need not mention again.

56th row—48 tricot stitches.

57th row—48 double stitches.

58th row—Commence the shoulder piece with 13 tricot stitches through the next 13.

59th row—25 tricot stitches, working up from the edge as far as the 25th through the stitches of the 57th row.

60th row—37 tricot stitches.

61st row—47 tricot stitches.

62nd row—47 double stitches.

63rd row—47 tricot stitches.

64th row—Like the 62nd. Now repeat the last 7 rows twice for the shoulder gore (from the 58th row), then follow the stripes again regularly as in the former part, going through each row. In the following 7 grey stripes decrease 2 stitches in each stripe for the throat part: in the 8th stripe 3 stitches, so that there are 28 stitches in breadth. At the beginning of the 9th stripe these must be reduced to 23 as far as the next stripe; at the following, to 18 stitches, then to 13 stitches; and from here in 6 grey rows to a point, consequently 1 stitch must be reduced on both sides. The left shoulder and front part are worked exactly like the right in an opposite direction; then follows a row of double crochet round the fichu, with the black wool twisted with silk.

2nd row—With white Berlin wool *. 2 treble in the two nearest stitches; take, however, both the horizontal threads upon the hook, 1 chain over 1 under stitch. Repeat from *.

3rd row—With black wool twisted with white silk. * 2 treble upon the next chain of the preceding row, working entirely under the whole stitch 1 chain over 1 under stitch; repeat from *. This row does not go round the slope for the throat, but ends above the point.

4th row—With white Berlin wool, like the third, and ending the same.

5th row—With black wool chain, 1 scollop of 3 chain and 1 double upon the 1st of these; repeat from *. This row goes round the fichu. A jet button is placed in the back under the first violet stripe, and two eyes, each consisting of 6 chain in grey, are worked from the last thread of the point, and sewn with a worsted needle to the disengaged end; they fasten the point firmly to the button.

17. Baby's Boot (Knitting).

MATERIALS—½oz. pink Berlin wool, ½oz. white eider yarn. A pair of No. 15 knitting needles. Terms used—K., knit; T., take two together; P., purl, or seam; O., over, or thread forward; S., slip a stitch without knitting it.

Cast on with pink 55 stitches. The first stitch in each row throughout the work should always be slipped instead of knitted.

1st row, knit; 2nd row, purl; 3rd row, knit; 4th row, knit; 5th row, knit; 6th row, join on the white wool and knit; 7th row, purl; 8th row, knit; 9th row, knit; 10th row, * K. 3, P. 3*, repeat; 11th row, * K. 3, P. 3*, repeat; work 5 more rows like the 11th row; 18th row, S. 1, * O, T.*, repeat, 1 K. at the end of the row; repeat the 18th row 10 times; 29th row, * P. 3, K. 3 * throughout the row, and 6 more rows like the 29th.

30th row—S. 1, * O., T., repeat; K. 1 at the end of the row. Repeat this row 8 times, then 6 plain rows. Now make the divisions for the foot. K. 35, take the remaining 19 stitches off on a piece of cotton, and tie together; * turn, and P. 16, turn K 16 *. Repeat these two short rows of 16 stitches until you have worked 25 rows of them, then cast them off. Join the colour, and commence the 1st stitch of the 19 left on the needle during these 25 rows of 16 stitches. Knit the 19 with pink, then take up 13 stitches at the side of the 25 rows just worked, and cast on 13 more. Now work side of foot and sole.

1st row, S. 1, knit; 2nd row, S. 1, knit; 3rd row, S. 1, T. (at toe, rest knit); 4th row, S. 1, knit; 5th row, S. 1, T. at toe, knit; 6th row, S. 1, knit; 7th row, S. 1, T., rest knit; 8th row, S. 1, knit; 9th row, S. 1, T., knit; 10th row, S. 1, knit; 11th row, S. 1, T., knit the rest until only 3 on the needle at the heel, then T., K. 1; 12th row, S. 1, knit; 13th row, like 11th row; 14th row, like 12th row; 15th row, S. 1, T., knit until 5 only on needle, T., T., K. 1; 16th row, like 12th; 17th row, like 11th row. Knit 9 more rows, every alternate row like the 11th row, and cast off from heel to the toe. Do not cut off the thread, but take up 13 stitches on the intakes at the toe for a gusset. Knit back 11, T. 2nd row of gusset, T. knit. Knit these 2 rows until there are only 2 stitches on the needle, which knit together and fasten off. Now join the colour to the 13 stitches, cast on extra in the 1st row of the foot, take up the 13, and with the last take up the 1st of 16 white (over the instep). * S. 1, knit back. Knit 12, and with the last take up the next white; repeat from * until all the white stitches are worked up. Then take up 13 at the side of the instep, and the 19 that are tied together. Knit back, repeat from the 1st row of the foot directions. When the foot is worked, add another gusset at the toe. The instep is very pretty if darned on the wrong side with pink, taking up every other stitch.

TO JOIN THE SOCK.—Commence at the top of the leg, and sew neatly together; then the foot. Lay the two shaded sides of the gusset together, and join; then lay the two flat sides to the little plain piece over the toe, which forms a pretty square toe. The leg is ornamented by a row of netting with white wool round the top (see engraving), the mesh ¼in. wide, and each stitch of knitting taken up. Upon this wide row net a row of colour with one of the knitting needles as a mesh; then run ribbon or cord of wool through the sock round the ankle.

18. Cardinal Cape (Tricot).

MATERIALS—8oz. of violet, 2oz. of black, and 1½ of white 4-thread fleecy wool, a few small skeins of black wool twisted with white silk, 18 medium-sized black beads, 2 or 3 wooden tricot hooks No. 8 (Bell gauge), of the same length.

The violet foundation of this pelerine is worked in tricot. The under border is worked separately, and sewn on afterwards.

Begin at the under part of the foundation with 279 stitches for the width, and work the first 11 rows plain; in the 12th row commence the requisite decrease, by which the pelerine gradually becomes narrower over the shoulders, and fits close at the throat. For this the 5th and 6th stitches on each side in the 12th row must be worked up together; then always after 13 stitches the two following must be worked up together. Upon this always after every 4 rows the 5th and 6th stitches are worked up together, and again decrease, as in the 12th row. By this means the spaces between are gradually reduced to 1 stitch, and from the 2nd decreasing line care must be taken that the stitches knitted together from the middle of the back (with regard to the right and left front part) go in opposite directions. Therefore, in the first half, as far as the middle of the back, work always the stitch standing after, and in the last half the stitch standing before, with the stitches rising in straight lines from the under decreasing stitches. Continue this until 43 rows are worked, and in the 44th row leave the 10 end stitches untouched. In working off leave the 10 front stitches on the hook.

Digitized by Google

45th row—Work up and off the worked-off stitches of the preceding row. 46th row—Besides the 10 end stitches previously left leave 3 more, and retain also 3 more at the beginning upon the hook. Work these 2 last rows alternately as far as the 52nd row, and in the 48th row continue the decrease as far as possible.

53rd row—With this row work up and off all the end stitches as far as the end of the 44th row. Draw a violet wool cord of chain-stitch, 1½ yards long, through the front perpendicular stitch threads of this row, and to the ends of this cord fasten woollen tassels of the same colour 6 inches long, and twice bound round at the upper part with black wool twisted with white silk.

For the under border begin with 19 stitches for the breadth. For this crochet 20 single with black wool, and now work so that the under scollops represented in the design go towards the right hand obliquely, as before mentioned.

1st row—In tricot work the first 6 stitches with black wool, then take a white reel and work up the 6 following stitches with white, then take a second black reel and work up the following 6 stitches with black and take a second white reel and work the remaining stitches with white. All four reels remain on the work, and the stitches are always worked up and off with the same reel.

2nd row—Like the 1st, that is the loop remaining upon the hook from the last stitch of the preceding row forms the first stitch of the new row; then work through the 2nd perpendicular stitch thread lying in front and so on.

3rd to the 7th row—In these five rows the scollop advances outwardly 1 stitch downwards; therefore, always at the beginning of this row, instead of working through the second, work through the front stitch thread standing outwards. There remain, however, as shown in the design, 6 stitches of each colour, and the scollop gradually widens at the end from 1 to 6 white stitches.

8th and 9th rows—Plain, namely, working through the 2nd stitch thread, and always 6 stitches of each colour.

10th to the 14th row—As the scollop must be again worked back in this row, work through the third instead of the second perpendicular stitch thread. For this the end stitch must be reversed at the first 3 times, 6 stitches always upon the first stitch of the other colours; and the white stitches at the end are reduced to one stitch.

15th and 16th rows like the 1st and 2nd, and so on for the whole width of the bottom of the pelerine, which contains 18 scollops; then crochet on the scollop side of this a row of double stitches with violet, and over these little scollops with white wool* 1; double in the nearest 3 chain, passing over one under stitch; repeat from *; into the top of the white work little scollops with black wool twisted with white silk; * draw 1 loop through in front of the nearest double, and work off both by putting the thread round afresh 3 chain, and repeat from the last *.

In the middle white scollops work according to the design a running pattern in feather stitch with black wool twisted with white silk; with the latter work also the little feather sprigs with a black bead in the middle in the upper white scollop; sew the border to the pelerine, and then crochet up the front 5 rows of double stitch—the 1st violet, 2nd white, 3rd black, 4th white, 5th violet. In working these double, inclose both the horizontal stitch threads upon the hook. The trimming for the throat is also worked separately, and sewn on. For this make a chain of 80 stitches with white wool and tricot, 1 plain row over it. In the next row work up with white wool, and work off with black twisted with white silk. In working off these stitches draw 3 loops always through the front before the following stitch of the hook is worked off with it. Work a similar pattern on the under side; for this turn the work, and crochet again through the front perpendicular stitch threads of the 1st row with white wool, and work off as before with black twisted with white.

19. Petticoat (Crochet).

This petticoat is gored. It is worked in two parts, the petticoat, and the border round the bottom. They are crocheted or sewn together, and the joining is covered by a narrow black velvet ribbon.

Materials—1lb. of wool, either Fingering or Angola wool; a long and a short crochet hook, rather thick ones; and some black velvet ribbon. Bleached or unbleached knitting cotton may be substituted for the wool if preferred.

You commence the petticoat from the middle of the back where the slit is.

Make a chain of 100 stitches. The first 20 rows are plain crochet Ecossais or tricotée. 21st row—Take up 4 stitches besides the edge stitch, which is on the hook. W. back. 22nd row—Take up these 4 of the preceding row again, and 4 more, Work back. Continue to work in this manner, increasing each row 4 stitches as far as the 42nd row. 43rd row to the 45th—Increase 3 stitches each row. 46th row—Take up all the stitches there are remaining on the needle, and W. B. (this forms one gore). 47th row to 64th row are all plain, working the whole 100 stitches each. Commence again at the 21st row. Work to the 46th row, which brings you to the 90th row (end on the second gore). 90th row to the 111th row are all plain. 112th row—You now commence the middle or front breadth. Take up 5 stitches beside the edge stitch, W. back. 113th row—Take up the 5 stitches of last row, and 5 more, W. B.

Continue in this manner until the 116th row. In the following 6 rows increase 4 stitches at a time. 123rd row to 132nd row—Take up 3 stitches extra each row. 133rd row to 142nd—Take up 2 extra stitches each row. 143rd row—Plain, taking up all the stitches on the work; then work 18 more plain rows. You must now work the slope for the left side of the front breadth. Instead of beginning at the bottom of the petticoat, and gradually increasing each row, you commence the gore from the top, and take up fewer stitches each row; the remaining gores in the petticoat are worked in the same manner. You must therefore work the pattern backwards from the 142nd row, and work back each row successively until 112th row, which will be the 191st row of your work: then work 18 plain rows, then work from the 46th to the 21st row, then 18 more plain rows, and repeat again from the 46th to the 21st row. Now join the petticoat by working the first 60 stitches together, leave the 40 at the top for the slit, wrap the slit over, 10 rows wide. On the side under the slit, work a row of double crochet; then a row of double crochet in the edge stitch at the top of the petticoat, holding the right side towards you; then upon this a row of crochet as follows, to form a runner for drawing up the petticoat—* 1 long, 1 chain, 1 L. in the stitch underneath; * repeat. Then a row of double crochet, taking up each stitch; fasten off.

For the girdle, make a chain with seven or eight thicknesses of the wool the length required; add a tassel at each end. You crochet loosely at the bottom of the petticoat a row of long crochet, one in each stitch (through these stitches you pass the black velvet ribbon); upon this row of long crochet you work an open row.

Open row—6 long all through the 1st long of preceding row; * you pass over the next long; 1 double crochet in the 2nd, pass over the next long, work 6 long in the 2nd long from the double crochet; repeat from*.

The Under Border.—You commence this border by a chain of 32. It must be worked obliquely. This is done by decreasing one stitch continually on the right-hand side of the work, and increasing a stitch on the left-hand side. 1st row—Take up all the loops and work back. 2nd row—Take the 2 first loops together, take up all the loops but the last; before taking up that, make a loop by taking up the chain between the two last loops, then take up the last loop. To W. back, draw through 1, then through 1 again, then through 2 to the end of the row; repeat this row 6 times. 7th row—Take up the 1st long loop, work in it a single crochet; repeat to the end, still increase at the left side, turn; work the 8th, 9th, and 10th rows in single crochet, always taking up the back of the loops, and decreasing and increasing as before. 11th row—is long crochet, one in each stitch. 12th to 15th, like the 7th to 10th rows; then repeat again from the 2nd row, working 6 rows in crochet tricotée. You have to repeat this 16 times for the entire width. The velvet ribbon is run through the row of long crochet. You add an open row to the bottom of this border, the same as in the petticoat. Of course you work a row of long crochet first; then you join the border to the bottom of the petticoat under the open row round the same.

20. Knitted Over-shoe for a Lady.

Materials—4 needles, No. 12, Bell gauge; 5oz. of single Berlin or Angola wool.

Terms: K., knit plain; P., purl knitting; T., knit 2 together; S., slip a stitch off the needle without kniiting; DO., draw the slipped stitch over the knitted.

You commence the shoe from the bottom, and cast on each of 3 needles 52 stitches, making 156 altogether. Knit a plain round.

1st round—K. 10, * P. 2, K. 8 *; repeat from between the * * throughout.

2nd round—S. 1, K. 1, draw the slip stitch over the one knit (DO.), K. 2, T. K. 3, * P. 4, K. 6 *; repeat.

3rd round—K. 6, * P. 6, K. 4 *; repeat.

4th round—S. 1, K. 1, DO., K. 2, T., P. 7, * 2 K., P. 8 *; repeat.

5th round—K. 11, * P. 2, K. 8 *; repeat.

6th round—S. 1, K. 1, DO., K. 2, T., K. 4, * P. 4, K. 6 *; repeat.

7th round—K. 7, * P. 6, K. 4 *; repeat.

8th round—S. 1, K. 1, DO., K. 2, T. * P. 8, K. 2, *; repeat. With this round you see the pattern, which consists of alternate triangular pieces in purl and plain knitting. This is repeated throughout until 56 rounds are worked; but as each row differs slightly at the commencement, we will give the pattern in full, to make it easier for workers.

9th round—P. 4, * K. 8, P. 2 *; repeat.

10th round—S. 1, K. 1, DO., K. 2, T., K. 5, * P. 4, K. 6 *; repeat.

11th round—K. 8, * P. 6, K. 4 *; repeat.

12th round—S. 1, K. 1, DO., K. 2, T., K. 1, * P. 8, K. 2 *; repeat.

13th round—K. 13, * P. 2, K. 8 *; repeat.

14th round—S. 1, K. 1, DO., K. 2, T., * K. 6, P. 4 *; repeat.

15th round—P. 2, K. 7, * P. 6, K. 4 *; repeat.

16th round—S. 1, K. 1, DO., K. 2, T, * K. 2, P. 8 *; repeat.

17th round—K. 4, P. 2 * K. 8, P. 2 *; repeat.

18th round—S. 1, K. 1, DO., K. 2, T., K. 7, * P. 4, K. 6 *; repeat.

19th round—K. 10, * P. 6, K. 4 *; repeat.

20th round—S. 1, K. 1, DO, K. 2, T., K. 3, * P. 8, K. 2 *; repeat.

21st round—P. 7, * K. 8, P. 2 *; repeat.

22nd round—S. 1, K. 1, DO. K. 2, T., P. 2, * K. 6, P. 4 *; repeat.

23rd round—K. 11, * P. 6, K. 4 *; repeat.

24th round—S. 1, K. 1, DO K. 2, T., K. 4, * P. 8, K. 2 *; repeat.

25th round—K. 6, * P. 2, K. 8 *; repeat.

26th round—S. 1, K. 1, DO. K. 2, T., P. 3, * K. 6, P. 4 *; repeat.

27th round—K. 2, * P. 6, K. 4 *; repeat.

28th round—S. 1, K. 1, DO. K. 2, T., P. 3, * K. 2, P. 8 *; repeat.

51st round—K. 8, * P. 6, K. 4 *; repeat.
52nd round—S. 1, K. 1, DO., K. 2, T., K. 1, * P. 8, K. 2, *; repeat
53rd round—K. 3, * P. 2, K. 8 *; repeat.
54th round—S. 1, K. 1, DO., K. 2, T., K. 6, * P. 4, K. 6 *; repeat.
55th round—K. 9, * P. 6, K. 4, *; repeat.
56th round—S. 1, K. 1, DO., K. 2, T., K. 2, * P. 8, K. 2 *; repeat.

The decreasings now cease, as this brings the boot or shoe to the top of the instep.

57th and 28th rounds—Knit plain.

59th round—* K. 3, P. 3 *; repeat. Work 23 more rounds like the 59th; then cast off loosely.

You now crochet 3 rounds of open crochet at the top of the boot.

1st rounds—1 Double crochet (DC.) in the 1st stitch, * 5 chain, miss 2 stitches, 1 DC. in the 3rd; repeat.

2nd round—* 5 Ch., 1 DC. in 3rd of 5 Ch. in last round; repeat.

3rd round—As last.

You can either knit the sole of the shoe in plain knitting, or stitch it neatly to a felt one the size you require.

21. Tatted Edging.

MATERIALS—Evans's cotton, No. 20, a fine crochet hook, and a tatting shuttle are required.

You work first the row of ovals. 1st oval—2 Double (D.), 1 Purl (P.), 6 D., 1 P., 6 D., 1 P., 6 D., 1 P., 2 D., draw close, *, leave rather more than the 8th of an inch of cotton, and work the 2nd oval. 2 D., join to the last P. in last oval, 6 D., join to the next P. in last oval, 6 D., 1 P., 6 D., 1 P., 2 D., draw close; repeat from * the length required, turn back and crochet upon this row of ovals the following rows of crochet for the heading:

1st row of crochet—* 1 long on the closing of the oval, 1 chain, 1 long on the thread between the ovals, 1 chain; repeat from *, turn back work.

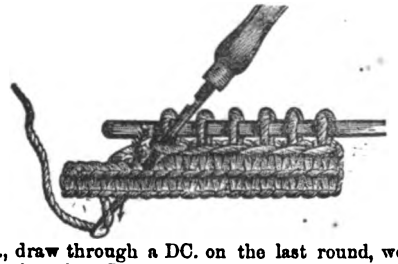
The 2nd row—1 long upon the 1st long stitch,* 1 Ch., 1 long upon the next long; repeat from * and fasten off.

22. Medallion for Antimacassars, Covers, &c.

TERMS—Ch., chain; S., single crochet; DC., double crochet; L., long crochet; T., treble. The treble stitches in this pattern are made with the thread twisted four times round the needle before taking up the stitch.

Make a chain of 6, unite.

1st round—9 Ch. (the first five of these chain form the first treble stitch in the round, a treble over the 6 Ch., * 4 chain; a treble; repeat from * 7 times, then 4 Ch., 1 S. on the 5th of the 9 Ch. 2nd round—6 DC. over each 4 chain, making 60 DC. in the round. 3rd round—* 3 DC. on the next 3 stitches, 5 Ch., 1 S. on the last DC.; repeat from * 19 times, making 20 loops of 5 Ch. 4th round—1 DC. on each DC. of last row, making 60 DC. in the round, and taking care to bring all the loops in the last round to the front of the work; fasten off. You now commence the first or inner row



of leaves; 8 Ch., draw through a DC. on the last round, work back upon the Ch. 1 DC. in the 7th, 1 L. on each of the next five, 1 DC. on the first, * 17 Ch., miss 4 DC. on the round, draw through the 5th (working from left to right on the round), work a leaf like the last. This leaves 9 Ch. between each leaf; repeat from *10 times, making 12 leaves in the round; then 9 Ch., 1 DC. on the first leaf. Turn back, and work the outside row of leaves on the round of chain stitches between the leaves as follows: 2 DC., * 8 Ch., work back on it a leaf, take up the last DC. on the round and with it the next chain, and work another DC., 4 DC., work a leaf, after the leaf, take up the last DC. on the round, work another DC., 1 DC. on the next chain, take up the last DC. of the first round of leaves, and with it the next Ch. for the next DC., 1 DC. on the next chain; repeat from * all round, having 24 leaves in the round, and fasten off. 5th round—1 DC. on the chain stitch at the top of the first leaf in last round, * 6 Ch., 1 DC. on the next leaf; repeat from * all round. 6th round—Double crochet. 7th round—Double crochet, and in every alternate loop make a picot of single cotton over a No. 12 knitting needle. (See Illustration.) Work as many of the medallions as you require, joining them to each other, and fill the space between with a small star.

23. Tatted Edging.

MATERIALS—Evans's cotton, No. 20, a crochet hook, and a tatting shuttle. You work first the small row of ovals. 1st oval—4 double, 1 purl, 4 double; do not draw close, but leave about the eighth of an inch of cotton in the opening of the oval (see engraving No. 23); leave rather less cotton now than in the oval, and work another oval; work the length you require, turn, and work a row of double crochet upon the threads left in, and between the ovals, work 3 stitches in each oval, and 1 between the ovals. Then join the second thread to the first, and commence in the first oval joining to the purl, * work with the shuttle over the 2nd thread; 5 double, 1 purl, 5 double; draw it to its shape, then loop into the purl of the next oval; repeat from *, and fasten off at the end.

24. Edging (Vandyke Braid and Crochet).

MATERIALS—Use Vandyke braid, No. 3 or 4; Evans's crochet cotton, No. 20; and a fine steel hook.

The edge of this pattern is worked in one row. 4 double crochet upon the first point of the braid, ** 1 treble upon the next point, † 6 chain, 1 double crochet in the first of the 6 chain † 3 times; 1 treble on the last point of the braid used again; 6 chain, 1 double crochet in the first of the 6 chain; 6 Ch., 1 DC. in the first of the 6 Ch.; 1 treble on the last point of the braid again; 1 double crochet on the next point of the braid; repeat from ** the length required, and fasten off.

2nd row—Work on the other side the braid; 1 double crochet in the first point, * 4 chain, 1 DC. in the next point; repeat from *; turn.

3rd row—1 long in the first stitch of last row, * 2 chain, miss 2 stitches of last row; 1 long in the next; repeat from *, and fasten off at the end.

25. Edging (Vandyke Braid and Crochet).

MATERIALS—Use the Vandyke braid, No. 3 or 4; crochet cotton, Evans's No. 20; a fine steel crochet hook. 1st row—1 double crochet upon the first point of the braid, * 5 chain, 1 double crochet upon the next point; repeat from * the length required; turn. 2nd row—* 2 long in the 3rd of the next 5 Ch. of last row, 2 chain, 2 long in 3rd of the same 5 chain again (take up these chain stitches through 2 loops instead of 1, as it makes the work stronger), 1 chain; repeat from *; turn. 3rd row—1 double crochet upon the 1 chain of last row, * 2 chain, 1 long over the next 2 chain, 5 Ch., 1 long in the first of these 5 chain, 1 long over the same 2 chain again, 2 chain, 1 DC. over the next 1 chain; repeat from *, and fasten off. 4th row—This row is worked on the other side the braid. 1 double crochet on the first point, * 4 chain, 1 double crochet on the next point; repeat from *, and fasten off.

26. Broad Tatting.

THIS is a very useful pattern, worked in strong cotton, for trimming children's washing dresses and jackets. It may also be worked in coarse black sewing silk with great effect. For this use the prepared machine silk. You must have two reels of cotton or silk and a tatting shuttle. The pattern is worked almost entirely on the second thread.

You commence with the 1st row of the foundation; work with the shuttle over the 2nd thread 7 double, 1 purl; repeat the length required.

2nd row—Work over the 2nd thread 7 D., * draw through the next purl of last row, 7 D., 1 P., 7 D. on the second thread; repeat from *.

3rd row—Commence on the 2nd thread, 7 D. on it, join to the 1st P. of last row, * 3 D. on 2nd thread, turn, work with the shuttle 3 ovals close together of 10 D., 1 P., 10 D., then turn, and over the second thread work 3 D; join to next P. in 2nd row, 7 D. and 2nd thread, join to next P., and make a small purl; 7 D., join to next purl, repeat from *. You now work the 5 ovals on the top of the 2nd of each of the 3 ovals in this row; you can work them either with the shuttle or over the 2nd thread. 10 D., join to the P. in the 1st of the 3 ovals, 10 D., draw up so as to make a long oval (not very tight). Commence the 2nd oval close to this 10 D., join to the P. in the 3rd oval, 10 D., draw up; now knot the cotton through the P. in the 2nd of the 3 ovals, knotting it over the connecting thread between these 2 ovals just worked, work 3 ovals of 10 D., 1 P., 10 D., close to these two just worked, then knot into the 2nd oval again and fasten off; work these 5 ovals on each set of 3 in the length.

4th row—Work entirely on the 2nd thread. 1st large oval—16 D., join to the 1st P. before the first set of ovals in last row. 6 D., join to the P. uniting the 2 ovals together in the set. 8 D., join to the P. in next oval, and draw through the thread on which you commenced, * turn over, 1 small purl, 5 D., 1 P., 6 D., 1 P., 2 D., draw through P. of next oval, 2 D., 1 P., 6 D., 1 P, 5 D., 1 small P., join to next oval, turn over; work another

Digitized by Google

oval like the last, joining on both sides of the oval to the sets of ovals on each side of it, and in the centre to the P. on the 2nd thread of last row. When the oval is worked and arranged, draw through the small purl just before it was made, and repeat from *.

5th row—Join to the 1st P. after the oval with 5 D. before it. Work on the 2nd thread * 5 D., 1 P., 4 D., 1 P., 4 D., join to next P. of last row, 5 D., 1 P., 5 D., join to next P., 4 D., 1 P., 4 D., 1 P., 5 D., join in next P., 5 D., join to the next P.; this last 5 D. forms the little bar across the scollop, Repeat from *.

6th row—Join to the 1st P. of last row, 4 D., † 1 P., 1 D. † 3 times, 3 D., shape and join in next P.; * 2nd scollop, 5 D., † 1 P., 1 D. † 5 times, 4 D., join to next P.; 3rd scollop as the 2nd; 4th scollop, 4 D., † 1 P., 1 D. 3 times, 3 D, join to the next P., 4 D., join to the 1st P. in the next scollop of last row, 4 D., join to the last P. in the 4th scollop of this row, 1 D., 1 P. twice 4 D., join to the P. in next scollop. Repeat from * and fasten off.

27. Tatted Insertion.

The insertion as represented in the engraving is intended to be laid upon a dress as a trimming, each star being stitched on firmly. It can be worked as a trimming for chemises, frocks, &c.; but if so, the stars must be joined together by a purl stitch at the top of the ovals facing each other. You require two threads for the centre part of the pattern.

Commence your work with the outside rows of stars. Each star is worked alike.

The Star.—2 double, 1 purl, 7 times, 2 double, draw close; work close to this. The first oval of the star, 10 double, 1 purl, 10 double, draw close, * join to the next purl on the foundation, and work the 2nd oval of 20 double; draw up and repeat from * 6 more times, making 8 ovals. These ovals may be made more ornamental by adding more purl stitches; when a sufficient number of stars are worked you join them together by working the centre of the pattern. For this take the 2nd thread, * join to the purl in the first oval of a star, work over the 2nd thread 20 double, join to the purl in the first oval of a second star, work over the 2nd thread 20 double; work from * until all your stars are joined together, then work back in the same manner, joining to the same purl stitches, and taking care to shape the work properly as you go on.

28. Tatted Edging.

You commence this border with the bottom row, which consists of large rounds, and two small ovals attached to each round. Leave a few inches of cotton in commencing before you work.

The First Large Round.—3 double, a large purl (this purl must be rather more than the 8th of an inch deep), 7 times, then 3 double, draw close. Now knot the cotton to the thread at the commencement one-eighth of an inch distant from the round to form the 8th purl. *Leave three-eighths of an inch of cotton and work.

The First Small Oval.—9 double, join to the first of the 7 purl in the ring, 9 double, draw close; leave three-eighths of an inch of cotton again, work another small oval, making a large purl as in the ring, draw close; leave three-quarters of an inch of cotton, work another large ring like the first, joining in the first purl of the seven to the purl in the last oval: repeat the ring, and then knot into the cotton left between it and the last small oval to from the 8th purl; work the length required, repeating from *, then take a crochet needle and work on each thread between the ovals 7 double crochet, 1 double crochet in the 8th purl of each ring.

The 2nd row.—Join the cotton to the first purl unused in the ring; * a small oval of 5 double, 1 purl, 5 double, draw close. Join the cotton to the next purl on the ring, leaving enough cotton between the oval and the knot to let the work lie flat; repeat from * 3 more times, which brings you to the last purl on the ring. Now join to the first purl on the next ring, leaving three-eighths of an inch of cotton between the two rings; repeat the row, joining the first small oval on this 2nd ring to the last oval in the first ring. When this is finished work the spray of ovals springing from the two ovals united together, join to the purl connecting the 2 ovals, leave a small piece of cotton (see engraving 28, page 32), work 2 ovals of 9 double, 1 purl, 9 double, then join the cotton to the thread before the first of these ovals.

Leave quarter of an inch of cotton, and work 2 large ovals of 12 double, 1 purl, 12 double. Knot the cotton firmly to the cotton just before the first of the 2 ovals. Leave another piece of cotton like the last, and work 2 small ovals again of 5 double, 1 purl, 5 double. Knot to the cotton as before, leave a quarter of an inch of cotton, and knot into the same place again. This little piece of cotton is for the large purl at the top of the spray. Fasten off, work a spray like this between each ring.

3rd or outside row—Join the cotton to the purl in the large oval outside the spray, leave a small piece, then work the first outside oval, 3 double, 1 purl, * 1 double, 1 purl * 5 times, 3 double, draw close; knot into the top oval of the spray; work another oval like the last, joining to it in the first purl worked, then knot into the purl at the top of the spray; work another oval, joining it to the last, then knot into the next oval of the spray, work another oval, then knot into the large oval, leaving a small piece of cotton; then leave three-eighths of an inch of cotton, work a knot of 4 double, draw close to form a Josephine knot, take up the 3rd oval of the spray and the 2nd oval on the ring together, knot into the two together, make a large knot of 7 double, draw close, knot into the purl of the next oval on the ring and the oval of the next spray together, then a small knot like the first, knot into the cotton before the first knot, then into the large oval on the next spray, and repeat the whole row, joining the first oval on the 2nd ring to the last oval on the first ring.

29. Antimacassar.

Explanation of terms: S. single, Ch. chain, Pl. plain or double crochet T: treble or thread once round the needle.

Materials—Evans's Boarshead cotton, No. 16; crochet hook, No. 22, Bell gauge.

Commence with 18 chain, and work 1 S. in the first stitch to form a round loop.

1st round—Work 36 plain in the loop; join (when told to join work thus: Take the needle out of the loop, and inserting it in the stitch to be joined, draw the loop through).

2nd round—Work on the upper edge 36 plain; join.

3rd round—* 4 Ch., miss 1, 1 Pl.; repeat *, making in all 18 loops.

4th round—Take your needle out, and place it in the centre stitch of the first loop, draw the cotton through so as to commence the next round from the centre of the first loop, 4 Ch. and 1 Pl. in every loop all round; end with 18 loops; join.

5th round—Into every loop work 7 Pl.

6th round—Work on the upper edge throughout the medallion, * 1 Pl. in each of the 3 first stitches, 3 Pl. in the 4th stitch, 1 Pl. in each of the 3 next stitches; repeat.

7th round—* 1 Pl. in each of the 4 first stitches, 3 Pl. in the 5th stitch, 1 Pl. in each of the 4 next stitches; repeat *.

8th round—* 1 Pl. in each of the 5 first stitches, 3 Pl. in the 6th stitch, 1 Pl. in each of the 5 next stitches; repeat *.

9th round—* 1 Pl. in each of the 6 first stitches, 3 Pl. in the 7th stitch, 1 Pl. in each of the 6 next stitches; repeat *.

10th round—1 Pl. in each of the first 7 stitches, 3 Pl. in the 8th stitch, 1 Pl. in each of the next 11 stitches, * join to the 6th stitch from the last point; 1 Pl. in each of the 3 next stitches, 3 Pl. in the 4th stitch, 1 Pl. in each of the next 11 stitches; repeat *.

11th round—* 5 Ch., join to the stitches on each side of the under point at the back, that is, the 8th stitches from each point; repeat *.

12th round—* 5 Ch. 1 Pl. in the centre of the chain work of last round, 5 Ch., 1 Pl. in the "join" of last round; repeat *.

13th round—Slip the cotton the same as in the 4th round, work then * 5 Ch., 1 Pl. in the next loop of chain work; repeat *.

14th round—Same as the 13th round.

15th round—Same as the 13th, only making 6 Ch. instead of 5 chain, join; fasten off. Join the medallions together in the last row of chain, stitch, after the pattern of the engraving.

Star for Joining 4 Medallions together.—Commence with 12 Ch., join to form a ring. 1st round—24 plain in the loop; join. 2nd round—1 Pl. in every stitch; join. 3rd round—12 Ch., miss 2, 1 treble *. 10 Ch. miss 2, 1 T., repeat *; join to the second chain of the first loop. 4th round—* 1 S. in the first stitch, 1 Pl. in the next 4 stitches, 2 Pl. in the 6th stitch: join to one of the last round of loops in the medallion, 1 Pl. in the 6th stitch, 1 Pl. in the next 4 stitches, 1 S.; repeat *; join the next point to the third loop of the same medallion. Every two of the next 6 points join to a medallion in the same way, so that each star joins four medallions.

30. Tatted Edging.

Materials—Use Evans's cotton No. 20, a fine steel crochet hook, and a shuttle. You commence with the row of small ovals above the double crochet. 1st oval—9 double, 1 purl, 9 double, draw close, *, leave one-eighth of an inch of cotton, and work the 2nd oval like the first. Leave a quarter of an inch of cotton, and work another oval of 9 D., 1 P., 9 D., draw close; repeat from * the length required, turn and work on the threads between the ovals in double or plain crochet; 3 double crochet on every one-eighth of cotton, 6 on every quarter inch. Fasten off, 2nd row, 1st oval—10 D., join to the 2nd oval in 1st row, being the 2nd oval after one-eighth of cotton is left, 10 double, draw close; work close to this oval another oval, 10 double, join to the 3rd oval of last row, 10 D., draw close, join into the thread before the first of these two ovals, turn the work over, * take up the second thread, and work on it, 3 D., 1 P., † 2 D., 1 P., † 4 times, 3 D., draw the thread in its place, turn the work over and work the next two ovals like the first two, joining them into the two next ovals of the last row; then loop the thread through the last thread before these 2 ovals just worked; turn the work over and repeat from *.

31. Circle for an Antimacassar (Crochet).

Materials—Use Arden's cotton No. 28, and a fine crochet hook.

Terms—A picot, 5 Ch., 1 single in the first of the 5 Ch. Ch., chain; DC., double crochet; L., long crochet.

The circles must be joined to each other in the last row, in two trefoils close together; and, as they are small when worked in the finer cotton, no connecting star is required, as there will only be two trefoil left between each join.

1st round—5 picots close together, then join the last picot to the first, so forming a small ring. 2nd round—2 DC. in the middle of each of the picots, 1 S. in the 1st DC. in the round. 3rd round—* A picot, 1 DC. on the next DC. underneath; repeat 9 times, making 10 picots. 4th round—* 2 Ch., 1 DC. upon the top of the next picot; repeat from * 9 times, on the last 3 Ch. are crocheted instead of 2 Ch. 5th round—* 1 DC. upon each of the first two stitches of last round, 3 Ch., 1 DC. upon the 1st and 2nd of these 3 Ch., draw through the last DC. before the chains; repeat from * 15 times, making 16 picots in the round. 6th round—Work in single

crochet to the top of the 1st picot of last round. * 4 Ch., 5 picots close together, 6 Ch., work 1 S. on each of the five first of these chain, 5 picots, joining each picot as it is worked to the foundation of the picot underneath. 4 Ch., 1 DC. in the Ch. of next picot in the last round; repeat from *, joining the first picot in each little leaf to the last picot in the previous one. 7th round—Join to the 6th Ch. above the leaf of picots, * 7 Ch., 1 DC. in the chain at the top of the next little leaf; repeat from *. 8th round—Double crochet. 9th round—1 DC. on the DC. over the Ch. of 6th round, * 5 Ch., 1 DC. in the same DC. as last, 3 Ch., 1 L. on the 4th DC. 3 picots close together, draw through the long stitch again, 3 Ch., 1 DC. on the DC. over the point in the 6th round; repeat from *, and fasten off.

32. Border (Tatting and Crochet).

MATERIALS—A reel of fine cotton; tatting shuttle; a fine steel crochet hook. Terms—D. double; P purl; JK. Josephine knot. The details No. 2*a* and No. 2*b* give you the information of the knot; it is very simple, being composed of a certain number of half the double stitch; *i. e.*, instead of working a full double stitch, and so reversing the knots for each part, you work 6 stitches like the first part only of a double stitch, and then draw it up like all other ovals.

1st row—Make 1 D. and draw up (just to form a knot for commencement), leave ¼in. of cotton, then commence the 1st oval. 9 D., 1 P., 9 D.; draw close. Work two more ovals close together like this 1st; * then turn the work over and join to the cotton between the D. and 1st oval, so as to make the 3 ovals into a firm trefoil. Do not join too close to the ovals, as others will be worked in the joining. Leave about ¼in. of cotton, then make a JK. as follows: 1 D., 6 half-doubles, draw up, leave ¼ of cotton, and make the first oval of 2nd trefoil, joining the purl into the purl of the 3rd oval in the 1st trefoil. Work 2 more ovals like this 1st, without joining to any other oval, and repeat from *.

2nd row—Commence an oval, 9 D., join to the thread connecting the 3 loops forming the 1st trefoil, 9 D.; draw close. * Leave ¼in. of cotton, make another oval like the first, and join into the same place; draw close. Work a third oval close to the 2nd, join it into the connecting thread of the 2nd trefoil; draw close. Repeat from *.

3rd row is crochet. 1 long at the bottom of 1st oval of 2nd row, 2 chain, * 1 DC. (double crochet), in the middle of the connecting thread between the ovals. 2 Ch., 1 long on the middle of the next 2 ovals, 2 ch.; repeat from *.

4th row—1 long on the 1st stitch, * 1 ch., miss 1, 1 long on the 2nd stitch; repeat from *.

33. Edging (Mignardise Braid and Crochet).

USE the best braid (which can only be had on cards), and No. 20 Evans's crochet cotton; a very fine steel hook.

Terms: Ch., chain; DC., double crochet; L., long crochet, or the thread once round the needle; S., single.

In giving "the loops" in this pattern, we refer to the loops on the braid, and each loop is given as if counted from the last worked.

1st row, being the outside edge—Join to a loop with 1 DC., 1 DC. in 5th loop, * 3 Ch., 1 DC., in next loop 7 times; 1 S. in 5th loop; repeat the length required, turn, and work back on the other side the braid.

The 2nd row—Work 1 DC. in the first of the two loops that are exactly in the middle of the four passed over in the last point worked. * 2 Ch., 1 DC. in next loop, 9 Ch., 1 DC. in next loop, 3 Ch., 1 L. in 2nd loop, 1 L. in 5th loop, 3 Ch. 1 DC. in 2nd loop. 3 Ch., take the needle out, and take up the 6th of the 9 Ch.; draw the loop you have just left through it, 5 Ch., 1 DC. in next loop; repeat.

3rd row—Turn back, and work a row of double crochet, taking up each chain.

34. Edging (Crochet).

TERMS: Ch., chain; DC., double crochet; L., long stitch, or the thread once round the needle before taking up the stitch; T., treble, or the thread twice round the needle before taking up; DT., double treble, or the thread three times round the needle.

Make a chain the length required.

1st row—1 L. in 5th Ch. * 1 Ch., miss 1 Ch., 1 L. on the next; repeat. End the row with 1 L.; then turn.

2nd row—3 Ch., 1 L. on 2nd L. * 3 Ch., 1 L. on the 2nd L. again, 3 Ch., miss next long stitch, 1 DC. on the following, 3 Ch., miss 1 L. stitch; 1 L. on the following; repeat. Finish the row with the DC. stitch, fasten off.

3rd row—3 Ch., 1 DT. on the 1st L. in 2nd row, 1 T. on the 2nd Ch. between the 1st and 2nd L., 1 DT. on the 2nd L.; * 3 Ch., 1 L. on the middle twist of the last DT., 1 DT., on the next L. in the 2nd row; 3 Ch., 1 L. on the middle twist of this last D.T. 1 T. on the 2nd Ch. between these 2 L. in the 2nd row. 1 DT. on the next L; repeat. Finish at the end of the row with the 1 L. on the 2nd DT. in the little point; turn and work.

4th row—* 3 Ch., 1 L. on 1st T. in last row, 4 Ch., 1 T., on the same T., 4 Ch., 1 L. on the same T., 3 Ch., 1 S. on the join between the two double treble stitches in the last row; repeat, taking up each successive treble stitch.

35. Tatted Insertion.

THE middle row of this insertion is worked first. Leave a small piece of cotton, then commence the 1st oval, * 7 double, 1 purl, 7 double, draw close; work another oval like this close to the drawing up of the oval, then knot into the cotton before the 1st oval, which will bring the points of the two ovals together, leave ¼ of an inch of cotton, and repeat from * the length required. 2nd row—Knot into the purl of the 1st oval, * leave sufficient cotton to bring the oval you are going to work in the centre of the two first sets of ovals in last row, an oval of 3 D., 1 P., * 2 D., 1 P. 4 times, 3 D., draw up; knot into the purl of the next set of two ovals, and repeat from the 1st * in the row. 3rd row—Knot into the 3rd purl of the 1st oval in last row, leave ⅛th of an inch of cotton, work an oval 3 D., 1 P., * 1 D., 1 P. 6 times, 3 D., draw close; * * leave ⅛ of cotton, knot into the 3rd P. of the next oval of last row, leave ⅛ of cotton, an oval, 3 D., join to the last purl of the last oval in this row, 1 D., 1 P. 6 times, 3 D., draw close; repeat from * *. Join to the 2nd oval worked in the 1st row, and repeat the 2nd row, then repeat the 3rd row upon this last row worked.

36. Tatted Insertion.

MATERIALS—Tatting cotton, Evans's or Arden's, and a shuttle. Terms—D., double; P., purl; LP., large purl; DC., draw close.

You commence with the stars in the centre of the insertion; they are all worked alike and joined to each other.

1st star—Commence * 2 D., 1 P. * 8 times, DC.

2nd star—* 2 D., 1 P. 6 times. 2 D., draw through a purl of the 1st star, 2 D., 1 P., DC. Repeat these stars the length required.

Commence the outside edge.

1st oval—5 D., 1 P., 2 D., 1 P., 1 D., 1 P., 1 D., 1 P., 2 D., 1 LP., 5 D., DC. * Leave half an inch of cotton, then knot into the 2nd purl at the side of the 1st star (see engraving 36, page 33). Leave half an inch of cotton. Commence the

2nd oval—5 D. Join to the LP. in 1st oval. 2 D., 1 P., 1 D., 1 P. 1 D. 1 P., 2 D., 1 LP., 5 D., DC. Repeat from * in 1st oval, joining to each oval and each star as you work. The other side is worked exactly the same, as this.

37. Edging (Crochet).

MATERIALS—Use No. 20 Arden's cotton, and No. 20 hook Bell gauge. Terms—DC., double crochet; P., picot of 3 Ch., 1 S. in first; S., single; L., long; DL., double long, or two twists of cotton round the needle.

Commence with 20 Ch. In the 19th work 1 DC., 1 L. in the 3 next, 1 DL. on 2 next, 1 L. on 3 next, 1 DC. This is for the first leaf of 3.

2nd leaf—16 Ch., 1 DC. on 15th, 3 L., 7 DL., 3 L., 1 DC.

3rd leaf—11 Ch., 1 DC. on 10th, 3 L., 2 DL., 3 L., 1 DC., 1 DC. on the 9th of the first 20 Ch. These 17 Ch. go between the sets of 3 leaves. *11 Ch. for the 1st leaf of the next 3, which work like the 1st leaf. 16 Ch., work on it the 2nd leaf; 11 Ch., work on it the 3rd leaf, then 1 DC. on the 17th Ch. between the leaves; repeat the length required. Do not cut the thread off at the end, but work upon the chain, forming the foot of these leaves the 2nd row. 1 L. on 1st Ch., * 1 Ch., miss 1, 1 L; repeat the whole length; at the end work 9 Ch., 1 DC. on the point of the 1st leaf of all.

3rd row—* 10 Ch., 1 DC. on point of 2nd leaf; 10 Ch., 1 S. on point of 3rd leaf; 9 Ch., 1 S. on 9th of 17 Ch.; turn, 9 Ch., 1 S. on point of 4th leaf, drawing it through the S. on the 3rd leaf at the same time; repeat the whole length, turn, and work the

4th row—1 L. on 1st Ch; * 1 Ch., miss one, 1 L. 5 times; 1 L., 1 Ch. in next twice; 1 Ch., miss one, 1 L. 5 times; repeat the whole length from *.

5th row—1 DL. on first stitch, * 5 Ch., 1 DL. on 3rd stitch underneath 7 times, 1 DL., miss one underneath. This should be over the joining of the 2 leaves, 1 DL., miss one; repeat the row.

6th row—In the first 5 Ch. work * 2 DC., a P. of 3 Ch., 3 DC., 1 P., 3 DC., 1 P., 2 DC.; repeat in each 5 Ch. and fasten off.

38. Antimacassar (Crochet).

MATERIALS—Arden's cotton, No. 16; fine steel hook, No. 18, Bell gauge. Terms—DC., double crochet or plain; Ch., chain; S., single crochet; L., long crochet, or the thread once round the needle before taking up the stitch; T. of 4, a treble with the thread passed round the needle four times before taking up the stitch.

1st round—4 Ch., 1 DC. in 1st, * 5 Ch., 1 DC. in 2nd of 5 Ch. *; repeat 4 times more; 1 Ch., 1 S. on the 1st of the 4 Ch.

2nd round—10 Ch., 1 L. on the Ch. between the two first picots, * 7 Ch., 1 L. on next Ch. between the picots *; repeat. At the end of the round work 7 Ch., 1 S. on the 4th of the 10th Ch. at commencement.

3rd round—DC. all round.

4th round—* 5 Ch. miss 3 DC., 1 L. on 4th DC., 5 Ch., 1 T. of 4 on 4th DC., 5 Ch., 1 L. on 5th DC., 5 Ch., miss 3 DC., 1 DC. in 4th; repeat. At the end work 1 S. on each of the 1st 10 Ch., which will bring you to the top of a treble.

5th round—20 Ch., 1 DC. on next treble; repeat.

6th round—* 8 S. on the 1st 8 Ch., now you work a loop, miss 3 Ch., 1 S in 4th *, 9 Ch., 1 S. on 7th of 9 Ch., 1 S. on each of the rest of the 9 Ch., pass your thread across the work in front, and work one S. on the S. just before the 9 Ch., then 8 DC. up the side of the 9 Ch. again, 3 DC. in the

Digitized by Google

top stitch, turn, 8 DC. down the opposite side to the 1st DC. on the 9 Ch., 8 S. on the next 8 Ch. of last round, work a loop like this over the DC. upon the treble of last round, beginning at 9th, and then repeat from 1st *.

7th round—8 L. on the 8 S. between the two first loops, * 1 Ch., 1 S. on the point of 2nd loop, 1 Ch., 8 L. on next, 6 S.; repeat.

8th round—1 L. on the 1st of 8 L. of previous round, * 1 L. on 4th L., 3 Ch., 1 L. on 4th L., 1 L. on 8th L., 1 L. on the 1 Ch., 2 L. on the S. in the point of the loop, 1 L. on next Ch., 1 L. on the 1st L. of next 8 L. repeat; at the end work 3 S., bringing the needle into the middle of the 3 Ch. at commencement of the round.

9th round—Work a loop as in the 6th row, begining with 9 Ch., * 11 S., which brings you to the 2nd of the next 3 Ch.; work another loop like the last; repeat.

10th round—4 Ch., * 1 S. in point of first loop, 1 Ch., 10 L. on next 10 S. 1 Ch.; repeat.

11th round—3 Ch., * 1 L. on the 1st Ch. of last round, 1 L. on loop, 1 L. on next Ch., 1 L. on each of the next 2 L., 1 Ch., 1 L. on 4th L., 2 Ch., 1 L. on 7th L., 1 Ch., 1 L. on 9th L., 1 L. on 10th L.; repeat.

12th round—1 S., 1 DC., * 4 Ch., 1 DC. on 1st of 4 Ch., 1 DC. on 2nd L. from the single, 3 Ch. 1 DC. in 4th of 8 Ch., 5 Ch., 1 DC. in 4th of Ch., 4 Ch., 1 DC. in 4th of 8 Ch., 4 Ch., miss 3 L., 1 S. in 4th; repeat.

Join the circles together in the 3rd of the 5 Ch. worked upon the 8 Ch. See engraving.

THE CONNECTING STAR.

A chain of twelve; unite.

1st round—Work in the round 23 DC.

2nd round—1 DC., * 5 Ch., miss 2, 1 DC. on 3rd DC. of previous round; repeat.

3rd round—In each 5 Ch. work 9 DC.

4th round—1 DC. on first DC., * 3 Ch., 1 L. on 5th DC., 4 Ch., 1 DC. in 1st of 4 Ch., 2 Ch., join to the trefoil in last row of circle, 2 Ch.. 1 DC. on 1st of 2 Ch. before the join, 4 Ch, 1 DC. in 1st of 4 Ch., 1 L. on 5th DC., 3 Ch., 1 DC. between the 9th DC. of first 5 Ch. in 3rd round, and 1st DC. of 2nd 5 Ch. in same round; repeat from *, joining to the circle in every other repetition.

39. Fancy Berlin Stitch for Slippers, Footstools, &c.

THIS fancy stitch is worked with brown and violet wools. The brown squares are formed of four cross-stitches taken in the height and four in the width; the violet of four double cross-stitches. The single cross-stitch squares are further decorated with a double cross-stitch of maize filoselle added when the first is completed.

40. Cravat (Muslin and Crochet).

MATERIALS—A reel of very fine crochet cotton, and an equally fine needle. Some very fine book muslin.

The cravat has a bow which is made up and is not to be untied. The muslin for the bow is half an inch wide when doubled. It requires a piece half an inch wide when doubled, and thirty-two inches long for the bow and the piece for the neck. The ends to the bow are made likewise of double muslin; in the widest part they are four inches, in length six inches each. Shape them by the engraving, and ornament the ends of each by placing on it the crocheted rosette, which is given full size in No. 40*a*.

When the rosette is worked (the directions for working it are below), sew it very neatly on the top, or what is to be the right side of a muslin end; cut away the muslin under the rosette on the wrong side of the end. Then you sew the edging, No. 40*b*., round the ends for the bow. The narrower edging, which is given in the directions, is for the neck and bow, but we give no engraving of it.

THE ROSETTE—(*see* Illustration 40*a*, page 36).

The crochet commences in the middle; use the fine cotton and hook.

For the 1st leaf, make 8 Ch., or chain stitches, 1 DC. (double crochet or plain crochet) on the 7th chain, 5 L. or long crochet, one on each of the next 5 Ch., 1 DC. on the 1st chain *; turn the work over, and for the 2nd leaf work 1 single crochet, or SC., on the last DC. of 1st leaf, 1 S. on the 1st L. of 1st leaf, 6 chain; turn the work over, 1 DC. on the 5th Ch., 1 L. on each of the next 4 Ch., 1 L. on 1st single crochet on 1st leaf, 1 DC. on the 2nd SC. on 1st leaf; repeat from * 8 more times, making 10 leaves; join the 10th leaf to the 1st with a SC., and work up the side of the 1st leaf in SC., then 1 DC. on the top of the 1st leaf.

1st round—* 5 Ch., 1 DC. on point of next leaf; repeat all round.

2nd round—Entirely long crochet, 1 L. in each stitch.

3rd round—4 Ch., 1 treble or double long (the cotton twice round the needle before taking up the stitch) on the next stitch of preceding round, * 3 Ch., 1 T. on the same stitch as the last treble, 1 T. on the 3rd long from last treble; repeat.

4th round—1 treble on the 1st treble of preceding round, 1 treble on 2nd treble, 4 Ch., 1 treble on the 3rd treble, * 1 treble on the 4th treble, 4 Ch., 1 treble on 5th treble; repeat.

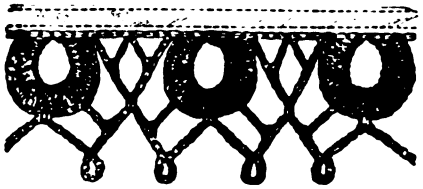
5th round—1 DC. on the first treble, * 5 Ch., 1 DC. on the next 2 trebles that come together; repeat.

6th round—* 7 DC. in the next 5 Ch., 1 S. on the next DC.; repeat.

THE EDGING FOR THE ENDS OF THE BOW.

1st row—* 10 Ch., 1 DC. on 3rd of 10 Ch.; then 8 Ch. Repeat the length required to go round each end, allowing the corners to be fulled on; then cut off the thread.

2nd row—1 DC. on the 1st of the 10 Ch. of preceding row. * 18 L., to be worked in the little ring made by 7 Ch. on the 1st 10 Ch., 1 DC. on the 3rd of next 8 Ch., 3 Ch., 1 T. on the 5th of the 8 Ch., 7 Ch., 1 treble on the 5th chain again, 3 Ch., 1 DC. on the 7th of 8 Ch.; repeat.



3rd row—* 1 DC., made between the 9th and 10th of the first 18 L. of preceding row, 12 Ch., 1 DC. on the 6th of the 12 Ch., forming a picot, 3 Ch., 1 treble on the 12th of 18 L., 2 Ch., 1 DC. on the 4th of the next 7 chain, 2 Ch., 1 treble on the 7th of the next 18 L., 9th Ch., 1 DC. on the 4th, making a picot. 5 chain. Repeat.

THE NARROW EDGING FOR THE NECK.

Make a chain the length required for the various pieces of muslin. You sew the edging on by this chain.

1st row—* 3 chain. Miss the 3 Ch. below, work 1 L. on the 4th Ch., *3 Ch., 1 DC. on the 4th Ch., 3 Ch., 1 L. on the 4th Ch. again; 3 Ch. Miss the next 3 Ch., 1 DC. on the 8th Ch. of foundation chain; 3 Ch. Miss 3 Ch., 1 L. on the 12th Ch. of foundation; repeat from *.

2nd row—Commence with 1 L. on the DC. with the 3 Ch., missed on each side of it, * Ch., 1 DC. on the same DC. of preceding row, 3 Ch., 1 L. on the same DC., 3 Ch., 1 DC. on the 3rd Ch. After this last DC. of preceding row, 7 Ch., 1 DC. on the 1st Ch. After the 2nd long of preceding row, 3 Ch., 1 L. on next DC., with 3 Ch. missed on each side. Repeat from *.

3rd row—1 DC. on the 4th of 7 Ch. of preceding row, 7 Ch., 1 DC. on the DC. between the 2 L. of preceding row, 7 Ch., 1 DC. on 4th of next 7 chain; repeat.

41. Fancy Berlin Stitch.

No. 3 is worked in satin-stitch with three shades of sepia-coloured wool, and three shades of green. Each square covers eight threads of the canvas, both in height and width, and the stitches are taken in diagonal lines according to the illustration. The squares are separated with back-stitched lines of maize filoselle.

42. Fancy Berlin Stitch for Slippers, Bags, &c.

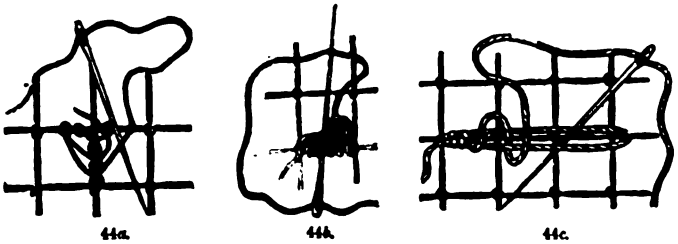
THE successful effect of this design depends on the colours used; if many different hues are brought into requisition, the result is not so good as when a few are selected. Either three shades of the same colour, or a happy contrast of two colours, is all that is necessary. The dividing lines are worked in maize filoselle and black wool; the stars are maize filoselle. The stitch is ordinary cross-stitch worked on Penelope canvas.

43. Fancy Berlin Stitch for Slippers, &c.

A SHADING of six skeins of brown wool with filoselle, for the lightest tone is required for the vandyke pattern in this design, the stitch being *point russe*. The points are then filled in with a bright shade of green in cross-stitch. This is a neat pattern for slippers, &c.

44. Curtain Border (Guipure D'Art).

BORDERS for curtains and table covers are now frequently made in this style of work. They are knitted with coarse thread and a thick mesh, so that they are quickly done. The design No. 9 is intended for this purpose. Cotton No. 12 and mesh 8 must be used. After filling the needle and tying the cotton to a foundation string, net 1 plain stitch, turn, and net 2 stitches in the same loop; turn again, net 2 plain, the net 2 stitches in the last loop. Continue working backwards and forwards, increasing by netting 2 loops in the same stitch, until there are thirteen loops. To make the length of insertion required, work backwards and forwards, netting



44*a*. 44*b*. 44*c*.

2 stitches together, at the end of one row and at the end of the next row work 2 stitches in the last loop. Repeat these two rows alternately, until the insertion is sufficiently long, when net 2 stitches at the end of every row, until all are reduced. Wash, stiffen, and fasten in a wire frame, and commence darning with the *points de toile* that fill in the corners of the stars; then work the *points de feston* that divide and form the border to the squares; the stars are lastly darned with *points de feston*, *points de cone*, and *points de reprise*, all of which are illustrated, full working size, in details Nos. 44*a*, 44*b*, and 44*c*. On velvet curtains these guipure borders look very effective.

45. Fancy Stitch in Knitting.

This pattern (represented in the illustration 45, page 37) may be used for a variety of articles, such as antimacassars, couvrepieds, bassinet or toilet covers, &c., and can be done in finer or coarser cotton or wool, according to taste, and the purpose for which it is intended. The directions are given for two needles, knitting backwards and forwards; but it could also be adapted for four needles, in which case, in the alternate rows, the turned stitches must still be turned, the purl stitches purled, and the rest, including all the increased stitches, knitted plain.

The actual pattern requires 20 stitches, which must be allowed for every repetition of it; besides which, to make a firm edge (if not knitted round), 3 stitches must be added for each of the two sides of the antimacassar, &c., the first of which is taken off at the beginning of every row, and the last one of each row knitted plain. (These are not included in the recipe). Cast on the required number of stitches.

1st row (this is the right side of the work)—Knit 2 together * 4 purl, 2 turned (knitting the stitches plain from the back instead of in the usual way), thread over, knit 2 together, over, 1 plain, over, knit 2 together, over, 2 turned, 4 purl, take off a stitch, as if about to purl, purl the two next together, and pass the slipped stitch over. Repeat from *. At the very end of this row there will be 3 extra stitches, knit 2 together, and 1 plain.

2nd row, and every alternate row—The stitches must be knitted as they appear on the wrong side; the turned, plain, and increased stitches all purled, those that were purled on the right side knitted plain. When a few more rows have been done there will be no difficulty in seeing at once how the different stitches should be knitted.

3rd row—Knit two together, * 3 purl, 2 turned, over, knit 2 together, 1 turned, over, 1 plain, over, 1 turned, knit 2 together, over, 2 turned, 3 purl, take 1 off, purl 2 together, pass slipped stitch over; repeat from *. (When at the end of the row it is found there are not stitches enough left to do this last, and leave 1 edge stitch, take off the 1st stitch, purl the next and pass the slipped stitch over, so as to keep 1 stitch for the edge, which is always to be knitted plain and taken off without knitting in the next row.)

5th row—Knit 2 together, * 2 purl, 2 turned, over, knit 2 together, 2 turned, over, 1 plain, over, 2 turned, knit 2 together, over, 2 turned, 2 purl, take off 1, purl 2 together, pass slipped stitch over; repeat from *.

7th row—Knit 2 together, * 1 purl, 2 turned, over, knit 2 together, 2 turned, 1 purl, over, 1 plain, over, 1 purl, 2 turned, knit 2 together, over, 2 turned, 1 purl, take off a stitch, purl 2 together, pass the stitch over. Repeat from *.

9th row—Knit 2 together, * 2 turned, over, knit 2 together, 2 turned, 2 purl, over, 1 plain, over, 2 purl, 2 turned; knit 2 together, over, 2 turned take off a stitch, purl 2 together, pass the stitch over. Repeat from *.

11th row—Knit 2 together, * 1 turned, over, knit 2 together, 2 turned, 3 purl, over, 1 plain, over, 3 purl, 2 turned, knit 2 together, over, 1 turned, take off a stitch as usual, knit 2 together (instead of purling them), pass the stitch over. Repeat from *.

13th row—Knit 2 together, * over, knit 2 together, 4 purl, over, 1 plain, over, 4 purl, 2 turned, knit 2 together, over, take off a stitch, knit 2 together, pass the stitch over. Repeat from *.

15th row—* 1 plain, over, knit 2 together, over, 2 turned, 4 purl, take off a stitch, purl 2 together, pass the stitch over, 4 purl, 2 turned, over, knit 2 together, over. Repeat from *.

17th row—* 1 plain, over, 1 turned, knit 2 together, over, 2 turned, 3 purl, take off a stitch, purl 2 together, pass the stitch over, 3 purl, 2 turned, over, knit 2 together, 1 turned, over; repeat from *.

19th row—* 1 plain, over, 2 turned, knit 2 together, over, 2 turned, 2 purl, take off a stitch, purl 2 together, pass the stitch over, 2 purl, 2 turned, over, knit 2 together, 2 turned, over; repeat from *.

21st row—* 1 plain, over, 1 purl, 2 turned, knit 2 together, over, 2 turned, 1 purl, take off a stitch, purl 2 together, pass the stitch over, 1 purl, 2 turned, over, knit 2 together, 2 turned, 1 purl, over; repeat from *.

23rd row—* 1 plain, over, 2 purl, 2 turned, knit 2 together, over, 2 turned, take off a stitch, purl 2 together, pass the stitch over, 2 turned, over, knit 2 together, 2 turned, 3 purl, over; repeat from *.

25th row—* 1 plain, over, 3 purl, 2 turned, knit 2 together, over, 1 turned, take off a stitch, knit 2 together, pass the stitch over, 1 turned, over, knit 2 together, 2 turned, 3 purl, over; repeat from *.

27th row—* 1 plain, over, 4 purl, 2 turned, knit 2 together, over, turned, take off a stitch, knit 2 together, pass the stitch over, thread over, knit 2 together, 2 turned, 4 purl, over; repeat from *. Commence again at the 1st row.

46. Fancy Knitting Stitch.

This stitch is suitable for antimacassars, bread cloths, &c.; the size of the needles and cotton must depend on the purpose for which the work is required. Cast on any number of stitches that will divide by 11 (according to the width wanted), and add two stitches at each end to make a firm straight edge, on which to sew fringe or a knitted border; these edge stitches must always be knitted plain, and the first of every row taken off without knitting; they are not included in the pattern. After casting on, do a plain and a purl row, and then commence the fancy stitch as follows:—

1st row—Thread forward, 3 plain, slip 1, knit 1, pass slipped stitch over, knit 2 together, 3 plain, forward, 1 plain, repeat, 2nd, and every alternate row, purl. 3rd and 5th rows as 1st. 7th row—1 plain, * forward, 2 plain, slip 1, knit 1, pass slipped stitch over, knit 2 together, 2 plain, forward, 3 plain, repeat from *; at the end of row 2 plain, instead of 3 plain, before the edge stitches. 9th row—2 plain, * forward, 1 plain, slip 1, knit 1, pass slipped stitch over, knit 2 together, 1 plain, forward, 5 plain, repeat from *; at the end 3 plain, instead of 5 plain. 11th row—3 plain, * forward, slip 1, knit 1, pass slipped stitch over, knit 2 together, forward, 7 plain, repeat from *; at the end 4 plain, instead of 7 plain. 13th row—4 plain, forward, slip 1, knit 1, pass slipped stitch over, forward, 3 plain, slip 1, knit 1, pass slipped stitch over; repeat. 15th row—Knit 2 together, 3 plain, forward, 1 plain, forward, 3 plain, slip 1, knit 1, pass slipped stitch over; repeat. 17th and 19th rows—Same as 15th. 21st row—Knit 2 together, 2 plain, forward, 3 plain, forward, 2 plain, slip 1, knit 1, pass slipped stitch over; repeat. 23rd row—Knit 2 together, 1 plain, forward, 1 plain, forward, 1 plain, slip 1, knit 1, pass slipped stitch over, repeat. 25th row—Knit 2 together, forward, 7 plain, forward, slip 1, knit 1, pass slipped stitch over, repeat. 27th row—Knit 1 with the last of edge stitches, * forward, 3 plain, slip 1, knit 1, pass slipped stitch over, 4 plain, forward, slip 1, knit 1, pass slipped stitch over, repeat from *; at the end, 1 plain instead of slip 1, &c. Commence again at 1st row.

For any purpose that would render it desirable, this pattern can also be knitted on 4 needles (leaving out, of course, the edge stitches), the only difference being that the alternate rows must then be plain instead of purl, and in the 27th row it will be found necessary to pass the 1st stitch without knitting it to the right-hand needle before commencing, and leave it there, knitting it at the end of row to pass the slipped stitch over. In like manner, at the end of each needle, 1 stitch must be taken from the next, to enable the stitch to be knitted over which the slipped one is passed.

47. Fancy Knitting Stitch.

This is a pretty and suitable stitch, knitted in cotton, for bread cloths, brush tray, or toilet covers, and for any purpose requiring a close and tolerably even surface. Cast on any number of stitches that will divide by 14, with 2 or more on each side for edge stitches, and one additional stitch to make the pattern uniform on both sides. After a plain row, begin the pattern thus:—

1st row—* 1 turned (knit plain from the back, putting in the needle as if about to purl), 5 purl, 1 turned, 1 purl, 1 turned, 5 purl; repeat from * at end of needle, add 1 turned. 2nd row—1 purl, * 5 plain, 1 purl, 1 plain, 1 purl, 5 plain, 1 purl; repeat from *. 3rd row—* 1 purl, 1 turned, 4 purl, 1 turned, 1 purl, 1 turned, 4 purl, 1 turned; repeat from *; at the end add 1 purl. 4th row—1 plain, * 1 purl, 4 plain, 1 purl, 1 plain, 1 purl, 4 plain, 1 purl, 1 plain; repeat from *. 5th row—* 1 turned, 1 purl, 1 turned, 3 purl, 1 turned, 1 purl, 1 turned, 3 purl, 1 turned, 1 purl; repeat from * at the end add 1 turned. 6th row—1 purl, * 1 plain, 1 purl, 3 plain, 1 purl, 1 plain, 1 purl, 3 plain, 1 purl, 1 plain, 1 purl; repeat from *. 7th row—* 1 purl, 1 turned, 1 purl, 1 turned, 2 purl, 1 turned, 1 purl, 1 turned, 2 purl, 1 turned, 1 purl, 1 turned; repeat from*, at the end add 1 purl. 8th row—1 plain, * 1 purl, 1 plain, 1 purl, 2 plain, 1 purl, 1 plain, 1 purl, 2 plain, 1 purl, 1 plain, 1 purl, 1 plain; repeat from*. 9th row—Same as 5th. 10th row—Same as 6th. 11th row—Same as 3rd. 12th row—same as 4th. 13th row—Same as 1st. 14th row—Same as 2nd. 15th row—* 1 purl, 1 turned, 5 purl, 1 turned, 5 purl, 1 turned; repeat from *, at the end add 1 purl. 16th row—1 plain, * 1 purl, 5 plain, 1 purl, 5 plain, 1 purl, 1 plain; repeat from *. 17th row—* 1 purl, 1 turned, 4 purl, 1 turned, 1 purl, 1 turned, 4 purl, 1 turned; repeat from *, at the end add 1 purl. 18th row—1 plain, * 1 purl, 4 plain, 1 purl, 1 plain, 1 purl, 4 plain, 1 purl, 1 plain; repeat from *. 19th row—* 1 purl, 1 turned, 3 purl, 1 turned, 1 purl, 1 turned, 1 purl, 1 turned, 3 purl, 1 turned; repeat from *, at the end add 1 purl. 20th row—1 plain, * 1 purl, 3 plain, 1 purl, 1 plain, 1 purl, 1 plain, 1 purl, 3 plain, 1 purl, 1 plain; repeat from *. 21st row—* 1 purl, 1 turned, 2 purl, 1 turned 1 purl, 1 turned, 1 purl, 1 turned, 1 purl, 1 turned, 2 purl, 1 turned; repeat from *; at the end add 1 purl. 22nd row—1 plain, * 1 purl, 2 plain, 1 purl, 1 plain, 1 purl, 1 plain, 1 purl, 1 plain, 1 purl, 2 plain, 1 purl, 1 plain; repeat from *. 23rd row—Same as 19th. 24th row—Same as 20th. 25th row—Same as 17th. 26th row—Same as 18th. 27th row—Same as 15th. 28th row—Same as 16th. 29th row—Commence again at 1st row.

48. Fancy Knitting Stitich.

Cast on any number of stitches that will divide by 14, and add 2 stitches at each end for an edge, slipping the first and knitting the last stitch of each row plain. The same number of stitches must be kept on the needles throughout, and it is desirable to count them at the end of each pattern row, to ascertain that this is the case.

1st row—Over, take in (which means throughout this pattern, slip 1, knit 1, pass slipped stitch over), 2 plain, over, take in, over, take in, over, take in, over, take in, 2 plain, repeat. 2nd and every alternate row, purl. 3rd row—1 plain * over, take in, 2 plain, over, take in, over, take in, over, take in, 2 plain, over, knit 2 together, repeat from *, use one of the edge stitches for "knit 2 together" at the end. 5th row—2 plain, over, take in, 2 plain, over, take in, over, take in, 2 plain, over, knit 2 together; repeat. 7th row—3 plain, * over, take in, 2 plain, over, take in, 2 plain, over, knit 2 together, 4 plain; repeat from *, at the end 1 plain, instead of 4. 9th row—Over, take in, 2 plain, over, take in, 4 plain, over, knit 2 together, 2 plain; repeat. 11th row—1 plain, * over, take in, 2 plain, over, take in

Digitized by Google

2 plain, over, knit 2 together, 2 plain, over, take in; repeat from *. Use one of the edge stitches for the last "take in." 13th row—2 plain, * over, take in, 2 plain, over, take in, over, knit 2 together, 2 plain, over, take in, over, take in; repeat from *. 15th row—1 plain, * over, take in, over, take in, 2 plain, over, take in, 2 plain, over, take in, over, take in; repeat from *. Use one of the edge stitches for the "take in" at the end. 17th row—Over, take in, over, take in, 2 plain, over, knit 2 together, over, take in, 2 plain, over, take in; repeat. 19th row—1 plain, * over, take in, 2 plain, over, knit 2 together, 2 plain, over, take in, 2 plain, over, take in; repeat from *. Use one of the edge stitches for the "take in" at the end. 21st row—Over, take in, 2 plain, over, knit 2 together, 4 plain, over, take in, 2 plain; repeat. 23rd row—3 plain, * over, knit 2 together, 2 plain, over, take in, over, take in, 2 plain, over, take in, 4 plain; repeat from *. At the end 1 plain instead of 4. 25th row—2 plain, over, knit 2 together, over, take in, over, take in, 2 plain, over, take in; repeat. 27th row—1 plain, * over, knit 2 together, 2 plain, over, take in, over, take in, over. take in, 2 plain, over, take in; repeat from *. 29th row—Commence again at the 1st row.

49. Fancy Knitting Stitch.

This stitch is suitable for a variety of things, such as antimacassars, curtains cushions, bread cloths, &c. According to the purpose for which it is intended, coarse or fine knitting cotton or wool should be used, and the size of the needles must depend on the material. If anything round be required, it may also be knitted on 4 needles.

Cast on any number of stitches that will divide by 13, besides which, to complete the pattern, if knitted backwards and forwards in rows with 2 needles, 2 edge stitches at each end of the needle must be added, which are not included in the directions; the 1st stitch of each row must be taken off without knitting, and the last knitted plain.

1st row—Over, take in (in this pattern, for brevity, this will always mean, slip 1, knit 1, pass slipped stitch over), 7 plain, over, take in, 2 plain; repeat from the beginning. 2nd and every alternate row—Purl. If knitted round, these rows must be plain. 3rd row—1 plain, * over, take in, 4 plain, knit 2 together, over, 1 plain, over, take in, 2 plain; repeat from *, using one of the edge stitches at the end. 5th row—* 2 plain, over, take in, 2 plain, knit 2 together, over, 3 plain, over, take in; repeat from *. 7th row—3 plain, * over, take in, knit 2 together, over, 2 plain, knit 2 together, over, 1 plain, over, take in, 2 plain; repeat from *, end with, take in, using one of the edge stitches. 9th row—Over, take in, 2 plain, take in, over, 2 plain, knit 2 together, over, 3 plain; repeat from beginning. 11th row—1 plain, * over, take in, 2 plain, over, 2 plain, knit 2 together, over, 5 plain; repeat from *, end with 4 plain. 13th row—2 plain, * slip 1, knit 2 together, pass slipped stitch over, over, 2 plain, knit 2 together, over, 7 plain; repeat from *, end with 5 plain. 15th row—1 plain, * knit 2 together, over, 2 plain, knit 2 together, over, 1 plain, over, take in, 4 plain; repeat from *, end with 3 plain. 17th row—Knit 2 together, over, 2 plain, knit 2 together, over, 3 plain, over, take in, 2 plain; repeat from beginning. 19th row—Knit 2 together, over, 2 plain, knit 2 together, over, 1 plain, over, take in, 2 plain, over. take in; repeat from beginning. 21st row—2 plain, knit 2 together, over, 3 plain, over, take in, 2 plain, over, take in; repeat from beginning. 23rd row—1 plain, * knit 2 together, over, 5 plain, over, take in, 2 plain, over, take in; repeat from *, using 1 edge stitch at end for the "take in." Commence again at first row.

50 Fancy Knitting Stitch.

This is a curious stitch, forming raised scales or leaves. The Germans, who are great connoisseurs in knitting, consider the purled to be the right side of the pattern, but this is optional with the worker. Cast on any number of stitches that will divide by 20, and add 2 or more on each side for edge stitches, which are not included in the directions.

1st row—purl. 2nd row—Over, * take in (this means take off the 1st stitch as if about to purl knit the next, pass the slipped stitch over), 8 plain, over 8 plain, knit 2 together, over; repeat from *. 3rd row—Over, let drop the "over" of last row (in future this will be understood by "let drop"), * purl 2 together, 7 purl, over (1 purl, 1 plain on the "thread over" of last row), over, 7 purl, purl the next stitch put it back on left-hand needle, and pass the next stitch over it (this will in future be called "take in reversed" for brevity), over, let drop; repeat from *. 4th row—Over, let drop, * take in, 6 plain, over, 4 plain, over, 6 plain, knit 2 together, over, let drop; repeat from *. 5th row—Over, let drop, * purl 2 together, 5 purl, over, 6 purl, over, 5 purl, take in reversed, over, let drop; repeat from *. 6th row—Over, let drop, * take in, 4 plain, over, 8 plain, over, 4 plain, knit 2 together, over, let drop; repeat from *. 7th row—Over, let drop, * purl 2 together, 3 purl, over, 10 purl, over, 3 purl, take in reversed, over, let drop; repeat from *. 8th row—Over, let drop, * take in, 2 plain, over, 12 plain, over, 2 plain, knit 2 together, over, let drop; repeat from *. 9th row—Over, let drop, * purl 2 together, 1 purl, over, 14 purl, over, 1 purl, take in reversed, over, let drop; repeat from *. 10th row—Over, let drop, * take in, 16 plain, knit 2 together, over, let drop: repeat from *. 11th row—1 purl on "thread over" of last row, for half leaf, over, * 7 purl, take in reversed, over, let drop, purl 2 together, 7 purl (1 purl, 1 plain on "thread over" of last row), over, repeat from *; after last "7 purl, over," 1 purl only, in "thread over" of last row, for half leaf. 12th row—2 plain, over, * 6 plain, knit 2 together, over, let drop, take in, 6 plain, over, 4 plain, over, repeat from *; at the end after last "6 plain," over, 2 plain, for half leaf. 13th row—3 purl, over, * 5 purl, take in reversed, over, let drop, purl 2 together, 5 purl, over, 6 purl, over, repeat from *; after last "5 purl," over, 3 purl. 14th row—4 plain, over, * 4 plain, knit 2 together, over, let drop, take in, 4 plain, over, 8 plain, over, repeat from * after last "4 plain," over, 4 plain. 15th row—5 purl, over, * 3 purl, take in reversed, over, let drop, purl 2 together, 3 purl, over, 10 purl, over, repeat from *; after last "3 purl," over, 5 purl. 16th row—6 plain, over, * 2 plain, knit 2 together, over, let drop, take in, 2 plain, over, 12 plain, over, repeat from *; after last "2 plain," over, 6 plain. 17th row—7 purl, over, * 1 purl, take in reversed, over, let drop, purl 2 together, 1 purl, over, 14 purl, over, repeat from *; after last "1 purl," over, 7 purl. 18th row—8 plain, * knit 2 together, over, let drop, take in, 16 plain, repeat from *; after last "take in," 8 plain. 19th row—over, * purl 2 together, 7 purl, over (1 purl and 1 plain on "thread over" of last row), over, 7 purl, take in reversed, over; repeat from *. 20th row—Commence again at 4th row.

51. Fancy Knitting Stitch.

This is a peculiarly pretty and uncommon fancy knitting stitch, suitable for many purposes, according to the materials and needles used. With fine boar's-head cotton and No. 17 or 18 needles it would make a very pretty top for a toilet pincushion; with knitting cotton No. 8 (three-thread) and needles No. 14 it would suit toilet tray covers; and knitted with wooden needles (No. 10) and Ardern's coarsest cotton (No. 2) it is very effective for antimacassars.

Terms used—"Take in": Slip the first stitch as if about to purl, knit the next, pass the slipped stitch over. "Take in reversed": Purl the first stitch, put it back on left-hand needle, pass the next stitch over it, and then take it on the right-hand needle. "Turned": Knit plain, but from the back of the stitch.

Cast on any number of stitches that will divide by 16, adding 4 to make the pattern uniform at both sides, and 2 or more at each end for edge stitches, which are always to be knitted plain, taking off the first stitch of each needle, and are not included in the directions. After a plain row, begin the pattern this:—

1st row—* 1 plain, purl 2 together, over, 1 plain, 4 purl, take in reversed, over twice, purl 2 together, 4 purl; repeat from *. At the end 1 plain, purl 2 together, over, 1 plain.

2nd row—* 1 purl, 2 plain, 1 purl, 3 plain, knit 2 together, over, take off the "over twice" of last row, so as to form one long loop of it, putting in the needle from the back as if about to purl, keep it on the right-hand needle, over, take in, 3 plain; repeat from *, at the end, 1 purl, 2 plain, 1 purl.

3rd row—* 1 plain, over, take in reversed, 1 plain, 2 purl, take in reversed, over, take off the two "overs" of last row, so as to form but one loop of them in the same manner as before, taking also on the right hand needle the former long loop (so that there will now be 2 long loops on the needle). over, purl 2 together, 2 purl; repeat from * at the end, 1 plain, over, take in reverse, 1 plain. Care must be taken to put the thread back after the "take in reverse," when a plain stitch follows it.

4th row—* 1 purl, 2 plain, 1 purl, 1 plain, knit 2 together, over, take off the 2 "overs" of last row with the other long loops (so that there will be 3 long loops on the needle), over, take in, 1 plain; repeat from * at the end, 1 purl, 2 plain, 1 purl.

5th row—* 1 plain, purl 2 together, over 1 plain, take in reversed, over take off the "overs" of last row with the 3 other long loops (so that there will now be 4 long loops on the needle), over, purl 2 together, repeat from * at the end, 1 plain, purl 2 together, over, 1 plain.

6th row—* 1 purl, 2 plain, 1 purl, 1 plain, over twice; take off all the 5 long loops there will now be, from the back on the right-hand needle, with the point of the left, pass the last two loops on those of the 4th and 5th rows to the front of the other three, and take the left-hand needle out of them; then with the point of the right-hand needle (by depressing it) pass these 2 threads *through* the loop made by the other three from the front to the back, and put the 2 stitches formed in this manner on the left-hand needle; knit them as two plain stitches, over twice, 1 turned; repeat from * at the end, 1 purl, 2 plain, 1 purl.

(This row is very difficult to explain, and at first will seem complicated to do; but by looking carefully at the illustration No. 2, the worker will see the *tied* appearance the long loops should have, which forms the beauty of the stitch.)

7th row—* 1 plain over, take in reversed, 1 plain, 1 purl (1 purl, 1 plain on the first turn of the "over twice" of the last row, 1 purl, 1 plain on the second turn of the same), 2 purl (1 purl, 1 plain on the first turn of the "over twice" of the last row, 1 purl, 1 plain on the second turn), 1 purl; repeat from *. At the end 1 plain, over, take in reversed, 1 plain.

8th row—1 purl, 2 plain, 1 purl, 11 plain, 1 turned; repeat from *. At the end, 1 purl, 2 plain, 1 purl.

9th row—Commence again at 1st row. It may be well to observe, in case the worker should be puzzled by it, that in this stitch, contrary to the general rule of the number of stitches remaining the same in every row, they diminish two at every repetition of the pattern each row; but this diminution is made up for in the 7th row by the 4 stitches made in each "over twice," and this restores them to their original number in the 8th or last row of the pattern.

Dress and Fashion.

Movements of Fashion, 1869-70.

Ladies' fashions during the year 1869 have been eminently picturesque; they have permitted the display of individual taste, and the result has been immense variety. Costumes that recall those worn during the closing years of Louis XVth's reign have been universally adopted, and these have permitted the introduction into general use of a variety such as fashion has never known in previous years. With the exception of a few absurdities, such as wearing hats over the bridge of the nose instead of on the head, of balancing the figure upon high heels, that at their base would not cover a fourpenny piece, and of adding too much bustle, or as it is commonly called "dress improver," to the figure at the back, the feminine world have not had to suffer much from the exigencies of that despotic sovereign whose laws, however inconvenient, are always eagerly obeyed. The ever-varying Goddess has been beneficent, rather than otherwise, in her decree. She has willed that, when we walk abroad along muddy streets and dusty roads, short costumes are *the* thing. There is no necessity now to have any care for flowing drapery—no danger of trailing and so ruining it—no encumbering of hands in holding it up—no unseemly bunching up "anyhow" so long as it was clear of the pavement. On the contrary, the pedestrian, in her short costume, not unduly distended with crinoline, walks along in comfort, unimpeded by her skirts, for Fashion insists that, no matter how ingeniously or cunningly a trained skirt may be looped up, it is out of place for walking. But for evening wear, and ceremonious visiting, and on all occasions where full dress is imperative, then the train, with its flowing and graceful lines, is imperative also. There is no exception to these rules; the laws are fixed for the time, and sensible women will obey to the letter.

We will now pass in review the principal items in a lady's toilet, faithfully reporting on the present style and hazarding a prediction as to the future. It would be dangerous to prophesy authoritatively on this subject, for nothing is more uncertain than the adoption by the majority of English-women of any particular mode that may be introduced in Paris. Another fact to be observed is that English ladies, being more conservative by nature, by no means copy every novelty that has a *furore* in Paris. The tastes of the two nations are as different as the two climates; a fashion is brought out and caught at in the French capital, the manufacturers set to work, and supply the home and American markets,—for our sisters at the other side of the Atlantic follow more readily the French lead in matters of taste. When a few months have passed, the freshness of conception gone, the new sensation over, it is just a chance whether the new cut, the new material, or whatever it may be, will live its day here. We are slow in adopting, but, when once a fashion is taken into favour, we are faithful and tenacious about retaining it to a fault.

Morning costumes for indoor and outdoor wear first claim our attention. Materials that have a shiny surface, such as satin cloth, are in favour; reps, cashmere, plaid woollens, and velvet are also worn. The daylight colours are maroon, marine blue, Paris *brulé*, amethyst violet, a light shade of brown (Turkish tobacco as it is called in Paris), and olive green. The costume proper consists either of a skirt and short loose jacket to the waist, with *revers* in front, or of a skirt and a casaque that fits closely the figure to the waist, and terminates with a panier tunic, with *tablier* front—all corners being left square, instead of rounded off. No matter the richness of material; the under skirt reaches to the ankle, and is so contrived that it quite clears the ground all round. It has five breadths; one sloped front breadth twenty-seven inches wide at the bottom, one gore at each side twenty-one inches, and two full back breadths, each measuring twenty-seven inches. The front width is sewn plainly to the belt; the side gore has two shallow plaits, and the back widths are in full French gathers. When skirts are much trimmed they are three and a quarter yards wide, when plain from three and a half to four yards. The outdoor skirt is bordered with a twelve-inch plaited flounce (the plaits all laid the same way), headed by a lias band and an upright frill plaited in the same manner—a narrower plaiting in the casaque. When the costume is worn over a visible under skirt, it is frequently made of a different material. Cashmere is worn, for example, over silk, and satin over velvet; moire antique is also worn over velvet. Sashes are all short and bunchy, and, as a rule, the waistband fastens at the back beneath the cascade of loops.

There has been little variety in cloaks or out-door garments during the year. Ladies are tired of condemning their beautiful Cashmere shawls to obscurity, so they have been brought out and ingeniously arranged to form a circular belted cape bunched up at the back, and this, marvellous to relate, without cutting. Both long and square shawls are treated in this way. The close-fitting casaque, with full panier at the back, basque square in front or turned back with *revers*, likewise *revers* on the bodice, is now the prevailing out-door garment. Very short loose jackets with velvet *revers* and deep gauntlet cuffs are worn for a change.

In trimming there is endless variety, as the present style of dress requires so much ornamentation. Flounces plaited *à la Russe* (one plait laid closely over the other and all folded one way), plaid satin rouleaux, likewise satin rouleaux to match the dress, white Valenciennes lace with black lace over it, gold braid and gold fringe, feather bands of all descriptions, ostrich, marabout, cock plumes, grebe, peacocks' tips make up the list of fashionable *garnitures*.

Large crinolines have given way to skirts of small dimensions—seventy-five inches at the greatest width. They are usually made of hair cloth cut in narrow gores and bordered with two-plaited frills five inches deep. Crinolines are not now worn to add to the apparent size, but merely to prevent the skirt from clinging to the limbs. But if crinolines have "gone out," bustles and *tournures* have "come in." These are made of hair cloth with puffs, and frills and whalebone, so as to add to the figure below the waist.

Lace frills or ruffles have replaced the small upright collars; they are universally worn, made both of the commonest and of the best materials. Round a long slender throat they are eminently becoming. These frills and cravat bows have quite displaced brooches; a large locket and long earrings now making up a set of jewellery. Sleeve buttons are large and square, and broad heavy bands are popular for bracelets.

There is still an immense quantity of false hair worn, but the high preposterous chignons are now changed into chatelaine braids, which do not disfigure the head as their predecessors did. Curls and ringlets are worn with full dress.

Bonnets are worn higher and narrower, and resemble headdresses very closely. They are like a high coronet in front and are fastened under the chignon with strings and a bow. An upright aigrette is placed at the side or else a large flower; short vevlet strings beneath the chin. In hats the Tyrolean form is the most popular, and long gauze veils twisted round the throat and falling over the shoulder have come into vogue.

In the accompanying illustrations we have endeavoured to give, so far as space allowed, illustrations of ladies' and children's fashions that are adopted, as we are entering a new decade. It will be gathered from them that luxury is by no means decreasing; it strikes people more forcibly because in matters of dress it daily becomes more general.

1. The Coronet Fanchon.

THIS *fanchon* is made of rice straw, adorned with four rows of narrow black ribbon-velvet; two ends of lace, tied in the middle, occupy the centre of the coronet; a lace ruche enriches the front, while the *fanchon* that accompanies it veils the back of the head, and is raised crest-like at the top of it. This *fanchon* is of black spotted tulle, trimmed with lace; its long, simple, rounded ends are carelessly tied below the chin. A branch of roses is placed at the top of the *fanchon* on the right side, and another branch behind the left ear. The bonnet is fastened with black ribbon velvet tied below the chignon.

2. The Coralie Bonnet.

A VERY high bonnet, consisting of a wide *bandeau* of black velvet, trimmed with narrow black lace. A high puffing of black velvet at the left, and a large velvet bow on the right. A long black and white ostrich feather falls over the front of the bonnet, and is prolonged over the back of the chignon. Folds of velvet terminate the back of the bonnet, and are continued to form a string that passes under the chin, fastening under the left ear with a bow. There is another velvet bow in the centre of the folds at the back of the head.

3. The Chatelaine Headdress.

THIS headdress consists (as will be seen from the illustration, page 40) of a chignon of thick plaits intermixed with coloured ribbon, and pinned so as to fall low at the back of the neck. It is designed by Messrs. Leroy and Albert Court hairdressers, 422, Rue St. Honoré, Paris, and is the style now universally adopted in Paris.

4. The Nevers Hat.

THE Nevers hat is made of black velvet; the form is high, and the brim is turned up at the sides. A black gauze scarf is carried at each side over the top of the hat, and is crossed both in front and at the back. At the right side there are two blue velvet bows without ends, and at the left a tuft of blue feathers.

5. The Empress Hat.

THIS shape is covered with black velvet, a large maroon velvet bow without ends is placed at the side, and three maroon feathers curl over and at the side of the crown. The feathers are of three different shades, the darkest being fastened in on the right side; the lightest is uppermost.

6. Low Frock for a Girl from four to five.

THE material of this frock is white French *piqué*, and the braiding is copied with white Mignardise of two widths, sewn on as indicated in the illustration, page 40. This style of frock also looks well in white cashmere braided in either mauve or scarlet washing mohair braid.

7. Princess Frock for a Girl of three.

THIS gored frock is made of white alpaca, studded with coloured flowerets. The trimmings consist of satin *rouleaux* to match the flowers; likewise of satin buttons and tassels, all harmonising with the flowers.

8. Low Frock for a Girl from two to five.

THE under skirt and top of bodice is made of striped grey and cerise silk; the tunic, body, and arm bands of grey *mousseline de laine*, trimmed with stripes of cerise silk.

9. Apron for Girl from four to six.

THIS apron can be made either of white *piqué*, striped cambric, or *brillanté*, and is well calculated to keep the bodice and skirt clean. It is trimmed with vandyked bands, sewn on without fulness, and headed by a line of braid to match the thread with which the vandykes are button-hole stitched.

10. White Pique Apron.

THIS apron is intended for a little girl, and can be made either in white *piqué* or black silk. It may be braided either in scarlet or black if *piqué* is used, and with white *soutache* if black silk is preferred.

11 and 12. Morning Robe for a Girl from eight to ten.

THIS robe may be made either of cashmere, poplin, or satin cloth. The skirt is gored, and the pointed trimming of the same material, ornamented with silk braid, is laid on the skirt to simulate a tunic. There is a braiding decoration at the corner of the skirt, and the sash is likewise braided. Made of white cashmere braided with scarlet, this style of robe is particularly pretty.

13. Pinafore.

THIS pretty pinafore is suitable for a girl of three. It is made of white Nainsook muslin, and may be trimmed either with Valenciennes insertion and lace or with fine Madeira embroidery.

14. The Numide Collar.

THE Numide collar is made of two rows of rich Valenciennes lace, headed with a *bouillonné* of lace lined with ribbon. A bow of ribbon replaces the brooch.

15 and 16. Frill for the Throat, and Sleeve to match.

FRILLS, or *fraises*, as they are called in Paris, are superseding collars. The illustrations 15 and 16, page 44, give a good idea of the prevailing style. No. 16 is made of box-plaited frills of either muslin or net, edged with Valenciennes lace, and separated with a band of black velvet; a bow fills up the joining. The sleeve (No. 15) corresponds with the ruff.

17. Petticoat Bodice.

THIS petticoat bodice fastens in front with linen buttons. It is made of fine linen, and trimmed with a plaiting of cambric, headed by a row of embroidered Madeira edging; Valenciennes might be substituted if desirable.

18 and 19. White Petticoats.

PETTICOATS are now trimmed like dresses, with Russian plaitings, as will be observed from the illustrations on page 44. In both these models the plaits are laid one over the other in regular succession. No. 18 has a deep plaited flounce round the edge, and a heading of slanting tucks. Both heading and flounce are ornamented with vandyke and horizontal lines of embroidered insertion, with coloured satin ribbon run in and out of the insertion; or, if preferred, the insertion may be simply embroidered. No. 19 is bordered with two plaited, over which there are rows of insertion arranged in vandyke, and edged with Valenciennes lace. This upper trimming is rendered more effective by lining with coloured satin ribbon to match the dress with which the petticoat is worn.

20. Dressing Jacket.

THE material is fine white *brillanté*, and the *bouillonnés* down the centre are separated by narrow bands of coloured cambric. They are bordered at each side with a wide frill of Madeira embroidery. The sleeves correspond.

21. Dressing Jacket.

THE material may be either *brillanté* or cambric. The jacket is trimmed with tape work mounted on broad bands of coloured cambric.

22. Night Dress.

THE material may be either fine long cloth or cambric, and the trimmings may consist either of embroidered insertion and frilling, or of Valenciennes insertion and lace edging, the former being lined with coloured cambric. The upper part is tucked by machinery.

23 and 24. Chemises.

THESE chemises are of different form. No. 23 opens in front, and the neck piece is trimmed with a row of Madeira embroidery, headed with Valenciennes lace: likewise the sleeves. No. 24 is intended for wearing under a low dress. The neck piece is richly ornamented with alternate rows of Valenciennes insertion and thickly worked embroidery, headed by a row of lace.

To wash Honiton Lace.—Roll it very smoothly and securely round a clean bottle previously covered with old white linen sewed tightly on. Tack each end of the lace with a needle and thread to keep it smooth, and be careful not to fold in any of the scollops or purl edges. After it is on the bottle take some of the best sweet oil, and with a clean sponge wet the lace thoroughly to the inmost folds. Have ready in a kettle a strong cold lather of clear water and white Castile soap. Fill the bottle with cold water to prevent its bursting, and stand it upright in the suds, with a string round the neck secured to the handle of the kettle to prevent its knocking about and breaking while over the fire. Let it boil in the suds for an hour or more, till the lace is clean and white all through. Drain off the suds, and dry it on the bottle in the sun. When dry, remove the lace from the bottle, fold and place it within a sheet of smooth white paper, and press it in a large book for a few days.

To wash Silk Stockings.—Cut some white soap in thin bits, and boil it in soft water; pour a little of this into cold soft water, and wash the stockings first with the inner side out: repeat the washing with fresh suds and water till they are quite clean; turn the right side out the last time of washing, and if the feet be still soiled rub a little of the boiled soap upon them, but not upon the legs. If the stockings are to be coloured, mix the dye with a little clean suds, and dip them in; draw them out smooth, and lay them upon a sheet on a bed, with the window open, and when nearly dry lay them upon a piece of flannel, and with another bit, rolled up, rub them hard and quickly one way till they are dry.

To wash Black Silk Stockings.—Black silk stockings will keep their colour if done in the following way: Heat some soft water, and while on the fire cut into it slices of yellow soap, so as to make a good lather. Wash the stockings in two such waters, adding to the first a wineglassful of gin. Then rinse the stockings well in lukewarm water, with plenty of salt in it, and dry them off quickly. While still rather damp, place them on a small linen sheet or large cloth, smooth them out quite flat, as when bought; then turn the sheet over them, and have them mangled. They ought never to be ironed, as the hot iron is sure to make them brown. Treat black cotton stockings exactly in the same way, but let them soak for half an hour in strong salt and water before drying them.

To waterproof Garments.—Dissolve ¼lb. of alum in 2 quarts of boiling water, and pour the solution into a vessel containing 2 gallons of cold spring water. 2ndly. Immerse the garment into this vessel, and let it remain twenty-four hours. 3rdly. Dissolve ¼lb. of the sugar of lead in 2 quarts of boiling water, and pour the solution into another vessel, containing 2 gallons of cold spring water. 4thly. Take the garment from the first vessel, gently wring or press it, and immerse it in the second vessel. 5thly. Let it remain six hours, gently wring it, and hang it in the shade to dry.

To remove Grease Spots out of Silk.—"Mix powdered French chalk with lavender water to the thickness of mustard. Put it on the stain, and rub it gently with the finger or palm of the hand. Put a sheet of clean blotting paper and brown paper over it, and smooth it with a warm iron." When dry the chalk must be removed, and the silk gently dusted with a white handkerchief. If a faint mark still remains a second application of French chalk and lavender water will generally remove it. If the wax has fallen thickly on the silk it will be better to remove it first very carefully with a penknife.

To clean a Riding-habit.—Put the habit into a pail of cold water (if at all dirty) immediately on returning home. It should be then rubbed lightly with the hands, and put into several clean pails of water, till the dirt is quite out; but never wrung, it spoils the cloth. When quite clean it must be hung on a line to dry; hanging on chair crumples the cloth, and when nearly dry put it rather near the kitchen fire. After this brush it. This method prevents the cloth from spotting. If the servant who brushes the habit is not able to do so immediately, it should be left in the pail of water till it is ready.

To clean Doeskin Gloves.—They must be washed and boiled in soap and water with a little soda, and without rinsing taken out of the soapy water and put on the grass to bleach in the sun, being sprinkled with water so as to keep them constantly wet. When the yellow stains have quite disappeared, the shop should be entirely washed out, and the gloves rinsed in cold water with a little blue, after which they should be dried in the sun, and if possible mangled, as that greatly improves the colour. Should the tops not be quite smooth after the mangling, an iron may be passed round them on the wrong side.

To clean Black Kid Boots.—Do nothing to kid boots for as long a time as possible after they are new, except to have the mud wiped off without delay with a damp sponge, and the boots rubbed with an old linen cloth or old silk handkerchief. When they become scratched and worn, and this is no longer sufficient, the best method is the following: Having cleaned off the mud with a damp flannel, let them dry, and then rub them well over with a small sponge steeped in ink; allow them again to dry, and, with another piece of sponge, rub them over with *salad* oil, which must afterwards be well rubbed in with a soft rag or silk handkerchief until the oil is absorbed into the kid. This will give them the appearance of new leather.

Jacket for Sick Person.—The "Nightingale Jacket" is very simple, and may be made as follows: Take two yards (or if for a very stout person two yards and a quarter may be required) of scarlet flannel of the usual width, or any other colour preferred; fold the length exactly in half, and cut it down about six inches. Bind the whole round, including the slit, with white or black sarsenet ribbon, black mohair braid, or as tartans are now so fashionable, royal Stuart braid would look well and stand washing. Now measure eight inches from the top of the slit and fold it back on each side like a sailor's collar; this is caught together at the top with a bow or rosette of ribbon to form the back of the neck, and also finished with the same at the end of the slit; the corners may be kept back with a fancy button. The two back corners of the flannel are also turned up six inches and fastened, to form a place to slip the hands through, the point of the turn back being finished with a rosette. Strings may be put to tie under the chin.

Dressing Jackets.—Little dressing jackets are very useful, and likewise round capes for dressing the hair in. Everybody should have a pretty bright coloured flannel jacket to wear in bed, in case of illness. A suitable trimming for these, as for dressing gowns, can be worked by tacking rather fine Penelope canvas where trimming is required, and working a simple pattern, like the Greek pattern, on it, through to the flannel, in coarse white boarshead crochet cotton, removing the threads of the canvas afterwards. The Nightingale wrappers are very suitable for this purpose, and are easily made. They consist of a couple of yards of coloured flannel, the ordinary width, split down about 4in. exactly in the middle, so that the pieces so split may be turned back like a sailor's collar, and are kept in their places by means of two loops and two buttons. It is bound all round with silk binding, and the two corners farthest from the front at both ends must have a loop about 4in. from the point on one side, and a button on the other, which, when fastened and the corner turned down, makes a cuff. When these are put over the shoulders, the middle which has been split down goes round the throat, and the hands slip through the corners, so that without the trouble of getting your hand into a sleeve, the arms are well covered, and the flannel folds comfortably over the chest.

Hair Wash.—1*d.* worth of oil of rosemary, 1*d.* worth of oil of lavender, 1*d.* worth of liquid ammonia, 1*d.* worth of salt of tartar, to be mixed in two quarts of soft water, bottled, and well corked. With a sponge wash the head well first, then wash the hair in the lotion. About a pint of the lotion is sufficient to wash the hair in—at any rate after the first time of using it. Do not use any water with the wash, or to the hair after. The hair soon dries. A little of the wash used to damp the hair at night, before crèpéing it, makes it bright and glossy in the morning. The best plan is to procure all the ingredients mixed in one small bottle at a chemist's, and add the water at home.

—— Take one ounce of borax, half an ounce of camphor, powder these ingredients finely, and dissolve them in a quart of boiling water; when cool, the solution will be ready for use. The camphor will form into lumps, but the water will be sufficiently impregnated. This wash cleanses and strengthens the hair, preserves the colour, and prevents early baldness. The hair must be damped with it frequently.

To clean Grebe.—The best way to clean grebe is to use warm soap and water and a sponge, wiping the way the feathers lie. This will be found to answer perfectly.

To wash Muslin Dresses.—The best means of preserving the bright colours of muslin dresses when washed, to look equal to new, is to simply soak each dress for twelve hours in a gallon of cold water in which one pennyworth of sugar of lead has been dissolved. The dress should be wrung out and dried by the fire. Wash it in a cold lather of soap and water, but do not put it in any soda or any other substance, and particularly not to rub any soap into or on the dress. Dry it indoors, as exposure to the air or sun would fade the colour. Thus treated, dresses wash again and again, without losing either their clearness or brilliancy of tint. The sugar of lead being poisonous, care should be taken that the hands are perfectly free from any scratch or cut before squeezing the dress out of the soaking water.

To remove Ink Stains, &c.—Ink stains can be removed out of woollen materials, carpets, table covers, &c., by applying milk, thus—with a rag or fine cloth gently sop up the ink, then have, according to the size of the stain, some milk in a bowl; gently touch the spot with the rag which has been thoroughly steeped in the milk, continue gently to wet the spot, then take a clean towel and wipe all over; if well done no stain will remain. To take ink out of linen or muslin, if still wet, put the stained place into the milk; if dry boil the milk and place the article in the milk while boiling. To take stains of fruit out of muslin, table serviettes, or pocket handkerchiefs, steep for twelve hours in fresh cold water, which should be in a large pan, or tub, or basin, according to the size of the article.

To clean white Jean Boots.—The easiest and best way is to clean them on the hand with soap and water and a nail-brush, brushing them well till quite clean, but not making them wetter than can be helped; rinse off the soap, and rub them with a clean cloth till partly dry; then put them in the open air, or at a reasonable distance from the fire.

To clean the Teeth.—Brush the teeth well every night before retiring to rest with common white soap. This simple remedy will keep the teeth a good colour.

Lip Salve.—White beeswax 1oz., oil of sweet almonds 2oz., spermaceti 1 drachm. Let the ingredients boil gently with one pennyworth of red alkanet root; strain and stir in with three pennyworth of friar's balsam.

To cure Warts.—Pare the hard and dried skin from their tops, and then touch them with the smallest drop of strong acetic acid, taking care that the acid does not run off the wart upon the neighbouring skin, for if it does it will occasion inflammation and much pain. If this practice be continued once or twice daily, with regularity, paring the surface of the wart occasionally when it gets hard and dry, the wart may be soon effectually cured.

Fancy Costume.—An extremely pretty fancy dress for a fair girl is "Undine, the spirit of the waters." The skirt should be full and short, and made of three or four petticoats of tulle or tarletan, spotted all over with good-sized clear white beads, to represent drops of water. The hair hanging and mixed with a wreath made of scarlet coral and seaweed, and the same across the body and hanging down one side of the skirt; bracelets and necklace made with tassels of clear glass beads, and the boots and gloves trimmed with the same.

Dress of the Breton Women.—The dress of the women varies a good deal, but generally consists of a close-fitting cloth bodice of some bright colour, with sleeves of a different hue, both turned up and ornamented with cloth of a third colour. A close cap or hood, sometimes violet, though often green, is the most common head-dress. To enter more into details—the dresses, so far as they possess any uniformity, consist of a very full skirt of dark cloth, and a wide apron with large pockets. The sleeve fits loosely to the arm, with turned-back cuffs and coloured edges; the bodice is cut very low, and open in front with a broad stripe of coloured embroidery or binding, and buttons only joined just at the waist, with a lacing of yellow cord. The chest is covered with a tight breastplate of cloth, also bound and embroidered. The different kinds of caps are endless. In many villages also the whole dress is of one colour; in others the sleeves, body, and breastplate are carefully contrasted. The form of the collar varies with the cap. "Can a maid forget her ornaments?" applies to Brittany. Nearly every Breton girl wears a silver or gold cross tied round her neck with black velvet. Some of the better class of the girls eligible for marriage have several black velvet ribbons with bead ends streaming from under their caps. We may here advert to a custom round Josselin which, if practised in English circles, would save a good deal of annoyance, and prevent much misunderstanding. It is this. The girls appear on *fête* days in red under petticoats with white or yellow borders; the number of these denotes the portion which the father is willing to give his daughter; each white band, representing silver, signifies a hundred francs of rent, and each yellow band means gold, and stands for a thousand francs per year. Yellow was originally worn by the women when in mourning. At present, however, many wear black like the English; but still frequently in Lower Brittany women follow the funeral trains of their husbands in caps dyed with saffron. Yellow stuffs have recently become rare in Brittany, and hence probably the change in the custom. Many of the old women wear a short bead chain with a ring at the end fastened to their left shoulder, through which ring they stick their distaffs when working.

Dress and Fashion early in the last Century.—A lady's riding-dress was advertised for sale in the *Spectator* of June 2, 1711, "of blue camblet well laced with silver; being a coat, waistcoat, petticoat, hat, and feather." Another, in 1712, mentions an Isabella-coloured kincob gown flowered with green and gold, a dark-coloured cloth (probably linen) gown and petticoat with two silver orrices, a purple and gold atlas gown, a scarlet and gold atlas petticoat edged with silver, a wrought under-petticoat edged with gold, a black velvet petticoat; allejah petticoat striped with green, gold, and white, a blue and silver silk gown and petticoat, a blue and gold atlas gown and petticoat, and clogs laced with silver. These were the property of Mr. Peter Paggen, of Love-lane, near Eastcheap, brewer, who fined for sheriff in 1712, and were probably the dresses of the females of his family. That they, or whoever wore such, were very gaudy, cannot be denied; but those rich coverings for the body were matched by the decorations of the head. If the hips had their scarlet, the seat of the understanding had its blue, yellow, pink, and green hoods. The *Spectator* says, "when Melesinda wraps her head in flame colour her heart is set upon execution." The majority of these fashions were doubtlessly from France, as the same work describes a Parisian doll imported by the milliners; a custom most religiously continued during the rare intervals of peace between the two countries. To the above list of finery pray let me add Mrs. Beale's loss in 1712. "A green silk knit waistcoat with gold and silver flowers all over it, and about 14yds. of gold and silver thick lace on it. And a petticoat of rich strong-flowered satin red and white, all in great flowers or leaves, and scarlet flowers with black specks brocaded in, raised high like velvet or shag." Surely if James I. had seen this waistcoat and petticoat he would have sadly abused his two subjects who wore them; they even set the stomachers of Queen Bess at defiance, except that they are deficient in jewellery. And in 1714 Mr. John Osheal had the misfortune to be robbed of "a scarlet cloth suit, laced with broad gold lace, lined and faced with blue; a fine cinnamon cloth suit with plate buttons, the waistcoat fringed with a silk fringe of the same colour, and a yellow-flowered satin morning gown, linen, with a cherry-coloured satin, with a pocket on the right side." The extreme richness of the habits of those days were accompanied by equal extravagance in the furniture of beds, advertised as stolen 1715, and thus described: "Four curtains of damask, a blue ground and changeable flowers, the curtains lined with white satin, having a mixed fringe. A white satin quilt to the said bed, embroidered; four flowered velvet curtains of a yellowish ash-colour, in a border of the same kind of flowered velvet of a musk-colour; the border trimmed with green lace with a stripe of red, lined with a striped India muslin." Those were the property of a lady resident in Bedford-row, whose name is not mentioned. Wigs maintained their ground in 1720; and white hair for the manufacture of them bore a monstrous price, if we may credit that that of a woman aged 70, of a very considerable length, produced 50*l.* after her death from a periwig maker. The man of fashion in 1720 wore the full-curled flowing wig, which fell in ringlets half-way down his arms and back; a neckcloth tied tight round his neck; a coat reaching to his ancles, laced, straight, formal, with buttons to the very bottom, and several on the pockets and sleeves; his shoes were square at the toes, had diminutive buckles, a monstrous flap on the instep, and high heels; a belt secured the coat, and supported the sword.—*Malcolm's Manners and Customs.*

THE EMPRESS TOILETTE.

THIS outdoor toilette is a happy combination of the two most fashionable materials, velvet and *faille*—the latter being that soft rich make of silk, without the sheen of satin or the glitter of *moire*. The front breadth is cut out in deep *dents* and bound with satin, a velvet being added beneath the *dents*; the side and back breadths terminate with a velvet flounce and *faille* box-plaited flounce, the skirt being cut short, scolloped out, and bound with satin. The velvet *casaque* is peculiarly rich and fashionable in style. It is trimmed with fine French lace and with black tassel-fringe above the lace. There is a pointed *panier* at the back, which is fastened up in the centre with a bow of alternate loops of *faille* and lace. A pelerine of lace falls over the shoulders, and the band that confines the *casaque* round the waist is *faille*. The lining to this handsome mantle is violet silk. White terry bonnet, ornamented with violet velvet and black lace.

THE MAINTENON COSTUME.

No. 1.

THIS skirt illustrates one of the novelties of the season. The train is composed of alternate gores of black velvet and *faille*. The front breadth terminates with a deep box-plaited flounce headed by velvet diamonds, edged on all sides with plaited *faille*; a band of velvet and a row of *faille* quillings terminate the flounce. The robings down the sides of the front are similarly ornamented with quillings. The black velvet *casaque* has a *panier* at the back, and the trimmings consist of rich Maltese lace headed with bands of black curled feathers. These are carried down the fronts, round the sleeves and *panier*, and also simulate a cape on the bodice. A Maintenon ruff is worn above the simulated cape. The ruff is made of fine Maltese lace, with clusters of velvet loops at intervals. Black velvet bonnet trimmed with lace; a coronet in front, and a feather arranged so as to fall over the chignon; black velvet strings, edged with Maltese lace. We have selected this and the *pendant* illustration from designs furnished by Messrs. Jay, of Regent-street.

The Housekeeper.

SEASONABLE MENUS.

JANUARY.

SOUPS :—Palestine soup—Mock turtle (thick).
FISH :—Turbot and lobster sauce—Fillets of soles.
ENTRÉES :—Curried lobster—Oyster patties—Cutlets and truffles.
REMOVES :—Roast beef—Boiled chickens and ham.
ENTREMETS :—Grouse—Snipe.
SWEETS :—Gold leaf jelly—Cream à la Royale—Gateau d'apricots—Finger pastry—Cheese straws.

SOUP :—Turtle soup (thick).
FISH :—Turbot—Fillets of whitings and Dutch sauce.
ENTRÉES :—Lobster cutlets—Veal patties—Sweetbreads.
REMOVES :—Roast turkey—Boiled chickens and tongue.
ENTREMETS :—Snipe—Grouse.
SWEETS :—Foies gras in aspice jelly—Plum Pudding—Clear jelly—Cream glacés—Trifle—Prawns.

SOUPS :—Mock turtle (thick)—Clear gravy soup.
FISH :—Turbot and lobster sauce.
ENTRÉES :—Vol au vent of oysters—Cutlets and tomato sauce—Stewed pigeons.
REMOVES :—Haunch of mutton—Roast capon.
ENTREMETS :—Snipe—Wild duck.
SWEETS :—Orange fritters—Vanilla cream—Swiss puddings—Iced Nesselrode.

FEBRUARY.

SOUPS :—Mock turtle—Soup à la Russe.
FISH :—Fried soles—Fillets of cod with oysters.
ENTRÉES :—Oyster patties—Lamb cutlets and French beans—Curried sweetbreads.
REMOVES :—Fore quarter of roast lamb—Boiled capon and tongue.
ENTREMETS :—Snipe—Woodcock.
SWEETS :—Pineapple cream—Glacé pastry—Punch jelly—Iced pudding—Prawns.

SOUPS :—Vermicelli—Calf's tail
FISH :—Turbot and lobster.
ENTRÉES :—Sweetbreads with cream sauce—Lamb cutlets with truffles.
REMOVES :—Stuffed turkey—Boiled chickens and tongue.
ENTREMETS :—Hare—Woodcocks.
SWEETS :—Plum pudding (rich)—Jelly with grapes—Cream à la Royale—Ice pudding.

MARCH.

SOUPS :—Clear asparagus—Ox tail.
FISH :—Salmon—Fillets of whiting.
ENTRÉES :—Lamb cutlets—Oyster patties—Sweetbreads and peas.
REMOVES :—Four quarter of lamb—Boiled turkey and ham.
ENTREMETS :—Snipes—Woodcocks.
SWEETS :—Pine apple cream—Californian jelly—Meringues with ice—Cheese straws—Prawns.

SOUPS :—Oyster soup—Mock turtle.
FISH :—Salmon—Fillets of soles.
ENTRÉES :—Curried lobster—Lamb cutlets and truffles—Pâté du fois gras.
REMOVES :—Capons—Roast lamb.
ENTREMETS :—Larded quail—Ducklings and peas.
SWEETS :—Orange fritters—Punch jelly—Trifle—Swiss puddings—Glacé—Prawns—Cheese straws.
ICES :—Strawberry cream—Lemon water.

APRIL.

SOUPS :—Spring soup—Ox tail.
FISH :—Salmon—Grey mullet.
ENTRÉES :—Curried lobster—Oyster patties—Lamb cutlets and peas.
REMOVES :—Ducklings and peas—Fore quarter of lamb.
ENTREMETS :—Turkey poult—Leverets and sweet sauce.
SWEETS :—Plum pudding—Vanilla cream—Clear jelly—Swiss pudding glacé—Cheese straws—Prawns.
ICES :—Pineapple cream—Cherry water.

MAY.

SOUPS :—Asparagus soup—Soup à la Reine.
FISH :—Salmon and lobster—Dory.
ENTRÉES :—Quinelles of chickens—Lobster cutlets—Cutlets and asparagus.
REMOVES :—Spring chickens—Haunch of mutton.
ENTREMETS :—Larded quail—Ducklings and peas.
SWEETS :—Ice pudding—Swiss puddings—Punch jelly—Pine cream.
ICES :—Cherry water—Strawberry cream.

JUNE.

SOUPS :—Calf's head soup—Spinach soup.
FISH :—Salmon—Trout and brown sauce.
ENTRÉES :—Sweetbreads and peas—Cutlets and truffles.
REMOVES :—Boiled chickens and tongue—Saddle of mutton.
ENTREMETS :—Turkey poult—Plovers.
SWEETS :—Cabinet pudding—Strawberry jelly—Ratafia baskets and cream.
ICES :—Strawberry cream—Lemon water—Pineapple water.

JULY.

SOUPS :—Chicken soup—Soup à la Jardinière.
FISH :—Trout—Salmon cutlets.
ENTRÉES :—Pâte de fois gras—Savoury omelette—Fillets of chickens.
REMOVES :—Boiled fowls—Roast lamb.
ENTREMETS :—Quail—Leverets.
SWEETS :—Apricot pudding—Gateau of fresh cherries—Ice pudding.
ICES :—Strawberry water—Lemon water—Pine cream.

AUGUST.

SOUPS :—Green pea soup—Soup Julienne.
FISH :—Salmon and Prawn sauce.
ENTRÉES :—Sweetbreads and truffles—Veal patties—Lobster vol au vent.
REMOVES :—Buck venison—Boiled chickens.
ENTREMETS :—Grouse—Leverets.
SWEETS :—Iced pudding—Grape jelly—Pine cream—Cabinet pudding.
ICES :—Neapolitan ice—Strawberry cream—Lemon water.

NOVEMBER.

SOUP :—Thick mock turtle and mulligatawney.
FISH :—Crimped cod and oyster sauce—Fillets of soles in port wine.
ENTRÉES:—Stewed pigeons and port wine sauce—Vol-au-vent of oysters.
REMOVES :—Saddle of mutton—Boiled chickens and tongue.
ENTREMETS :—Pheasants—Pâté de foie gras.
SWEETS :—Punch jelly—Orange fritters—Ratafia basket and cream.

SOUPS :—Turtle and clear turtle.
FISH :—Fillets of whitings and Dutch sauce—Red mullet à la Bordeaux.
ENTRÉES :—Sweetbreads à la Royale—Fillets of partridges and truffle sauce.
REMOVES :—Lark puddings and boiled chickens and tongue.
ENTREMETS :—Fois gras in aspice jelly—Prawns—Petit pains d'apricots—Meringues à la vanille—Iced puddings.

DECEMBER.

SOUPS :—Ox tail (thick) and soup Jullienne.
FISH :—Turbots and sprats.
ENTRÉES :—Sweetbreads—Lobster cutlets.
REMOVES :—Roast turkey and tongue—Saddle of mutton.
ENTREMETS :—Woodcock—Roast hare—Prawns.
SWEETS :—Californian jelly—Petits soufflées glacés—Meringues filled with clear cream.

SOUPS :—Mulligitawney and calf's tail soup.
FISH :—Cod and oysters—Red mullet à la Bordeaux.
REMOVES :—Boiled turkey, stuffed—Haunch of mutton and suet sauce.
ENTREMETS :—Pheasants—Hare.
SWEETS :—Iced pudding—Vanilla cream—Punch jelly—Prawns—Cheese rings.

HOUSEHOLD RECIPES.

To make Gingerbread.—Mix 2½lb. of flour with ½lb. of butter, the rind of a lemon grated with a bread grater being put into the flour, 4oz. of moist sugar, and ½oz. of pounded ginger; make this into a paste with ½lb. of warm treacle; lay it in cakes on a tin plate, and bake.

To make finger Gingerbread.—Mix 2lb. of flour with ½lb. of treacle, ¾oz. of carraways, 1oz. of ginger finely sifted, and ½lb. of butter. Roll this paste into the form of fingers, and, after a great deal of working and allowing it to rise, bake on a tin in a rather quick oven.

To make a Gingerbread Loaf.—2½lb. of flour, ½lb. of butter, 1oz. of ginger, four eggs, ½lb. of moist sugar, one dessert spoonful of carbonate of soda dissolved in a cup of water. Melt the butter on the treacle, then add the sugar, soda and eggs. Mix all together with the flour, and bake in a moderate oven two hours. *Another plan* is to mix the soda first with the flour, and then when the treacle, &c., are added a slight evolution of gas takes place, which makes the gingerbread light.

To make Puddings without Eggs.—*Plum Pudding:* 1lb. bread crumbs, ½lb. flour, a little salt, and one dessert spoonful of Yeatman's yeast powder, ½lb. moist sugar, half teaspoonful of mixed spices; mix these well together, then add ½lb. chopped suet, ¾lb. stoned raisins, ½lb. currants, 2oz. candied peel; slightly moisten the whole with a little milk, taking care not to make it too wet, or it will make the pudding heavy; boil for six hours. The above is also very good with ½lb. each of raisins, candied peel, and almonds chopped fine and moistened to the consistency of a thick batter, with treacle instead of milk (the suet may be omitted).—*Suet Pudding* is also very good without eggs, by using a teaspoonful of Yeatman's yeast powder, to each pound of flour mixed in while dry.—*Batter Pudding* can be made with flour, yeast powder, and milk added to make it of the proper consistency.—*Bakewell Pudding:* Line a dish with paste, and lay over it about 3oz. of any preserve, strawberry is especially good; mix together 6oz. of grated bread, 3oz. sugar, 3oz. butter, melted to a cream, the juice of a whole and rind of half a lemon. Lay this over the preserve, and bake twenty minutes in a moderate oven.

To make Cakes.—*A Bun Loaf*: Procure half a quartern of dough from the baker's, roll it out, and break into it 6oz. of butter; add ½lb. of moist sugar, two eggs, 2oz. of candied peel shred fine; beat all these ingredients up, let it stand half an hour to rise, and bake in a tin or in small loaves at pleasure. The dough may be made at home by thoroughly mixing with each pound of dry flour required a heaped-up teaspoonful of Yeatman's yeast powder and a little salt, pouring on gradually half a pint of cold water or milk, and quickly making the dough into the usual consistence.—*A Cake made with Baking Powder*: 1lb. of Sultanas, ¼lb. of moist sugar, 1lb. of flour, ¼lb. of butter rubbed into the flour, the same weight of candied peel, and two dessert-spoonfuls of baking powder: then add half a pint of new milk, lukewarm, and one egg. This cake must be put into the oven immediately.—*A useful Bun Loaf*: Take a quartern loaf of dough, and mix with it 1lb. butter, ½lb. sugar, 1lb. raisins, 1lb. currants, 4 eggs, 2oz. of orange peel, 2 nutmegs, ½oz. mixed spices, a few blanched almonds, and a few carraway seeds.—*A good Cake*: 1lb. flour, ½lb. currants, ½lb. sugar, ½lb. butter, 3 eggs, 1 gill of sweet milk, a teaspoonful of baking powder, and 25 drops of essence of lemon.

To make Plain Cakes.—¾lb. flour, ¼lb. brown sugar, ¼lb. dripping, ¼lb. currants, 2 teaspoonsful of baking powder, 1 egg, and nearly ½ pint of milk. The powder to be mixed with the flour and the milk when going into the oven.—*A Plain Cake for Children*: ½lb. flour, 7oz. brown sugar, 4oz. dripping, 4 teaspoonsful of baking powder, ½lb. currants, or 1oz. carraway seeds, ½ pint warm milk.

To make Mince Pies.—The mince meat for these pies should be prepared in the following way, and used when required, as it will keep for many months: 1lb. of undercut of sirloin of beef put in a jar, placed in hot water in a saucepan, and let it stew half an hour, then shred it very fine; 2½lb. of beef suet, minced fine, 2lb. of raisins chopped up small, the same weight of good cooking apples, and the same of currants well picked, washed and dried before the fire; 1½lb. of moist sugar, 1lb. of mixed candied peel, cut up very finely, the grated rind of two lemons, one nutmeg, a little cinnamon, half a teaspoonful of salt, half a pint of brandy, and half a pint of white wine. Mix all very thoroughly, and put in a stone jar, closely covered down. When the pies are wanted, line some small *pâté* pans with good puff paste, place a little of the mincemeat in each, cover it over with the light paste, and bake them in a nice quick oven.

To make Oat Cake.—Take a handful of oatmeal, and mix it with the smallest quantity of water, just sufficient to form it into a hard paste. Roll it out as thin as a sixpence, and bake on an iron bakestone over the fire. After it is baked, place it close before the fire for a few minutes to harden. The thinner it is, and the less water used in mixing it, the better. You must mix again for every cake.

To clear Gravy Soup.—Whisk the whites of two very fresh eggs with half a pint of water for ten minutes; then pour in very gently the four quarts of boiling stock or soup, whisking it all the time. Place the stewpan over the fire; skim it clear; and when on the point of boiling whisk it well together; then draw it to the side, and let it settle till the whites of the eggs become separated. Strain it through a fine cloth placed over a sieve, and it will be clear and good.

To make Mushroom Soup.—Take a good quantity of mushrooms, cut off the earthy end, and pick and wash them. Stew them with some butter, pepper, and salt in a little good stock till tender; take them out, and chop them up quite small; prepare a good stock as for any other soup, and add to it the mushrooms and the liquor they have been stewed in. Boil all together and serve. If white soup be desired, use the white button mushrooms, and a good veal stock, adding a spoonful of cream or a little milk, as the colour may require.

To preserve Peaches in Brandy.—Pick and wipe the fruit, and have ready a fourth of the weight of fine powdered sugar. Put the fruit into a jar with patent top, throw the sugar over it, and then cover the fruit with brandy, and tie a piece of linen over the top of the jar. Set the jar in a saucepan of water till the brandy be quite hot, but without boiling. Afterwards put the fruit in a jar, pour the brandy over it, and cover as in ordinary preserves.

To make Sparkling Grape Wine.—To a gallon of grapes put three quarts of water; bruise the fruit thoroughly, let it stand for a week without stirring, and then strain off the liquor; then add three pounds of powdered loaf sugar and cork up the vessel before fermentation has entirely ceased, as otherwise the wine will not sparkle; let it stand at least two months, then bottle it, but be sure to cork it well and to keep it in a dry cellar.

To ice Tarts.—Beat the white of an egg till stiff, and when your tart is half baked take it from the oven, brush it over with the egg, and sift white sugar (not very fine) thickly over it as you put it again into the oven to complete the baking process.

Custard Tart.—Cover a tart pan with puff paste; stew some apples very soft, then rub them through a sieve, sweeten them to taste, and put them in the paste; make a custard with half a pint of cream or good milk; set it on to boil with a laurel leaf, a bit of lemon peel, and an ounce and a half of loaf sugar; when it boils stir in the yolks of three eggs, stir till thick, and pour it over the apples. Beat the whites of ten eggs to a very stiff froth and spread it over the custard, sift fine sugar on to it, and bake in the oven for about twenty minutes. Marmalade or fruit tarts of any sort may be made in the same way.

To clean Alabaster.—The most effectual way of cleaning alabaster, however much neglected, is with a piece of flannel and warm soap and water; if after cleaning stains be detected, as is often the case, wash again with soap and water; then whitewash carefully the stained part, let it stand for about six hours, then rub off the whitewash with a damp sponge, and dry carefully.

To clean Ormolu.—Ormolu can be cleaned with soap and water, and ink stains removed with spirits of wine.

To clean Papier Mache.—The articles should be washed with a sponge and cold water, without soap, dredged with flour while damp, and polished with flannel.

To clean Vinegar Cruets.—Leave the bottle in soda and water all night, and the next morning cut up a potato into small pieces, put it into the bottle, and shake up well for some time. This is also a good method for cleaning and brightening water bottles.

To preserve Knives from Rust.—Rub the blades of the knives with a very small quantity of mercurial ointment, rolling up the handles in paper to prevent the ointment touching them, and it will be found that the knives will keep for months. It is also a very good way of preserving steel grates from rusting.

Dried Flowers.

In July of 1867 a group of flowers, that had been dried two years, and in which the colours were perfectly kept, was exhibited at the Horticultural Show, South Kensington. We are now enabled to give full directions both for drying and mounting the flowers.

First, we would mention a great mistake that is usually made by those who attempt the drying of flowers. In the many recipes that have been given for this purpose great weight and pressure seem to be considered as an essential part of the process. We do not hesitate to say that this is a great mistake, and *the* chief cause of failure. Common sense should tell us that if we wish to keep the colour in a flower we should not take all the pains we can to squeeze out the juices in which that colour resides. All our efforts, then, must be given to retain the colour by drying up the juices in the flower. *No more pressure must be used than will be required to keep the flower flat.*

Great care is requisite in gathering the flowers for drying. They must be free from all damp and dew. If it is possible, they should have had not less than seven or eight hours' sun upon them. Cut those only which have just arrived at the full perfection of their bloom; if at all past it, and beginning to fade, the drying process will fail to preserve their colour. Cut the flowers with a pair of sharp scissors. Do not hold them when cut in your hands, but throw them as they are gathered into a large handkerchief lightly, so that they may not press one upon another. If the petals of a flower are at all bruised or broken, it would be best to discard it at once, as the juice would escape through the injured part.

When you have gathered your flowers, take them from their foliage, leaving the stalk to each flower from one to two inches long; light a candle, and hold the flower stalks one by one in the flame until about a quarter of an inch is quite burnt—this prevents the juice from escaping. Some flowers of a very bright red, purple, or magenta hue, such as some of the cinerarias, pyrethrums, and those of a fleshy texture, such as the dielytra, require to have their stalks dipped, from ten to twenty minutes, in a weak solution of water and muriate of lime in crystals before burning; while very fleshy green leaves should have their stalks first put in a solution of saltpetre and water.

You must provide yourself with some blotting pads. The size sold for 4*d.* or 6*d.* per quire will be found most convenient; and several quires of thin white blotting paper, which may be procured in London at 10*s.* the ream. We will suppose we are going to dry scarlet geraniums, periwinkles, single magenta stocks, and laburnums, as they are some of the flowers most liable to change colour.

Take your blotting pad, raise the whole of the blotting paper from the cover on each side. For the geraniums, periwinkles, and stocks take each bloom out singly, and, having burned the stalks as directed, bore a number of holes in one of the thicknesses of blotting paper sufficiently large to admit the calyces of the flowers, and so far apart that, when the flowers are arranged, no one bloom shall touch another; pass the stalk and calyx of each flower through the pad, so that the petals of the flower shall rest flat upon the surface of the blotted paper, and no part of them be pressed against the calyx. Arrange each truss of laburnum (having passed its stalk through the pad) in such a manner that the blooms shall be distinct upon the paper; now lay the other thickness of blotting paper over the petals, and, holding the two pads together, turn them over on one of the covers. Gently press down the stalks and calyces, which will now be uppermost, and shut down the other cover upon them; tie round and round both opposite edges of the pad with cotton, taking care to make all the edges meet perfectly. Prepare as many pads as you require in this manner; then prop them up at about a yard's distance from a bright fire, or put them in a very gentle oven. When one side of the pad is so hot that you can just bear your hand upon it, turn the other side to the heat and repeat the process for an hour. Then open the pads, and examine the flowers; if they feel like smooth paper to the touch, they are sufficiently dried, but if they have still any *fleshy* feeling about them, the pads must be reclosed, and the exposure to heat continued; but after the hour they must be carefully watched, the pads being frequently unclosed for the purpose of examination, as a very little *too much* heat will cause the flowers to scorch and turn brown. Some flowers will, of course, take longer drying than others even of the same kind; so that it is impossible to lay down any exact rules as to the time required; but no flower will need more than three hours.

Great care must be taken in removing the flowers from the pad, as the process of drying renders them exceedingly brittle. The best method is gently to enlarge the holes on the side in which the stalks are, and having seen that the stalks and calyces are free, to take hold of the petals on the other side between a small ivory folder and one finger, and draw the flowers out; put them away immediately between sheets of white writing paper, taking care not to lay one flower over another. Remove the top sheet of blotting paper from each side before using the pad again.

Double flowers, such as stocks, small roses, narcissus, &c., must have layers of cotton wool or small pieces of blotting paper placed between the petals, after they have been arranged in the blotting pads, and before they are subjected to any heat or pressure. Calceolarias must have cotton wool or very fine sand very carefully put inside each flower, the flower being just sufficiently filled to retain its shape without any fear of its bursting. The fuchsia should have a part of its calyx passed through the paper, with a little cotton wool put between the flower and the surface of the paper, and also between the corolla and sepals, so as to keep the form of the flower as much as possible.

Blue flowers in general do not require heat; you may put them between sheets of plain white blotting paper, five or six sheets on each side, passing the stalks and calyces, as directed above, through holes made in one of the thicknesses, and subject them to just sufficient pressure to keep the flower from wrinkling. In the same manner ferns, white, and some variegated leaved plants, such as centaurea, begonias, and caladiums, may be treated. The fancy leaved geraniums require heat; but these, as well as other plants with variegated foliage produced by high cultivation, will often fail to repay the most careful treatment, as they are very apt to lose their distinctive markings under the drying process.

For mounting the flowers you require a sheet of white cardboard, a pair of scissors or a penknife, gum, and a small camel-hair pencil. The gum must be *very strong*, and prepared as follows: take 3oz. of gum arabic, pour upon it just sufficient hot water to dissolve it, then add a tablespoonful of spirits of wine.

The greatest care and patience is required in the manipulation of the flowers; they must be taken up between the blade of your penknife and one finger. It is well to arrange them first on the cardboard without fastening them, and having arrived at a satisfactory effect, to fix the arrangement in your own mind; then remove the flowers and proceed to build up your design, gumming the flowers one by one in the position you have assigned them. The smallest dab of gum in the middle of the back of the flower or leaf is sufficient to hold it in its place. A cardboard mount, round or oval, must now be placed on the cardboard on which the group is fixed, and the whole covered with a sheet of glass, and fastened together round the edges so as to exclude the air.

These groups may be framed as pictures, or mounted as fire-screens and table tops. If hung up as a picture, it must be on a wall looking north; and, however they are used, care must be taken that the sun's rays shall not rest upon them. They must also be kept free from damp.

To preserve Everlasting Flowers.—Pick the blossoms some three days before they are full blown, tie them in bunches, and hang them up in a shady but very dry room; the colour is then effectually preserved.

To remove Mildew from Linen.—Mix soft soap with starch powder, half as much salt, and the juice of a lemon; lay it on the part on both sides with a painter's brush. Let it lie on the grass day and night until the stain comes out.

Washing Flannel.—Flannel for gentlemen's shirts should always be shrunk before making it up, by soaking it first in cold, then in hot water. White soap should be used in the ordinary washing, and lukewarm water; it should be quickly done, and the flannel wrung immediately.

To prevent Loss of Hair.—Wash the head and hair well with soap and hot water, and afterwards rinse well in cold water. Use an infusion of the young shoots of the box-tree. Take a handful of them, cut them up, and pour enough boiling water over them to cover them; when it cools, pour the liquid into a bottle through muslin, to get rid of the leaves. It is better not to make much at a time, as in a fortnight the smell becomes disagreeable.

The Queen and Royal Family.

THE QUEEN.—VICTORIA, of the United Kingdom of Great Britain and Ireland, &c., Queen, Defender of the Faith. Her Majesty was born at Kensington Palace, May 24, 1819; succeeded to the throne June 20, 1837, on the death of her uncle King William IV.; was crowned June 28, 1838; and married Feb. 10, 1840 to his Royal Highness Prince Albert. Her Majesty is the only child of his late Royal Highness Edward, Duke of Kent, son of King George III. The children of Her Majesty are:—

Her Royal Highness Victoria Adelaide Mary Louisa, PRINCESS ROYAL OF ENGLAND AND PRUSSIA, born Nov. 21, 1840, and married to his Royal Highness William of Prussia, Jan. 25, 1858, and has had issue, Frederick William Victor Albert, born Jan. 27, 1859; Victoria Elizabeth Augusta Charlotte, born July 24, 1860; Albert Wilhelm Heinrich, born Aug. 14, 1862 (dead); Frederica Wilhelmina Amelia Victoria, born April 12, 1866; Joachim Frederick Ernest Waldemar, born Feb. 10, 1868; and Sophia Dorothea Ulrike Alice, born 1870.

His Royal Highness Albert Edward, PRINCE OF WALES, born Nov. 9, 1841; married, March 10, 1863, Alexandra of Denmark (Princess of Wales), born Dec. 1, 1844, and has issue, Prince Albert Victor, born Jan. 8, 1864; George Frederick Ernest Albert, born June 3, 1865; Louisa Victoria Alexandra Dagmar, born Feb. 20, 1867; Victoria Alexandra Olga Mary, born July 6, 1868; and Maude Charlotte Mary Victoria, born Nov. 26, 1869.

Her Royal Highness Alice Maude Mary, born April 25, 1843; married to H.R.H. Prince Frederick Louis of Hesse, July 1, 1862, and has issue two daughters and a son.

His Royal Highness Alfred Ernest Albert, born Aug. 6, 1844.

Her Royal Highness Helena Augusta Victoria, born May 25, 1846; married to his Royal Highness Prince Frederick Christian Charles Augustus of Schleswig-Holstein-Sonderburg-Augustenburg, July 5, 1866, and has issue two sons and a daughter.

Her Royal Highness Louisa Carolina Alberta, born March 18, 1848.

His Royal Highness Arthur William Patrick Albert, born May 1, 1850.

His Royal Highness Leopold George Duncan Albert, born April 7, 1853.

Her Royal Highness Beatrice Mary Victoria Feodore, born April 14, 1857.

George Frederick William Charles, K.G., DUKE OF CAMBRIDGE, cousin to Her Majesty, born, March 26, 1819. Augusta Wilhelmina Louisa, DUCHESS OF CAMBRIDGE, neice of the Landgrave of Hesse and aunt to Her Majesty, born July 25, 1795; married in 1819, the late Duke of Cambridge. George Frederick Alexander Charles Ernest Augustus, K.G., DUKE OF CUMBERLAND, cousin to Her Majesty, born May 27, 1819, married Princess Frederica of Mecklenburg-Strelitz, and has issue a son and two daughters. Augusta Caroline Charlotte Elizabeth Mary Sophia Louisa, daughter of the late Duke of Cambridge and cousin to Her Majesty, born July 19, 1822, married, June 28, 1843, to Frederick, Grand Duke of Mecklenburg-Strelitz, and has issue a son. Mary Adelaide Wilhelmina Elizabeth, daughter of the late Duke of Cambridge and cousin to Her Majesty, born Nov. 27, 1833, married Prince Teck, June 7, 1866, has issue a son and daughter.

Postal Guide.

COLONIAL AND FOREIGN MAILS.

Australia.—Mails to these colonies are dispatched every fourth Friday viâ Marseilles, and every fourth Saturday viâ Southampton.

Cape of Good Hope.—Mails are forwarded to the Cape of Good Hope by direct packet on the 25th of each month, as well as on the 10th.

Ceylon.—Mails to Ceylon are now dispatched every alternate Friday viâ Marseilles, and every alternate Saturday viâ Southampton.

China and Japan.—Mails for China and Japan are now dispatched every alternate Friday viâ Marseilles, and every alternate Saturday viâ Southampton.

Honduras.—The postage of all letters addressed to Honduras is 1s per half ounce.

India.—Mails to India are now dispatched every Friday viâ Marseilles, and every Saturday morning viâ Southampton. The postage of letters to India and Ceylon per half ounce is 9*d.* when sent viâ Southampton, and 1s. 1*d.* when sent viâ Marseilles. The scale advances by half ounces instead of by ounces.

Malta. The packets between Marseilles and Alexandria have ceased to call at Malta, and mails are consequently no longer sent to Malta viâ Marseilles; but in lieu thereof a mail is dispatched to Malta every Tuesday viâ Messina. The mail viâ Southampton is now dispatched every Saturday.

Mauritius.—The English contract for the conveyance of mails to and from Mauritius viâ Galle has terminated, and mails to and from Mauritius are sent only by French packet. No correspondence for the Cape of Good Hope is now sent by this route.

United States of America.—Letters 6 cents per single rate of 15 grammes (one half-ounce) in the United States, and 1 3*d.* (6 cents in the United Kingdom; prepayment optional. A fine will, however, be levied and collected in addition to the deficient postage on each unpaid, or insufficiently prepaid, letter received by one country from the other. Newspapers, 2 cents each in the United States, and 1*d.* each in the United Kingdom, if not exceeding 4oz. in weight. Book-packets, including printed papers of all kinds, &c., and patterns and samples of merchandise, including seeds and grain, when not exceeding 1oz. in weight, 2 cents in the United States, and 1*d.* in the United Kingdom.

INLAND.

RATES OF POSTAGE FROM ALL PARTS OF THE UNITED KINGDOM, THE CHANNEL ISLANDS, AND THE ISLE OF MAN.

Letters under ½ oz., prepaid	1*d.*
„ „ 1 oz. „	2*d.*
„ „ 1½ oz. „	3*d.*
„ „ 2 oz. „	4*d.*
„ „ 2½ oz. „	5*d.*

and so on, at the rate of 1*d.* for every additional half-ounce or fraction of half an ounce. No limit exists to the weight of paid letters, but no inland letter must exceed 2ft. in length or 1ft. in breadth or depth. All inland letters must be prepaid in stamps, except letters posted at St. Martin's-le-Grand before five p.m. daily by one individual or firm collectively, postage of which amounts to 2*l.* or upwards.

MONEY ORDERS, AMOUNT AND FEES.

Orders upon any post town can be obtained for 3*d.* for 2*l.*, or any sum under; and for 5*l.* and under, 6*d.*; for 7*l.* and under, 9*d.*; and for 10*l.* and under, 1*s.*

LETTERS "TO BE CALLED FOR."

The Poste Restante being intended solely for the accommodation of strangers and travellers who have no permanent abode in London, letters for residents in London must not be addressed "Post Office till called for." Letters addressed to "Initials" or "Fictitious Names" at the Poste Restante, or any district or branch office, are returned to the writers. Letters may not be redirected from a private address to the Poste Restante.

Letters for strangers are delivered from the Poste Restante, at the General Post Office, and at the Charing-cross Branch Post Office, for a period of two months; after which period they must be addressed to the place of residence, in order that they may be sent by the letter-carriers. Letters for known residents in London, addressed to the "Poste Restante," either at the General Post Office or at the Charing-cross Branch Post Office, are delivered there for one week only, after which they are sent out by the letter-carrier to the applicant's place of residence.

Letters addressed Post Office," "London" or "Poste Restante, London." are delivered only at the Poste Restante Office, General Post Office, St. Martin's-le-Grand, between the hours of 9 a.m. and 5 p.m.; and such letters as are addressed "Poste Restante, Charing-cross," will be delivered to strangers at the Charing-cross Branch Office, subject to the same regulations as those in force with regard to letters for the Poste Restante, St. Martin's-le-Grand. No letters are permitted to be addressed "to be called for" at the other district or branch offices; any so directed will be sent to the Post Restante, Charing-cross, from offices in the western districts of London—viz., the W., S.W., W.C., and N.W. districts; and to the Poste Restante, St. Martin's-le-Grand, from the offices in the other districts.

All persons applying for letters at the Poste Restante must be prepared to give the necessary particulars to the clerk on duty, in order to prevent mistakes, and to insure the delivery of the letters to the persons to whom they properly belong.

THE HALFPENNY POSTAGE IN THE UNITED KINGDOM.

Any publication coming within the following description shall, for the purposes of this Act, be deemed a newspaper: that is to say, any publication consisting wholly or in great part of political or other news, or of articles relating thereto, or to other current topics, with or without advertisements, subject to these conditions:—

That it shall be printed and published in the United Kingdom; that it shall be published in numbers at intervals of not more than seven days; that it be printed on a sheet or sheets unstitched; that it have the title and date of publication printed at the top of every page.

And the following shall, for the purposes of this Act, be deemed a supplement to a newspaper: that is to say, a publication consisting wholly or in great part of matter like that of a newspaper or of advertisements, printed on a sheet or sheets, or a piece or pieces of paper, unstitched, with a leaf or leaves of the same form and size as the leaf or leaves of a newspaper to which it is a supplement, and published with the newspaper, and having the title and date of publication of the newspaper printed at the top of every page, or at the top of every sheet or side on which any such engraving, print, or lithograph appears.

The proprietor or printer of any newspaper within the description aforesaid may register it at the General Post Office in London at such time in each year and in such form and with such particulars as the Postmaster-General from time to time directs, paying on each registration such fee not exceeding five shillings, as the Postmaster-General, with the approval of the Treasury, from time to time directs.

Registered newspapers, book packets, pattern or sample packets, and post cards, may be sent by post between places in the United Kingdom, at the following rates of postage:—

On a registered newspaper, with or without supplement or supplements	One halfpenny.
On each registered newspaper in a packet of two or more, with or without a supplement or supplements	One halfpenny.
On a book packet, or pattern or sample packet:—If not exceeding two ounces in weight	One halfpenny.
If exceeding two ounces in weight, for the first two ounces and for every additional two ounces or fractional part of two ounces...	One halfpenny.
On a post-card	One halfpenny.

Provided that a packet of two or more registered newspapers, with or without a supplement or supplements, shall not be liable under this section to a higher rate of postage than the rate chargeable on a book packet of the same weight.

If a question arises whether any publication, not being a registered newspaper, is a newspaper or supplement, or whether any packet is a book packet or pattern or sample packet, within this Act or any Treasury warrant or Post Office regulations, the decision thereon of the Postmaster-General shall be final, save that the Treasury may, if they think fit, on the application of any person interested, reverse or modify the decision, and order accordingly.

If any registered or other newspaper, supplement, publication, book packet, pattern or sample packet, or post card, is sent by post otherwise than in conformity with this Act or any Treasury warrant or Post-office regulations, it shall be either returned to the sender thereof or forwarded to its destination, in either case charged with such rate of postage not exceeding the letter-rate of postage, or without any additional charge, as the Postmaster-General, with the approval of the Treasury from time to time directs, having been, if necessary, detained and opened in the Post Office.

The public are prohibited from using an embossed or impressed stamp separated from a cover or card, although such stamp has not been before sent by post.

The Imperial Gallon is the legal standard measure both for dry goods and liquids. It contains 277·274 cubic inches of distilled water when the barometer stands at 30 inches and thermometer at 62°. Under the same conditions an Imperial Gallon of water weighs 10 avoirdupois pounds, or 70,000 grains. A cubic inch of water weighs 252,458 grains. A cubic inch of air weighs 0·310 grains.

Avoirdupois Weight.

	Cwts.	Qrs.	Pounds.	Ounces.	Drachms.
Ounce (437½ grains)	...	...	...	...	16
Pound (7000 grains)	...	...	...	16	256

Our Portraits.

H.R.H. the Princess of Wales and Family.

(See page 1.)

On the 10th of March, 1863, H.R.H. the Princess Alexandra of Denmark was married to the heir apparent of our beloved Queen—Albert Edward, Prince of Wales; and since that time, by her charm of manner and sweet disposition, she has gained the love of the whole nation. H.R.H. has five children. Prince Albert Victor Christian Edward was born Jan. 8th, 1864; Prince George Frederick Ernest Albert, on June 3rd, 1865; Princess Louise Victoria Alexandra Dagmar, on Feb. 20th, 1867; Princess Victoria Alexandra Olga Marie, on July 6th, 1868; and the Princess Maude Charlotte Mary Victoria, on Nov. 26th, 1869.

The Princess Louise.

(See page 4.)

H.R.H. Princess Louise Caroline Alberta is the fourth daughter of the Queen, and was born at Buckingham Palace on the 18th of May, 1848. She is of course as accomplished as assiduous and well-directed culture can render her, and has developed decided artistic tendencies towards drawing, painting, and sculpture. The bust of the Queen in the Royal Academy Exhibition of 1870 possessed real merits of execution and verisimilitude; and some interesting specimens of the Princess's work are now exhibited at the collection of pictures and sculpture in Bond-street destined to aid the funds for the relief of destitute widows and orphans of German soldiers. Mrs. Thorneycroft has had the honour of instructing the Princess in the arts of modelling and sculpture. Her Royal Highness has also decided literary tastes, and is so assiduous a reader as to deserve the name of a student. The Princess has been for some years the closest companion of the Queen, her mother, and is greatly beloved by every member of the royal family, whilst her sweetness of disposition endears her to everyone within the sphere of her influence. A graceful act of appreciative kindness was performed by the Princess, in connection with her position as one of the lady patronesses of the National Society for the Aid of the Sick and Wounded. To each of the surgeons proceeding under the auspices of the society to the hospitals of France and Belgium she presented, in some instances personally, a handsome pocket case, ornamented with her monogram and escutcheon, containing the instruments required for the practice of military surgery. The interesting personal appearance of Her Royal Highness is well known to the English public generally; to those who have not had the pleasure of seeing that kindly and gracious face, we offer as good a likeness as it has been in our power to obtain.

It will be remembered that on several recent occasions of State ceremony the Princess Louise has officiated for the Queen, and has always called forth remark for a combination of dignity and kindly graciousness, rightly considered to be the perfection of royal reception. Although royal marriages are by no means of unfrequent occurrence in England, the betrothal of the Princess Louise to the Marquis of Lorn excited a remarkable amount of interest and sympathy. This was due to two causes—the personal popularity of the Princess Louise, and the unusual and somewhat romantic circumstance of a Princess of the Blood forming a matrimonial alliance with a commoner. We must go a long way back in English history to discover a precedent for the alliance which is now sanctioned between such a subject, however ennobled or renowned, and such a bride. Princes have again and again broken through the bar of birth; but Princesses have been instinctively obedient to family law, and we do not find an instance of a daughter of a living crowned head marrying a subject since the reign of Edward III., five centuries since. It is impossible not to admire the courage of Her Majesty in putting aside precedents which were thus enforced by some of her predecessors, without any consideration for the feelings of those immediately affected by them. The Queen has preferred the happiness of her daughter to a pedantic adherence to traditional principles of State policy, which were always at variance with popular feeling, and have now ceased to be supported by any weight of reason.

The Marquis of Lorn.

(See page 5.)

John George Edward Henry Douglas Sutherland, Marquis of Lorn, M.P. for the county of Argyll, the affianced bridegroom of H.R.H. the Princess Louise, is the eldest son of the Duke of Argyll. He was born in 1845, educated at Eton and Trinity College, Cambridge, and was appointed a captain in the London Scottish Volunteers in 1866, and to the same rank in the Sutherlandshire Rifles in 1869. In connection with these appointments it may be stated that he is a zealous supporter of the volunteer force, is a practised marksman with the rifle, and has shot with success in the University v. Houses of Lords and Commons matches at Wimbledon. In person he is handsome, although very youthful in appearance; he has an agreeable ease of manner, and an expression of great good nature and kindliness, and would generally attract favourable remark even from persons unacquainted with him. Those who are of his intimates are aware that he is also gifted with considerable abilities, and that, comparatively young as he is, he has given evidence of industry and of capacity for that description of work which is assigned to young men of his status. He has acted since 1868 as private secretary to the Duke of Argyll, his father, Secretary of State for India; and at one time, when his grace was occupied in the preparation of an important legislative measure, Lord Lorn undertook and carried on with assiduity and success an amount of business not usually within the sphere nor the ordinary capacity of a private secretary. In Parliament he has distinguished himself by a conscientious independence, which has at least once led him to vote against the Ministry of which his father is an eminent member. That he is influenced by the spirit of adventure which is characteristic of the greater number of manly young Englishmen has been shown by the extent of his travels, notably in the United States of America. The book he published on his return, entitled "A Trip to the Tropics," is a very creditable production. It is really remarkable for the impartiality and clearness of the opinions expressed in it concerning the working of the republican institutions of America, when the extreme youth and aristocratic education of the writer are taken into consideration. Although the Marquis of Lorn has not as yet been prominent as a speaker in the House of Commons, he has been heard in other places, and appeared ready and fluent, without a trace of the awkwardness and hesitation of a comparatively unpractised orator. In the circle in which he moves he has acquired unusual esteem and affection, and promises to inherit with the high rank the equally high character of the Duke of Argyll. If personal virtues can maintain old traditions, the head of the Campbells may be regarded in the Western Highlands for some generations to come as almost equal in authority to the sovereign.

The marriage of the Princess Louise and the Marquis of Lorn is, we are informed, fixed to take place in February next.

The Archbishop of Syra and Tenos.

(See page 8.)

The Archbishop of Syra and Tenos takes his title from two islands of the Cyclades group in the Ægean sea, under the dominion of Greece. Syra, the ancient Scyros, lies not far from Delos, and almost in the centre of the Archipelago. It is only five leagues in length; but it has a classical reputation of ancient date, for there, according to the fable, Achilles was educated and espoused Deidamia, the daughter of Lycomedes, the king of the little island. Apollo was its patron divinity, and the fountain where the nymphs used to hold their assemblies, under his auspices, flows with as much life and freshness as of yore. The island is an important member of the Greek dominion. Although its population is fewer than 30,000, most of the foreign powers are represented at it; and its trade is active and extensive. Its bazaars are spread with the produce and manufactures of divers nations, and the flags of ships from many lands wave in its beautiful harbours. Syra, the capital, was built by the Venetians, and stands like an amphitheatre upon the rocky coast, near the ancient Hermopolis, on the east side of the island. The harbour of Syra is good, and modern energy has supplied it with a breakwater and a lighthouse. The island is visited by a regular service of steamboats, by means of which it can be easily reached from Athens, Smyrna, Constantinople, the Dardanelles, Malta, Alexandria, Naples, Marseilles, &c. Near the northern extremity of the island there is a peak which rises 4000ft. above the sea level. The population of the city of Syra is said to be about 15,000.

Tenos, the other portion of the archiepiscopal province, is also an island, lying to the north-east of Syra, and, although larger, of less relative importance. The name is sometimes written Tino, and Tinos, but the ancient Greeks called it Tenos. The island is not far from Andros. Aristotle calls the place Hydrussa, because of its abundant supply of water, and it is also called Ophiussa. The name of Tenos is ascribed to some mythical personage so called. The ancients said that the water of one of its springs could not be mixed with wine, but unfortunately no such virtue is possessed by it at this day. The population is less than 30,000, but it is capable of supporting a much larger number, as its natural resources are considerable. Its white and red wines are famous, especially its *malvoisie*, which is said to be the finest grown. Its marbles are also celebrated, chiefly the *parkino*, an alabaster white with blue veins, and beautiful green varieties. One reason why the population is not larger is said to be that the people constantly emigrate to the mainland. The principal place is San Nicolo or Tenos, on the south side of the island, rising gradually out of the sea, from which its effect is charming. Some remains of antiquity, romantic scenery, a lovely climate, and an abundant soil might reconcile even an archbishop to the narrow limits of such a home.

During his sojourn among us, the Archbishop of Syra and Tenos, who is a very favourable specimen of the higher Greek clergy, has been a sharer of hospitalities of no common order. The clergy, from the archbishops downwards, have vied in their efforts to do him honour; and from York to Canterbury he has been received as an apostle. The distinguished members of his own communion have paid him great respect, but our English Church has done what no other Church is likely to do—it has given him the highest honours which our Universities have to confer.

The Dean of Westminster.

(See page 9.)

The Very Rev. Arthur Penrhyn Stanley, D.D., is not only one of our most accomplished and best known divines, but one of the most highly esteemed and popular of our writers and preachers. His personal character has endeared him to a large circle of persons of most widely divergent shades of political and religious opinion, and his zealous endeavours to promote the general material, intellectual, and spiritual interests of the

community have rendered him one of our most influential men. His own breadth of view and largeness of heart are shown in his genial recognition of what he believes to be true and good wherever he finds it, and however it may be in proximity with errors of faith and worship. It is therefore not to be wondered at if he holds that there is some ground common to himself with humanity at large, and upon which he can meet on friendly terms with the Jew and the Mahommedan, and even with members of the Brahmo Somaj, as well as with Roman Catholics and Dissenters. That he has boldly, though unostentatiously, acted up to this principle is matter of publicity, and that his example has done something towards making other men of our day more liberal and generous is not to be doubted.

Dean Stanley is the son of the late Bishop Stanley, of Norwich; and it may be due to his experience amid episcopal cares that he has so consistently illustrated the famous dictum of *Nolo episcopari* (I am unwilling to be a bishop), for everybody believes that he could have long ago held a crosier and worn a mitre if he had wanted them. The date of his birth is to be placed about fifty-five years back. He was one of the pupils of Rugby School during the presidency of the eminent Dr. Arnold. From Rugby he went to Oxford, where he obtained a scholarship in Balliol College, and won the Newdegate prize for an English poem entitled "The Gipsies." He has always cherished a liking for poetry, and his elegant poetic tastes appear not only in his graceful prose, but in occasional verse, examples of which have quite recently been given by him to the world. Dr. Stanley took a first class in classics in 1837, in 1839 he gained the prize for the Latin essay, and in 1840 he secured the theological prize and the prize for the English essay. For a number of years he remained tutor of his college and examiner, and he has always borne a good reputation for his attainments in Greek and Hebrew as well as in Latin. In 1845-6 he was select preacher, and he was also appointed secretary of the Oxford University Commission. From 1851 to 1853 he was canon of Canterbury; from 1858 to 1864 he was Regius Professor of Ecclesiastical History at Oxford, chaplain to the Bishop of London, and canon of Christ Church. In 1864 he succeeded to the deanery of Westminster, in the place of Dr. Trench, now Archbishop of Dublin. Since his elevation to the deanery Dr. Stanley has won the best of opinions by his efforts to introduce improvements in the glorious old Abbey and into its official arrangements. Many occurrences which have happened in the Abbey and its precincts during the last five or six years will be remembered as evidences of the liberality and good taste of the Dean.

In 1852-3 Dr. Stanley, in company with three friends, carried out a long-cherished wish to visit the scenes of sacred history in Egypt, Arabia, and Syria. On his tour he used his eyes and judgment, and made his notes; but when he returned, instead of adding one to the long list of unread narratives, he produced a book which is the most charming and one of the most valuable of its class ever written—his "Sinai and Palestine." This work has gone through many editions, and exemplifies in various ways the writer's versatility of genius, variety of learning, and earnest faith. Most of his other works more or less exemplify the same qualities. In 1861 Dr. Stanley accompanied the Prince of Wales on his tour to the East, in the course of which the memorable inspection of the sepulchres of the Patriarchs at Hebron, and other curious and important occurrences, took place. After his return he published a volume of sermons preached in the East, with some valuable additions. We cannot enumerate all the publications of the Dean of Westminster, but the following must not be omitted: "Historical Memorials of Canterbury," published in 1854; "Lectures on the Study of Ecclesiastical History;" "Lectures on the History of the Jewish Church," two volumes of which have made their appearance; "Lectures on the Eastern Church;" numerous contributions to Smith's Dictionaries and other publications, and various theological discourses. Nor must we fail to refer to his work on the history of Westminster Abbey, or "Historical Memorials of Westminster Abbey." His latest acts of a more public character will tend to make his popularity even more universal and enduring: we refer to the ready and Christian liberality which offered the remains of Charles Dickens a final resting place in Westminster Abbey; and to his admirable funeral discourse over the great English novelist, whose decease has covered us with sorrow and surprise. It is needless to say more of Dean Stanley than is said of the good man in Biblical history, that "his works praise him," and that his name is held in honour, as his memory shall be blessed.

The Late Charles Dickens.

(See page 12)

NEVER, perhaps, has the loss of a great writer been so felt as a personal bereavement by millions, as that of Charles Dickens. The author had been so identified with the many works whose genial heartiness had delighted us—his very mannerisms revealing the kindliness and sunny charity of his nature—that the love we felt for his creations we involuntarily transferred to himself. If there are authors who, as it were, live apart from their works, letting their *dramatis personæ* evolve themselves according to their own law, cold chroniclers of that in which they have no concern, it was not thus with Dickens. The stamp of the man was upon all he did—but withal of a man so rich, so observant, so full of healthy sympathy with human nature, and such a power of enjoyment and making us sharers with himself, that to have missed the presence of the workman from his productions would have been at once to lessen their value and our own pleasure in them.

Born at Portsmouth on the 7th of February, 1812, Charles Dickens had only reached his fifty-ninth year. His father, who had been in the Pay Department of the Navy, had retired on his pension at the close of the war, and came to London the same year as a Parliamentary reporter for a daily paper. Charles himself was educated at Chatham, and afterwards at a college near Rochester, the recollections of which quaint old cathedral town so often reappeared in the writings of his maturer years, and near which, at Gad's Hill, famous already in Shakespeare, when a successful man he took up his residence. He was articled to a solicitor, but, though it does not appear that "he penned a stanza when he should engross," the old revolt of literature against law was renewed in his mind, and he left the office to take up his father's profession of reporting.

It was about the year 1834-5 that Mr. Dickens made his *début* as an author, in the pages of the *Old Monthly Magazine*. He sent in the first instance his contributions to that periodical anonymously. "They consisted of sketches, chiefly of a humorous character, and were simply signed 'Boz.' For a long time they did not attract any special attention, but were generally spoken of in newspaper notices of the magazine as 'clever,' 'graphic,' &c." Other sketches by "Boz" also appeared in *Bell's Life* and the *Morning Chronicle*. That the sketches had not yet stamped the rank of their author may be inferred from the fact that at the very time (early in 1836), when he was engaged with Messrs. Chapman and Hall to write a monthly serial, which was no other than the "Pickwick Papers," "Boz" demanded for a proposed continuance of his sketches in the *Monthly Magazine* only the modest remuneration of half-a-guinea a page; while for "Pickwick" itself, it is said, his reward was to be just fifteen pounds fifteen per number. The monetary value of his pen was to be something different in six months. With the "Pickwick Papers," and especially with the introduction into that work of Mr. Pickwick's faithful henchman, Sam Weller, Dickens began to be famous. Costermongers' barrows and baked potato-cans were ornamented with the portraits of Sam and his master, the latter in his never-to-be-forgotten smalls and gaiters; and that the disinterested tribute of piracy to success might not be lacking, a "Penny Boz" brought out a "Penny Pickwick."

In 1837 he published in *Bentley's Miscellany*—a new publication of which he was the first editor—the opening chapters of "Oliver Twist," which was illustrated by George Cruikshank, who also contributed etchings to a collected edition of the "Sketches by Boz;" the "Pickwick Papers" and almost all Mr. Dickens's other works having been accompanied by the designs of Mr. Hablot Browne ("Phiz"). In "Oliver Twist" the author showed that his aim was of something more than a "humorous character," and in Noah Claypole and Mr. Bumble, the Artful Dodger and Charley Bates, Fagin, Bill Sykes, and poor Nancy, he displayed that power of characterisation which has since filled so large a gallery. Here also was exhibited that philanthropic tendency which marked many of his later works—a tendency still more direct and definite in his next work, "Nicholas Nickleby," where, in Dotheboys Hall and Wackford Squeers, he exposed the evils of a certain class of country schools with unsparing severity. Encouraged by the popularity which he had earned on the conclusion of "Nicholas Nickleby" Mr. Dickens determined on a new venture. Abandoning the form of a monthly serial, he started a weekly periodical, called "Master Humphrey's Clock," in which his two stories of "The Old Curiosity Shop" and "Barnaby Rudge" ran their course—the latter a tale of the Gordon Riots of 1780. With "Barnaby Rudge" the issue of "Master Humphrey's Clock" came to an end. In 1842 Mr. Dickens visited America, and on his return published his "American Notes for General Circulation," a work which gave considerable offence to our very susceptible Transatlantic cousins, and in some of its chapters was as damnatory to the then "domestic institution" as Mrs. Stowe herself could have been.

With 1843 came the first of the famous Christmas books—the "Christmas Carol"—followed in the subsequent years up to 1848 by "The Chimes," "The Cricket on the Hearth," "The Battle of Life," and "The Haunted Man"—stories in which the fountains of laughter and of tears are indeed found to be near each other, and which contain some of the most tenderly beautiful things that ever Dickens wrote. In 1850—still inventive, but still following the line he seems unconsciously to have traced from the beginning—he started the weekly serial *Household Words*, a periodical unique in its excellencies, and which perhaps more than any other has manifested a unity of style and colour from the influence of its directing mind. In 1859, ceasing to be connected with *Household Words*, Mr. Dickens established *All the Year Round*, which he continued to superintend to his death.

Reverting now to his novels, after his return from America appeared "Martin Chuzzlewit;" in 1847-8 he wrote "Dombey and Son;" and in 1849 the "History of David Copperfield" was begun, the latter considered by many to be his best work. To these followed "Bleak House" and "Little Dorrit"—all these in his old monthly serial form; and then in *Household Words* and *All the Year Round* appeared "Hard Times," "A Tale of Two Cities," and "Great Expectations." Noticeable again, as witnessing to the inventive power of Dickens's mind, are the yearly issues of Christmas stories in connection with these periodicals, with their delicious bits of introduction, enshrining Mugby Junction and its wonderful boy, Mrs. Lirriper, Dr. Marigold, Joey Ladle, and the rest of their agreeable fraternity—all with their merry jubilant humour, and all with their April lights of gentle pathos, not inconsolable, and not unfruitful.

But Mr. Dickens was not only successful as an author. It has been said of him that he was probably the best after-dinner speaker in England; with a language and a method of his own that were perfectly inimitable, he never

Digitized by Google

failed to set the table in a roar. In spite of all the demands upon his time, he was never chary of his help at charitable gatherings; and many benevolent institutions will have deeply to lament the silence of that eloquent tongue that pleaded for them so often and so well.

For two or three days previously to his death Mr. Dickens complained of a difficulty in doing his work, saying that it did not come spontaneously to him as it used to come. There was no appearance, however, of his being ill. On Wednesday, when he sat down to dinner with his sister-in-law, Miss Hogarth, she saw an unusual appearance in his face, and, becoming alarmed, proposed to telegraph for medical assistance. "No, no," he replied, "I have got the toothache, and shall be better presently." He then asked that the window might be shut, and almost immediately became unconscious. From this he was never roused, and at ten minutes past six on Thursday, June 9, about twenty-four hours after the attack, he died.

At an early hour on Tuesday morning, June 14, the remains of Mr. Dickens were buried in Poets' Corner, Westminster. Although his will had been express in forbidding anything like ceremony and show, it was found that he had named no place in which he desired to lie, and it was therefore possible to accept the offer of the Dean of Westminster, and inter him in what every Englishman would feel to be his fittest resting-place.

The Late Daniel Maclise.

(See page 13)

Daniel Maclise was born in Cork early in the year 1811; but he was of Scottish extraction, and his father, also Daniel Maclise, was an ensign in the Elgin Fencibles. His first effort to make his way in the world was at a banking house in Cork; but, not finding "to cash and balance at a desk, perched like a crow on a three-legged stool," much to his taste, and having evinced some talent for drawing, he adopted the more congenial pursuit after he had attained his sixteenth year. In 1828 he came to London, and at once entered himself as a student both at the Antique and Life Schools of the Royal Academy. He worked at his art with great industry and perseverance, competing successfully for the medals, and even winning the gold one twice successively. He remained two years steadily at work, and then went to Paris to study the galleries and studios of that city. At this period he earned money by designing for booksellers and by painting portraits. He exhibited his first pictures at the British Institute in 1833, and they at once established his fame. The subjects were, "Mokanna unveiling his features to Zelica," "All-Hallow Eve," and "A Love Adventure of Francis I. with Diana of Poictiers." Two years later he exhibited "The Chivalrous Vow of the Ladies and the Peacock," and the Royal Academy elected him an associate. It was a poetical subject artistically treated, although the effect was theatrical. In 1838 "Robin Hood and Richard Cœur de Lion," "Salvator Rosa painting Masaniello," and the "Banquet Scene in Macbeth" were shown; in 1840 "Gil Blas," dressed *en cavalier* (in the possession of Her Majesty), scene from the "Twelfth Night," and "The Sleeping Beauty" were the subjects; and in 1841 he was elected a Royal Academician. From that date onwards it was an exceptional year that he did not paint three large pictures; in 1842 he produced perhaps the best known of his works, the "Play Scene in Hamlet," which now forms one of the many attractions of the South Kensington Museum. It proved a most popular picture, for it was engraved by Mr. C. W. Sharpe for the Art Union of London, and no less than 13,000 impressions have been distributed among the subscribers. In 1844 Mr. Maclise painted "The Lady released by Sabrina from the Enchanted Chair," and a scene from Milton's "Comus," which so pleased Her Majesty and the late Prince Consort that the artist was requested to reproduce it as a fresco in the summer house of the Buckingham Palace Gardens. The "Sacrifice of Noah," and his famous design of Shakespeare's "Seven Ages of Man," were produced in 1848; the latter, two years later, were etched by Mr. Edward Goodall (recently deceased), and published by the Art Union. Mr. Maclise's later pictures include "The Spirit of Chivalry" and the "Spirit of Justice," painted in oil and fresco for the House of Lords; "Caxton showing Edward IV. his first proof-sheet in the Almonry in Westminster;" "Prospero and Miranda;" and in 1854 he exhibited at the Royal Academy his largest and most important picture, "The Marriage of Strongbow and Eva," in ratification of the conquest of Ireland under Henry III. The following year was almost entirely devoted to a tour through Italy in search of fresco work, and to the discharge of his duties as one of the Fine Arts jurors of the Paris Exhibition. The fine set of forty-two drawings illustrative of the History of the Conquest, and exhibited in 1856, were among his smaller works. The frescoes in the Royal Gallery of the Houses of Parliament, illustrations of the glories of England in war by land and sea, from the earliest period of our national existence to Waterloo, are now well known works. In 1866, after Sir Edwin Landseer refused the presidency of the Royal Academy, it was offered to Mr. Maclise, who also declined it. Mr. Maclise died very suddenly on the 25th of April, 1870, from an attack of heart disease. At the usual Royal Academy banquet on the 30th, Mr. Maclise's name was adverted to in a graceful manner by the Prince of Wales, and the late Mr. Charles Dickens paid a touching tribute to the memory of his intimate friend and companion.

Mlle. Sessi.

(See page 16.)

The fair one with the golden locks is before you. Her charming *chevelure* is, however, not her only attraction; she has proved that she has vocal and dramatic capabilities to hold her own even against the leading European stars. In Berlin, during the illness of Pauline Lucca, she had the *répertoire* exclusively of all the leading characters of the modern lyric drama. In Paris, during the absence of Patti, she occupied the same proud position as in Berlin. The artiste who can grapple with the parts in which Persiani, Lind, Sontag, Hayes, Lucca, Nilsson, and Patti have gained their glory must have no ordinary ability. Mathilde Sessi is born of a musical family of Italian opera. Her native place is Vienna, where she studied under the first masters, including Lauffer and Salvi. She made her *début* at Frankfort (on the Maine) in May, 1867, and her success was such as to secure her engagement at Berlin. The first notices of this young talent appeared in these columns in November, 1868, in the letters of our special correspondent, who predicted that Sessi would be heard of in other capitals than the Prussian one. Herr Maurice Strakosch, after the loss of his sister-in-law Adelina Patti, by her marriage with the Marquis de Caux, was looking anxiously for a young *prima donna*, or for a novice whose abilities he could turn to the best account; and, hearing of the great talent of Mathilde Sessi, and that she was the daughter of the celebrated cantatrice Mariana Sessi, for whom Mozart composed the "Clemenza di Tito," and that her grandmother was Victoria Sessi, a once famed contralto, resolved to monopolise such a promising vocalist, with such undeniable antecedents. After her successful career he has farmed her to Covent Garden Theatre, where Mlle. Mathilde has already attacked the parts of Lucia, Maria ("La Figlia"), the Queen of Night, and Violetta ("Traviata"), all with more or less effect. An artiste who at twenty-two years of age can sing Mozart, Donizetti, and Verdi need have no apprehension as to her future career. The lady with the "flowing hair" has an organ of extraordinary compass, she has practised her scales sufficiently to acquire a brilliantly articulated shake, she can attack intervals, and all she has to do is to husband (not herself, we hope) her resources—not to force the voice too much. When the *débuts* of other artistes who have achieved a successful career are called to mind, the attributes of Mlle. Sessi are of a nature to encourage her to go on and study, which of course means to rise and prosper.

Mrs. Rousby.

(See page 17.)

It was a fortunate circumstance for the lovers of the higher branches of the dramatic art that Mr. Tom Taylor once took it into his head to pass a summer holiday in the Channel Islands. It was still more fortunate that the veteran dramatist and critic, unwearied by a sufficiently long dramatic experience, and undaunted by the almost invariably dulness of a country theatre, resolved upon paying a visit to the Theatre Royal, Jersey. For in that comparatively remote portion of Her Majesty's dominions a brilliant of the finest water was waiting to reward the fortunate discoverer. The Guernsey and Jersey theatres were, at the time of Mr. Taylor's visit, under the management of Mr. Wybert Rousby. Mr. Rousby himself played the leading business, as indeed country managers very frequently do, and was assisted by his wife, a lady of gentle birth and education, who had adopted her husband's profession after her marriage. The practised eye of so good a judge of the dramatic art as is Mr. Taylor was not likely to overlook the excellence of the performance which, very probably to his infinite surprise, was presented to him. He saw at once that he was in the presence of true artists, and that for them the large arena of London, and not the narrow stage of a country theatre, was the proper battle ground. All country actors live in the hope of the appearance of that London manager or that London critic who is to give them the much-desired opening in the great city. Mr. Taylor's appearance and advice almost romantically influenced Mr. and Mrs. Rousby, who were not long in agreeing to come to London, and who in the winter of last year made their first appearance at the Queen's Theatre. Mr. Taylor's play, "The Fool's Revenge," was the piece selected for the *début* of the new comers. The part of Fiordelisa, which fell to Mrs. Rousby's lot, is not of sufficient importance to offer any great opportunities of distinction to the actress, and accordingly, although Mrs. Rousby's performance attracted much notice and was favourably commented upon in many quarters, the critical world hardly expected what was in store for it. But in January last Mr. Taylor's new play, specially written for Mrs. Rousby, was produced at the Queen's, and Mrs. Rousby at once achieved one of the most remarkable successes on record. The public and the critics united in praise of the new comer. It was understood at once that the historical drama—the higher class drama which has been for so long a time on the shelf, owing, not so much to the apathy of the public as to the want of actors, and above all, of actresses competent to interpret it—had a newlease of life. The promise of Mrs. Rousby's earlier performances has been amply borne out. She has made a steady and appreciable advance in her art. The tenderness and delicacy of manner, so conspicuous and so delightful at first, are unimpaired; the dignity and grace of the educated lady are as remarkable as ever. But Mrs. Rousby has, greatly to the improvement of the general performance, acquired much force and power. And this is one of the most satisfactory circumstances we have to note in Mrs. Rousby. It is clear that she is an earnest student of her art; that she understands its difficulties, and how to grapple with them; that she has, in a word, all the perseverance and courage of true genius, unspoiled by that hardest of trials, success.

Mrs. Rousby will never be of the Lady Macbeth school of tragic actresses. But wherever grace, womanly tenderness, intellect, and refinement are required, here Mrs. Rousby will be at home—and "here," we are glad to

think in this case, means almost the whole range of the classical English dramas. Not the least of this charming actress's attractions are those of a personal nature. Mrs. Rousby is as much distinguished by her beauty as by her genius; the graces of her mind are reflected in a most expressive and mobile face; in every look, as in every action, Mrs. Rousby's genius asserts itself.

Mlle. Teresa Tietjens.

(See page 20.)

TERESA TIETJENS was born in Hamburg in June, 1834. Her family is of Hungarian extraction. She studied in Vienna at an early age, and made her *début* in her native city in April, 1849, "Lucrezia Borgia" being her first essay. Her tall and commanding figure and clear and resonant soprano, extending to D in alt, compensated for stage inexperience; but who could conceive a Lucrezia of fifteen? A child in years, the passions of the poisoneress were comparatively feeble; but the voice told in default of artistic finish, and she repeated the part successfully. In 1850 she was at Frankfort, where Jenny Lind had "starred" so triumphantly. After some seasons Tietjens was engaged for Vienna, and appeared as Donna Anna. The impression she produced was great, and she was permanently engaged for three years, her repertory comprising the characters of Valentine in the "Huguenots," Norma, Fidelio, and Leonora in the "Trovatore." The first appearance of Tietjens in London on the 13th of April, 1858, as Valentine in the "Huguenots," will not be forgotten; she had Giuglini for tenor. The powerful voice of Tietjens took the town; it was at that period and for some time afterwards a glorious organ, truthful in intonation, sympathetic in *timbre*, and telling in strong dramatic situations. The principal feature about the life in this country of Tietjens has been her marvellous powers of endurance. Singing throughout the United Kingdom at theatres and concerts, and at musical festivals after a fatiguing season, her strength never seemed to fail; but the abuse of her fine constitution has, of course, told on her once incomparable organ. She has made her mark as a great artiste in the lyric drama, and if her class be not of the first, she is at all events the first of her class.

Mme. Arabella Goddard.

(See page 21.)

MME. ARABELLA GODDARD was born on the 12th of January, 1836, at St. Servan, near St. Malo in Brittany (France). Her parents are English. Her aptitude for music was displayed almost from her very infancy. At four and a half years she made her *début* at a charitable concert in St. Servan, astounding her auditory by a performance of a fantasia on themes from "Don Juan." To cultivate such an extraordinary talent her parents removed to Paris, and the late Kalkbrenner was her first master of note. In 1848 she received lessons from Mrs. Anderson, the instructress of the Queen, who is still pianist to Her Majesty. At eight years of age Miss Goddard performed at Buckingham Palace before Her Majesty and Prince Albert, receiving marked compliments from the royal amateurs. Miss Goddard's next master was Thalberg. Under Mr. George Macfarren she studied harmony, counterpoint, and composition. At a private gathering of artists and amateurs at her father's residence at Notting-hill, in March 1850, her playing of Bach's fugues, as well as of works of the modern school, created a great sensation. Her future fame was confidently predicted by one of her hearers on that occasion. After appearing at a *matinée musicale* given by Miss Bassano the contralto, Miss Goddard made a formal *début* at the Grand National Concerts given in October 1850, at Her Majesty's Theatre. She executed the "Elisir d'Amore" fantasia and the "Tarantella" of Thalberg with signal success. Miss Goddard was married in 1860 to Mr. J. W. Davison, the musical critic, and that union certainly has not assisted her professional career, as it exposed her to attacks from those ill-disposed and ill-conditioned artists who will not hesitate to stab a man through the heart of a woman—the belligerent disposition of a writer is so easily avenged by an indirect assault on his wife. But the storm passed off; the public pronounced decisively by recognising the artistic attributes of assuredly a lady player of exceptional ability. It is really surprising to look back at the innumerable works which Mme. Arabella Goddard has first brought under notice. Her recitals, as regards revivals, have been singularly interesting and valuable. Mme. Goddard has proved that, with a delicate and yet crisp tone, she can combine a force that enables her to dominate over the largest orchestra. Her concerto playing is as vigorous as her treatment of the veriest pianissimo is light. Power and refinement, combined with digital dexterity, are an essential element of her style. Her precision is such, that there is never the slightest apprehension of any notes being slipped or slurred. Even in 1854, in her Continental tour, her commanding talent was recognised in Germany, Italy, and France; but since that year she has made marked progress. The musical instinct and organisation of her early days have been matured by study and practice and varied light and shade has been acquired by experience.

There is one material point connected with the career of Mme. Arabella Goddard, and that is no existing pianist has shown such a command over an existing *répertoire*, whether of music with or without orchestra. No artiste has played so many of the fine but neglected concertos, such as those by Dussek, Woelfl, Steibelt, Weber, Schubert, Hummel, Moscheles, &c.; and it must not be forgotten that she alone has kept the masterly concertos and other able works of the youthful days of Sterndale Bennett before the public. Her latest revivals have been the interesting manuscript fantasias of W. Friedemann Bach (son of *the* Bach) at the Monday Popular Concerts. And this brief memoir cannot be better concluded than by citing the criticism of the celebrated writer Rellstab of Berlin, on the occasion of her playing Bach's fugues at a concert in that capital: "I never heard Bach played with such perfection and clearness. In the Prelude, it seemed as if sparks of melody flew from the piano, while the succeeding fugue stood boldly out, like some bronze statue, before our mind's eye. It was easy to see that when Bach leaves the public cold, and his compositions pass over without making any impression, it is neither the fault of the composition nor the public. We wish the modest artiste all success upon the road she has taken; may she never leave it, never make concessions to the bad taste of the many, but nobly and firmly continue as she has begun."

That Mme. Arabella Goddard has quite followed the counsels of the illustrious Rellstab must be fully admitted.

Father Hyacinthe.

(See page 24.)

CHARLES LOYSON was born at Orleans on the 10th of March, 1827. His father was at that time rector of the Academy in Orleans, but soon after the event went in the same capacity to Metz, and in 1830 to Pau. It was under the warm skies of the more southern clime that the gifted boy, whose youthful poetical effusions were somewhat remarkable, received his early education. At the age of eighteen he entered the priestly seminary of St. Sulpice, which at that time still numbered among its pupils Ernest Renan, the celebrated author of "The Life of Jesus," and "The Life of St. Paul," who, however, belonged to the Paris division of the establishment, while Loyson was in that of Issy, near Paris. The favourite instructor of the talented youth was Baudry, afterwards Bishop of Perigueux, to whom, after his early death, a deserving tribute was paid by his former pupil Loyson, in an enthusiastic and feelingly eloquent discourse delivered in the church of St. Front, in Perigueux. In 1846 Loyson passed on to the seminary in Paris, which Renan had then just quitted. After only four years of theological study, exclusive of the part of a year he had spent at Issy, Charles Loyson received the priestly ordination on June 14, 1851, in the church of Notre Dame, the scene in after days of his oratorical triumphs. His talent for teaching was the cause of his mission to the great seminary at Avignon, in which he was Professor of Philosophy, and from thence, in 1854, he moved to Nantes, as teacher of Dogmatic Theology. His successes here were great, but still more through his gift of oratory than through his talent in teaching, exceptional as it was. An ardent desire to exercise this gift as a preacher now seized him, and induced him to accept a modest vicariat (or curacy) in the church of St. Sulpice, in Paris. Here, however, he found no sufficient opportunity of exercising his talents, and, becoming more and more anxious to devote himself to the acquirement of fame as an orator, he entered in 1858 the order of the Dominican Preaching Friars of Flavigny, and soon afterwards became a novice in the order of Carmelites. Soon the fame of his oratory reached Paris, and he was appointed preacher in the fashionable church of La Madelaine. Before, however, he could take up this office he achieved new triumphs in Bordeaux and Perigueux, and when at last he reached Paris a large audience of believers and unbelievers soon gathered round his pulpit, chained there by his rare talents. The attention of the Archbishop of Paris became quickly drawn towards the wonderful powers of this man, who was able to stir up the almost extinguished religious feelings of a great portion of the population of Paris, and he resolved to fix Loyson permanently in that city. The Advent lectures at Nôtre Dame were restored again, expressly for Father Hyacinthe, and for some time he filled the offices of preacher to the ancient metropolitan church of Paris and superior of the Carmelites at Passy, near the city. The conferences of Father Hyacinthe soon obtained a celebrity by no means inferior to those of his predecessor, Father Lacordaire; and although they frequently overstepped the boundary placed between Catholic pulpit eloquence and the expression of liberal opinions, their success was all the greater. This drew down upon him the envy and hatred of the Jesuits, who had no such orator in their ranks to bring forward, and who anticipated danger from his liberal sentiments. For long, the Archbishop Darboy, who was well disposed towards Father Hyacinthe, sought to paralyse their denunciations against him; but after his discourse on the Peace Convention—still fresh in the memory of all—the breach became inevitable. In July, 1869, the General of the Order of the Carmelites demanded from his inferior silence both in word and writing. To this demand Loyson replied in the following September by that eloquent letter which was subsequently copied into all the newspapers of Europe. Then followed his resignation of the Order, and the haughty letter of admonition addressed to him by Bishop Dupanloup, of Orleans, known as the author of a pamphlet against the notions of modern times, and the reply of the Abbé Loyson, "I am conscious of having committed no great fault, but of having fulfilled a great duty."

The superintendent of the Carmelites has since then attempted to recall the wanderer by another method, and after ten days' grace threatened to strike him with the thunderbolt of excommunication. Charles Loyson withdrew meanwhile to the United States, to return to Europe for the opening of the Œcumenical Council. Thence he returned to Paris, where he set the example of working on the ramparts, to his priestly brethren, debarred by their vows from taking up arms in the defence of their country.

In 1850 she was at Frankfort, where Jenny Lind had "starred" so triumphantly. After some seasons Tietjens was engaged for Vienna, and appeared as Donna Anna. The impression she produced was great, and she was permanently engaged for three years, her repertory comprising the characters of Valentine in the "Huguenots," Norma, Fidelio, and Leonora in the "Trovatore." The first appearance of Tietjens in London on the 13th of April, 1858, as Valentine in the "Huguenots," will not be forgotten; she had Giuglini for tenor. The powerful voice of Tietjens took the town; it was at that period and for some time afterwards a glorious organ, truthful in intonation, sympathetic in *timbre*, and telling in strong dramatic situations. The principal feature about the life in this country of Tietjens has been her marvellous powers of endurance. Singing throughout the United Kingdom at theatres and concerts, and at musical festivals after a fatiguing season, her strength never seemed to fail; but the abuse of her fine constitution has, of course, told on her once incomparable organ. She has made her mark as a great artiste in the lyric drama, and if her class be not of the first, she is at all events the first of her class.

Mme. Arabella Goddard.

(See page 21.)

MME. ARABELLA GODDARD was born on the 12th of January, 1836, at St. Servan, near St. Malo in Brittany (France). Her parents are English. Her aptitude for music was displayed almost from her very infancy. At four and a half years she made her *début* at a charitable concert in St. Servan, astounding her auditory by a performance of a fantasia on themes from "Don Juan." To cultivate such an extraordinary talent her parents removed to Paris, and the late Kalkbrenner was her first master of note. In 1848 she received lessons from Mrs. Anderson, the instructress of the Queen, who is still pianist to Her Majesty. At eight years of age Miss Goddard performed at Buckingham Palace before Her Majesty and Prince Albert, receiving marked compliments from the royal amateurs. Miss Goddard's next master was Thalberg. Under Mr. George Macfarren she studied harmony, counterpoint, and composition. At a private gathering of artists and amateurs at her father's residence at Notting-hill, in March 1850, her playing of Bach's fugues, as well as of works of the modern school, created a great sensation. Her future fame was confidently predicted by one of her hearers on that occasion. After appearing at a *matinée musicale* given by Miss Bassano the contralto, Miss Goddard made a formal *début* at the Grand National Concerts given in October 1850, at Her Majesty's Theatre. She executed the "Elisir d'Amore" fantasia and the "Tarantella" of Thalberg with signal success. Miss Goddard was married in 1860 to Mr. J. W. Davison, the musical critic, and that union certainly has not assisted her professional career, as it exposed her to attacks from those ill-disposed and ill-conditioned artists who will not hesitate to stab a man through the heart of a woman—the belligerent disposition of a writer is so easily avenged by an indirect assault on his wife. But the storm passed off; the public pronounced decisively by recognising the artistic attributes of assuredly a lady player of exceptional ability. It is really surprising to look back at the innumerable works which Mme. Arabella Goddard has first brought under notice. Her recitals, as regards revivals, have been singularly interesting and valuable. Mme. Goddard has proved that, with a delicate and yet crisp tone, she can combine a force that enables her to dominate over the largest orchestra. Her concerto playing is as vigorous as her treatment of the veriest pianissimo is light. Power and refinement, combined with digital dexterity, are an essential element of her style. Her precision is such, that there is never the slightest apprehension of any notes being slipped or slurred. Even in 1854, in her Continental tour, her commanding talent was recognised in Germany, Italy, and France; but since that year she has made marked progress. The musical instinct and organisation of her early days have been matured by study and practice and varied light and shade has been acquired by experience.

There is one material point connected with the career of Mme. Arabella Goddard, and that is no existing pianist has shown such a command over an existing *répertoire*, whether of music with or without orchestra. No artiste has played so many of the fine but neglected concertos, such as those by Dussek, Woelfl, Steibelt, Weber, Schubert, Hummel, Moscheles, &c.; and it must not be forgotten that she alone has kept the masterly concertos and other able works of the youthful days of Sterndale Bennett before the public. Her latest revivals have been the interesting manuscript fantasias of W. Friedemann Bach (son of *the* Bach) at the Monday Popular Concerts. And this brief memoir cannot be better concluded than by citing the criticism of the celebrated writer Rellstab of Berlin, on the occasion of her playing Bach's fugues at a concert in that capital: "I never heard Bach played with such perfection and clearness. In the Prelude, it seemed as if sparks of melody flew from the piano, while the succeeding fugue stood boldly out, like some bronze statue, before our mind's eye. It was easy to see that when Bach leaves the public cold, and his compositions pass over without making any impression, it is neither the fault of the composition nor the public. We wish the modest artiste all success upon the road she has taken; may she never leave it, never make concessions to the bad taste of the many, but nobly and firmly continue as she has begun."

That Mme. Arabella Goddard has quite followed the counsels of the illustrious Rellstab must be fully admitted.

Father Hyacinthe.

(See page 24.)

CHARLES LOYSON was born at Orleans on the 10th of March, 1827. His father was at that time rector of the Academy in Orleans, but soon after the event went in the same capacity to Metz, and in 1830 to Pau. It was under the warm skies of the more southern clime that the gifted boy, whose youthful poetical effusions were somewhat remarkable, received his early education. At the age of eighteen he entered the priestly seminary of St. Sulpice, which at that time still numbered among its pupils Ernest Renan, the celebrated author of "The Life of Jesus," and "The Life of St. Paul," who, however, belonged to the Paris division of the establishment, while Loyson was in that of Issy, near Paris. The favourite instructor of the talented youth was Baudry, afterwards Bishop of Perigueux, to whom, after his early death, a deserving tribute was paid by his former pupil Loyson, in an enthusiastic and feelingly eloquent discourse delivered in the church of St. Frout, in Perigueux. In 1846 Loyson passed on to the seminary in Paris, which Renan had then just quitted. After only four years of theological study, exclusive of the part of a year he had spent at Issy, Charles Loyson received the priestly ordination on June 14, 1851, in the church of Notre Dame, the scene in after days of his oratorical triumphs. His talent for teaching was the cause of his mission to the great seminary at Avignon, in which he was Professor of Philosophy, and from thence, in 1854, he moved to Nantes, as teacher of Dogmatic Theology. His successes here were great, but still more through his gift of oratory than through his talent in teaching, exceptional as it was. An ardent desire to exercise this gift as a preacher now seized him, and induced him to accept a modest vicariat (or curacy) in the church of St. Sulpice, in Paris. Here, however, he found no sufficient opportunity of exercising his talents, and, becoming more and more anxious to devote himself to the acquirement of fame as an orator, he entered in 1858 the order of the Dominican Preaching Friars of Flavigny, and soon afterwards became a novice in the order of Carmelites. Soon the fame of his oratory reached Paris, and he was appointed preacher in the fashionable church of La Madelaine. Before, however, he could take up this office he achieved new triumphs in Bordeaux and Perigueux, and when at last he reached Paris a large audience of believers and unbelievers soon gathered round his pulpit, chained there by his rare talents. The attention of the Archbishop of Paris became quickly drawn towards the wonderful powers of this man, who was able to stir up the almost extinguished religious feelings of a great portion of the population of Paris, and he resolved to fix Loyson permanently in that city. The Advent lectures at Nôtre Dame were restored again, expressly for Father Hyacinthe, and for some time he filled the offices of preacher to the ancient metropolitan church of Paris and superior of the Carmelites at Passy, near the city. The conferences of Father Hyacinthe soon obtained a celebrity by no means inferior to those of his predecessor, Father Lacordaire; and although they frequently overstepped the boundary placed between Catholic pulpit eloquence and the expression of liberal opinions, their success was all the greater. This drew down upon him the envy and hatred of the Jesuits, who had no such orator in their ranks to bring forward, and who anticipated danger from his liberal sentiments. For long, the Archbishop Darboy, who was well disposed towards Father Hyacinthe, sought to paralyse their denunciations against him; but after his discourse on the Peace Convention—still fresh in the memory of all—the breach became inevitable. In July, 1869, the General of the Order of the Carmelites demanded from his inferior silence both in word and writing. To this demand Loyson replied in the following September by that eloquent letter which was subsequently copied into all the newspapers of Europe. Then followed his resignation of the Order, and the haughty letter of admonition addressed to him by Bishop Dupanloup, of Orleans, known as the author of a pamphlet against the notions of modern times, and the reply of the Abbé Loyson, "I am conscious of having committed no great fault, but of having fulfilled a great duty."

The superintendent of the Carmelites has since then attempted to recall the wanderer by another method, and after ten days' grace threatened to strike him with the thunderbolt of excommunication. Charles Loyson withdrew meanwhile to the United States, to return to Europe for the opening of the Œcumenical Council. Thence he returned to Paris, where he set the example of working on the ramparts, to his priestly brethren, debarred by their vows from taking up arms in the defence of their country.

Pope Pius IX.

(See page 25).

JOHN MARIA MASTAI FERRETTI, now Pope Pius IX., was born at Sinigaglia on May 13, 1792, and was the son of Count Jerome Mastai Ferretti. The family is said to be an ancient one, which can be traced back to the thirteenth century. A pious mother presided over his early education, but when he was twelve years old he was placed in a college at Volterra, where he remained for six years, and left with the intention of adopting the profession of arms in the service of Pius VII. A nervous affection compelled him soon after to abandon his military course, and he entered upon the study of theology at Rome. In 1825 he became a bishop, in 1828 he was made Archbishop of Spoleto, and in 1832 accepted the bishopric of Imola. He occupied these two last sees in troublous times, but his prudence greatly promoted peace, and he was a general favourite in consequence of his active charity and other virtues. Subsequently he was sent to Naples as apostolic nuncio, and, having been designated cardinal *in petto* in 1839, in 1840 was openly raised to the dignity of cardinal by the title of SS. Peter and Marcellinus. When Gregory XVI. died, and the conclave was held for the new appointment, Cardinal Mastai was elected by acclamation. This was in June 1846, and he took the name of Pius IX. in honour of Pius VII., his early patron, and was crowned almost immediately after his election, but did not take solemn possession of the chair of St. Peter until November following.

On his accession to the Papacy, Pius IX. at once proclaimed an amnesty for political offences, he recalled the exiles, and he liberated the prisoners. Reform was his watchword. Austria took offence at his liberal measures, because Lombardy and Venetia became more discontented that ever with Austrian rule. Naples itself was alarmed. Matters became worse when the Pope, through Father Ventura, pronounced the funeral oration of O'Connell in June 1847, declaring O'Connell's name the symbol of the harmony between religion and liberty. Other events which preceded, accompanied, and rapidly followed, added to the difficulties of the reigning pontiff, and the appointment of Cardinal Antonelli mainly tended to bring on a crisis. A demand was made for a lay ministry, and for the levy of forces against Austria. At this juncture a proclamation issued by the Pope was taken as a signal for revolution, and soon after a republic was proclaimed at Paris. This was early in 1848. Several concessions were made to the republican party, and many changes made, but all in vain—the storm increased, and on Nov. 24, the Pope resolved to quit Rome in disguise, and to seek an asylum in Naples. Having retired to Gaeta, he appointed a commission to govern in his absence; but the Romans refused it, and the revolutionary party voted the abolition of the temporal power, and set up a republic. The Pope at once protested before Europe, and Antonelli made an appeal for the armed intervention of France, Austria, Spain, and Naples. France responded, and its forces occupied Rome in July, 1849; in April, 1850, Pius IX. resumed the possession of the Quirinal, where he still remains.

The Pope owed his restoration to the French arms. While at Gaeta he initiated the steps which led to his declaring what had heretofore been "a pious opinion" an article of faith, the dogma of the Immaculate Conception, which was proclaimed a doctrine of the Church in December, 1854? Five months after his return to Rome, Pius IX. divided England into dioceses, and set up an episcopacy here, in the face of most active and energetic remonstrance. A similar step was taken towards Holland in 1853. Two years later, a concordat was signed with Austria. But the next spring a movement began, near the outset of which the chief plenipotentiaries of France and England proclaimed the situation of the Pontifical States an abnormal one. Danger was imminent, and although in 1857 the Pope made a sort of triumphal progress through his states, in 1859, during the war between Sardinia and Austria, a revolt occurred in the Legations, and Victor Emmanuel annexed them. Events rapidly followed each other, and all the efforts of Pius IX. and his friends failed to stop them. In January, 1860, his Holiness issued an encyclical to the bishops, but it was in vain, and soon after Victor Emmanuel was proclaimed King of Italy, with Rome for its capital. Pius lost the greater part of his kingdom, and although he retained possession of Rome and the territory adjacent, his temporal power was reduced to very narrow limits.

The French army of occupation has been withdrawn. The Pope maintained a small army of volunteers from various nations for his protection. The revival of a system of voluntary contributions under the name of Peter-pence from the Catholic world has helped materially to augment the Papal treasury, and large gifts from wealthy princes and nobles have been liberally bestowed. On Dec. 8, 1864, the Pope issued his famous Encyclical proclaiming the jubilee of 1865, to which was added the Syllabus of eighty errors condemned by his Holiness. More recently a general or Œcumenical Council was summoned at Rome, for the decision of weighty questions which were surmised rather than authoritatively stated. It was rumoured that three opinions especially were to be exalted to the rank of articles of faith: 1. The bodily assumption of the Blessed Virgin into Heaven; 2. The temporal power of the Popes; and 3. The personal or official infallibility of the Popes.

The present troubles in France necessitated the withdrawal of the French troops. The Italians seized the opportunity to carry out their long-cherished project of making Rome the capital of Italy, under the King Victor Emmanuel. The Pope, seeing that real resistance was vain, made a feint of opposing the entrance of the royal troops for a brief space, but speedily bade all bloodshed to cease, and admitted them into the city. He is now deprived of all temporal power in Italy, and restricted to the exercise of his spiritual supremacy, and the Government of the Leonine City.

Pastimes.

Amusements with Numbers.

THE following method of telling, or appearing to tell, a number thought of, was invented by the mathematician Ozanam: 1. Desire a person to think of a sum of money, say a certain number of sovereigns. 2. Tell him to imagine that some one has lent him a similar sum, and to add the two together. 3. Now let the person imagine that ten pounds are given to him. This sum is to be added to the former. 4. Let the person imagine that he gives half the entire sum to the poor, retaining the other half. 5. Let the person return the amount lent him, *i.e.*, subtract the amount lent from what he has after giving to the poor. 6. Ask the person if he knows what remains. He will say "yes." You then say, "And I also know the number; it is equal to the number of pieces I put in my hand." 7. Put five coins into your hand, open it, and say, "This is the number that remain over." In the case supposed, whatever the number thought of, the remainder must be five. The reason is clear. The sum, half of which is given to the poor, is only the number thought of plus ten; and when the poor have received their part, there remains only the number thought of plus five; and when the number borrowed is returned (which is the same as the number thought of) there must remain five. The result will always be half the number given in the third part of the operation. If the trick is repeated, the number given in the third part of the operation should always be different, as if the result is several times the same the deception would be discovered. You do not really know what was the number thought of, but you tell a result without any apparent clue. If asked to repeat the process, it is best not to name the result at first, but to continue the operation, so as to render it more complex, saying, for example, after the fifth operation, double the remainder, deduct two, take the fourth part and so on, keeping the different steps in mind, in order to know how much the first result has been increased or diminished. This irregular variation generally puzzles the audience.

To tell two or more numbers thought of, provided none exceeds nine.—Tell the person to add 1 to the double of the first number thought of; desire him to multiply the whole by 5, and to add to the product the second number. If there is a third, tell him to double again and add 1 to the product, and multiply the new product by 5, and to add the third number. If there is a fourth number, let him double again and add 1 and the number thought of, and so on for any more numbers. Then ask the number arrising from the preceding operations, and if there were two numbers thought of subtract 5 from it; if three 55: if four 555; and the remainder will be composed of figures representing the numbers thought of. *Example*; Suppose the numbers thought of are 3, 4, and 6. Double the first and add 1, this gives 7; multiply by 5, which gives 35; then add the second number thought of making 39. This is doubled amounts 78; one added 79. This multiplied by 5 gives 395, and 6, the third number thought of, gives 401. If 55 be deducted from this, we have for remainder 346, the figures of which—viz. 3, 4, and 6—are the numbers thought of.

Another way to tell two or more numbers thought of.—If one or more of the numbers thought of is greater than 9 we must proceed differently, according to whether the number of the numbers thought of is even or odd. If an odd number of numbers is thought of, ask the sum of the first and second, of the second and third, of the third and fourth, and so on to the last; and then the sum of the first and last. Having written down all these sums in order, add together all those which result from the first, third, fifth, and other odd operations; and make another sum of those the places of which are even—viz. the second, fourth, sixth, &c. Subtract this sum from the former, and the remainder will be double the first number; from this we may find all the rest. *Example*: Suppose the numbers thought of are 3, 7, 13, 17, 20. These when added two and two, as before explained, give 10, 20, 30, 37, 23. The sum of the first, third, and fifth is 63; that of the second and fourth is 57. If 57 is subtracted from 63, the remainder will be 6, which is double the first number thought of, viz. 3. If 3 be taken from 10, the first of the sums, the remainder will be 7, the second number; if seven is taken from 20, it will give 13, the third number; and so on for the rest. In the second case, if the number of the numbers thought of is even, you must ask and write down as above the sum of the first and second, the second and third, and so on as before; but instead of the sum of the first and last you must finally take that of the second and last. Then add together those which stand in the even places, and form them into a new sum, and then add those in the odd places, the first excepted, and subtract this sum from the former. The result will be the double of the second number. If the second number thus found be subtracted from the sum of the first and second, you will have the first number; if it be taken from that of the second and third, it will give the third number; and so on for the rest. *Example:* Say the numbers thought of are 3, 7, 13, 17. The sums formed as above are 10, 20, 30, 24. The sum of the second and fourth is 44, from which if 30, the third, is subtracted, the remainder will be 14, the double of 7, the second number. the first is therefore 3, the third 13, and the fourth 17.

The Garden.

A Selection of Hardy Perennials.

1. Anemone alba.
2. — Pavonina.
3. — fulgens.
4. — sylvestris.
5. Aquilegia cærulea.
6. — glandulosa.
7. Trollius napellifolius.
8. Ranunculus aconitifolius plena.
9. — acris plena.
10. — amplexicaulis.
11. — bullatus plena.
12. Helleborus olympicus.
13. — atro-rubens.
14. Pæonia tenuifolia pl.
15. Hepatica angulosa.
16. Epimedium macranthum.
17. — pinnatum elegans.
18. Corydalis nobilis.
19. Dielytra formosa.
20. Thermopsis fabacea.
21. Coronilla montana.
22. Lathyrus Sibthorpi.
23. — californicus.
24. Orobus flaccidus.
25. — angustifolius
26. — roseus.
27. Aster elegans.
28. — grandiflorus (for sunny walls).
29. — turbinellus.
30. — lævis.
31. — pyrenæus.
32. — versicolor.
33. Echinacea angustifolia.
34. Echinops ritro.
35. — ruthenicus.
36. Pyrethrum uliginosum.
37. Platycodon autumnale
38. Gentiana Andrewsi.
39. — ciliata.
40. Calystegia dahurica.
41. Convolvulus lineatus.
42. Morina longifolia.
43. Scabiosa caucasica
44. Eryngium amethystinum.
45. — Bourgati.
46. — cæruleum.
47. Statice eximia.
48. — tatarica.
49. Dodecatheon Jeffreyanum.
50. Acanthus spinosissimus.
51. Phlomis Herba-Venti.
52. Polygonum Sieboldi.
53. Pentstemon venustus.
54. — procerus.
55. Vicia argentea.
56. Iris Kæmpferii.
57. — nudicaulis
58. Carpesium Richei.
59. Comelina cælestis.
60. Cypripedium spectabile.
61. Dracocephalum grandiflorum
62. Lithospermum fruticosum.
63. Linum flavum. The true plant is hardy and herbaceous.
64. Lobelia Tupa.
65. Michauxia campanuloides.
66. Ononis spinosus albiflorus.
67. Phygelius capensis.
68. Spigelia marilandica (in moist peat).
69. Rhexia virginica (ditto).
70. Symphytum bohemicum.
71. Thalictrum fœtidum.
72. Verbascum vernale.
73. Veronica taurica.
74. — corymbesa.
75. — amethystina.
76. Zauschneria californica
77. Hibiscus roseus
78. Chrysobactron Hookeri
79. Malva campanulata.
80. Ferula neapolitana.
81. Sedum spectabile.
82. Silene pennsylvanica.
83. Rudbeckia Newmanni.
84. Liatris spicata.
85. — elegans.
86. Erodium Manescavi.
87. Iberis Tenoreana (for light sandy soils).
88. Chelidonium japonicum.
89. Sympiandra pendula.
90. Armeria cephalotes.
91. Astragalus vaginatus.
92. — monspessulanus.
93. Melissa grandiflora.
94. Œnothera missouriensis.
95. — speciosa.
96. — anisoloba.
97. Podophyllum Emodi.
98. Geum chiloense.
99. Symphytum caucasicum.
100. Trillium grandiflorum.

Choice Flowers and Plants.

Dahlia Imperialis.

The Imperial dahlia has very large and graceful pinnate leaves, and flowers of a pure and beautiful French white, thrown up in a great cone-like mass, and resembling such lilies as *L. triginum Fortunei*, which, instead of merely developing a head of flowers, shoot up a great candelabrum laden with them. There is little chance of the plant producing its flowers in the open air in this country, but it will, notwithstanding, be of service both in the flower garden and conservatory.

Planted in rich soil, and placed in a warm sheltered position in the open air, it grows pretty beautifully with us in summer, and, in consequence of its large and graceful leaves, is an ornament worthy of being used as a "fine-foliaged plant," or "sub-tropical plant" if you like. Just at the time that it begins to gather together its flowering energies the best of our season fails, and the plant must soon fail too, if not immediately taken up and placed in a light and warm greenhouse. If plunged out in a large pot or tub during the summer, it may be taken up without injury, and will in all probability flower under glass in the autumn. We should have very small hopes of its flowering well if planted out so that its great roots must be mutilated when being taken up, and therefore the safe way will be to pot in a very large pot, and plunge that in the ground. The roots would probably go through the pot and enter the ground, but the main mass of them could be taken up without disturbance; and then it could be shifted into a larger pot, or small tub, in which to flower.

Silene Alpestris (the Alpine Catchfly).

The catchflies, as generally known, are rarely included among choice alpine plants; but this species possesses every quality that renders one worthy of extended culture—great beauty of bloom, perfect hardiness, very dwarf and compact habit, and a constitution that enables it to flourish in any soil. It is one of those plants which should be used in abundance on every well-made rockwork, with the Aubrietia, tiny shrubs like *Menziesia empetrifolia*, and all first-class alpines that may be readily grown in the open air. To secure a perfect bloom, it should not be disturbed, but allowed to spread forth into established tufts, and, not being fastidious as to soil, will, when once tastefully associated with appropriate plants, require no attention except removing the flower stems when the starry blooms have passed away. Like most alpines, it should have perfect exposure to the full sun; it should never be cocked up amongst burrs or stones in such a position that a dry wind may parch the life out of the tiny roots, and it should be protected from being overrun by coarser plants. We once regretted to see a colony of ants take up their abode in a tuft of this plant, and begin to elevate the soil amongst its tiny leaves; but as the ants built their hill, Silene expanded her leaves, and finally grew to be quite a little pile of starry snow, finer than any of its neighbours.

It is a native of the Alps of Austria. Grows about 4in. to 6in.; is readily propagated by seed, which is offered by seedsmen. It flowers in May.

Mespilus Smithii.

Among the most attractive of hardy trees in flower in May is this species of medlar. It flowers much more profusely than the common medlar, and is a fine object associated with the hawthorns and chestnuts. The bloom not being produced in large trusses, the shining foliage is never hidden by it as in the case of the hawthorns, so that in the distance the tree looks as if it were dotted, not frosted, over with white. It will grow as much as 30ft. or 40ft. high, forms a round, spreading, handsome head, and is perfectly hardy. It is sometimes known as *M. grandiflora*, but it is more correctly *Mespilus Smithii* of Decandolle. Its native country is not accurately known.

Tacsonia Van-Volxemi.

This Tacsonia is without exception the most beautiful of all the greenhouse climbers we know, while its culture is always satisfactory, from the rapidity of its growth and abundance of its flowers. These are very large, suspended at the end of a filament-like tube sometimes nearly 1 ft. long—a thread-like process which hangs down straight into the house, and then spreads into a very large flower of vivid crimson, scarlet shaded, however, so as to be indescribable. It comes from New Granada, and thrives luxuriously in conservatory, greenhouse, orchard house, or, indeed, any cool structure. It will do in a large pot, but it is much the best way to plant it out in a bed of earth if such exist in the house; if not, it is well worth while making a special little brick pit for it—this pit to be filled with light and rather sandy soil; the plant then put in, and trained over the roof, or over slender arches, or up rafters. It flowers throughout the whole of the summer and autumn months. Wherever the drawing room opens right into the conservatory—as is frequently the case—it would be well to so plant this that its suspended blooms may be seen from the interior.

Acacia humifusa.

Acacia humifusa grows upwards sufficiently to enable us to train it to rafters, pillars, &c., but then begins to throw down long green tresses of fine leaves, and becomes, even when out of flower, a graceful ornament to the conservatory or greenhouse. In spring these long tresses become covered with flowers. As to culture, there needs little to be said. It, like most of its brethren, will grow in almost any soil.

Gunnera scabra.

This is a South American plant, and yet quite hardy. Darwin says of it in his "Naturalist's Voyage:"—"I one day noticed growing on the sandstone cliffs some very fine plants of the Panke (*Gunnera scabra*), which somewhat resembles the rhubarb on a gigantic scale. The inhabitants eat the stalks, which are sub-acid, and tan leather with the roots, and prepare a black dye from them. The leaf is nearly circular, but deeply indented on its margin. I measured one which was nearly 8ft. in diameter, and therefore no less than 24ft. in circumference! The stalk is rather more than a yard high, and each plant sends out four or five of these enormous leaves, presenting altogether a very noble appearance." Darwin does not speak of the inflorescence, which is more remarkable than the leaves. The little flowers and seeds are seated densely on conical fleshy masses a few inches long, and these in their turn being seated as densely as they can stand on a thick stem, the whole has the appearance of a compound cone a couple of feet high (on our best plant) very heavy, and perhaps the oddest-looking thing ever seen in the way of fructification. This great spike springs from the root itself, the leaves also springing from the root as in the case of the rhubarbs. We had two plants in a wet peat bog—one in deep rich soil, and with the crown well raised above the level, and the whole protected under a couple of barrowloads of leaf mould; the other left exposed, and not allowed any particularly good soil. Both plants survived the severest winters, but the one protected and well fed grew much the largest. The leaves of the largest plant used sometimes to grow four feet in diameter, the texture being of extraordinary thickness and rugosity. We have, however, in the Royal Gardens at Kew, seen it grow to a larger size than that. The bottom there is the very reverse of bog, while the situation is warmer and more sheltered than where we grew it. But the Kew people met its wants very sagaciously, by building a little bank of turf around it, so as to admit of its absorbing a thorough dose of water now and then, while in winter it was protected with dry leaves and a piece of tarpaulin. Similar protection, plenty of water in summer, and a warm and sheltered position, are all that are necessary for success with this very striking object. It is not difficult to obtain, and may be raised from seed, which is offered by some of our seedsmen. It should be planted in some isolated spot, and not as a rule in the "flower garden proper," as it must not be disturbed after being well planted, and would associate badly with the ordinary occupants of the parterre.

Primula Amœna.

The flowers are large, of a pleasing purple hue, and out before the snow has left the ground. In leaf it is not unlike the primrose. It is so much earlier than the common primrose, that when that species is in full flower *amœna* has quite finished blooming, and sent up almost the same kind of strong tuft of leaves which the common primrose does after its flowers are faded. We have seen it flourishing quite freely on a chalky soil inimical to most alpine plants. It is readily propagated by division of the root.

81. Sedum spectabile.
82. Silene pennsylvanica.
83. Rudbeckia Newmanni.
84. Liatris spicata.
85. — elegans.
86. Erodium Manescavi.
87. Iberis Tenoreana (for light sandy soils).
88. Chelidonium japonicum.
89. Sympiandra pendula.
90. Armeria cephalotes.
91. Astragalus vaginatus.
92. — monspessulanus.
93. Melissa grandiflora.
94. Œnothera missouriensis.
95. — speciosa.
96. — anisoloba.
97. Podophyllum Emodi.
98. Geum chiloense.
99. Symphytum caucasicum.
100. Trillium grandiflorum.

Choice Flowers and Plants.

Dahlia Imperialis.

The Imperial dahlia has very large and graceful pinnate leaves, and flowers of a pure and beautiful French white, thrown up in a great cone-like mass, and resembling such lilies as *L. triginum Fortunei*, which, instead of merely developing a head of flowers, shoot up a great candelabrum laden with them. There is little chance of the plant producing its flowers in the open air in this country, but it will, notwithstanding, be of service both in the flower garden and conservatory.

Planted in rich soil, and placed in a warm sheltered position in the open air, it grows pretty beautifully with us in summer, and, in consequence of its large and graceful leaves, is an ornament worthy of being used as a "fine-foliaged plant," or "sub-tropical plant" if you like. Just at the time that it begins to gather together its flowering energies the best of our season fails, and the plant must soon fail too, if not immediately taken up and placed in a light and warm greenhouse. If plunged out in a large pot or tub during the summer, it may be taken up without injury, and will in all probability flower under glass in the autumn. We should have very small hopes of its flowering well if planted out so that its great roots must be mutilated when being taken up, and therefore the safe way will be to pot in a very large pot, and plunge that in the ground. The roots would probably go through the pot and enter the ground, but the main mass of them could be taken up without disturbance; and then it could be shifted into a larger pot, or small tub, in which to flower.

Silene Alpestris (the Alpine Catchfly).

The catchflies, as generally known, are rarely included among choice alpine plants; but this species possesses every quality that renders one worthy of extended culture—great beauty of bloom, perfect hardiness, very dwarf and compact habit, and a constitution that enables it to flourish in any soil. It is one of those plants which should be used in abundance on every well-made rockwork, with the Aubrietia, tiny shrubs like *Menziesia empetrifolia*, and all first-class alpines that may be readily grown in the open air. To secure a perfect bloom, it should not be disturbed, but allowed to spread forth into established tufts, and, not being fastidious as to soil, will, when once tastefully associated with appropriate plants, require no attention except removing the flower stems when the starry blooms have passed away. Like most alpines, it should have perfect exposure to the full sun; it should never be cocked up amongst burrs or stones in such a position that a dry wind may parch the life out of the tiny roots, and it should be protected from being overrun by coarser plants. We once regretted to see a colony of ants take up their abode in a tuft of this plant, and begin to elevate the soil amongst its tiny leaves; but as the ants built their hill, Silene expanded her leaves, and finally grew to be quite a little pile of starry snow, finer than any of its neighbours.

It is a native of the Alps of Austria. Grows about 4in. to 6in.; is readily propagated by seed, which is offered by seedsmen. It flowers in May.

Mespilus Smithii.

Among the most attractive of hardy trees in flower in May is this species of medlar. It flowers much more profusely than the common medlar, and is a fine object associated with the hawthorns and chestnuts. The bloom not being produced in large trusses, the shining foliage is never hidden by it as in the case of the hawthorns, so that in the distance the tree looks as if it were dotted, not frosted, over with white. It will grow as much as 30ft. or 40ft. high, forms a round, spreading, handsome head, and is perfectly hardy. It is sometimes known as *M. grandiflora*, but it is more correctly *Mespilus Smithii* of Decandolle. Its native country is not accurately known.

Tacsonia Van-Volxemi.

This Tacsonia is without exception the most beautiful of all the greenhouse climbers we know, while its culture is always satisfactory, from the rapidity of its growth and abundance of its flowers. These are very large, suspended at the end of a filament-like tube sometimes nearly 1 ft. long—a thread-like process which hangs down straight into the house, and then spreads into a very large flower of vivid crimson, scarlet shaded, however, so as to be indescribable. It comes from New Granada, and thrives luxuriously in conservatory, greenhouse, orchard house, or, indeed, any cool structure. It will do in a large pot, but it is much the best way to plant it out in a bed of earth if such exist in the house; if not, it is well worth while making a special little brick pit for it—this pit to be filled with light and rather sandy soil; the plant then put in, and trained over the roof, or over slender arches, or up rafters. It flowers throughout the whole of the summer and autumn months. Wherever the drawing room opens right into the conservatory—as is frequently the case—it would be well to so plant this that its suspended blooms may be seen from the interior.

Acacia humifusa.

Acacia humifusa grows upwards sufficiently to enable us to train it to rafters, pillars, &c., but then begins to throw down long green tresses of fine leaves, and becomes, even when out of flower, a graceful ornament to the conservatory or greenhouse. In spring these long tresses become covered with flowers. As to culture, there needs little to be said. It, like most of its brethren, will grow in almost any soil.

Gunnera scabra.

This is a South American plant, and yet quite hardy. Darwin says of it in his "Naturalist's Voyage:"—"I one day noticed growing on the sandstone cliffs some very fine plants of the Panke (*Gunnera scabra*), which somewhat resembles the rhubarb on a gigantic scale. The inhabitants eat the stalks, which are sub-acid, and tan leather with the roots, and prepare a black dye from them. The leaf is nearly circular, but deeply indented on its margin. I measured one which was nearly 8ft. in diameter, and therefore no less than 24ft. in circumference! The stalk is rather more than a yard high, and each plant sends out four or five of these enormous leaves, presenting altogether a very noble appearance." Darwin does not speak of the inflorescence, which is more remarkable than the leaves. The little flowers and seeds are seated densely on conical fleshy masses a few inches long, and these in their turn being seated as densely as they can stand on a thick stem, the whole has the appearance of a compound cone a couple of feet high (on our best plant) very heavy, and perhaps the oddest-looking thing ever seen in the way of fructification. This great spike springs from the root itself, the leaves also springing from the root as in the case of the rhubarbs. We had two plants in a wet peat bog—one in deep rich soil, and with the crown well raised above the level, and the whole protected under a couple of barrowloads of leaf mould; the other left exposed, and not allowed any particularly good soil. Both plants survived the severest winters, but the one protected and well fed grew much the largest. The leaves of the largest plant used sometimes to grow four feet in diameter, the texture being of extraordinary thickness and rugosity. We have, however, in the Royal Gardens at Kew, seen it grow to a larger size than that. The bottom there is the very reverse of bog, while the situation is warmer and more sheltered than where we grew it. But the Kew people met its wants very sagaciously, by building a little bank of turf around it, so as to admit of its absorbing a thorough dose of water now and then, while in winter it was protected with dry leaves and a piece of tarpaulin. Similar protection, plenty of water in summer, and a warm and sheltered position, are all that are necessary for success with this very striking object. It is not difficult to obtain, and may be raised from seed, which is offered by some of our seedsmen. It should be planted in some isolated spot, and not as a rule in the "flower garden proper," as it must not be disturbed after being well planted, and would associate badly with the ordinary occupants of the parterre.

Primula Amœna.

The flowers are large, of a pleasing purple hue, and out before the snow has left the ground. In leaf it is not unlike the primrose. It is so much earlier than the common primrose, that when that species is in full flower *amœna* has quite finished blooming, and sent up almost the same kind of strong tuft of leaves which the common primrose does after its flowers are faded. We have seen it flourishing quite freely on a chalky soil inimical to most alpine plants. It is readily propagated by division of the root.

Digitized by Google

PRIMULA NIVALIS.

This plant is very easy of culture, and may be grown in pots or in the open air. If in pots, it should be frequently divided; for it has a tendency, in common with other choice primulas, to get a little lanky about the base of the shoots, the whole thing is likely to go off if not taken out of the pot and divided into as many pieces as possible. Every shoot will form a plant, inasmuch as each is usually furnished with little rootlets, which shoot into fresh soil immediately. On dry ground it would have little or no chance unless surrounded by a few stones, which would prevent evaporation, and at the same time save it from being lost among coarser things. The ground would also be the better of being covered with an inch or so of cocoa fibre. In moist and elevated regions there would be less trouble, but, in all, care should be taken to give the snowy primrose what it deserves—a select position in rockwork or in the border, and a light free soil during the warm season. It flowers in April and May.

ANEMONE RANUNCULOIDES (Yellow Wood Anemone).

This is a South-European species, and apparently not so free on the generality of our soils as the blue anemone, but when grown into well-established tufts on a chalky, warm, and well-drained soil, it displays qualities. We have not found it to do well on clay soil, but on chalky soil it seems to grow as free as the common crowfoot. It is quite charming for association with tufts of the blue or common wood anemones, the Dane's blood or pasque flower, any of the varieties of *Anemone hepatica*, the aubretias, and like plants. Will grow well in partial shade, but flourishes to perfection when fully exposed. Flowers the end of March and beginning of April; height, 4in. to 6in. Propagated readily by division, and also by seeds.

CYCLAMEN REPANDUM.

This is large in the flower, and hardy. In mild and favourable parts of England it will grow quite as healthfully as ever the common ivy-leaved cyclamen has done. The colour is a deep crimson rose. It is a native of Southern Europe, likes partial shade in the summer, and would prove as easy to naturalise on a sunny slope, in a thin wood or plantation, on a warm soil, as *Cyclamen hederæfolium* is found to be. It may be propagated by seeds, which are not, however, offered by seedsmen, so far as we know. It is to be had in the form of plants.

IRIS CRISTATA.

This does not rise above the ground more than a couple of inches, having flowers, however, as large as many of the tall and coarser species. It is a native of North America. It flowers in May; blue, with spots of a deeper blue on the outer petals, with a stripe of orange and yellow variegation down the centre of each. It loves and flourishes luxuriantly on rich but free and light soil, and a warm position. The little rhizomes have a habit of uplifting themselves, and of course the plant too, above the ground, and should in spring be covered with an inch or two of fine soil to prevent any bad effects resulting from this. Somewhat moist districts will suit it Charming for association with the dwarf Crimean iris, the Alpine catch-fly, and any other dwarf gems among the later spring flowers.

DODECATHEON JEFFREYANUM.

A splendid species of American cowslip, which grows as high as 2ft., in pots. It has large and thick leaves of a dark green, and with reddish mid-ribs, very strong and healthy looking, and perfectly hardy, the flower being like that of the older species, except that it is somewhat larger and darker in colour. It will prove a thoroughly hardy and first-class border plant, not requiring any particular attention. Soil rather deep, and freely enriched with leaf-mould, suits it and most of the family to perfection.

A Few May Flowers.

IBERIS CORIFOLIA.

THE common white perennial iberis (*I. saxatilis*) is a very widely-spread plant among us, and one for which there are several names. The best description we can give of *I. corifolia* is to say that it is considerably less than one-half the size of *saxatilis*, very neat and spreading, being only 3in. or 4in. high when in full bloom. It is perfectly covered with small white flowers early in May, is as hardy as the dandelion, and a very gem for the rockwork or select spring garden. It will do as well for the front and lower margin of the mixed border as on the rockwork, and a very tasteful use may be made of it in forming an evergreen (except when covered with snowy flowers in May) edging around a bed of very choice dwarf shrubs. Readily propagated from cuttings.

AMMYRSINE THYMIFOLIUM.

A neat and very lovely tiny shrub, otherwise known as Ledum, forming compact bushes from 4in. to 6in. high, and densely covered with pinkish white flowers in May, the unopened buds being of a delicate pink hue. It is particularly suited for grouping with diminutive shrubs, such as the Partridge Berry, the sweet *Daphne Cneorum*, the tiny Andromedas, and willow like *S. reticulata* and *serpyllifolia*, that do not rise more than 1in. or 2in. above the ground. Requires peat; and, if planted on rockwork, should have have a bed of that beneath it.

TROLLIUS ASIATICUS (Globe Flower).

This is usually at or very near its best about May-day, and nothing can be richer or more striking than the appearance it then presents. Not unlike one of our common ranunculuses in leaf, it grows from 18in. to 2ft. high, and produces abundance of rich yellow flowers, deliciously sweet. There is a row of abortive petals in the centre, which are of a pure orange colour, and give the flowers a peculiarly rich appearance. It is as easily grown as the common crowfoot, and should be associated with such fine May flowers as the Caucasian borage, the Fair Ladies of France (*Ranunculus aconitifolius fl. pl.*), and the double marsh marigold. As to position, it is equally good for the mixed border or the rougher spots on rockwork.

TROLLIUS NAPELLIFOLIUS.

Not unlike the preceding species in leaf, this is a much larger and finer kind as regards the flower, which is almost globular in shape, and when fully expanded half as large again as the preceding. It also is remarkably sweet, but does not present the same rich hue of orange and yellow in the centre. It grows from 15in. to 2ft. high, and there is no finer border flower. Suited for the same purpose as its congeners.

CORYDALIS NOBILIS.

This is well named, for it is truly fine compared to the other members of the genus that are known and cultivated. The leaves are a good deal divided, and the plant strong and neat, growing when in flower 10in. or 1ft. high; the flower stems shoot strong and leafy to the top, and bear a massive head of flower, composed of many individual blooms in various stages. They are arranged in a short and close spiral whorl, the unopened ones at the apex of the flower, forming a light green rosette, and contrasting singularly with the fully opened flowers lower down. The perfect ones are of a rich golden yellow, with a small protuberance in the centre of each, of a reddish chocolate colour; and the effect of this, with the yellow and the green rosette when the bloom is young, makes the plant very ornamental. It is quite easy of culture as a border plant, but is rather slow of increase. Is worthy of good deep loam wherever planted.

Management of Achimenes.

PLUNGE the old pots full of last year's roots into a bottom heat, and when the young plants are a couple of inches high, transplant as you would young balsams. They are generally grown in shallow pans. The plants must be dibbed in at about 2in. or 3in. apart. Use compost, and when potted off they should be plunged again for a fortnight or three weeks, and then transferred to the planthouse. Whatever compost is used, be sure that the pots are thoroughly drained, and add silver sand to the compost. They like a half-shady situation at all times, a somewhat moist air and warmth. Their roots should not receive too much moisture at first, but it should be progressively increased. The syringe should be sparely used. In order to have a succession through the whole summer, they must be potted in succession.

To Skeletonise Leaves.—The leaves are to be put into an earthen or glass vessel, and a large quantity of rain water to be poured over them; after this they are to be left in the open air and to the heat of the sun, without covering the vessel. As the water evaporates and the leaves become dry, more water must be added; the leaves will by this means putrefy, but the time required for this varies; some plants will be finished in a month, others will require two months or longer, according to the toughness of their parenchyma. When they have been in a state of putrefaction for some time, the two membranes will begin to separate, and the green part of the leaf to become fluid; then the operation of clearing is to be performed. The leaf is to be put upon a flat white earthen plate, and covered with clear water; and being gently squeezed with the finger, the membranes will begin to open, and the green substance will come out at the edges; the membranes must be taken off with the finger, and great caution must be used in separating them near the middle rib. When once there is an opening towards this separation, the whole membrane always follows easily; when both membranes are taken off, the skeleton is finished, and it has to be washed clean with water, and then dried between the leaves of a book. Fruits are divested of their pulp and made into skeletons in a different manner. Take, for an instance, a fine large pear which is soft and not tough; let it be carefully pared without squeezing it, or without injuring either the crown or the stalk; put it into a pot of rain water, covered, set it over the fire, and let it boil gently till perfectly soft, then take it out and lay it in a dish filled with cold water; then, holding it by the stalk in one hand, rub off as much of the pulp as you can with the finger and thumb, beginning at the stalk and rubbing regularly towards the crown. The fibres are most tender towards the extremities, and are therefore to be treated with great care there. When the pulp has been cleared pretty well off, the point of a fine penknife may be of use to pick away the pulp sticking to the core. In order to see how the operation advances, the soiled water must be thrown away from time to time, and clean poured on in its place. When the pulp is in this manner perfectly separated, the clean skeleton is to be preserved in spirits of wine. This method may be pursued with the bark of trees, which afford interesting views of their constituent fibres.

The Lady's Work Table.

Introduction.

Our predictions have been verified. Modern point lace has been the popular fancy work of the year 1870, as we ventured to prophecy twelve months ago would be the case. Many styles of lace have been successfully imitated with woven thread and cotton braids; and great perfection has been attained by many amateurs in this most delicate of handworks. But there has been one drawback to this mania for modern point lace making—it has become common; many workers have copied simple braiding patterns, filling in the spaces with loose unevenly-formed stitches, imagining that effect was the only object to be sought after. The result is that we frequently encounter badly made lace, which is a positive eyesore; lace, being one of those accessories which it is quite possible to do without, should never be attempted by fancy workers who have not high aims in their labour—who do not intend to make their lace what it should be, the most beautiful, the most delicate of all fabrics, and an heirloom.

The fashionable work for ladies during the forthcoming year will be pillow lace-making; they will make the "real thing" with bobbins and thread, on a small pillow, as their grandmothers and great grandmothers were wont to do before railways and sewing machines and woven lace braid came into vogue. By these means they will be enabled to make the braid as they work, and so avoid all those fullnesses and turns always required by the exigences of the pattern, however skilfully designed. This pillow lace has already been practised in the highest circles of society; some of Her Majesty's Maids of Honour have produced exquisite lace on the pillow; the art is now spreading, and we have no doubt but that English ladies will have sufficient discrimination to appreciate the pillow lace as it deserves. Mrs. Mitchell, of Soho Bazaar, has introduced this work.

In canvas work, generally known as Berlin-wool work, there have been several new styles introduced during the year. Mrs. Mee, of Brook-street, Grosvenor-square, has patented a new plan of copying embroidery patterns. The designs are printed in colour on tracing cloth, which though strong, is transparent and thin; this is laid over the canvas, and thus obviates the necessity of drawing the pattern or counting stitches. It is an admirable invention, as it saves time and trouble, and you are certain of the effect of your work before commencing it.

The Mesdames Bouttelier, of Oxford-street, have also introduced a novelty which is worthy of attention—one of those happy thoughts which when we see it immediately suggests the inquiry, Why it never occurred to any one before? It is called the "Work of the Period." It consists of satin damask, with a rich pattern, which is traced out with coloured silks in the same manner and same stitches as Breton embroidery. It is one of the happiest ideas.

Another novelty that the past year has seen introduced is the tufted canvas work, admirably suited to carriage rugs and piano mats, likewise for mats to place before a writing or dressing table. The wool is so knotted into the canvas that it all appears on the surface—very rich effects are produced, and are becoming popular, as no wool is wasted on the wrong side of the canvas, which, as a matter of course, is never seen. This is by Mrs. Shales, of 17, Garway-road, Bayswater.

In the accompanying illustrations we have sought to give as much variety of work as space allowed. The Italian point lace vallance is especially beautiful, and the coloured border is a style of pattern at present in high favor.

Vallance for Bracket in Italian Point Lace.

[Frontispiece.]

(Designed by Madame de G.)

Trace the design on kid, and tack the linen braid carefully on; whip all the edges of the braid that are not quite flat with fine linen thread, and draw them close. To work the flowers and leaves, tack J. W. Taylor's Mecklenburg linen thread No. 8 round each part, work buttonhole stitch along one edge of the leaf, take the thread back, and continue working the buttonhole stitch until the leaf is filled; then buttonhole all round the edge. Work the bars with dots on, and the little raised buttonhole round (in the centre of the flower) last. In working the flower, the thread must be sufficiently coarse to make them about the same substance as the braid used. The length of the piece of lace required must depend on the size of the bracket it is intended to adorn. If the worker has not one ready, a common wooden bracket can easily be made, covered with blue or crimson velvet, with a vallance of velvet, and the Italian Point lace put over it, and headed by a good silk cord to match.

This makes a beautiful ornament for a room at a small cost.

Design for Border.

This border is designed by Mesdames Le Bouttelier, 125, Oxford-street, London. It can be used for either a table cloth or curtain border, and would likewise serve for a fender stool. It is worked on Penelope canvas with either Berlin wool or filoselle silks; the latter of course produces the richer effect.

1. Carriage Blanket (Crochet).

The materials required for this blanket are a fine bone crochet hook No. 8, 1lb. white single Berlin wool, half a pound blue or red. The engraving on page 28 gives a section of this handsome cover joined together; the woodcut below, a square, larger, for embroidering the stripes. The cover is worked in stripes of diamond with white single Berlin wool; then the sides of each stripe are crocheted over with coloured wool. Each stripe is joined together with a row of filoselle in single crochet—the filoselle must be the same colour as the wool. Commence the white stripe by making 3 Ch., take up the two chain as loops, and work back in crochet tricotee. 2nd row—* Increase one stitch on each side the 2nd loop

by working a loop in the horizontal stitch between the middle and side stitches; work back 5 plain loops. 3rd row—Increase a loop as in last row after the first plain loop, which is on the needle, and before the last stitch, so that you have 7 loops in the row; work back plain. 4th row—Work as the last row, but of course having 9 loops. Continue to work in this manner until the 12th row, in which you have 24 stitches. Work these 24 back plain, then take up the 24 loops again. Work back as follows: The two first loops together, plain to the end of the row where work the two last together. 14th row—Take up the loop just before the two end ones, which are worked together, then plain to the end of the row, taking up the two together as one stitch; again work back as in last row. Decrease in this manner in each row until you have only three loops on the needle again; these work back plain; this finishes one diamond; repeat from * in the 2nd row. When a sufficient number of stripes are finished, take the coloured wool and work a row of double crochet on each side the stripe. Commence in the first row, and put the wool in the horizontal loop just before each long loop at the commencement of each row. Work 3 DC. in the 12th row to enable you to turn the corners well. 2nd row of colour—Make a loop, put it on the needles * then put the wool round the needle, take up the first DC. and draw the wool through (taking up the back of the loop), put the wool round the needle again, then into the same loop, draw the wool through, take the wool on the needle, and draw through all the loops on it, take the wool on the needle and draw through the next DC., then draw through all the loops on the needle; repeat from *, work three stitches at the corner and miss one DC. in the narrowest part. Join the stripes by working the two edges together with a row of filoselle in single crochet. You then embroider each diamond by the engraving above; it is worked with green stalks and blue flowers. Then crochet the border. 1st row—1 DC. on the first stitch, * 7 Ch., 1 DC. on the 3rd stitch from the last; repeat from *. At the top of each diamond leave one stitch only between the chain stitches. 2nd row—* 1 DC. on the 4th of the next 7 Ch., 7 Ch.; repeat from *. Then loop a knot of coloured wool cut into lengths of 6in. into the 4th of each seven chain.

2. Lady's Under Bodice with Short Sleeves (Knitting).

MATERIALS.—1½oz. of single Berlin wool in ½oz. skeins, of any colour preferred, 5 wooden or bone knitting needles, No. 10, a bone crochet hook to suit the wool, and 6 mother of pearl shirt buttons.

Commence the bodice at the waist, by casting on loosely 120 stitches divided on four needles, 30 on each. It is knitted in rows backwards and forwards, first (for the edge) in ribs of 2 plain, 2 purl, for 12 rows, afterwards alternately one row plain, one row purl, so that the right side of the work should appear to be all plain knitting. The 13th row is plain; and continue knitting backwards and forwards to the end of the 24th row. 25th row—16 plain, increase in the following stitch by knitting a plain and a purl in it, 14 plain, increase as before, 56 plain, increase, 14 plain, increase, 16 plain. 26th to 28th row—Without increase. 29th row—17 plain, increase, 88 plain, increase, 17 plain. 30th to 32nd row—Without increase. 33rd row—18 plain, increase, 14 plain, increase, 58 plain, increase, 14 plain, increase, 18 plain. 34th to 36th row—Without increase. 37th row—19th plain, increase, 90 plain, increase, 19 plain. 38th to 40th row.—Without increase. 41st row—20 plain, increase, 14 plain, increase, 60 plain, increase, 14 plain, increase, 20 plain. 42nd to 44th row—Without increase. 45th row—21 plain, increase, 92 plain, increase, 21 plain. 46th to 48th row—Without increase. 49th row—22 plain, increase, 14 plain, increase, 62 plain, increase, 19 plain, increase, 22 plain. 50th to 22nd row—Without increase. 53rd row—23 plain, increase, 94 plain, increase, 23 plain. 54th to 56th row—Without increase. 57th row—24 plain, increase, 94 plain, increase, 24 plain. 58th to 60th row—Without increase. 61st row—25 plain, increase, 94 plain, increase, 25 plain. 62nd row—Purl. 63rd row—The armhole begins. Knit the first 42 stitches backwards and forwards without increase to the 80th row for the right front. 81st row—To give width on the shoulder, increase as before in the last stitch but one, and do the same in the 87th, 93rd, and 99th rows. 100th to 106th row—Without increase. 107th row—Cast off the first 8 stitches, knit the rest plain. 108th row—Purl. 109th row—Cast off the 3 first stitches, knit the rest plain. 111th and 113th rows—Like the 109th. 114th row—Purl. There should now be 29 stitches left. 115th row—The shoulder-piece commences, for which knit the first 6 stitches plain; turn back and purl the same 6 stitches. Knit 12 plain, turn back, and purl the same 12 stitches. Knit 16 plain, turn back, and purl the same 16 stitches. Knit 21 plain, turn back, and purl the 21 stitches. Knit 27 plain, turn back, and purl the 27 stitches. Knit 21 plain, turn back, and purl the same 21 stitches. Knit 16 plain, turn back, and purl the 16 stitches. Knit 12 plain, turn back, and purl the same 12 stitches. Knit 6 plain, turn back, and purl the same 6 stitches; then knit a plain and purl row with all the 29 stitches of the right front piece. Knit the second front in the same way to correspond exactly with this one. The middle stitches for the back must then be knitted straight backwards and forwards for 16 rows. In the 17th row, after the 1st stitch and before the last, increase in the same manner as before, and do the same in the 23rd, 29th, 36th, and 42nd rows. After the latter 12 more straight rows follow; then the outer stitches of the back on each side must be cast off, on the wrong side, with those of the corresponding front, putting the two needles together, knitting a stitch from each at the same time, and passing one over the other, as in the heel of a stocking. Knit the stitches remaining in the centre of the back for 6 more straight rows, increasing in the 1st of them after the 1st stitch and before the last; when the 6 rows are completed, cast off and sew the ends of this narrow strip to the shoulder pieces. For the short sleeves, pick up 66 stitches from the edge of the armhole on 3 needles, and knit them for 15 rounds in ribs of 2 plain, 2 purl, like the top of a stocking, then cast off loosely. Round the throat and down both sides of the front a strip of 7 or 8 rows is to be worked in double crochet (either with the same wool or a contrast, as may be preferred), taking up both the upper threads of the stitch. In the 4th row six buttonholes are to be made in the right front, at equal distances, by making 2 chain and missing 2 stitches of the former row. If a smaller-sized bodice is wanted, use steel needles No. 12.

---

3. Striped Mitten.

MATERIALS—4 needles, No. 15, required; single German wool, two colours. The directions are given for scarlet and black. Only two needles are used at first. Knitted in Andalusian wool, these mittens are a child's size.

With scarlet wool cast on 40 stitches. Knit 3 rows plain. Be particular throughout this mitten to slip the first stitch of each row, excepting the first time after you have cast on, when it must be knitted. With black wool, knit 4 rows plain. Repeat these 4 rows in alternate stripes of scarlet and black until your hand is wide enough, which it will be, for an average size, when you have done 28 stripes, but in the last stripe only knit plain 3 rows. The 4th is as follows:—4th row of last stripe for width of hand: Knit 2, pull the first stitch over the 2nd, knit another, and do the same. Repeat until you have cast off 10 stitches, knit 19, then cast off the remaining 10 loops as you did at the beginning of this row.

THE THUMB.—The 20 loops now left are for the thumb, which for the right hand is worked thus: With scarlet wool, cast 8 stitches on a fresh needle, plain knitting on the same the stitches left until within 3 of the end, when you knit 2 together, knit 1. 2nd row—Knit plain. 3rd row—Knit plain to within 3 of end, when knit 2 together, knit 1. 4th row—Plain knitting. Repeat the last 2 rows, in alternate stripes of 4 rows each stripe, until you have worked 10 stripes and reduced the stitches to 8, the number you cast on for top of thumb. Cast off these 8. Neatly sew or knit up the mitten and thumb.

TOP OF MITTEN.—Four needles are now used. You can knit this in a wide stripe of one colour, or alternate stripes of 4 rows each. With scarlet wool along top of mitten, take up, and as you take up knit 56 stitches, arranging them thus: 20 on two needles, 16 on the third. Rib the next row by alternately knitting 2, seaming 2. Continue the ribbing until you have the width you require, then cast off. Take up 56 stitches along the bottom for wrist of mitten, and knit to correspond with the top, making it the length you like.—*Stripe at top of thumb*: Take up, and as you take up knit 20 stitches, 8 on 2 needles, 4 on the third. Rib length required, then cast off.

LEFT-HAND THUMB.—When you have only the 20 stitches left on needle, take scarlet wool, and knit plain to end of 20 stitches, then cast on 8 more for top of thumb; this makes the stripes fall properly for this hand. 2nd row—Knit plain until within 3 of the end, when you knit 2 together, knit 4. 3rd row—Knit plain. Repeat the 2 last rows until you have your 10 stripes, then cast off.

---

4. Pelerine (Crochet Tricotee).

YOU require wool of two colours for this, 8oz. of grey single Berlin wool, 2 of scarlet, and a bone hook, No. 6. The two parts are worked separately: first the cape, then the point at the back. Commence the left side of the cape first, by making a chain of 130 stitches with grey wool. It is worked throughout in crochet tricotée. 1st row—Take up all the loops, and work back. 2nd row—Grey wool, and plain. 3rd row.—In this row you commence the first row of border. Work the first loop grey, all the rest scarlet; work back. 4th row—1st loop grey, 1 scarlet, the rest grey, and work back. 5th row—1 grey, 1 scarlet, 1 grey, all the rest scarlet, work back. 6th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, all the rest grey; work back. 7th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, all the rest scarlet, and work back. 8th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, 1 scarlet, all the rest grey. The 9th, 10th, and 11th rows are all like the 8th. The 12th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, increase one loop by making a stitch between this last grey and the next, then all the rest grey; work back. 13th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, 1 scarlet, all the rest grey. 14th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, 1 scarlet, 10 grey, 2 together in grey; repeat from * with grey, and work back. 15th row—Like the 12th row. The 16th, 17th, and 18th rows like the 13th. 19th row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, 1 scarlet, * 9 plain, 2 together in grey; repeat from *. 20th and 21st row—Like the 13th row. 22nd row—Like 12th row. 23rd row—1 grey, 1 scarlet, 1 grey, 1 scarlet, 1 grey, 1 scarlet, * 8 grey, 2 together; repeat from *. 24th, 25th, 26th rows—Like the 13th row. 27th row—Like the 12th. When you have finished this row, fasten off. Make a chain of 130 again for the right-hand side of the cape; repeat from the 1st row, but reverse the border and increasing stitch by working them at the end of the row instead of at the commencement. When you come to the 27th row you unite the two parts by working a plain row in grey on each half; all the rest of the cape is now worked in grey wool. 29th row—7 plain, 2 together; repeat at the end of the row; work 7 plain to match the first side. This must be done in all the succeeding rows. 30th row—Plain. 31st row—7 plain, 2 together, * 6 plain, 2 together; repeat from *. 32nd row—Plain. 33rd row—7 plain, 2 together, * 5 plain, 2 together, repeat from *. 34th row—Plain. 35th row—7 plain, 2 together, * 4 plain, 2 together, repeat. 36th row—Plain. 37th row—7 plain, 2 together, * 3 plain, 2 together, repeat. 38th row—Plain. 39th row—7 plain, 2 together, * 2 plain, 2 together, repeat from *. 40th row—Plain. 41st row—7 plain, 2 together, 1 plain, 2 together, repeat. 42nd row—Take 2 together throughout the row. 43rd row—Like the 42nd. 44th row—10 single, taking up each long loop as a stitch, raise all but the last 10, work back. 45th row—5 single on the 5 first loops, raise all but the last 5, and work, and if it is too wide in the neck, work 2 together throughout the row again, work back, and fasten off. Now commence the piece for the back: make a chain of 2 stitches with grey wool, take up the 1st loop and work the two back. 2nd row—Make a stitch between these two loops and work back. 3rd and 4th rows—Each 3 loops. 5th row—Increase 1 loop on each side the centre loop. Work back. 6th and 7th rows plain. 8th row—2 grey loops, increase a stitch, but with scarlet wool, a grey loop, increase a stitch with scarlet, 2 grey loops, work back. 9th and 10th rows—Plain, but working the 3rd and 5th loops in scarlet, and these two loops are worked in scarlet throughout the whole pattern. 11th row—Increase 1 grey loop on each side the centre stitch. 12th and 13th rows—Plain. 14th row—Increase as before, but with scarlet wool. 15th and 16th rows—Plain, working the 3rd and 5th stitch on each side in scarlet. Continue to work in this manner, increasing every 3rd row with grey wool, and working these two stitches on each side in scarlet until you have 87 stitches in the row. Then take up 18 only, work back, take up 17, and so on, taking one less until the work is brought to a point, fasten off; now work the other side in the same manner, then arrange the neck to the neck of the cape, and work together with a row of double crochet. Work also a row all round the cape and this back piece; then work the border. 1st row of border in grey wool—* 3 treble in the

3rd stitch, 1 Ch.; repeat. 2nd row—* Scarlet wool. 3 long on the 2nd of the 3 treble, 1 Ch., the thread 3 times round the needle, work a long treble in the double crochet just under the next chain stitch of last row; repeat. The rosettes on the back are commenced with 8 Ch.; unite work, * 3 treble in the next stitch, 1 Ch.; repeat 7 times. Work the 2nd row of the border on this row, and fasten off. Cover a button with scarlet in the centre of each, add a long tassel at the back, and cord and tassels to draw up with.

---

5. Small Shawl or Neckerchief (Knitting).

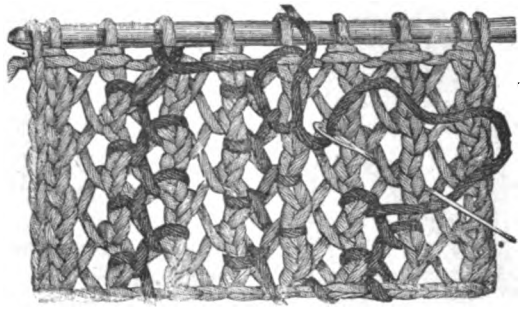
MATERIALS—Pink, blue, scarlet or white Shetland wool, 2 long wooden needles, No. 10, a rather fine netting needle, and 2 meshes, one of ¾in. and the other ¼in wide.

This small square shawl or kerchief may be thrown either over the head or neck, and from its lightness and elasticity will be found pleasant for summer wear. The width is 166 stitches, which must be loosely cast on. It is worked in rows backwards and forwards, and after one purl row begin the open stripe, that surrounds the shawl as an inner border, thus: 1st row—Slip 1, * over, knit 2 together, repeat from * throughout, until the last stitch, which is plain. 2nd to 6th rows—Like the 1st; these rows complete the open border at the end of the shawl. 7th row—Slip 1, * over, knit 2 together, repeat from * twice more, for the open border at one side of the shawl; then knit plain to the last 6 stitches of the row, and repeat the open stripe as at the beginning of the row, for the border on the other side. 8th row—Like 7th, except that the plain stitches of the centre must be purled. 9th row—Like 7th. 10th row—Like 8th. 11th row—After taking off 1 and working the first 6 stitches as before, * 3 plain knit 3 stitches (1 plain, 1 purl, 1 plain) into the next, and repeat from * till you come to the last six stitches required for the open border on the opposite side. 12th row—After the open stripe, as usual, purl, purling as 1 stitch the 3 stiches made in one of former row wherever they occur; last 6 stitches as before. 13th and 14th rows—Like 7th and 8th. 15th row—similar to the 11th, but the 3 stitches in one, which, when the knitting is stretched, will be seen to form spots, must come between the former ones; therefore, after the usual open border at the commencement, knit 1 plain, then the * 3 stitches in one (1 plain, 1 purl, 1 plain), 3 plain, and repeat from * to last 6 stitches, which knit as before. 16th to 18th rows—Same as 12th to 14th rows. 19th row—Same as 11th, and go on repeating from 11th to 18th rows, till the spotted centre of the shawl measures a square, then repeat the first 6 rows for the open border on the fourth side of the shawl. When the last row of the border is completed let the stitches remain on the needle, and commence knitting the edging or lace required for that side. As each of the four parts of the lace is to be separately knitted to the shawl, the ends of each piece must be increased in a sloping direction; for this purpose at the beginning of every row, both plain and purl, a stitch must be added after the 1st stitch by bringing the thread over; or if the pattern begins with an "over," then this additional stitch must be cast on the right-hand needle after knitting the first stitch. These are not included in the pattern. 1st row—Plain. 2nd row—Purl. 3rd row—Slip 1, * over twice, knit 3 together, repeat from *. 4th row—Purl, knitting a purl and a plain stitch on each "over twice" of last row. 5th and 6th rows—Same as 1st and 2nd. 7th row—* over, 1 plain, over 1 plain, over, 1 plain, knit 2 together 3 times, over, knit 2 together 4 times, over, 1 plain, over, 1 plain, over, 1 plain; repeat from *. 8th row—Purl. 9th row—Plain, but the open stripe between every repetition of the pattern must be continued, for which purpose, when you come to the stitch on the "over" of the 7th row, between the two sets of "knit 2 together," bring the thread forward and knit it and the next together, and this must be done at each place where it occurs. 10th row—Purl. Repeat from the 7th row. As you gradually increase the number of stitches at the beginning and end of the rows by the one stitch added, more of the pattern must be done at the beginning and end, observing that the "knit 2 together 3 times" must be kept in a straight line over each other, next to the open stripe; as many "over, 1 plain" before them at the beginning as can be brought in, up to 6, which is the full number of holes, and by degrees the "knit 2 together 4 times;" in like manner the pattern is to be continued at the other end. The pattern is to be repeated 6 times in the depth, and before the 6th repetition an additional plain and purl row are to be knitted straight along, not keeping up the open stripe, then the 11th row for the sixth time, but leaving out the "over" of the open stripe, and after a purl row the stitches are to be cast off loosely. The lace is to be knitted in the same way to the other three sides of the shawl, and for this purpose the edge stitches must be picked up, taking care that the number of stitches corresponds on all four sides, so that, by diminishing or adding, if necessary, the number shall be kept to 166. The crossway ends of the four pieces of lace are to be sewn together on the wrong side, and then round the whole outside edge of the lace 3 rows of netting with double wool are to be worked. The two first rows are netted on the smallest mesh, putting a stitch into every alternate one of the cast-of row; for the 3rd row the wider mesh is used. The shawl, when completed, must be held over the steam of hot water, and be made thoroughly damp. It is then to be pinned out on a covered board or table, and allowed to remain for twenty-four hours. In pinning it out it is necessary to be careful that it is kept perfectly straight and square.

6. Scarf for the Throat (Knitting).

MATERIALS—Scarlet, blue, or pink single Berlin wool, black filoselle, two wooden needles, No. 10. This scarf for the throat is composed, as the detail given below shows, of light open knitting in scarlet, blue, pink, or any coloured single Berlin wool, interwoven with stitches of black silk. Light grey wool and rose-coloured filoselle is also a pretty mixture for this purpose. That the illustration may be better understood, we may add that in the detail the *wrong* side of the work is represented, in order that the manner of doing the herring-bone or feather stitch with the silk might be more clearly shown, for whilst on the wrong side the course of the silk thread may be continuously traced, on the right side it has more the appearance of detached stitches.

For the breadth of this scarf, which is knitted across, 90 stitches are to be cast on with the coloured wool, then follows the 1st row. Take off a



stitch, * put the thread over, knit 2 together, repeat from *; the last stitch of the row is to be knitted plain. 2nd row—Take off a stitch,* purl the next one, with the "thread over" of former row, together, thread over, repeat from *; the last stitch of the row to be knitted plain. 3rd row—Like 1st. 4th row—Like 2nd. Continue repeating these two rows alternately till the length of one yard and rather more than three-eighths is knitted, when cast off the stitches. Afterwards the work must be spread on an ironing blanket, on a table or ironing board, and tightly pinned out; a muslin dipped in cold water and wrung out, placed upon it, and ironed with a hot iron till the muslin becomes dry. Then the embroidery with the filoselle is to be done, after the completion of which the scarf is to be folded in half, the square ends gathered together, and a tassel of the wool of suitable thickness and 5½ inches in length, the top worked over with silk to match, fixed to each of them.

Instead of single Berlin, this scarf may be knitted in Shetland wool, which will make it lighter and more elegant, but not so warm.

---

7. Lady's Carriage Boot.

THIS boot when knitted must have a cork sole placed inside, and tacked down. If liked, another can be put *outside*, to make the sole warmer. Place a pretty rosette on the instep.

The directions are given for knitting this boot in the double Berlin Partridge wool, with scarlet stripes in the ribbing at the top. Required—4½oz. of partridge wool, ½oz. of scarlet, four needles, No. 12 for an average knitter, No. 13 for a loose knitter. Measure the needles by Chamber's registered Bell gauge.

With partridge wool, cast on 60 stitches loosely, 20 on each needle. Knit one round plain. * Knit 2, seam 2 alternately for 4 rounds. Repeat these 4 rounds in scarlet: Continue to repeat from * until you can count 4 scarlet stripes, and have 5 done in the partridge wool. You may break off the scarlet wool after the 4th stripe, as it will not be required again. You will have worked 36 rounds of the ribbing. Knit plain 10 stitches; the next stitch is called the centre stitch of the back needle. Each round *now* commences on it, and this stitch must *always* be seamed throughout the leg. Knit 3 rounds plain. Seam a round. Repeat these 4 rounds three times more. 17th round—Seam centre stitch, knit 1, knit 2 together. Knit plain the rest of round until you come to within 3 of the end, when you must knit 2 together, knit 1. 18th and 19th rounds—Knit plain. 20th round—Seam all. 21st, 22nd, and 23rd rounds—Knit plain. 24th round—Seam all. Repeat from 17th round three times more; you will have only 12 stitches left on your back needle. * Knit three rounds plain. Seam the next round. Repeat from * once more. If you count the number of seamed ribs down the leg, you will have 14. Knit one round plain.

TO PREPARE FOR HEEL.—Prepare for heel by knitting to the end of your *back* needle, and from 1st side (or next needle) knit off on back needle 7 stitches. Knit the other 13 stitches from 1st side needle, on another needle. Knit 2nd side needle to within 7 stitches of the end. These 7 you must pass to the heel or back needle without knitting. You ought to have 26 on heel and 13 on each side needle. The 2 front needles are not used again until the heel is completed. The heel is made by working the back needle backwards and forwards. Always slip the 1st stitch in each row, excepting the first time you knit the 1st row. 1st, 2nd, and third rows—

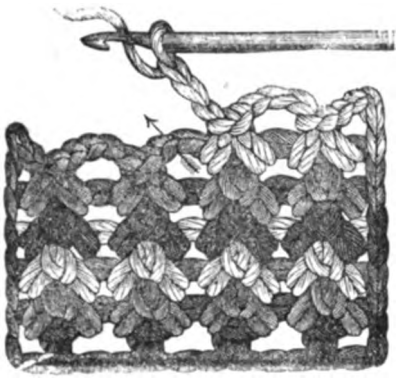
Digitized by Google

Knit plain. 4th row—Seam all. Repeat these 4 rows seven times more. 33rd row—Slip 1, knit 16, knit 2 together, * turn your needle and work back; slip 1, knit 8, knit 2 together, repeat from * until you have only 10 stitches left on needle.

To form the Foot.—Commence by slipping 1st stitch, knit 9, and with same needle take up, and as you take up knit 18 stitches from side of your heel. Knit 3 stitches off front needle on the same, knit all the stitches from the 2 front needles, excepting the 3 last, on another needle. These 3 must be knitted on a third needle, with which take up, and as you take up knit 18 stitches from other side of heel; also knit 5 stitches from next needle on this. You will have 26 stitches on each side-needle, 20 on front needle. The next needle is called your 1st side-needle. * 1st side-needle—Seam all till within 5 of the end, when seam 2 together, seam 3. Front needle—All seamed. 2nd side-needle—Seam 3, seam 2 together, seam to the end of needle. Three rounds plain knitting. Repeat from * until you have 18 stitches only on each of your side needles. Seam one round, knit 3 rounds. Repeat these 4 rounds until your foot is with 2in. of the length you wish it. Now to narrow off for the toe. * 1st side-needle—Seam all till within 5 of end, when seam 2 together, seam 3. Front needle—All seamed. 2nd side-needle—Seam 3, seam 2 together, seam to end. Three rounds knit plain, repeat from * 5 times more, seam a round, knit plain 3 rounds, the last to be done very loosely. Draw the wool through the loops, and sew up the toe inside the boot.

8. Gentleman's Comforter (Crochet).

This is very pretty if worked in fine wool as a shawl, and the directions given for the comforter will be found to answer the purpose, though of course, if used as a shawl, a square must be worked. For this comforter you require 2oz. each of black, white, and purple fleecy or double Berlin wool, and a bone hook, No. 8. The detail No. 1*a* gives the stitch full. Make a chain with black wool the length you require the work, then turn and commence the 2nd row. All the rows commence on the right-hand side of the work, so each row must be fastened off when finished. 1st row



No. 1*a*. Detail of Comforter.

—* Take the wool on the needle, take up the 5th chain, take the wool on the needle, take up the same chain again, draw the wool through all the loops on the needle, 3 Ch., miss 2 Ch., work the double stitch as before in the next stitch, repeating from * for it; at the end of the row, after the last double stitch work 3 Ch., 1 DC. (double crochet) in the last chain stitch. 2nd row—Join the violet wool work 1 DC. in the first of the 3 chain, 3 Ch.,* the wool over the needle, put the needle just under the 3rd of the first 3 chain, and draw the wool through, put the wool over the needle again and insert the needle just under the first of the next 3 Ch., draw the wool through, then through all the loops on the needle, 3 Ch., repeat from * working the double stitch on each side the double stitch of last row to the end of the length of work, when work 3 Ch., 1 DC. on the 3rd Ch.; fasten off. 3rd row—With white wool, and work as the 2nd row. 4th row—With purple wool as the 2nd row. 5th row—With black wool as the 2nd row. Repeat from the second row, taking care to work throughout a row of purple on each side the row of white; when you have worked 48 rows lay the first and last row together, and join with black wool in the following manner: 1 DC. upon the 2nd of the first 3 Ch., * 3 Ch., 1 DC. upon the 2 Ch., on the opposite side, 3 Ch., 1 DC. upon the 2nd of the next 3 Ch. on the opposite side again; repeat from * the whole length, then join the two ends by working them together with a row of double crochet in black wool, now working the heading for the fringe.

The Fringe.—With white wool. 1st row—1 DC. in the first stitch, 2 Ch., miss 2 DC., * 1 treble or the wool twice round the needle in the next stitch, 2 Ch., 1 DC. in the next DC., 2 Ch., 1 treble in the next DC., miss 1 DC., and repeat from * and fasten off. 2nd row—With black wool. 1 DC. on the first DC. of last row, * 5 Ch., 1 DC. upon the DC. between the two treble stitches; repeat from * and fasten off. 3rd row—Purple wool. 1 DC. on the first DC. of last row, * 5 Ch., 1 DC. upon the 3rd of the next 5 Ch.; repeat and fasten off. Cut the purple and black wool into lengths of 6 inches, loop 4 threads of each colour into each loop of 5 chain in the last row and fasten off.

9. Pelerine (Crochet).

This pelerine is not only very useful, but very simple in its execution. Grey and either scarlet or purple wool for the border is required; use fleecy or 6-thread Lady Betty, and a long hook, No. 4. The work is commenced from the bottom; make a chain with 296 stitches with grey wool; this is for the whole width of the cape. 1st row—Plain crochet tricotée. 2nd row—Take the two first loops together with grey wool, 3 scarlet loops, *5 grey, 4 scarlet; repeat to the end; finish the end with taking two stitches together in grey. 3rd row—1 grey loop, 3 scarlet, * 5 grey, 4 scarlet; repeat from *. In all the rows of border finish with the same colour that commences the row, and with the same decreasings. 4th row—* 4 grey, 2 scarlet, 1 grey, 2 scarlet loops; repeat from *. 5th row—Two together with grey, 3 grey, * 1 scarlet, 1 grey, 1 scarlet, 6 grey; repeat from *. 6th row—4 grey, * 1 scarlet, 1 grey, 1 scarlet, 6 grey; repeat from *. 7th row—4 grey, * 1 scarlet, 1 grey, 1 scarlet, 2 grey, 2 scarlet, 2 grey; repeat from *. 8th row—2 together with grey, 2 grey, * 1 scarlet, 1 grey, 1 scarlet, 6 grey; repeat from *. 9th row—3 grey, * 1 scarlet, 1 grey, 1 scarlet, 6 grey; repeat from *. 10th row—2 grey, * 5 scarlet, 4 grey; repeat from *. 11th row—2 together with grey, * 5 scarlet, 4 grey; repeat from *. 12th row—1 grey, 2 scarlet, 1 grey, 3 scarlet, * 2 grey, 3 scarlet, 1 grey, 3 scarlet; repeat from *. 13th row—1 grey, * 5 scarlet, 4 grey; repeat from *. 14th row—2 together with grey, 1 grey, 3 scarlet, * 4 grey, 5 scarlet, repeat from *. 15th row—2 grey, 2 scarlet, * 6 grey, 3 scarlet; repeat from *. 16th row—2 grey, 2 scarlet, * 6 grey, 3 scarlet; repeat from *. 17th row—2 together with grey, 1 scarlet, * 8 grey, 1 scarlet; repeat from *. 18th row—2 together with grey, and all the rest grey to the end, when 2 together again. 19th row—Plain. The rest of the cape is worked in grey wool. 20th row—* Plain. 21st row—2 together, 12 plain, 2 together, * 10 plain, 2 together; repeat from * until the end of the row, when work 12 plain and 2 together. 22nd, 23rd, 24th rows—Plain. 25th row—2 together, 11 plain, 2 together, * 9 plain, 2 together; repeat from * and at the end work as at the commencement of row. 26th, 27th, 28th rows—Plain. 29th row—2 together, 10 plain, 2 together, * 8 plain, 2 together; repeat from *, and end as at first. 30th, 31st, and 32nd rows—Plain. 33rd row—2 together, 9 plain, 2 together, * 7 plain, 2 together; repeat from *, and end as at first. The end of the row must be finished as it commences throughout. 34th, 35th, 36th rows—Plain. 37th row—2 together, 8 plain, 2 together, * 6 plain, 2 together; repeat from *, and end as before. 38th, 39th, 40th rows—Plain. 41st row—2 together, 7 plain, 2 together, * 5 plain, 2 together; repeat from *, &c. 42nd, 43rd, 44th rows—Plain. 45th row—2 together, 6 plain, 2 together, * 4 plain, 2 together; repeat from *, &c. 46th, 47th, 48th rows—Plain. 49th row—2 together, 5 plain, 2 together, * 3 plain, 2 together; repeat from *. 50th, 51st, 52nd rows—Plain. 53rd row—2 together, * 4 plain, 2 together; repeat from *, and throughout. 54th row—Same as 53rd. 55th row—Two loops together throughout the row. 56th row—Double crotchet, work a row of double crochet down each side the front and round the bottom; then work the following border in scarlet and grey.

Border.—1st row with grey, * 1 double crochet in the next stitch, miss 2 DC. underneath, 6 treble stitches in the following, miss 2 DC., and repeat from *. 2nd row with scarlet wool—1 long upon the 1st DC. of last row, * 5 Ch., 1 DC. between the 3rd and 4th treble, 5 Ch., 1 long upon the next DC.; repeat from *. Cut the two colours of wool into lengths of 8 inches, and knot 3 threads of each wool into each loop of chain round the bottom of the mantle. Make a chain of grey, and add tassels to draw up the cape round the neck.

10. Cloak (Crochet).

A long bone crochet hook No. 4 is required for this, and scarlet and white 3 thread fleecy wool, or partridge and black; 6 thread Lady Betty wool would be preferable, being lighter and softer; but you can rarely procure partridge wool in that make. The shape of this cloak is like the burnous, but without the hood, and instead of being rounded, it forms a point at the back. The engraving No. 10*a* shows the back of the cloak. Commence with a dark stripe at the bottom of the front, and for this make a chain of 150 stitches. Work 3 rows plain in crochet tricotée. 4th row—Increase a loop by taking up a stitch between the first and second long loop in the row; the rest plain; work back. 5th row—Plain. 6th row—Take the white wool and work a plain row. 7th row—In this row, and also in the 4th row in the light stripe, a little pattern in black wool is worked. Have a separate ball for the purpose, and pass it on from one pattern to the other (the cloak would look very well without it, if extra trouble is not desired). * 8 loops plain with white wool, 2 black loops; repeat from * and work back, taking care to work the black loops through with black wool. 8th row—Increase as in 4th row, rest plain. 9th row—4 white loops, * 2 black loops, 8 white loops; repeat from *, and work back. 10th row—Plain. 11th row—Join the dark wool, and work 5 rows, increasing in the 2nd row of the 5; work 15 stripes in this manner, each stripe consisting of five rows, and increasing one stitch at the commencement of every 4th row in the work, and working the little pattern in the white stripes, you will now have 74 rows, and are about to commence a light or white stripe. Now commence the neck, and for this decrease at the end of the rows by leaving the loops unworked. 75th row—White wool. Leave 1 loop unraised at the end, and still continue to increase at the commencement of every 4th row. 76th row—Take up all the loops

12. Round d'Oyley (Tatting).

Digitized by Google

of last row excepting the last. 77th row—Take up *all* the loops of last row. 78th row—Take up all the loops but the last of the preceding row. 79th row—Leave one loop at the end. 80th row—Dark wool. Work all the loops of last row. 81st row—Leave the last loop unworked. 82nd row—Work all the loops of last row. 83rd row—Leave one loop at the end. 84th row—Work all the loops of last row. 85th row—White wool; raise all the loops. 86th row—Leave one loop at the end. 87th row—Raise all the loops of last row. 88th row—Leave one loop unraised. 89th row—Raise all the loops of last row. 90th row—Dark wool; raise all the loops of last row. 91st row—Leave one loop unraised. 92nd row—Raise all the loops of last row. 93rd row—Leave one loop unraised. 94th row—Raise all the loops of last row. 95th row—White; raise all the loops of last row. 96th row—Leave one loop unraised. 97th row—Raise all the loops of last row. 98th row—Leave one loop unraised. 99th row—Raise all the loops. 100th row—Dark wool; raise all the loops of last row. 101st row—Leave one loop unraised. 102nd row—Raise all the loops of last row. 103rd row—Leave one loop unraised. 104th row—Raise all the loops of last row. 105th row—White wool. This stripe is worked plain at both ends of the row. This stripe forms the middle of the back of the cloak; now work 21 stripes, working the directions backwards from the 104th row, increasing one stitch in the neck in the rows where you left a stitch, and decreasing one stitch at the commencement of every fourth row throughout the whole pattern. When finished, work a row of double crochet with dark wool all round the bottom of the cloak. Then work the following border, with white wool for the fringe.

BORDER.—1st row—1 double crochet on the first stitch, * 5 Ch., miss 2 double crochet, 1 DC. in the next; repeat from *. 2nd row—With dark wool, * 1 double crochet in the third of the next 5 Ch., 5 Ch.; repeat from *. Cut the two colours of wool into lengths of 8in., and knot three or four lengths into each loop of chain stitches. Then make a long chain of the light wool, and two tassels at each end, to tie it with round the neck.

11. Alms Dish Mat.

To work this mat the material is to be prepared precisely as for any other kind of embroidery, viz., the pattern is first to be drawn on the velvet, which is then to be pasted or smoothly tacked on tightly framed holland. The materials used in the work are comprised in gold passing, gold beads, crochet silk, fine purse, and sewings.

The colour of the silks must of course be governed by the ground. Should it be of crimson, a light but rich olive green, either in crochet silk or coarse floss, stitched down with gold sewings, and the "passing" sewn over with crimson, would be in correct taste.

We advise the use of two qualities of "passing" (coarse and very fine) for this design, and that the gold beads be of two distinct sizes, as shown in the engraving.

12. Round D'Oyley (Tatting).

YOU require Ardern's cotton No. 32, and a tatting shuttle. Commence with the centre figure.

THE RING IN THE CENTRE.—1 double, 1 purl, 17 times, 1 double, draw up. Now work a small oval of 3 double, 1 purl, 3 double, draw up; * join to the next purl, work on it another oval like the last; repeat from * until you have 18 of these small ovals, then knot the cotton into the purl at the top of the first oval for the

2nd round.—A large oval of 2 double, 1 purl, then 1 double, 1 purl, 8 times, 2 double, draw up, join to the purl at the top of the second small oval, then join the cotton to the purl, stitch on the third oval, work the large oval again, joining to the last large oval worked in the first purl stitch; work in this manner until the round is complete, when you should have 9 ovals; join the 9th to the first oval, as well as to the one preceding it, and fasten off. On this round of ovals you work a round of 9 stars.

THE STAR.—Commence in the centre with 1 double, 1 purl 6 times, draw up; on these 6 purl stitches work a round of 6 small ovals, each oval consisting of 2 double, 1 purl, 2 double, 1 purl, 1 double, 1 purl, 1 double, 1 purl, 2 double, 1 purl, 2 double; draw up, join the 3rd oval by the centre purl stitch to the same purl stitch on one of the 9 ovals of last round; in working the following stars join them together in the first and second ovals as well.

Now work the 9 outside figures. Commence with the star in the centre; make a ring of 1 double, 1 purl, 12 times, draw up, loop the cotton into the first purl stitch, and work the 2nd round. This is composed of 12 small ovals; each oval is worked with 5 double, 1 purl, 5 double, and is joined to the purl under it—that is, the purl on the ring.

3rd round.—Join to the purl in the first oval, work an oval of 3 double, 1 purl, then 1 double, 1 purl, 6 times, 3 double, draw up, join to the purl on the next oval, leave a small piece of cotton, and work another oval like the last, joining them together in the first and last purl stitches; repeat the round until you have 12 ovals, and join the last oval to the first. Now work the three small ovals forming the trefoil at the top of the figure. Each oval is worked with 3 double, 1 purl, then 1 double, 1 purl, three times, 3 double, join the two under ovals to two of the ovals in the last round of the star. When these are finished, work the row of ovals outside the trefoil and star. Commence in the 3rd purl of the top oval of the trefoil, and work an oval of 4 double, 1 purl, then 1 double, 1 purl, 6 times, 4 double, draw up, join to the 3rd purl of the same oval, and work another oval like the last, joining to the last oval in the first purl stitch. The engraving is so distinct that you can follow it for the position of the remaining ovals, which are all worked like the first. Then finish the d'oyley by working the outside round. Commence the round with the large oval between the two figures; for this work 6 double, join to the 8th oval in the last round of the figure, 5 double, join to the 17th oval of the next figure, then work the ovals round the bottom of this outside figure, each oval is worked with 5 double, 1 purl, then 1 double, 1 purl, 6 times, 5 double, follow the engraving for the position of the remaining ovals, which are all worked like the last. This makes a very good toilet cushion. If used for this purpose, a round cushion should be made on a circle of cardboard; let it be well wadded and raised in the centre, covered with pink satin, a ruche of the same placed on the outside edge of the cushion, and the tatting laid lightly over it and slightly fastened at different distances.

13. Tatted Medallion for Trimmings, &c.

Two threads are required for this rosette. Commence by working the two stars in the corners of the medallion.

THE STARS.—For the centre work 2 D., 1 P. 12 times; draw close; loop into the first purl, and work an oval of 12 double, 1 purl, 12 double, draw close; work an oval like the last in each of the 12 purl stitches on the foundation, making 12 ovals; then knot into the first oval again (in the purl stitch), and now work the ten little ovals at the side of the medallion. 1st oval—Leave one-eighth of an inch of cotton, then commence 3 D., knot into the purl on the oval again, 6 double, knot into the last oval of the star, 3 D., 1 P., 3 D., 1 P. (a large P.), 6 D., 1 P., 3 D., draw close; leave a small piece of cotton, and repeat this oval (joining to the one worked before it in the two first purl stitches) 8 times; then work the oval again, and in the two last purl stitches join to the ovals of the second star; fasten off. Join to the 3rd oval on the first star, and repeat these 10 ovals again, joining in the last oval to the second star again.

Now join the 2 threads to the purl in the last oval of the first star, it has been already used by the first of the 10 ovals, * work on the 2nd thread 4 D., 1 P., 4 D., join into the purl at the top of the first small oval, repeat from * 10 times, joining into each small oval, and at the last to the second star. Then work the same on the other side. Now work the outside row. Join into the 11th oval of the first star with the two threads, * * work on the 2nd thread 3 D., * 1 P., 1 D. * 5 times, 1 P., 3 D., join into the next purl on the last thread, and repeat from * * to the next star, to which join; then work on the other side in the same manner.

Now work the two stars in the centre of the medallion. Commence an oval. 16 D., join to the oval on the first star between the two sides of the medallion, 16 D., draw up; repeat the oval, joining to the bottom of the 3rd small oval at the side, then a 3rd oval 16 D., 1 P., 16 D. The 4th oval—Join to the 3rd oval on the 2nd side of the medallion from the first star, fasten off; now work another star like this at the other end of the medallion; fasten off; then work in the centre 2 ovals, joining to the purl stitches of the two ovals of the stars, and to the connecting thread between the 5th and 6th small ovals at the sides. These medallions will look very well joined together for a border.

14. Medallion (Tatting).

COMMENCE in the centre with 1 double, 1 purl, then 2 double, 1 purl seven times, 1 double, draw up. Knot the cotton into the first purl, leaving the eighth of an inch of cotton, * then work an oval of 5 double, 1 purl, 3 double, 1 purl, 3 double, 1 purl, 5 double, draw up. Knot the cotton into the next purl, leaving the same amount of cotton as before, and repeat from * seven more times. The outside row is worked with two threads; join them together, and * with the shuttle work an oval of 6 double, 1 purl, 3 double, join to the purl in the oval underneath, 3 double, 1 purl, 6 double, draw up, over the second thread work 16 double; repeat from *, joining each oval to the last one worked in the first purl stitch.

15. Medallion for Antimacassars, D'Oyleys, Covers, &c.

THIS is extremely pretty if worked with fine cotton. Use Ardern's cotton, No. 22, and a *very* fine crochet hook. Commence by making the 8 leaves in the centre of the medallion, * 13 chain, 1 treble, or the thread twice round the needle, in the 8th chain and each of the 4 next stitches; 1 long in the 3rd and 2nd, 1 single in the first; repeat from * 7 more times, making 8 leaves, then join to the 1st leaf with a single on the single stitch in that leaf. 2nd round—8 chain, * work 1 long on the 2nd long stitch in the next leaf, working at the back of the leaves 3 Ch., 1 double treble, or the thread 3 times round the needle just between the first and second leaves, working on the single crochet stitch, 3 Ch.; repeat from * all round. At the end of the round work 3 Ch., 1 single on the 5th of the 8 Ch., and 1 single on each of the two next chain. 3rd round—7 Ch., 1 long on the same stitch as the last single, 1 Ch., * 1 long in the 2nd of the next 3 Ch. of last round, 3 Ch., 1 long in the same stitch as the last, 1 Ch.; repeat from * at the end of the round. Work 1 single in the 3rd of the first 7 Ch., 1 single row over the next 3 Ch. 4th round—3 Ch., 1 long over the same 3 Ch. as the single stitch just worked in last round, 2 Ch, 2 long over the same, 3 Ch. again, * 1 Ch., 2 long over the next 3 Ch., 2 Ch., 2 long over the same 3 Ch.; repeat from * at the end of the round; work 1 single on the 3rd of the first 3 Ch. 5th round—1 single on the next 2 long, 3 Ch., 1 long over the

Digitized by Google

2 Ch., * 3 Ch., 2 long over the same 2 Ch., 2 Ch., 2 long over the next 2 Ch.; repeat from *. 6th round—1 single on the next 2 long, 3 Ch., 1 long over the 2 Ch., * 3 Ch., 2 long over the same 2 Ch., 3 Ch., 2 long over the next 2 Ch.; at the end of the round turn, 1 DC. on the next chain, turn, work the 7th round. * 6 Ch., 1 single in the 2nd of the 6 chain, 2 long in the next 3 Ch., a picot of 5 Ch., 1 single in the first of the 5 chain, 2 long in the same 3 Ch., a picot, 1 Ch., 1 DC. in the second of the next 3 Ch.; repeat from *, and fasten off.

16. Square of Tatting.

This little square is very pretty when worked, and is suitable for the ends of cravats, trimming aprons, or they can be worked and joined together as a border or antimacassars.

Two threads are required, and a fine crochet hook. You commence with the star in the centre. Work for the foundation of this star, 3 double (D.), 1 purl (P.) 7 times, draw up; work close to this join * a large oval of 12 D., 1 P., 12 D., draw close, draw the cotton through the next loop on the foundation, pass the loop over the left hand, and work on it a small oval of 8 D., 1 P., 8 D, draw close, draw through the next purl in the same manner, and repeat from *, taking up each loop successively, so that you have at the end 4 large and 4 small ovals. * * Draw the cotton through the purl of the first large oval, and crochet 12 chain, take the last of these 12 chain upon the hand as a loop, and work the first trefoil of 3 ovals close together. Each oval is made of 10 D., 1 P., 10 D. After the 3rd oval crochet back 5 single on the first 5 chain of the 12 Ch., then 5 Ch., another trefoil like the last, joining the purl of the first oval in the trefoil, to the purl in the last oval in the last trefoil, 5 single on the 5 Ch., 5 Ch., another trefoil worked as the last. 5 single on the 5 Ch., and 7 single on the 7 Ch. left of the first 12 Ch. Knit into the purl of the large oval in the star again, then draw through the purl on the next oval of the star, and work a small oval of 5 double; join to the last oval in the last trefoil 5 D., 1 P., 5 D.; draw up. Repeat from * * all round the star, joining the first oval of the next trefoil to the purl in this small oval just worked; fasten off. Join the 2 threads together to the purl of the 2nd oval in the centre of one set of trefoils, * work over the 2nd thread, 3 D., 1 P., 2 D., 1 P., 2 D., 1 P., 2 D., 1 P., 3 D., draw through the purl uniting the next 2 trefoils, then repeat from * again, and join to the different points as the design shows clearly; at the end fasten off neatly.

17. Vallance for Chimney Pieces.

This border is very handsome worked for a chimney piece, bracket, or small table. It is composed of roses, large rose buds, rose leaves, and butterflies, but requires an experienced worker.

The Butterfly.—This is worked in entirely ribbed crochet, edged with a border of open crochet. The ribbed crochet is worked by taking up the stitch from the back of the loop instead of the front of the double crochet stitch. Make a chain of 13, turn, work back on it 12 double crochet, 1 Ch., turn, 12 DC., 1 Ch., turn, 12 DC., * 3 Ch.—this side on which the three Ch., are worked is for the inside of the wing going next the body—work back, 1 DC. on the 2 Ch. and the following DC., then 1 Ch., turn DC to the *end of* last row; repeat from * until you have 6 ribs, or 13 little rows. If properly worked this makes the last row finish at the top by the 3 Ch., work 5 Ch., turn, * 1 long on the 3rd DC., 2 Ch., from the last * repeat to the corner, where work three times in one stitch; then continue as before on the edge of the 13 rows to the foundation chain, turn, and work 4 DC. over each 2 Ch., finishing on the 3rd of the first 5 Ch. Work 3 chain for the foundation of the next wing, turn, work back on it 12 DC., draw the last stitch through the 1st DC. on the last wing, turn, 10 DC., turn, 8 DC., join to the next DC. on the last wing, turn, 8 DC., 3 Ch., turn, work 10 DC., *join to the* last wing in the next DC., turn 12 DC., 3 Ch., work back in DC., join to the next stitch on the last wing, turn, 3 Ch., * 1 long in the 2nd DC., 2 Ch., repeat from * to the end of the 10th of the foundation chain, *turn*, and work back in the same manner, working each long stitch in the space of the row before, and of course in both rows working 3 times in the corner stitch, *finish* at the end of the row between the two last long *stitches*; join to the 10th DC. from the last used on the last wing, turn, and work 4 DC. over each 2 Ch., finish on the 2nd long from the end; fasten off. Then work a row of DC. on the inside of the wing, taking up each *stitch* at each rib in the large wing; fasten off at the beginning of the first foundation chain stitch. Work the other half exactly like this, but, instead of *fastening off*, work after the last DC. on the inside of the wing 5 Ch. for the commencement of the body, turn, work 1 DC. on the 4th Ch., 1 long in each of the 3 next, 1 long on the first DC., then treble in each remaining DC., 2 chain (*for the head*), 6 DC. in the 1st Ch., draw the last stitch through the first DC., 2 single on the 2 last DC., 10 Ch., unite in the side of the wing (for the feelers), turn, 5 DC. in the last Ch., then 1 single on each of the next 9, 2 DC. in the middle of the head, work one single in the next, then 10 Ch. again for the next feeler, which work as the other; fasten off. Sew the other wing to the body on the opposite side with a needle and thread.

The Rose.—Make a chain of 16, unite with 1 single on the first of the 16 Ch., then 7 Ch., 1 long in the 2nd chain in the ring, * 4 Ch., 1 long in the 2nd chain from the last used; repeat from * 5 times, then 4 Ch., 1 single in the 3rd of the 7th Ch., work over the next 4 Ch., 1 DC., 6 long, 1 DC.; repeat, over each seven chain, 1 single on the long stitch in the first round *behind* the first leaf, 5 Ch., 1 single on the next long stitch; repeat of last round 6 Ch., 1 single on the next single; repeat, over each 6 Ch. work 1 DC., 10 long, 1 DC. For the 4th round of leaves, 1 single on the 1st single of last round, 7 Ch., 1 single on the next single; repeat, over each 7 Ch. work 1 DC., 4 long, 4 treble, 4 long, 1 DC. The 5th round of leaves, 1 single on the 1st single, 8 Ch.; repeat, over each 8 chain work 1 DC., 4 long, 6 treble, 4 long, 1 DC. The last or 6th round of leaves, 1 single on the 1st single, 9 Ch.; repeat, over each 9 Ch. work 3 long, 4 treble, 6 double treble, or the thread three times round the needle, 4 treble, 3 long; fasten off.

The Rosebud.—Commence with the little round just above the stalk, 2 Ch., work 5 DC., in the first of the 2 Ch., then 1 DC. on the first of these 5 DC., so joining them into a circle; work 2 DC. in each stitch, taking up the back of the loop only. When this little round is finished, work 18 chain, turn and work back on the 18 Ch., 17 DC. When you come to the round work 2 DC. in each stitch until you come to the stitch before the 18 Ch., work 1 DC. in it, then 6 Ch., 1 long in the 7th of the first, 18 Ch., 6 Ch., a treble in the 15th of the 18 Ch., 5 Ch.; turn and work back on this last little row 17 DC., then 4 single on the round, turn, work back, 1 DC., 2 long, 4 treble, 8 double treble, 6 treble; and in the last chain 4 long and 1 DC., 8 Ch., 1 DC., and 4 long in the top of the first 18 Ch. Now work down this side with 6 treble, 8 double treble, 4 treble, 2 long, 1 DC., 1 DC. on the 2nd stitch in the round, work in DC. on the round to the other side, then up the long and treble stitches to the 3rd long at the top of the bud. Now 9 Ch., 1 single in the first Ch. three times, 1 single on the last DC., 6 DC. over the 8 Ch., 9 Ch., 1 single in the first of the 9 Ch. three times, 1 single on the last DC., 6 DC. over the same 8 Ch., 1 DC. in the 2nd long stitch, 9 Ch., 1 single in the first chain three times, 1 single on the last DC., 1 DC. in each stitch to the round and on the round; fasten off.

The Rose Leaf.—For the first row in the first half of the leaf make a chain of 8, work back on it 7 DC.; the leaf is worked throughout in ribbed crochet, 2 Ch. for the turn on this, the outside edge of the leaf. 1 DC. upon the first Ch., and each of the next 6 DC., leaving the last unworked, * 1 Ch., turn. 1 DC. on each DC. of last little row, 3 Ch., turn, 1 DC. on the two first chain and next DC., excepting the last, turn, repeat from * until you have *ten ribs* on each side the work; you then begin to narrow for the point of the leaf. Work to the outside again, 3 Ch., work back in DC., leaving *three* stitches unworked of last row, 1 Ch., turn, DC. to the outside; 3 Ch., turn, DC., leaving 6 stitches unworked, 1 Ch., turn, work back in DC., 3 Ch., 1 DC. on each stitch of last row, then on each DC. left in all the preceding rows, and 1 DC. on the edges of each row also, until you come to the first row in the leaf, now turn for the vein 6 Ch., the first three of these form a long stitch, 1 treble in the 3rd DC., * 2 Ch., 1 treble in the 3rd DC., repeat from * 4 times, 2 Ch., 1 long in the 3rd DC. to the point of the leaf; turn, and work a row of DC. back upon this last row, ending on the 4th of the 6 Ch. You now make the 8 Ch. and work the first half of the leaf over again, but at the turn inside, instead of making 1 Ch., draw the last stitch through the 2nd DC. on the vein; at the end of the leaf cut off the thread and sew it neatly in. For the stalks, work the requisite number of chain stitches and back again on them in double crochet; the stalks should not be worked until all the separate parts are arranged on paper, then work the chain stitches, drawing the last through the part to be united. The engraving gives this so clearly that further explanations are unnecessary.

The height of the original border is 9½ inches from the deepest part of the scollop. The width of each scollop is 5½ inches. Arrange your sprays upon paper cut the shape of the scollops; then work round them the 1st row of the border, in which you work the long stitches. The longest of the stitches has the thread taken 6 times round the needle before taking up the spray or flower; each long stitch is preceded by 5 Ch.; upon this row work a row of double crochet. 3rd row—5 Ch., miss 2 DC., 1 DC. in the 3rd stitch; over the bottom of the scollop, that is where the rosebud is, only miss 1 DC. between each 5 Ch. 4th row—* 5 Ch., 1 DC. in the 3rd of the next 5 Ch. 5th row to the 12th row, as the 4th; in the narrow part between the scollops you must diminish the chain stitches to keep the border in its proper shape. 13th row—5 Ch., 1 long upon the 3rd of the next 5 Ch., * 7 Ch., 1 DC. upon the first of the 7 Ch. 3 times; 1 single upon the last long stitch, 5 Ch., 1 DC. upon the 3rd of the next 5 Ch. repeat from the beginning of the row.

18. Medallion in Crochet, Tatting, and Point Lace.

This medallion is very effective when worked, and pretty for d'oyleys, the ends of cravats, muslin aprons, &c. Very fine linen thread is required. crochet cotton No. 24 (Evans's), also No. 26, and a very fine crochet hook.

With the finest cotton crochet the spray of flowers. All the pieces are worked separately, then joined together. The spray consists of three leaves, two rosebuds, a small rose, and two forget-me-nots.

The Forget-me-not.—Make a chain of 6 unite. In the first chain of the ring work a leaf of 1 double crochet, 4 long, 1 double crochet; repeat in each stitch in the ring, making 6 little leaves before fastening off. Make the two little tendrils with 4 Ch. and 5 Chain.

The Large Rose Leaves.—Make a chain of 13, work back on it 1 DC on the 12th, 1 long on the 11th and 10th Ch., 1 treble or the thread twice round the needle on the 9th and 8th, 1 double treble or the thread three times round the needle on the 7th and 6th, 1 treble on the 5th and 4th

long on the 3rd and 2nd, 3 double in the 1st, then turn the work round and work 1 long on the 2nd and 3rd of the 13 Ch., 1 treble on the 4th and 5th, a double treble on the 6th and 7th, a treble on the 8th and 9th, a long on the 10th and 11th, 3 DC. in the stitch at the top of the leaf, and work all round the leaf in double crochet. When you come to the 2nd of the 3 chain at the bottom of the leaf, make the short stalk by working 4 Ch., turn, 1 DC. on each, then 1 single on the last DC. on the leaf, work in DC to the point, where fasten off neatly, and run the end in.

THE SMALL LEAF.—Make a chain of 8, turn, 1 DC. on the 7th, 1 long on the 6th and 5th, 1 treble on the 4th and 3rd Ch., 1 long on the 2nd, 3 DC. in the 1st; work up the other side the chain in the same manner, then work round with DC., working 3 DC. in the point, and on the 2nd of the 3rd DC. at the bottom work the small stalk of 4 Ch., 1 single on the first three of these 4 Ch., 1 single on the last DC. on the leaf, then DC. to the point and fasten off.

THE ROSE.—Make a chain of 6 unite, 5 Ch., 1 long in the next Ch. in the ring, * 2 Ch., 1 long in the next Ch., from *, repeat three more times, 2 Ch., 1 single on the 3rd of the 5 Ch.; work over each of these 2 Ch., 1 DC., 4 long, 1 DC. The 2nd row of leaves—1 single on the first long in the first round, working behind the row of leaves, * 4 Ch., 1 single on the next long, repeat from * all round; then over each 4 chain work 1 DC., 6 long, 1 DC. The 3rd round of leaves—Work behind the last round of leaves, 1 single on the first single, * 5 Ch., 1 single on the next single, repeat from * over each 5 Ch.; work 1 DC., 8 long, 1 DC., and fasten off.

THE ROSEBUD.—2 Ch., work 5 DC. in the first chain, 1 single on the first DC., then 8 Ch., turn 1 DC. on the 7th and 6th chain, 1 long on the 5th, 4th, 3rd, and 2nd Ch., 1 DC. on the first, then 2 DC. on each stitch in the round when the last is worked, 2 Ch., one long on the 3rd of the first 8 Ch., 2 Ch., 1 long on the 6th of the 8 Ch., 2 Ch., 1 single in the 8th Ch., turn, a picot of 7 Ch. 1 single on the first, three times; then work in DC. and long stitches over the last chain and long, in the same manner as on the 8 Ch., 1 single on the last DC. on the round, and work in single to the middle of the round, where work 5 Ch. for the stalk, and fasten off. Now work the tatted ovals round the medallion with the coarser cotton. 1st oval.—3 double, 1 purl, 3 double, 1 purl, 2 double, 1 purl, 2 double, 1 purl, 3 double, 1 purl, 3 double; draw up. Work 25 of these, joining them to each other in the first and last purl stitches, leaving a small piece of cotton between each. Now take a piece of kid or glazed linen; tack the different flowers and leaves on in their places, then unite them by the main stalk, which is chain stitch, with DC., worked back on it. Take hold of the smaller stalks in their respective places, and so unite them. Cut an oval in paper the size of the spray, leaving a margin all round. On this margin tack the tatting, remove the paper, then work over with the linen thread, and fill in the grounding by the pattern in point lace stitches.

19. Medallion for Antimacassar.

USE Ardern's cotton No. 24, and a very fine crochet hook. Make a chain of 12, unite; in this work 24 DC., 1 single on the first DC. 2nd round—* 5 Ch., 1 DC. in the 2nd DC., 1 Ch., a picot of 5 Ch., 1 single in the first of the 5 Ch., 1 Ch., a picot, 1 Ch., a picot, 1 Ch., a picot, 1 Ch., a picot, 1 Ch., 1 DC. on the next DC. in last round; repeat from * 7 more times; at the end of the round fasten off. 3rd round. 1 DC. on the centre picot of one of the points in last round, * 5 picots close together, each made of 5 chain stitches, 1 DC. in the 3rd picot of the next point; repeat from * and fasten off. 4th round. 1 DC. on the 3rd of the first 5 picots of last round, * 5 Ch., 2 treble in the first of the 5 Ch, 6 Ch., 2 treble in the 2nd of the 6 chain, 1 DC. on the 3rd of the next 5 picots; repeat from * and fasten off. 5th round—1 DC. on the chain stitch left between the 4 treble stitches in last round, * 10 Ch., 1 DC. on the next single chain stitch; repeat from *. 6th round—Over each 10 Ch. work 3 DC., 4 Ch., 2 DC., 4 Ch., 2 DC., 4 Ch., 3 DC., 4 Ch., 2 DC., 4 Ch., 3 DC.; fasten off.

20. Medallion for Antimacassar.

USE Ardern's cotton No. 24, and a very fine crochet hook. Make a chain of 8, unite; in this work 32 treble. 2nd round—1 DC., * 6 Ch., 1 treble in the first of the 6 Ch., 1 treble in the DC. just worked, and in working these treble stitches keep the last loop on the needle of the first treble until the 2nd is worked, 1 Ch., 2 picots, each worked with 5 Ch., 1 Ch., miss 3 treble of last round, 1 DC. in the next; repeat from * 7 more times, and fasten off. 3rd round—1 DC. just upon the 2 treble of last round, * 1 Ch., 4 picots together, 1 Ch., 1 DC. on the next 2 treble stitches; repeat from *. 4th round—1 DC. on the DC. of last round, * 2 Ch., 2 picots, 1 double treble, or the thread 3 times round the needle, in the 2nd picot of last round, 3 picots together, 1 double treble in the next picot of last round, 2 picots, 2 Ch., 1 DC. on the next DC. of last round; repeat from *, and fasten off.

21. Medallion for Antimacassars, d'Oyleys, &c.

USE Evans's No. 22 crochet cotton and a very fine crochet hook. Make a chain of 8, unite, in this work 16 double crochet. 2nd round—8 Ch., 1 long in the last DC. of last round, * 1 long in the 2nd DC. from the last long, 5 Ch., 1 long in the same DC. as the last long, repeat from * 6 times, then one single in the 3rd of the 8 Ch. at the commencement of the round. 3rd round—9 DC. over every 5 Ch., at the end of the round work 1 single on the 5 first of the first 9 DC. 4th round—9 Ch., 1 single in the 5th of the 9 Ch. forming a picot, a picot of 5 chain 1 single in the first of the 5 Ch., * 1 treble or the thread twice round the needle on the 5th DC. of the first 9 DC. of last round, work 2 picots close together like the last made, a double treble or the thread three times round the needle in the same DC. as the last treble stitch, a double treble in the 5th DC. of the next point, 2 picots; repeat from *. At the end of the round, after working the last double treble, work one single in the 5th of the first 9 Ch. 6th round—* 1 Ch., three picots each of 5 Ch., 1 DC. on the next treble, 1 Ch., 3 picots, 1 DC. just over the two double treble; repeat from * and fasten off. 7th round—* 1 DC. on the middle picot of the next three picots of last round, 7 Ch.; repeat from *. 8th round—Over every 7 Ch. of last round work 3 DC., 4 Ch., 2 DC., 4 Ch., 2 DC., 4 Ch., 3 DC., and fasten off; work as many of these medallions together as you require, joining them together in the 2nd of the three picots in the succeeding scollops. If worked in the fine cotton, no smaller star will be required to fill in the empty space.

22. Antimacassar (Crochet).

THIS pattern is composed of stars framed round with crochet to form squares; these squares are joined by still smaller squares of double crochet, with a network of chain stitch between the little squares; it is rather difficult to work neatly, as it requires a great many joins. Work first as many stars as you think you will require for the cover; the stars are joined together from a corner of the work, instead of in a longer row, in order that the open stripes between may run in a slanting direction.

1ST STAR.—2 Ch.* *, 2 picots of 5 Ch. each close together, 4 Ch., 1 double crochet (DC.) upon the first and second of this 4 Ch., 2 picots again (the 4 Ch., with the double crochet worked upon it forms the centre picot in each point of the star), 3 chain; repeat from * * 7 more times, making 8 sets of picots, turn, work 1 single on the 2nd of each 3 Ch. between the picots, so drawing up the star; then 1 S. on the 1st Ch., and 1 S. on the turn; fasten off. 1st row round the star—6 Ch., 1 DC. on the top of 1st point, * 6 Ch., 1 DC. upon the top of the next point, 12 Ch., 1 DC. upon the next point; repeat from * twice more; then 6 Ch., 1 DC. upon the next point, 6 Ch., 1 DC. upon the first DC. in the row. 2nd row—1 DC. in each stitch of last row, excepting on the 6th of each 12 chain, work between the 6th and 7th of these 12 Ch. an extra DC. for the corners; at the end fasten off, work another star exactly like this; then work a small square of double crochet to unite them.

THE SMALL SQUARE.—8 Ch., work back upon this 8 Ch., 7 DC., 1 Ch. at the end. 2nd row—DC. in the centre stitch work 3 DC. to form the little knot; 1 Ch. at the end. 3rd row—7 DC., DC., 1 Ch. 4th row—A knot of 3 DC. in the 3rd and 5th stitches, the rest plain, 1 Ch. at the end. 5th row—7 plain, 1 Ch. 6th row—Like the 2nd. 7th row—Join to a corner of one large square with a star in the centre, DC. to the end of the row; join to the corner stitch of the 2nd large square turn, work in DC. down the side of the little square worked, and fasten off. When more large squares are worked, you would fasten off by joining in the corner stitch of a 3rd square. Now join the cotton to the corner stitch of one of these two large squares already joined just above the square worked, 8 Ch., join to the corner of the 2nd square, and work back 7 DC. upon the 8 Ch.; then repeat from the 2nd row of the small square. When you have worked to the end, and brought the DC. into the stitch in which you commenced this small square, pass the thread over the corner, work 4 DC. upon the next side of the little square, 3 Ch., turn, 1 DC. upon the 4th DC. after the corner you have just passed on the large square, 7 Ch., 1 DC. between the 3rd and 4th DC. over the next 6 Ch. on the same large square; 7 Ch., 1 DC. upon the 4th of the next 13 DC., 3 Ch., 1 DC. upon the middle stitch on the side of the next little square, 3 Ch., turn, 1 DC. upon the 4th DC. on the side of the 2nd large square, 3 Ch., 1 DC. upon the 4th of the next 7 Ch., 3 Ch., 1 DC. between the 3rd and 4th of the next 6 DC. on the large square, 3 Ch., 1 D.C. upon the 4th of the next 7 Ch., 3 Ch., 1 DC. upon the 4th of the next 13 DC., 3 Ch., 1 S. on the 4th DC. in the little square where you commenced the net work, 3 DC. upon the remaining half side of this little square, 1 S. in the uniting stitch of the large and small squares, fasten off, but when more stars are joined together you can pass the cotton from one space to the other without a break, which makes the work much finer. When all the whole stars you require are joined together, work some half stars for the outside edges of the cover. They are all worked alike, and can be easily joined by the engraving.

THE HALF STARS.—Work 4 points only of the first star, then join and fasten off. 1st row round the square—6 Ch., 1 DC. on the 1st point, 6 Ch. 1 DC. on the next point, 12 Ch., 1 DC. on the 3rd point, 6 Ch., 1 DC. on the 4th point; 18 Ch., 1 DC. on the last picot in the 4th point (in the 7th of this 18 Ch. the corner of a half little square is joined), 1 DC. on the next Ch. in the point, 1 Ch., 1 DC. on the 2nd Ch. in the half star, 1 DC. on the 1st picot in the 1st point, 12 Ch., 1 DC. on the first of the first 6 Ch. 2nd row—Work in DC. to the 7th of the 18 Ch., working 2 in the 6th of the 12 Ch.; fasten off.

The little half squares of double crochet are worked by leaving one stitch less at the end of one side the square only, so that you finish with one stitch. When all the stars and half stars are joined and finished, work 2 rows of double crochet all round the cover, increasing in the corners; then work the

BORDER.—2 Ch., * 2 picots close together, 1 DC. upon the 4th DC., 2 picots, 1 Ch., 1 DC. upon the 1st of the 2 Ch., 3 Ch., 14 picots, 1 single in the

Digitized by Google

foundation of the 1st picot of Ch.; repeat from *, taking up the 4th of the 5 Ch. for the double crochet after the 4th little picot before the long loop, 5 picots; in the corners work a loop in every alternate stitch instead of every 4th.

23 and 23*. D'Oyleys (Point Lace).

These squares are useful for d'oyleys, and also for lining with coloured satin, and arranged on a sofa pillow in the same manner as *guipure d'art*. The plain linen braid, with open edge, is used for this design, and the spaces are barred together with button-hole stitches; a wheel-stitch forms the centre of many of the spaces. The mode of working is as follows: Trace the pattern on kid, then tack the linen braid very carefully on, so as to make each turn as nearly the same as the design as possible; whip the edges of the braid with fine linen thread (drawing it flat wherever it is full in the turns). Fill in all the parts worked by white crossings with a variety of old point stitches. Much taste was displayed in former generations in arranging the stitches with regard to artistic effect, but as some workers will make a stitch appear light and transparent, others will work the same stitch in a close and firm manner.

24. Border (Tatting).

This is extremely handsome, and not at all difficult to work. Two threads are required. Commence by working the row of trefoils in the middle of the work; * the top oval is worked with 9 double, 1 purl, 9 double, draw close; work close to this the two large ovals; each oval consists of 12 D., 1 P., 12 D.; leave half an inch of cotton, work a Josephine knot, of 7 double, leave half an inch of cotton, and repeat from * and fasten off. 2nd row—This is worked at the top of the trefoils and over the 2nd thread throughout; join the two threads, then join to the purl in the 1st oval of the trefoil, 2 D., † 1 P., 1 D., from † 5 times 1 P., 2 D., join to the purl in the next trefoil, and repeat the row. 3rd row—Knot the cotton into the 2nd large oval of the first trefoil, and at the same time to the purl in the first oval of the next trefoil, work the very small oval of 6 D., 1 P., 6 D., draw close, and knot into the purl again; now work the large oval outside this small oval, 8 D., * 1 P., 1 D. 8 times from *, 1 P., 8 D., draw close; leave a small piece of cotton, and work a knot of 7 D.; leave a piece the same length as the last, and repeat from the commencement of the row, taking up the next trefoils, and joining the large oval in the first purl to the large oval preceding it.

25. Border (Tatting and Crochet).

Work first all the stars; each star is worked separately and joined to the one preceding it. Commence in the centre of the star with the shuttle, work a round of 2 D., 1 P. 6 times, draw up, * join the cotton to the next purl, and work the 1st oval, 7 D., 1 P., 7 D., draw up, * draw the cotton through the next purl, and work another oval like the last; repeat from *, making 6 ovals on each star, fasten off neatly; join the next star you work to this in the 3rd and 4th ovals. When you have worked the number you require, with a fine crochet hook work the foundation. 1st row—1 double crochet upon the purl in the first oval of the first star, * 7 Ch., 1 long upon the purl of the next oval, 7 Ch., 1 DC., upon the purl connecting the two stars; repeat from *. 2nd row—1 DC. upon the first long stitch, * 11 Ch., 1 DC. upon the next long; repeat from * 3rd row—1 long upon the first stitch of last row, * 1 Ch., miss 1 Ch. underneath, 1 long in the following; repeat from * and fasten off.

26. Border (Tatting and Crochet).

Commence this border by working first the large oval inside the five small ovals, 5 double, 1 purl, repeat 4 times, 5 double, draw up, pass the thread to the first purl, and work a small oval of 5 double, 1 purl, 5 double, draw up, pass the thread to the next purl, and work an oval of 5 double, 1 purl, 3 double, 1 large purl, 2 double, draw up, pass the thread to the next purl, work an oval of 2 double, join to the large purl of the last oval, 3 double, 1 purl, 3 double, 1 large purl, 2 double, draw up, pass the thread to the next purl, and work an oval of 2 double, join to the last oval, 3 double, 1 purl, 5 double, draw up, pass the thread to the last purl on the large oval, and work an oval like the first, knot the cotton through the join into the large oval, leave an inch of cotton, and repeat the large oval, then the small ovals, joining the two first to the two last small ovals upon the last large oval. Work the length required in this manner; then take a crochet hook and work * 5 DC. over the first half of the thread between the two first large ovals, 1 DC. over the thread, taking up the purl between the ovals as well; 5 DC. over the next half of the thread between these same ovals, 1 DC. over the join in the large oval; repeat from * and fasten off. 2nd row—1 treble upon the 3rd of the first 5 DC., * 10 Ch., 1 treble upon the 3rd of the second 5 DC. in the same space, leave the last loop of this treble upon the needle; 1 treble upon the DC. in the join of the large oval, still leaving the last loop of the first treble on the needle, 1 treble on the 3rd of the next 5 DC.; work off all the loops on the needle and repeat from *. 3rd row—1 long upon the first stitch, * 1 Ch., 1 long upon the 2nd stitch underneath; repeat from * and fasten off.

27. Edging (Cordon Braid and Crochet).

Use Evans's cotton, No. 24, and fine cordon braid; also a fine steel crochet hook. 1st row—1 double crochet upon the 1st loop of braid, * 10 Ch., miss 1 loop, 1 DC. in the next loop, turn, 1 DC. on each of the first 2 Ch. of the 10, then 2 long, 1 treble on the next 3 stitches, making 5 stitches on the 10 chain altogether, 5 Ch., 1 DC. in the 2nd loop from the last on the braid, turn, 2 DC., 2 long, 1 treble on the 5 Ch., 5 Ch., 1 DC. in the 3rd loop from the last, turn, 2 DC., 2 long, 1 treble on the 5 Ch., 5 Ch., 1 DC. in the 2nd loop on the braid, turn, 2 DC., 2 long, 1 treble on the 5 Ch., turn, 5 Ch., 1 DC. on the 2nd loop on the braid, 4 Ch., 1 DC. in the next loop; repeat from * the length required, and fasten off. 2nd row—1 DC. upon the first DC. of last row, * upon the next, 5 chain, work 2 DC., 2 long, 1 treble, 9 Ch., work upon the 5 Ch. after the 4 points of last row, 1 treble, 2 long, 2 DC., 1 DC. upon each of the next 6 stitches in last row; repeat from *, and fasten off. 3rd row—In this row you work the 2nd row of braid to the last row, 1 DC. upon the 1st DC. of last row, 2 Ch. 1 DC. upon the 1st loop of the 2nd piece of braid, * 2 Ch., miss 2 stitches of the 2nd row, 1 DC. in the following, 2 Ch., 1 DC. upon next loop on the 2nd piece of braid; repeat from *. 4th row—Work on the other side the 2nd piece of braid for the foundation 1 DC. on the first loop, * 2 Ch., 1 DC. in the next loop; repeat from *. 5th row—This is worked on the outside of the scollop. Commence by taking the three loops together just over the 4 Ch. of the 1st row, work a DC. upon them, 6 Ch., 1 long in the 2nd of the 6 Ch., 1 DC. in the next loop; repeat until you come to the bottom of the scollop, where work 3 loops together again with a double crochet.

28. Border (Cordon Braid and Crochet).

Use Evans's cotton, No. 24, and fine cordon braid, with a fine hook. Commence by working the row of points inside the scollop. 1st row—1 double crochet upon the first loop, * 7 Ch., 1 DC. on the 6th and 5th chain stitches, 1 long on the 4th and 3rd, 1 treble on the 2nd, 1 double treble on the thread three times round the needle on the first Ch., take up the two next loops on the braid together, and work a DC. on them; repeat from * 5 more times, making 6 points only; then work another point exactly like the last, and 1 DC. upon the *next loop* only, 4 Ch., 1 DC. upon the next loop; repeat from * and fasten off. 2nd row—1 DC. upon the first DC. of last row, * 6 Ch., 1 DC. at the top of the first point, 3 Ch. 1 DC. on the 2nd point, 3 Ch., 1 DC. on the 3rd point, 1 DC. on the 4th and the 5th points, 3 Ch., 1 DC. on the 6th point, 3 Ch., 1 DC. on the 7th point, 6 Ch., 1 DC. on the next DC., 4 Ch., 1 DC. upon the next DC. of last row; repeat from * and fasten off. 3rd row—1 DC. upon the first DC. of last row, * 1 DC. upon each of the next 6 Ch., 2 Ch., 1 long upon each of the next 17 stitches, 2 Ch. 1 long upon each of the 6 Ch., 1 DC., and 4 Ch.; repeat from *, and fasten off. 4th row—1 long upon the first DC. of last row, * 1 Ch., miss 1 stitch of last row, 1 long upon the next; repeat from * 5 times, making 6 long altogether, 4 Ch. The thread over the needle twice, take up the 6th long of last row, work back through two loops only; the thread over the needle again, take up the 11th long, work back through all the loops on the needle, taking off two at a time, 2 Ch., 1 long upon the middle of this last cross stitch, 4 Ch., 1 long upon the last of the 17 long, 1 Ch., miss 1, 1 long, on the next to the beginning of the next 17 long, when work as before. 5th row—1 long upon each stitch of last row. You now work the other side of the braid for the edge. The edge—1 DC. upon the loop just over the first two loops taken together in the first row, take up the next 3 loops together, and work a DC. on them, 1 DC. on the next loop 3 Ch., 1 DC. in the next loop to the end of the scollop; repeat the whole row. 2nd row—Over every three chain of last row work 1 DC., 5 long, 1 DC., and fasten off.

29. Border (Tatting).

This is very handsome when worked, and anything but difficult to execute. You require two threads and a fine crochet hook. You work first the foundation row. With the shuttle, * an oval of 6 D., 1 P., 6 D., draw close, leave a quarter of an inch of cotton and repeat the length you require from *, then turn and crochet over the thread left between the ovals in double crochet. 2nd row—Join the thread to the first oval, * with the shuttle a large oval of 6 D., 1 P., 2 D., 1 P., 2 D., 1 P., 6 D., draw close. Now work over the 2nd thread 5 double, join to the purl of the next oval in last row, 7 double over the 2nd thread, with the shuttle work the trefoil. First large oval—8 D., join to the last purl in the last large oval, 8 D., draw up. 2nd oval of trefoil—6 D., 1 P., 2 D., 1 P., 2 D., 1 P., 2 D., 1 P., 2 D., 1 P., 6 D., draw close. 3rd oval—8 D., 1 P., 8 D., draw close, over the 2nd thread work 7 double, join to the next oval in the 1st row, 5 double over the 2nd thread, join to the next small oval in last row. Commence again from *, joining this large oval in the first purl to the purl in the 3rd oval of the trefoil.

3rd row—This row consists of small ovals, an oval of 3 D., 1 purl four times, joining the 2nd purl to the purl in the large oval; draw up, knot the cotton into the 1st P. on the trefoil, * an oval of 3 D., 1 P., † 1 D., 1 P., 3 times, 3 D., draw up; knot into the next purl on the trefoil; repeat from * 4 more times, joining each oval into the one preceding it, then knot into the last purl on the trefoil, and work a small oval like the first, joining to the last one worked, and repeat the whole row round each scollop.

30. Insertion (Braid and Crochet).

Use fine cordon braid and Evans's cotton, No. 24 or 28. You must work all the leaves required for this first; they are worked in ribbed or Russian crochet as follows: Commence with 9 Ch., work back 8 DC., * 1 Ch., turn, 8 DC., 3 Ch., turn 1 DC. on the 2 Ch., and each of the next DC. excepting the last, which leave; repeat from *, working 1 more DC. of course each time in going to the outer edge, until you have 9 little rows, then work to the outside, 3 Ch., as before, work back in DC. all but the last 3 stitches of last row, 1 Ch., turn, work to the edge again, 3 Ch., 1 DC. on each stitch excepting the last 6 of last row, 1 Ch., turn, work to the edge again, then 3 Ch., work 1 DC. on each stitch of last row, and on each DC. left in all the previous rows, also one at the edge of each of the first 9 rows, then 6 Ch., turn, * 1 long on the 3rd DC., 2 Ch.; repeat from * to the point, where turn and work back in double crochet. Now work the other side the leaf as this, joining each row in the inside of the half leaf to the vein, by drawing the last stitch through the 2nd DC. When finished, sew the ends in neatly. You now work the braid. Join to the first loop with a DC., 5 Ch., 1 DC. in the next loop, * 2 Ch., a treble with the thread 4 times round the needle upon the point of the leaf (see illustration No. 2, which keep before you, as it is an excellent guide), 2 Ch., 1 DC. upon the next loop of braid, then 5 Ch., 1 DC. upon the next loop 3 times, then 2 Ch., 1 long on the under half of the leaf at the top of the 2nd row from the point. 2 Ch., 1 DC. in the next loop of braid, 5 Ch., 1 DC. in the next loop, 1 Ch., 1 long upon the end of the 2nd rib from the last on the leaf, then 1 Ch., 1 DC. upon the next loop 3 times, 1 Ch., 1 treble (or the thread twice round the needle) upon the point of the 2nd rib in the leaf, then 1 Ch., 1 DC. in the next loop twice, 1 Ch., 1 treble upon the 4th DC. in the first row on the leaf, 1 DC. in the next loop of braid, then 2 Ch., 1 DC. in the next loop twice, 1 Ch., 1 treble, on the middle chain at the top of the vein, 2 Ch., 1 DC. in the next loop, 3 Ch., 1 DC. in the next loop, 2 Ch., a double treble or the thread *three* times round the needle upon the point of the 1st row in the upper half of the leaf, 2 Ch., 1 DC. in the next loop of braid, then 5 Ch., 1 DC. in the next loop 5 times; repeat from the first *. Then work in the same manner on the other side the braid, taking care to commence on the right loop. You now work the following row upon each of the last two rows, * a double treble or the thread three times round the needle on the DC by which you commenced the first row, 6 Ch., a double treble (for this treble put the thread four times round the needle) in the middle of the very long treble in the point of the leaf underneath, 6 Ch., a treble on the 2nd rib in the leaf, 6 Ch., 1 long on the 4th rib, 6 Ch., 1 treble upon the 1st row in the leaf, 6 Ch., a double treble upon the 2nd DC. *after* the long treble in the last row, which is also at the end of this first row of double crochet, 6 Ch., 1 long upon the 3rd of the second 5 Ch., from the treble in the last row, 6 Ch., 1 long upon the 2nd DC. from the last long stitch in this row, 6 Ch., 1 long upon the 2nd DC. from the last stitch, 6 Ch.; repeat from * the whole length of the work, then work upon the other side in the same manner upon each outside row. Now work a row of 1 DC. in the first stitch of last row, * 2 Ch., 1 DC. in the 3rd stitch of last row; repeat from *, and fasten off.

31. Tatted Border.

This border requires two shuttles. It would look well worked in black silk as a gimp.

Commence with the foundation row, join the two threads, and work first with one shuttle only an oval of 7 double, 1 purl, 7 double, draw up; over the second thread work 12 double; then repeat the row the length required. You now work the stars in the middle of the row.

The Star.—2 double, 1 purl, 3 times, 2 double, draw up, close to this join work an oval of 5 double, 1 purl, 5 double; draw up; draw through the next purl on the ring, work another oval like the last, but joining the purl to the first oval in the foundation row; then draw through the next purl on the ring an oval of 5 double, 1 purl, 5 double, draw up; draw through the third purl on the ring, work an oval of 3 double, 1 purl, 2 double, 1 purl, 3 double; draw up and fasten off. Work as many of these stars as are required, joining the 2nd oval only to the ovals in the first row. 2nd row—You work this row with both threads, join them together and draw through the purl in the *first* oval of the star, over the 2nd thread * work 7 double, 1 purl, 3 double, join to the first purl in the 4th oval of the star over the 2nd thread work 7 double, join to the 2nd purl in the same oval, over the 2nd thread work 3 double, 1 purl, 7 double, draw through the purl in the 3rd oval of the star, leave a small piece of cotton, and with the first shuttle work an oval of 9 double, join to the purl in the first oval of the foundation row, 9 double, draw up, loop the cotton through the piece left before the oval, and work another oval of 9 double, join to the next oval in the foundation row, 9 double, draw up, draw through the same thread again, then through the purl on the first oval of the *next* star; now take the 2nd thread again and repeat from * as often as required. 3rd row—Join to the first purl on the 2nd thread in the preceding row * work over the 2nd thread 5 double, then 1 purl, 1 double, 6 times, 1 purl, 5 double, draw through the next purl on the 2nd thread in the last row, over the 2nd thread work 5 double, then 1 purl, 1 double three times, 1 purl, 5 double, join to the next purl in the last row, and repeat from * the length required.

32. Vandyke Braid Insertion.

This is a most useful insertion for trimming children's drawers, frocks, brown holland pinafores, &c. Procure braid and cotton suitable for the purpose you require it. The insertion is worked with the needle and thread in lace stitch, passing the needle through the braid from the inside of one scollop to the other; fill in each scollop with work, as shown in the design. When this is done, work on each side the braid the following row of crochet: 1 long in the last point of the first scollop, * 1 long in the first point of the next scollop, 7 Ch., 1 double crochet in the next point, 7 Ch., 1 long in the next point of the same scollop; repeat from *.

33. Insertion (Tatting).

This pretty little insertion is intended for trimming white muslin bodices. It is very effective with a coloured ribbon run through the centre ovals. The tatting is composed of sets of three ovals (forming a trefoil), joined together in one long length. Upon this a second row is worked in exactly the same manner, but with this difference, that the 2nd oval is joined by the middle purl stitch to the corresponding stitch in the 2nd oval of each trefoil in the first row. The first trefoil: Work three ovals close together, each oval with 5 double, 1 purl, then 1 double, 1 purl 8 times, 5 double, draw up, fasten off. Repeat this trefoil, joining the first oval in the next trefoil to the last oval in the preceding trefoil by the middle purl stitches on each oval; work the length required of these trefoils, then repeat for the 2nd row, and in this row join the 2nd oval to the 2nd oval of last row by the centre purl stitch.

34. Fringe (Tatting and Crochet).

The head of this fringe consists of tatting and crochet. It looks very well in wool, but must of course then be worked over a crochet hook in the centre ovals, instead of with a shuttle. Use coarse cotton for it, No. 16 Coates's, as it will look softer in this make of cotton than in Ardern's or Evans's. Commence the tatting by working first the star of 5 small ovals in the centre of each vandyke.

1st oval—8 double, 1 purl, 4 double, 1 purl, 4 double, draw up. 2nd oval—4 double, join to the last purl in the last oval, 4 double, 1 purl, 4 double, 1 purl, 4 double, draw up. 3rd oval—4 double, join to the last oval, 4 double, 1 purl, 2 double, 1 purl, 2 double, 1 purl, 4 double, 1 purl, 4 double, draw up. The 4th oval work like the 2nd. The 5th oval—4 double, join to the last oval, 4 double, 1 purl, 8 double, draw up; join the thread to the piece left before the first oval, and fasten off. Take a second thread, join together on the first purl of the first small oval, work over the second thread, 10 double, join to the purl on the next oval. Work over the 2nd thread 10 double, join to the first of the three purl stitches on the next oval. Over the 2nd thread work 10 double, 1 purl, 10 double, join to the 3rd purl on the same oval, over the second thread 10 double, join to the top of the next oval. 10 double over the 2nd thread, join to the top of the last oval, turn, and work back the 2nd row, * over the 2nd thread, 3 double, 1 purl, three times, 3 double, join to the purl on the next oval again, repeat from * 5 more times, which brings you to the last oval; fasten off. Work as many of these vandykes as you require, joining them together in the first and last ovals over the 2nd thread in the last round. You now work the crochet heading.

* 1 DC. on the first purl in the outside round, 7 Ch., 1 long over the thread between the small ovals in the centre, 7 Ch., 1 DC. on the first purl in the last oval in this vandyke, 1 Ch.; repeat from * and fasten off. 2nd row—Double crochet. 3rd row—1 treble on the thread twice round the needle on the 3rd DC., * 1 Ch., 1 treble in the same stitch as the last, treble from * once more; then miss 4 DC., 1 treble in the 5th, repeat from the first * in the row. 4th row—Double crochet, add loops of cotton at the bottom of each vandyke.

35. Fringe (Tatting).

Two threads are required for the lower part of this pattern. Work over the second thread * 12 double, 1 purl, 12 double with the shuttle, an oval of 10 double, 1 purl, 5 double, 1 purl, 5 double, draw up, with the shuttle an oval of 5 double, join to the last oval, 5 double, 1 purl twice, 5 double, draw up. 3rd oval—5 double, join to the last oval, 7 double, 1 purl, 7 double, 1 purl, 5 double, 4th and 5th ovals—5 double, join to the last oval, 5 double, 1 purl 3 times, draw up. Now work over the 2nd thread, repeating from * and joining the 2nd set of ovals to the first by the engraving.

The Crochet Heading.—1st row—1 DC. on the first purl over the 2nd thread, * 12 Ch., 1 DC. on the next purl; repeat from *, then turn and work a row of DC. on the last row.

Now work with the shuttle a row of small ovals. Each oval is made with 5 double, 1 purl, 5 double, draw the thread through the 2nd DC., 5 double, 1 purl, 5 double, draw up, leave quarter of an inch of cotton, then work another oval like the last, joining to the last oval in the first purl stitch, and joining to the fifth DC. from the last used. Upon this work a row of double crochet over the foundation thread, then add the loops of cotton.

36. Square (Guipure D'Art).

MATERIALS required—Small wire frame covered with ribbon, Mecklenburgh thread, Nos. 6 and 8, a mesh, a netting and a darning needle. To make the foundation of the square No. 1 fill the netting needle with No. 6 thread; tie the end of thread to a foundation string, and with the mesh net one plain stitch; take out the mesh and turn back. Net two stitches both in this one loop; remove the mesh and turn back. Net a stitch plain; then net two stitches, both in the 2nd loop; turn back. Continue working backwards and forwards, and netting two stitches on the last loop of each row, until the work is increased to twenty-six stitches; after which net one row without increasing. To decrease the square net two loops together at the end of every row, until two stitches only are left; net them together without the mesh and fasten off. Wash and stiffen the netting; stretch it in the small frame, and darn it according to the illustration; the various stitches in full working size, with needle in position, appeared in THE QUEEN ALMANAC for 1868.

Experimental Hints on the Subject of Wood Carving in Relief.

THE first thing to which attention should be drawn is the wood selected for sculpture. For beginners sycamore is the best, being the softest, and yet evenly grained. Irish or Italian walnut, well seasoned and dark, is excellent, and for church purposes may vie with oak. These are both hard, and require a firm, steady hand. Bog oak is harder still, and coarse in grain, and would not do for a very delicate pattern. And here I may observe that the little trinkets professedly made of it, which appear so delicately carved, are for the most part merely stamped, the wood having been reduced by a certain process to a state of fusion, and then put into a mould and left to harden. Real bog oak may be distinguished by its coarse grain, and the veinings are more generally incised than in relief. Satin-wood, rose-wood, coromandel-wood, laburnum, and yew are available for sculpture, but good taste must be exercised as to the use made of their respective varieties of colour for the peculiarities of the pattern. The knots in the wood and the natural veining must be carefully taken into account when designing, as well as the whole character of the wood for the nature of the object to be carved. For instance, when designing (it may be a sacred subject), bird's-eye maple should not be selected for sculpturing a face, or it will give the appearance of small pox, and a dark knot in walnut might represent a mole; at the same time the natural shading, pattern, and knots in the wood may often aid the artist, and prove suggestive of a new design.

Grinling Gibbons, himself of Dutch origin, and deriving his genius from a people having a peculiar *spécialité* for the art (carving in relief being distinguished by the name of "Flemish carving"), was particularly partial to lime-wood. His splendid festoons of fruit and flowers, and his birds, at Petworth, Belton, Melbury, Gatton, and Chatworth, &c., were made of it. I have heard conflicting opinions of pear-tree, which seems more in favour in France than England. Chesnut, apple, and many beautiful varieties of foreign growth not so easily obtained may also be enumerated; ebony especially, but from its great hardness requiring a practised hand.

I have myself a peculiar partiality for box, which is unsurpassed in the beauty of its grain. It is rather difficult to procure it of a large growth, and the artist is advised to purchase it, and all other woods he may require, at a cabinet-maker's or wood-carver's. Timber merchants do not care to supply the small pieces required by the amateur, and give unseasoned wood, or too old for work, and cut often from nearer the bark than the heart of the tree. So much for our directions concerning the wood.

The second subject for consideration is concerning the TOOLS and other appliances for the work. These are fewer in number than the vendors of such articles seem to be aware. Well got-up boxes full of tools, the majority of which are perfectly unessential, are imposed upon the novice, the quality of the latter rendering them utterly unfit for use, as I have often myself proved in testing them. I recommend a good hardware shop to be selected, and here the smallest sized carpenter's and cabinet-maker's tools can be obtained, ground to a fine edge; and among other shops Hotham's, of Bladud-buildings, Bath, will be found particularly satisfactory for finer and more peculiar ones, on sending an outline of the same.

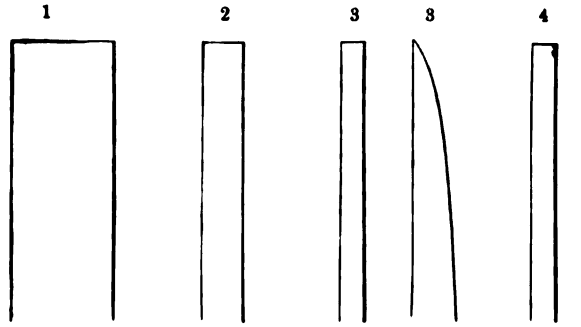
Boxes and tin cases are not to be recommended; they allow the tools to rattle about and get injured; and in putting in the hand to take one, it is liable to be cut. A small leather case, such as used for razors and other articles of a man's toilet, is the best case that could be devised for them, and can be easily carried rolled up, and occasions no noise.

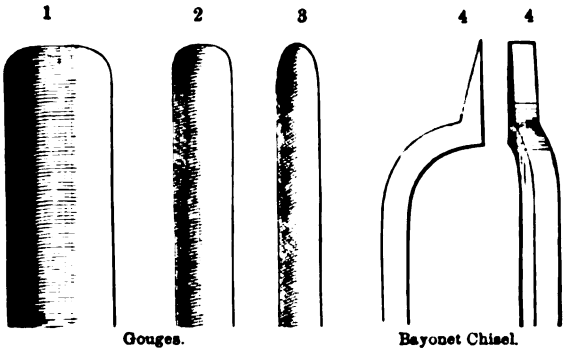
To the artist who has not the luxury of a work-room and properly-constructed table or bench, and as such a table is an awkward thing to carry from one place to another, we recommend a tray that will answer the same purpose, and can be packed into a trunk if required. It consists of a smooth piece of deal, about half an inch thick, with a firm ledge of wood nailed on the front and right side, underneath, so as to catch firmly on to any square table; and a corresponding ledge fastened on to the back ledge and left side at the top, so as to preclude the necessity for holding the wood with the left hand—a most dangerous practice.

If carving a fine piece in low relief for application, it should be glued to a little piece of deal board like the back of a book, and thus the portable carving tray can be equally made available for the work. To enable the artist to separate the two when the design is finished, a piece of paper should be placed between them, and so all glued together, and with a knife they can be parted again. Workers of small objects in ivory have to glue them in this way on pieces of wood.

The steel instruments absolutely necessary are eight in number, though two or three may be added with advantage. The eight in question are as follow: Four flat chisels, three semicircular gouges, and one bayonet chisel. A very fine sharp penknife, fastened into a good handle, so as not to shut up, may be found useful to restore the sharpness of outline where it has been lost in the use of glass-paper. A mallet also is necessary, but at least half as large again as those usually fitted into the boxes of tools for the use of amateurs. For the first sinking of the pattern the mallet is essential. As to the price of the tools, they vary a little; but the best may be had, with handle, for a shilling or eighteen pence. As a general rule the handles sold are improperly shaped, and hurt the hand. They are more adapted for the use of the mallet than to fit into the hollow of the hand. Thus, with the single exception of the long straight narrow chisel (such as used by carpenters), and which we direct to be employed for the first sinking of the work, the tools should all have short, round-topped handles, which will give no pain to the hand on strong pressure upon it.

Also, when possible to obtain short steels, they are most easily managed, and less likely to break any delicate object. Long tools apply so great a leverage that they involve the artists in many little accidents. Subjoined are outlines of the tools recommended:





The sharpening should be done by rubbing from side to side on the stone, not backwards and forwards.

The third point for consideration is the POLISHING and VARNISHING of wood carving. On this subject many opinions are given; and, after all, much must depend on the nature of the wood, the character of the carving, and the object or use for which it is intended. Thus, no definitive rule can be laid down of universal application. If the pattern be delicate it will not bear polishing, neither would it be possible to effect it, for the small interstices could not thus be reached; while they would be perfectly choked by ordinary varnish. But one kind of varnish can be thoroughly recommended, and this even for the most delicate work, viz., "Cooke's Imperial Bookbinder's Varnish." Laid on thinly, it will dry at once, leave no stickiness, choke no interstices, but preserve and brighten the wood. Two badgers' hair brushes, one flat and one finely-pointed, will be required for this purpose—the flat one about an inch wide. A Turkey or Arkansas stone, and some fine glass-paper, are the only remaining essentials for the work; unless the artist desire to conceal or change the natural colour of the wood, when some Swiss walnut-dye may be applied before the process of varnishing. In case of accidents, a bottle of Greenwood's cement will be found useful to fasten on any little portions of a pattern which cannot be dispensed with; but, while on this subject, it may be well to observe that in case of any trifling breakage it is always better so to alter the pattern as to render the restoration of the broken piece superfluous, removing any parts of the pattern in other places if possible instead, so as to keep up a perfect corresponding balance everywhere—the subject and spaces in equal proportions throughout.

The choice of DESIGNS must next claim attention. For beginners, simple arabesque patterns, in low relief, are most suitable; and when further advanced in the art, foliage, fruit, and flowers, small animals and insects, judiciously introduced here and there, such as lizards, beetles, flies, snails, &c.—all, if possible, studied from nature—may be undertaken, after a little practice in the first-named simpler designs.

And now we must suppose the pupil about to commence his work. A small piece of sycamore already cut and prepared by a cabinet-maker before him. If a book-stand, for instance, it must be polished on all parts excepting that designed for carving, the hinges already screwed on one side; but the stand not put together till the artist's work be done. If a box be the subject, all six parts should be completely prepared for being put together; that is to say, the mitering (or dovetailing) done, the lock put in, the hinges likewise, and on the lid, and wherever else required, the screws must be remembered and allowed for in the pattern, as well as the hollows of the dovetailing. Great care must be then taken of the sharp edges that will form the corners, a space unwrought should always be left as a border all round the carving, between it and the extreme edge of the wood, which the cabinet-maker will mark-out,

with a distinctly incised line. And now we arrive at the PRACTICAL part of our Treatise.

In commencing operations, the first instrument used is the long narrow carpenter's chisel, designed for use with the mallet, the pattern being either pasted on or sketched on the wood itself. Of course only the mere outline of the first sinking can thus be given. Afterwards, when the entire outline is sunk, the mallet may be sparingly used, with the largest gouge to excavate, where the spaces between the several portions of the design are sufficiently wide to allow of it. The first sinking should go down straight, leaving the edges of the pattern square, till all be evenly blocked out, the excavations with the gouges always followed by a repetition of the straight blocking-out with the chisel and mallet till the right depth be attained. Before levelling the foundation, which is the most difficult part of the work, the artist must observe whether there be any curled tendrils; requiring, in the first instance, the sinking of a round hole in the centre of the curl; or an empty acorn-cup, because this must be done before the outer edge of the cup or curl be blocked out by the chisel; otherwise the sinking of the hole will probably burst the wood on the sides against the grain. This sinking of the hole must be done by the smallest semi-circular gouge. Observe again, that, in the first blocking-out, when two incisions have to be made, one with and one against the grain, the two incisions meeting each other, care should be taken to cut across the grain very decidedly first and afterwards with it; otherwise the wood will be split too far. Lastly, in blocking-out a delicate object, such as a tendril or twig, or berry, the incisions should always be made beyond the outline of the ultimate size when finished, cutting from, but never towards it. Thus, when one side is cut out, the wood should be turned round for cutting the other side of the twig; the artist always keeping it between himself and the edge of the chisel; because he involuntarily presses outwards, away from himself; so that, were his work beyond the edge of the chisel, if delicate it would be broken through, especially if across the grain.

It may here be observed that where delicate objects and stems can be so arranged as to run with the grain, it is the safest plan; the coarser and flatter parts will bear well enough across it.

In designing a pattern, it should be remembered that where two stems cross each other, that with the grain should pass over that against it, that the weakest stem may lie on the foundation, or on some supporting object; as also that the knots should be used, where possible, for berries or grapes, while all the hardest (usually known by being the darkest) portions of the wood should be used for the design, rather than wasted on the foundation.

When the holes are sunk, and the whole pattern blocked out, and the foundation tolerably levelled, then the passage of the stems crossing each other should be cut out clearly, and the broad design in the shaping, and lie (or pose) of the leaves should be indicated, using the large flat chisel and then the largest gouge for the purpose. Some parts must be left in high relief, others made to lie flat on the foundation, and the whole to assume an undulating appearance. Then the major veining should be firmly marked out with the same chisel, and the others in turns, in relief; then the minor hollows and indentations of the leaves should be rendered by the small gouges; and lastly, the minor veining done with a penknife, or with a veining tool if preferred.

After this the sloping away of the thick waste wood, between the leaves and the foundation, may be effected, and the mining process carefully executed. The bayonet-chisel will be found of use here, and under the stems; the rounding and thinning of which can be best effected underneath by a penknife, which is far more delicate in its action than any chisel.

One grand rule should never be forgotten, and that is that a most gentle touch is essential in fine wood carving; and that where by one incision the effect in contemplation may be produced, two should be used, and the work will be better and certainly more safely done. It is impossible to have too delicate a touch.

All sketching, sinking, and gouge work, may be done by lamplight; but the levelling is an absolute exception to the rule. The clearest daylight is essential for this process, as the eye is far more deceived by candle-light than the uninitiated could possibly imagine. Take a piece of carving into the clear sunshine, and turn it round in various ways; and, however beautifully levelled it may have appeared by lamplight, it will be proved all undulating and unfinished when the sun shines upon it.

Another important rule, which should be borne in mind when first blocking out a design, is that accidents may be continually occurring from the unconscious employment of leverage, especially when excavating; because the upper part of the chisel is inadvertently made to bear upon portions of the design, upon which the artist is not at the time engaged.

In a former part of this little treatise we said that the dovetailing should be allowed for when cutting out the design and forming the foundation; and here we must further advise that the latter should be made to slope gradually downwards from the extreme edge, over the hollows of the dovetailing, inwards, towards the design, till it can safely sink to the required depth of the levelling.

Such rules as these appear so obvious to any person possessed of mere common sense, that it may almost lay the writer open to the charge of insulting the would-be artist; but where the subject is a new one, even to the most intelligent mind, many little rules may not occur to the novice till experience has given a painful lesson; and thus we "take Time by the forelock," and give any hints, however simple, that occur to us, hoping they may spare the reader many a breakage and spoiling of a choice piece of wood. A thick gardening glove should always be worn on the left hand, to break the force of any chance slipping of the instruments, and save the artist from a cut in an unguarded moment.

In conclusion, we shall afford the reader a great treat, and give him a fair idea of the wonderful perfection to which this art may be brought, by advising a visit to the Polytechnic Institution, and bidding him there ask to see the magnificent work, designed and executed by our first English artist in wood-carving, Gerard Robinson. It is an enormous sideboard, covered with many designs, most marvellously executed, the chief representing "Chevy Chase." The execution, design, perspective, knowledge of physiognomy, all proclaim the extraordinary genius of the man, whose shop and studio are (or were) in Duke street, Manchester-square. This wonderful specimen of art took five years in its accomplishment, and has been valued, I believe, at £2000.

And now we conclude, hoping that some hints have been given in this treatise that have not been supplied in preceding publications.—S. F. A. CAULFEILD, in the *Queen*.

Varnishing Fans.—Wooden fans ornamented with crests are best varnished with what is called "paper varnish." It gives a very high polish, and is very easily applied with a brush. Two coats are enough; the first coat must be quite dry before the second is applied.

To make Linen Scrap Books.—Cut some sheets of thick cartridge paper to the required size, paste brown holland or white calico on both sides and let them dry thoroughly. The holland or calico should, on one side, be about an inch beyond the paper. Bind each leaf all round with ribbon of any colour preferred, and with some of the same ribbon passed through the projecting holland, tie the leaves together at distances, making a bow of the ribbon at each tie, which will give it a neat appearance.

Simple Crochet Hood.—Make a chain of 54 stitches, 1 long treble into every loop, crochet 19 rows, no increase, then 2 rows, missing out every 6th stitch; break the wool off, and with a worsted needle run up the last row, draw it tight, and sew a few stitches down the neck; then turn over 4 rows for the front and crochet the curtain on, putting 2 treble into every stitch for the 1st row only; crochet about 6 rows, break off, and with a coloured ball crochet the edging round the curtain and round the piece you turned back for the front; 6 treble and 1 plain would do for the border.

Canadian Cloud.—Cast on 244 stitches on a long wooden needle, No. 4, with scarlet Pyrenean wool, and knit 44 plain rows, and then an equal number with white wool of the same description. Three scarlet stripes and three white ones, making 264 rows in all, complete the cloud. Care must be taken to cast on and off very loosely, as the cloud should be very elastic. Shetland wool is sometimes used, but Pyrenean or Spanish merino wool is better, being finer, and the great beauty of the cloud is its lightness. When completed, draw the ends together, and finish with tassels to correspond.

Point Lace Braid.—Plain braid can be made by tracing out the pattern the braid was to make with two strips of coarse crochet cotton (No. 8) on the kid or *toile cirée*, and filling up the space with close buttonhole, the coarse cotton forming the edges of the braid; the buttonholing done with very fine thread. Lay a thread across the space between the crochet cotton, buttonhole close one row, carry back the thread, and buttonhole again into first row as close and even as possible. Well done it produces the effect of fine braid, and is very durable; but it is laborious, and requires strong eyesight. The cotton should be tacked loosely on the leather.

Box Pincushion.—A cigar-box is very suitable as the foundation of a box pincushion. A long strip of silk should first be pasted round the outside, so as to cover the edges, and underneath the box, also on the inside of the lid. Next cut five pieces of stiff paper the sizes of the inside of the box; lay a thin piece of cotton wool on each, cover with the silk, and paste firmly into the box. Make a bag, fill it with bran, and place it on the lid; cover it with a piece of silk, and sew all round; then sew the lid very firmly on to the box. Add a flounce of the silk, not too full, lined with white muslin. A cover for the pincushion and flounce should be of tatting or crochet.

Knitted Smoking Cap.—Materials required: 2 skeins each of black white, and medium grey, 8-thread fleecy or double Berlin wool, and 2 needles No 10. Wind a skein of each of the wools together, and knit them as one. Cast on 21 stitches. 1st row—Slip 1, * purl 1, knit 1, repeat from *. Every row is alike, a purl stitch coming over a plain, and a plain over a purl. Knit 24 stitches in this way; pass a thread through the top of the knitting, and draw it in to 16 inches. Take an eighth of a yard of velvet of any colour preferred, cut cross way, 16 inches long, join it and gather it up closely at one edge, and stitch the other to the knitting. Line the crown with silk to suit the colour of the wool. The lower edge of the knitting is to be turned up about 2in. on the right side. The centre of the crown to be finished either with a fancy button or a tassel.

Knitted Waistcoat.—The two stitches best adapted for a gentleman's waistcoat are the check and moss stitch; both will take about the same quantity (12 ounces) of double German wool, and two needles (No. 11) will be required. For check stitch, cast on 102 stitches. *1st row*—Slip 1, knit 1, * purl 2, knit 2; repeat from *. *2nd row*—Slip 1, purl 1, * knit 2, purl 2; repeat from *. *3rd row*—Slip 1, purl 1, * knit 2, purl 2; repeat from *. *4th row*—Slip 1, knit 1, * purl 2, knit 2; repeat from *. Repeat from 1st row till you have about 27 inches in length. Knit a second piece exactly the same, and send them to a good tailor to make up. This insures the waistcoat being a good shape, and the knitting does not run down. For moss stitch, cast on the same number of stitches, slip the first of each row, and knit 1 plain and 1 purl alternately throughout, reversing them in the next row, so that a purl stitch should come over a plain, and a plain over a purl stitch, and continue in this manner till you have the required length.

Christmas Decorations.—Ornamental baskets used to be done in rice, long ago, in imitation of carved ivory, and the same thing would have a very good effect for the letters and devices of Christmas decorations. The rice used must be the large-grained Carolina rice; it is not to be softened in any way, but washed quickly to or three times in cold water to clean and whiten it, and afterwards rubbed dry in a cloth. The letters must be cut out in cardboard of such a width that two grains of rice, placed end to end diagonally, more or less sloped, will cover it, and they must of course be placed following each other in close succession so as to hide the cardboard framework. No gum that is bought will be strong enough to hold the rice, but with the best and whitest gum arabic, pounded, at the chemist's, gum can be made of any strength required. Either the rice or the cotton wool letters would look extremely well on a red baize or twilled cotton ground. Holly berries are well imitated by dipping good round white peas into sealing-wax varnish, made by dissolving the best sealing-wax in spirits of wine. The varnish must be very thick, and the peas should have two coats or more until properly covered.

Dress and Fashion.

Movements of Fashion, 1870-71.

The year 1871 opens badly for ladies' fashions in dress. The spring from whence they emanate is locked up. Paris is armed to the teeth, girdled with forts; no longer turning her attention to fresh modes and becoming attire, but fighting for very life. Europe pauses and waits, shuddering as it looks on, weeps over human lives sacrificed, over the gaps made in now desolate families, and wonders when the fierce passions, now thoroughly aroused, will be calmed down. The Franco-Prussian war has had an effect on every branch of trade, but it has produced a positive stagnation in fashions in dress. Other cities have been named as birthplaces for new styles—New York, Berlin, and Brussels have all been thought capable of "setting" the fashions; but wise people will wait till Paris unarms, and until the genius and vitality of her inhabitants are turned to peaceful occupations. In the meantime let us review the changes that have taken place during the past twelve months.

To commence with the outline of the figure: the aim of the dressmaker has been to cut and contrive the drapery of the skirt so that it shall fall very flat and plain in front, and very full and bunchy at the back. Tunics have grown longer during the last twelve months and are looped up in a careless, unstudied manner; skirts are no more "all round," but droop slightly behind; bodies are trimmed at the back quite as much as in front; sleeves have widened as they descend to the wrist; sashes have collapsed into falling loops and double bows; basques have "come on," and paniers "gone out." Not so many years ago—perhaps three—the back of a dress was not trimmed; all the modiste's energies were devoted to decorating the front, but now, not only is the back of the bodice made highly ornamental, but large bows, cascades of lace, and other adornments are profusely lavished on the back breadths of the skirt. *Revers* and *retroussis* are in favour, and to meet these additions, reversible materials have been introduced. Thus we have striped silks and satins which show different colours on either side. For example, a black and white satin will, on the wrong side, show blue and white; a gray and white satin will show pink and white beneath. These rich materials meet the exigencies of prevailing styles; they do not require lining, and by simply turning a corner back, an effective *revers* is produced.

The new colours for the present season are tan, *prune de monsieur*, and a dusk myrtle green.

Cashmere, satin cloth, and poplins are all favourite materials for winter wear; they drape well, and can be plaited into the small folds required for trimming.

Gimp and fringe play the most conspicuous part in all dress and mantle trimmings. Shaded dresses have been introduced during the past year; three, four, and even five shades of the same colour and the same material have gone to make up a single costume. The idea was excellent, borrowed doubtless from the floral creation, and when the shades, so to speak, ran into each other, without disturbing the eye with an inharmonious gap, the shaded toilette proved a triumph in its way.

In bonnets we have had quite a revolution. The "airy nothings," against which *Punch* and other satirists levelled their sarcasms, have grown and increased into head gear which takes the name of "Gipsy." The "Gipsy" bonnet is all the rage. It rejoices in a crown of its own, and has a brim, or poke (bonnets, strictly speaking, have been so long out of date that the terms of their various parts have become obsolete), and this brim or poke is curved and dented to look coquettish and jaunty. To wear this shape well, you require a symmetrically-formed head and shoulders, and hair arranged to fit, that is to say, no undue excrescence anywhere, and under these circumstances the "Gipsy" bonnet is a success, otherwise it is a caricature.

Hats are worn high crowned, and with fantastic brims, and veils twisted gracefully, not only about them, but about the throat of the wearer also.

Boots are worn much higher; they measure frequently nine inches from the heel upwards. They are made of velvet to match a velvet dress, and are frequently trimmed to accord with the toilette they accompany. More care than ever is expended on a lady's *chaussure*; boots and shoes worn with satin dresses are satin, and frequently embroidered. Should the robe be embroidered, gold braid is used on the boots if gold braid is on the dress; and fur is frequently to be seen on the boots of a lady whose costume is trimmed with fur.

Among the accessories of the toilette, there has been a decided change in *lingerie*. Collars have become more important and increased in dimensions; they form *revers*, or descend in squares or points on to the chest, and are altogether more dressy than the hard straight band of linen that reigned in high favour for the two preceding years. In laces the Duchess has had and is now enjoying a prosperous reign, but we do not predict a long popularity for it. Cluny lace, in *ecrue* buff colour, is very fashionable for trimming silk dresses. The same lace used on buff lawn was universally worn during the season.

The accompanying illustrations will give our readers a fair idea of the styles that prevail at the close of the year 1870. For the year 1871 we forbear to predict, our oracle is dumb, but every lover of taste and of high art in matters of a lady's toilette will join us in an ardent desire that the capital of France will ere long resume her cheerful aspect, and set fire to the now slumbering sparks of her wonderful inventive faculties in all matters relating to dress and fashion.

Autumn Toilettes for Children.

(See page 48.)

Fig. 1. *Boy from Six to Seven.*—Dark grey tweed suit, trimmed with black braid; the trousers descend a little below the knee. The jacket is ornamented at the top with a *revers* collar.

Fig. 2. *Girl from Eight to Ten.*—White cashmere frock, trimmed with plaitings of the same; low square bodice.

Fig. 3. *Girl from Five to Six.*—Costume of buff lama, trimmed with green ribbon. The skirt is bordered with a Russian plaiting, edged with a ribbon; this is followed with three gathered flounces, over which bows and loops of ribbon fall; low bodice, with square basques; white chemise Russe.

Fig. 4. *Boy from Three to Five.*—Velvet costume; the blouse which crosses over the chest is trimmed with a *revers* collar. The skirt is plain in front and plaited as a kilt at the back.

Fig. 5. *Girl from Ten to Twelve.*—Claret reps frock; the skirt is trimmed with upright plaitings of the same material stitched in with cross-bands of the same. The bodice has a *postillon basque* at the back and is pointed in front. Sailor collar and *revers* simulated with trimming. Pagoda sleeves.

Fig. 6. *Baby One Year Old.*—White cambric frock, ornamented with embroidered insertion, lined with blue silk.

Fashionable Bonnets and Hats.

(See page 49.)

Fig. 1. *The Pamela Bonnet.*—Rice straw bonnet bound with black velvet; a small black lace scarf ornaments the top and falls over the chignon. A tuft and spray of roses and white lilac encircle the crown; black lace *ruche* and black lace strings.

Fig. 2. *Straw Bonnet.*—This bonnet is bound with black velvet; spotted *tulle* strings, edged with lace. Long lappet to match the strings veils the chignon. Pink acacias both in front and at the back of the bonnet.

Fig. 3. *The Empress Casquette.*—Round straw hat with turned-up brim, ornamented with a white lace lappet and loops of black velvet. A tuft of field flowers is fastened at the side, a spray of the same is carried to the crown, and hangs over the top of the chignon.

Fig. 4. *The Duchesse Hat.*—Brown straw hat bound with brown velvet. The crown is trimmed with two crossbands of velvet; a large blue *faille* bow is fastened at the left side, and a long blue feather curls round the crown. The back is decorated with a black tulle veil scarf edged with lace.

Silver Ornaments.—The best way of cleaning silver filigree ornaments, is to keep them in a box filled with dry arrowroot. We have found it restores the colour perfectly. This is the way they are kept in India.

To Pack away Dresses.—Carefully folded in very dark blue paper, as highly glazed as possible. This will preserve the colour of them, but they must be also kept in a dry place, or be occasionally unfolded and hung for a few hours in a dry room, and the paper *be dried* too, otherwise they are sure to get spotted with mould.

To Clean Black Lace.—Black lace looks well and nearly new, if washed in skimmed milk. Of course it is not to be rubbed, but constantly softly squeezed. When it seems clean take it out and put it into a little clean milk, also skimmed, then give it another soft squeeze and directly lay it out on sheets of stout paper (though a newspaper will do); touch it every here and there with the fingers to draw out the mitres or scollops, as the case may be, lay sheets of paper over the lace, and until dry a heavy weight over all. If laid on anything soft, the moisture is absorbed, and the lace is not so new-looking.

The Nightingale Jacket.—For the "Nightingale jacket" take two yards (or if for a very stout person two yards and a quarter may be required) of scarlet flannel of the usual width, or any other colour preferred; fold the length exactly in half, and cut it down about six inches. Bind the whole round, including the slit, with white or black sarsenet ribbon, black mohair braid, or, as tartans are now so fashionable, royal Stuart braid would look well and stand washing. Now measure eight inches from the top of the slit, and fold it back on each side like a sailor's collar; this is caught together at the top with a bow or rosette of ribbon to form the back of the neck, and also finished with the same at the end of the slit; the corners may be kept back with a fancy button. The two back corners of the flannel are also turned up six inches and fastened, to form a place to slip the hands through, the point of the turn back being finished with a rosette. Strings may be put to tie under the chin.

The Round Skirt.—Most of the costumes now worn consist of four pieces, viz., the skirt, upper skirt, basque, and paletot. The round or lower skirt measures from three yards and a half to three and three-fourths in width. It contains a very broad gored front breadth, a broad side gore, and two straight back breadths each three-quarters of a yard wide. The same round effect may be given to skirts with two side gores and a single straight breadth behind. To be considered stylish the skirt must touch the floor all round, except just in front, though comfort and cleanliness dictate that it should escape the ground. The front breadth and side gores are sewed plainly to the belt, without their usual slight gathers or the plait on each seam, the entire fullness being massed behind in French gathers; and so important is it to have the front of the dress flat, that strings to tie the skirt back are placed in the side seams of both upper and lower skirts. Few skirts are lined, as heavy materials are now mostly used. The facing is of a stiff cloth, more pliable than wigging. Skirt braid is sewed between the facing and the skirt material, or else the material is turned up on the facing in the old fashioned way.

Toilette de Ville.

FIRST skirt with train of maize-coloured chalis, bordered with a plaited flounce, which has a turquoise-blue silk ruche for heading; a narrow blue cross-band fastens down the ruche in the centre. This flounce measures eight inches at the back, and sixteen in front, where it forms a point in the centre under a large blue bow. Second tunic to match, slashed up the back to the waist, and thereby forming two square ends, which stop six inches above the flounce on the skirt. The skirt then describes three steps at the sides, and a round *tablier* in front, and these are all trimmed with a plaited flounce, headed by a blue ruche. Bodice high at the back, and opening heart-shaped in front; it is pointed at the waist, and has two square *basques* at the back. The sleeve is cut up to the elbow, and decorated with bows. Lace collar, with plaited muslin chemisette. Rice straw bonnet, with wide strings, and maize gauze veil; tuft of blue flowers beneath.

Ball and Dinner Toilettes.

Fig. 1. Ball Toilette.—White tarlatane train skirt, over a white silk slip; there are four four-inch plaited flounces on the front breadth, and a deep flounce which decreases to half its width as it turns towards the back, and is carried all round the train. A pink silk *bouillonné*, tufted down with bows to match, heads this flounce, and ascends each side the front breadth to the waist. Tarlatane tunic, the sides of which turn back with *revers*, and are fastened in the centre under large pink bows. The tunic is bordered with a plaited flounce headed by a pink silk cross-band. Low square bodice of white silk, covered with white tarlatane; it is trimmed *en berthe* with two pink cross-bands and a tarlatane plaiting.

Fig. 2.—Green *poult de soie* dress of the shade called *paon*. Train skirt, bordered with a deep white guipure flounce and heading of same; tunic to correspond, looped up from the top, so as to form a round *tablier* in front and a *pouf* at the back; bodice half high at the back and square in front; like the sleeves, it is trimmed with guipure.

The Housekeeper.

SEASONABLE MENUS.

January.

POTAGES: Turtle soup (thick)—Celery soup.
POISSONS: Crimped cod and oyster sauce—Red mullet.
ENTREES: Fricassée of chicken—Oyster patties—Turban of pigeons.
REMOVES: Roast turkey, stuffed—Roast beef.
ENTREMETS: Pheasants—Woodcocks.
SWEETS: Foies gras in aspic jelly—Clear jelly—Ratafia cream—Plum pudding—Mince pies.

February.

POTAGES: Ox tail—White soup.
POISSONS: Salmon, plain—Soles, with water souchet.
ENTREES: Fricandeau of veal—Gateau of sweetbreads—Turban of larks.
REMOVES: Capon, stuffed with truffles—Brisket of beef, braised.
ENTREMETS: Hare—Woodcocks.
SWEETS: Venetian fritters—Maraschino jelly—Chocolate cream—Mince pies.

POTAGES: Mock turtle soup—Oyster soup.
POISSONS: Turbot and lobster sauce—Fillets of salmon and Genevoise sauce.
ENTREMETS: Lamb cutlets—Curried sweetbreads—Compote of pigeons.
REMOVES: Fore quarter of lamb—Boiled capon and truffles.
ENTREMETS: Snipe: Woodcock.
SWEETS: Curaçoa jelly—Macédoine of fruit—Pineapple cream—College puddings—Prawns.

March.

POTAGES: Clear asparagus—Ox tail soup.
POISSONS: Salmon and sauce Genevoise—Filets of soles.
ENTREES: Sweetbreads and truffles—Lamb cutlets—Oyster patties.
REMOVES: Lamb, roast—Turkey poult, boiled.
ENTREMETS: Larded quail—Ducklings.
SWEETS: Pineapple fritters—Meringues with cream trfles—Clear jelly—Prawns—Cheese rings.

POTAGES: Oyster soup—Soup Julienne.
POISSONS: Crimped salmon—Filets of whiting.
ENTREES: Oyster vol-au-vent—Croquets of veal—Cutlets and cucumber.
REMOVES: Calf's head stuffed—Saddle of mutton.
ENTREMETS: Stewed celery—Quail—Ducklings.
SWEETS: Turbans of pastry—Lemon jelly—Trifle—Swiss pudding, glacé—Cheese rings—Prawns.

April.

POTAGES: Spring soup—Mock turtle,
POISSONS: Salmon—Grey mullet.
ENTREES: Chicken patties—Lamb cutlets with peas—Lobster vol-au-vent.
REMOVES: Fowls à la Bechamel—Roast forequarter of lamb.
ENTREMETS: Leverets and sweet sauce.
SWEETS: Plum pudding—Grand meringues—Grape jelly—Mille fruit—Cream.

POTAGES: Spring soup—Soup à la Reine.
POISSONS: John Dory—Salmon cutlets, with Genevoise sauce.
ENTREMETS: Quenelles of chicken—Compote of quail—Cutlets and asparagus.
REMOVES: Haunch of mutton—Spring chickens.
ENTREMETS: Quail—Stewed celery.
SWEETS: Ice pudding—Punch jelly—Chantilly baskets—Sandwich pastry—Chinese rings.

May.

POTAGES: Green pea soup—Gravy soup.
POISSONS: Salmon, plain—Quenelles of sole and brown sauce.
ENTREES: Turban of lamb sweetbreads—Lobster curries—Compotes of pigeons.
REMOVES: Spring chickens—Haunch of mutton.
ENTREMETS: Larded quails—Peas.
SWEETS: Ice pudding—Genevoise pastry—Punch jelly—Apricot cream.
ICES: Cherry water—Vanilla cream.

June.

POTAGES: Green pea soup—Soup Julienne.
POISSONS: Trout, plain—Cutlets of salmon, purée sauce.
ENTREES: Turban of larks—Larded sweetbreads.
REMOVES: Haunch of venison—Boiled chickens.
ENTREMETS: Plovers' eggs—Prawns.
SWEETS: Ice soufflée—Apricot pudding—Grape jelly—Ginger cream.
GLACES: Pine apple cream—Cherry water—Lemon water.

POTAGES: Calf's head soup—Spinach soup.
POISSONS: Trout and brown sauce—Salmon cutlets.
ENTREES: Sweetbreads and peas—Cutlets and truffles.
REMOVES: Saddle of mutton—Boiled chicken and tongue.
ENTREMETS: Turkey poult—Plovers' eggs.
SWEETS: Iced Nesselrode—Cabinet pudding—Strawberry jelly—Ratafia cream.
GLACES: Strawberry cream—Lemon water—Pineapple water.

July.

POTAGES: Chicken soup—Soup à la Jardinière.
POISSONS: Salmon cutlets—Trout with brown sauce.
ENTREES: Pâte de fois gras—Filets of chicken—Savoury omelette.
REMOVES: Roast lamb—Boiled fowls.
ENTREMETS: Quail—Leverets with sweet sauce.
SWEETS: Gateau of fresh cherries—Ratafia basket with cream—Macedoine of fruits.
GLACES: Strawberry cream—Lemon water.

August.

POTAGES: Soup Julienne—Green pea soup (thick).
POISSONS: Filets of soles—Soles with water souchet.
ENTREES: Veal patties—Lobster vol-au-vent—Sweetbreads and truffles.
REMOVES: Buck venison—Chickens.
ENTREMETS: Grouse—Leveret.
SWEETS: Iced puddings—Grape jelly—Macedoine of fresh fruits—Gateau of apricots.
GLACES: Neapolitan ice—Strawberry cream—Lemon water.

September.

POTAGES: Mock turtle (thick)—Oyster soup.
POISSONS: Red mullet à la Bordeaux—Crimped cod and oysters.
ENTREES: Mutton cutlets and tomato—Sweetbreads à la royale—Turban of larks.
REMOVES: Roast beef—Boiled turkey with chesnut sauce.
ENTREMETS: Partridges—Lobster au gratin.
SWEETS: Foies gras in aspic jelly—Ginger cream—Trifle—Mince pies.

October.

POTAGES: Mock turtle—Julienne.
POISSONS: Turbot and lobster sauce—Fillets of soles.
ENTREES: Vol-au-vent of oysters—Cutlets and truffles.
REMOVES: Roast beef—Boiled turkey (stuffed).
ENTREMETS: Grouse—Woodcock.
SWEETS: Gold-leaf jelly—Nassau puffs—Ginger cream—Mince pies.
ICE: Biscuit à la vanille.

November.

POTAGES: Turtle (thick)—Ox tail soup (clear).
POISSONS: Crimped cod and oyster sauce—Filets of soles in port wine.
ENTREES: Stewed pigeons and truffles—Turban of partridges—Cutlets and tomato sauce.
REMOVES: Saddle of mutton—Roast turkey stuffed with truffles.
ENTREMETS: Pheasants—Partridges.
SWEETS: Plum pudding—Orange fritters—Punch jelly—Meringues with cream.

December.

POTAGES: Ox tail soup (clear)—Mock turtle (thick)
POISSONS: Turbot and lobster sauce—Sprats.
ENTREES: Larded sweetbreads—Beef collops—lobster patties.
REMOVES: Roast turkey and ham—Ribs of beef braised.
ENTREMETS: Woodcocks—Hare.
SWEETS: Californian jelly—Chantilly baskets—College puddings—Punch cream.

POTAGES: Hare soup—Clear turtle.
POISSONS: Turbot—Papillotes of filets of soles.
ENTREES: Lobster scallops—Fricassée of chicken.
REMOVES: Roast beef—Boiled turkey.
ENTREMETS: Pheasants—Partridges.
SWEETS: Cabinet pudding—Plum pudding—Pine cream—Orange jelly—Mince pies.

USEFUL HOUSEHOLD RECIPES.

To preserve Barberries.—Boil them in water for twenty minutes, and then drain them, and preserve them with sugar like other fruit.

Orange Pudding.—Take three Seville oranges, grate them, and squeeze them upon the peel of the orange, take three spoonfuls of grated bread, ½lb. of sugar, five eggs well beat, put no paste at the bottom, bake it an hour.

To parch Almonds.—Take 1lb. of sugar, make it into a syrup, and boil it to candy high; then put in ½lb. of Jordan almonds blanched, keep them stirring all the while till they are dry and crisp, then put them in a box and keep them dry.

Blackberry Jelly.—Bruise two quarts of blackberries, add two quarts of water. When it boils strain through a *linen* bag. Boil the syrup five minutes. To each 1lb. add 1lb. of sugar; boil fifteen minutes, skim well, pot, and put brandy papers over.

Medlar Jelly.—Take medlars when they are ripe, wash them, and put them in a preserving pan, with enough water to just cover them. Simmer slowly till they become quite a pulp. Strain through a jelly bag, and to every pint of juice add 1lb. of loaf sugar; boil one hour.

An Apple Pudding.—Take three large apples, cut out the core; put them into a saucepan, with a very little water; boil them till they are quite soft; beat them well with the yolks of six eggs and the whites of four, a ½lb. of butter, the rind of one lemon, and the juice of half a lemon, and sugar to your taste. Lay a puff paste at the bottom of your dish.

To colour Jelly Red.—Take 1oz. of cochineal, put to it half a pint of water, let it boil five minutes; then add to it ½oz. of cream of tartar, ½oz. of alum; let it boil five minutes more, then add to it 1oz. of sugar, let it stand to settle; then pour it off clear and put it into a dry phial. A teaspoonful will be sufficient to colour a pint of jelly.

Ox Palates Curried.—Cleanse and braise the palates, and boil in water for two hours; when done, pressed and cold, cut each into square pieces, and put them into a stewpan with curry sauce, and a teacupful of rich stock, add a tablespoonful of sweet chutney; make all hot, and serve with a plain border of rice.

Strawberry Cream.—Pick the stalks from half a pint of fresh strawberries, and bruise them with a wooden spoon, with 6oz. of sifted sugar, and a few drops of cochineal; rub this through a fine hair sieve into a basin, then add half a pint of cream that has 2oz. of isinglass in it. Mix carefully, or the fruit will turn the cream into curds; fill a mould, and stand on ice for two hours before using it.

Digitized by Google

To preserve Gooseberries in Hops.—Take whole green gooseberries, and boil them in water till they all break, then strain your water through a sieve, and weigh your hops; and to 1lb. of hops put a 1½lb. of double refined sugar; put the sugar and hops into the liquor, and boil them open till they are clear and green; then take them up and lay them upon pie plates, and boil your syrup longer. Lay your hops in a pretty deep gallipot, and when the syrup is cold pour it on them, and keep them in a stove.

Rabbits with fine Herbs.—Cut up the rabbit into joints, by cutting off the shoulders and legs, divide the back into four parts. Split the head in half; fry all these in a stewpan with butter, until browned all over; shake in a good tablespoonful of flour, chopped mushrooms, parsley, and shalots; season to taste, add the juice of a lemon, a glass of sherry, and a gill of rich brown gravy; toss all together over a brisk fire for ten minutes (do not let it boil) and serve.

Maccaroni.—Take a good handful of flour, break an egg into it to make it into a stiff paste; and roll it as thin as possible; then roll it quite up and cut it into thin strips, throw it into boiling hot water, let it boil three or four minutes; strain it through a sieve, pouring cold water directly on it; then put it into a stewpan with a little cream, some grated cheese, and a very little bit of butter, let it just boil up to be hot; then put it into the dish and sprinkle grated cheese over it enough to cover all the paste; then brown it with the salamander; send it up quickly.

Use for Whites of Eggs.—No. 1. Five or six whites of eggs in a breakfast cup of milk sweetened to taste, with a sprinkling of Jamaica pepper; put into a pie dish lined with paste, and baked together, will make a plain custard pudding, to be eaten cold. They are required also for whips for *soufflés*.—No. 2. White of egg is the readiest material for covering preserve pots. Spread it like gum thinly over one side of cap paper, and it will adhere to the top of the jar. It should be put on full stretch, and will dry tight like parchment. Brandy papers should, of course, be laid on the preserves underneath.

A Marrow Pudding.—Grate two Naples biscuits into the bottom of your dish, the marrow of one large or two small bones (be very careful to pick out the splinters of the bones) ½lb. currants, and ½lb. raisins stoned, and 1oz. citron sliced, put all these into your dish first, then make a custard as follows—take a pint of cream, beer measure, a chocolate cup of milk, a blade or two of mace, half a nutmeg, boil it, beat nine eggs, leaving out half the whites, put in as much loaf sugar, beat and sifted, as you think sufficient to make the cream very sweet, then mix them together by degrees that it may not curdle, then strain it through a sieve, and when strained put a spoonful or two of orange flower water; the custard must not be poured over the ingrediends till it is in the oven.

To preserve Gooseberries.—Take the largest gooseberries, and with a knife cut them across at the head, and half-way down, and with a bodkin put out the seeds clean, and do not break them; then take fine long thorns, scrape them, and then put on your gooseberries, putting the leaf of the one to the cut of the other, and so on till your thorn is full; and when they are full put them into a new pipkin with a close cover, and cover them with water, and let them stand scalding till they are green; then take them up, and lay them upon a sieve to drain from the water. Be sure they do not boil in the greening, for if they have but one warm they are spoiled; and, while they are greening, make a syrup for them.

Croustade of Quail.—Take a square shaped stale quartern loaf, and use a sharp knife to carve it into the shape of a croustade; when cut out stick a fork in the centre of it, and plunge carefully into hot lard; fry a light fawn colour, place the croustade in the dish with white of egg to keep it firm on it. Lard 16 quails, and stuff with fine seasoned bread crumbs and a truffle. Cut off the legs, and roll the birds into a ball; place them in rows, with fresh butter in a saucepan, season with pepper and salt; cover them with butter paper, and put into a moderately hot oven for twenty minutes, which is time enough to cook them well; place the croustade for five minutes in the oven; drain the birds, and place in the case. Garnish with large prawns and fresh parsley.

Ginger Wine.—Boil 20lb. of sugar in seven gallons of water for half an hour, skimming it well; then put 9oz. of bruised ginger in a portion of the liquor, and mix all together. When nearly cold, put 9lb. of raisins chopped very small into a 4-gallon cask, add 4 lemons sliced, after taking out the seeds, pour the liquor over all, with half a pint of yeast. Leave the cask open for three weeks, keeping it filled up with some of the reserved liquor; and bottle it in from six to nine months. Another process—Boil 26lb. of raw sugar in 7 gallons of water for half an hour, skimming it well; then if the syrup is quite clear from scum, pour it boiling upon 8oz. of bruised ginger and 16 lemons sliced; when the whole has cooled down to about seventy-five degrees, squeeze out the lemons and ginger through a sieve and add the yeast. Let it work for about three days, and then draw it off into a cask. Put half of the lemon and ginger residue in with it. Some first pare the lemons, and having rubbed the rinds with loaf sugar, add the latter when it has done working. Bottle in three months.

Preserving Crab Apples.—No. 1. To make delicious crab apple marmalade, wipe the crabs and take off the stalks, then weigh them. Put them in a large brown earthenware jar, with a pint of water, tie over with paper, let them stand in an oven all night, and when quite soft and broken, rub them through a sieve, and put pounded sugar, the same weight as the apples when weighed. If the pulp is too thick, add a little water, and boil altogether for three-quarters of an hour. Put in small jars or glasses, and when wanted for use it will turn out beautifully.—No. 2. Half a tea-cupful of water, 4lb. of loaf sugar; boil this together, and then drop in the crabs whole with the stems. Boil them from twenty minutes to half an hour, and then put them into jars. To each pound of crab apples put 1lb. of sugar.—No. 3. For crab jelly, to each pound and a half of Siberian crabs (weighed after they are washed, and the stalks taken off) add a pint of water, boil gently till they are broken, about twelve to eighteen minutes will do this. Strain through a jelly bag, and when quite clear weigh the juice, put it in a clean pan, boil fast for fifteen minutes, take it from the fire and stir in, until dissolved, three quarters of a pound of fine powdered loaf sugar to each pound of juice. Boil from fifteen to twenty minutes, skim it very clean to pour into moulds.

Treacle Parkin.—No. 1. Mix oatmeal, a little salt, and baking powder (a teaspoonful to the pound) and plenty of ground ginger to make it hot to taste. Melt a little shortening and pour in, then add sufficient treacle to make all into a soft paste. Thickly butter a mould or cake tin, put the paste in and paper over the top. Bake slowly; or it may be made in drop cakes, size of a tumbler top.—No. 2. Oatmeal, 3lb., flour 1lb., butter 1lb., treacle 4lb., ginger 1oz., sugar 1lb., carbonate of soda, two teaspoonfuls, in a gill of beer. The butter to be rubbed into the flour. All the ingredients to be mixed overnight and baked next morning in a moderate oven. Do not forget to add a wine glass or two of good rum.—No. 3. Sift 4lb. oatmeal, and mix with it 4lb. treacle, ½lb. brown sugar, ½lb. melted butter, ½oz. ground ginger. Work it with the hand till quite smooth. Leave it for a day and a night, then roll out thin, and cut it into cakes.—No. 4. Rub ½lb. butter into 3lb. oatmeal, ½lb. sugar, 1oz. ground ginger, and as much treacle as will make it into a stiff paste. Roll out into cakes ½in. thick, lay on buttered tins, and bake in moderate oven.—No. 5. 2lb. oatmeal, 1lb. flour, ½lb. sugar, crushed, ¾lb butter, melted in ½lb treacle. Mix the sugar, oatmeal, and flour, add 1½oz. allspice, 1oz. ground ginger. When well incorporated make into cakes ½in. thick, and bake as before. Some mix in some carraway seed. Parkin is said to be best when twelve months old.

To make Pomatum.—No. 1. 1lb. beef marrow, ½lb. fresh lard, half a flask of oil; mix all together, and scent with essence of bergamot or verbena.—No. 2. 1 dr. spermaceti, 2oz. olive oil, four pennyworth of bergamot, or any scent preferred; to be thoroughly mixed in a basin in the oven, and whilst hot poured into pots or bottles.

Cleaning the Hair.—No. 1. For hair wash, 1oz. powdered borax, three pennyworth of camphor, one quart of boiling soft water.—No. 2. 1oz. borax, ½oz. camphor, and one quart boiling water, is a good wash.

Cleaning Rock Coral.—Brush the rock coral with clean soap and water, and afterwards place in the sun to dry and bleach. Continue every day for a week.

To destroy Blackbeetles.—Take a little plaster of Paris, crumble it, and mix it with about as much moist sugar, put it on a plate, or on the floor where they come at night. After once or twice, they will disappear.

To allay Flea Bites.—No. 1. Glycerine is a good thing.—No. 2. Some people recommend liquor ammonia diluted to allay the irritation of flea bites, and a piece of camphor in the bed may prevent the bites.

To allay Wasp Stings.—Mix a little common garden mould with water, and make a poultice of it, putting it in a bit of muslin over the sting; it eases the pain in a very short time. It is said to be good for gnat and other bites.

To Transfer a Lace Pattern on Coloured Calico.—If you cannot trace a pattern through the calico by placing it against the window, you must, after taking it off on stiff paper, or tracing lawn, prick the design with a pin, at distances of about a quarter of an inch, and laying the paper or lawn on the calico, dust it through with pounded charcoal, tied up in a muslin bag; you will then, on carefully removing the paper, find the pattern slightly marked, and must trace it with a camel's hair pencil and lamp black.

— Another way is to brush the calico over with benzine, it will become transparent, and recover its usual appearance when dry.

— A third way to transfer point lace patterns is to get a piece of black tracing paper, place it between the pattern and the calico, and go over the pattern with something blunt pointed, say, a bone knitting pin; then ink the pattern over on the calico. Red or green kid, which may be obtained at almost any fancy workshop, is preferable to calico; and the patterns may be transferred in the same way.

Ruffles.—The number of stitches for these ruffles must of course depend on the size of the dish they are wanted for. For a good-sized pie-dish, 225 will be about the number, netted on a pin gauging No. 15 of Bell gauge; join, and net round 10 rows. This is for the contracting band; then net 20 rows with a pin that will pass through the straight slit to No. 10 Bell gauge; another contracting band of 10 fine rows as before, another 20 rows on the larger pin, and a third contracting band like the others completes the ruffle, as two puffs are generally enough for a pie-dish. For a very large fish drainer, to hold a handsome turbot or salmon, 200 more stitches would be requisite, making 425 in all, and 3 puffs, with 4 contracting bands. I have found Naish's ball cotton No. 30 the best to net them with, as it does not curl or twist, and keeps its colour better than the reel crochet cotton. The contracting bands are all to be tacked together when used; and if a thread be run round, they can be drawn to the size of the dish they are required for. There is a little difficulty in getting them up; they require to be starched and dried two or three times, and carefully ironed the way they are netted.

Spray Work.—For spray-work the ferns must be arranged on the wood, and fastened down at the end of each leaflet by minikin or lace pins, or fine needles lightly stuck through them into the wood. Then a liquid preparation of Indian ink or sepia must be made, and a toothbrush be dipped into it and held over the wood, about 2in. or 3in. from the surface; a fine comb must then be quickly passed over the hairs of the brush, so as to cause the ink to be lightly spurted over the whole. This work requires practice and patience, as the spurting must be very fine and without any blots. The brush should be moved about over the wood according to the shading wished for the background, and until the depth of colour required has been given. To produce the shading of the ferns, and to give them the appearance of lying at different degrees of depth, they must be removed one by one, and the spurting continued over them until the desired degree of tint is thus given to each, the foremost in the group remaining covered to the last, to produce the effect sought for. It is hardly possible to describe minutely and accurately the spray-work process; but, the principle being given, experience will soon add the requisite details. The wood used is the white kind commonly manufactured into screens, boxes, tables, &c., and may be purchaseed in any of these forms at most fancy shops. It requires no preparation before the work is done, but should afterwards be varnished by an experienced workman.

MARRIED WOMEN'S PROPERTY BILL.

AN ACT TO AMEND THE LAW RELATING TO THE PROPERTY OF MARRIED WOMEN.

1. The wages and earnings of any married woman acquired by her after the passing of this Act in any employment, occupation, or trade in which she is engaged or which she carries on separately from her husband, and also any money or property so acquired by her through the exercise of any literary, artistic, or scientific skill, and all investments of such property, shall be property held and settled to her separate use, independent of her husband, and her receipts alone shall be a good discharge for such wages, &c.

2, 3, 4, and 5. Notwithstanding any provision to the contrary in the Act of the tenth year of George the Fourth, chapter twenty-four, enabling the Commissioners for the Reduction of the National Debt to grant life annuities and annuities for terms of years, or in the Acts relating to savings banks and post-office savings banks, any deposit hereafter made and any annuity granted by the said commissioners under any of the said Acts in the name of a married woman, or in the name of a woman who may marry after such deposit or grant, shall be deemed to be the separate property of such woman, and the same shall be accounted for and paid to her as if she were an unmarried woman; the same applies to the public funds, being not less than 20*l.*, on application to the Governor and Company of the Bank of England and Ireland, who will transfer the same to the name the woman will be known by when she is married; also shares in any joint-stock company may be transferred and held in like manner; also funds in an industrial or provident society, or benefit building society, or loan society; provided that if any such deposit is made by, or such annuity granted to, a married woman by means of moneys of her husband without his consent, the court may, upon an application under section nine of this Act, order such deposit or annuity or any part thereof to be paid to the husband.

6. Nothing hereinbefore contained in reference to moneys deposited in or annuities granted by savings banks or moneys invested in the funds or in shares or stock of any company shall as against creditors of the husband give validity to any deposit or investment of moneys of the husband made in fraud of such creditors, and any moneys so deposited or invested may be followed as if this Act had not passed.

7. Where any woman married after the passing of this Act shall during her marriage become entitled to any personal property as next of kin or one of the next of kin of an intestate, or to any sum of money not exceeding two hundred pounds under any deed or will, such property shall, subject and without prejudice to the trusts of any settlement affecting the same, belong to the woman for her separate use, and her receipts alone shall be a good discharge for the same.

8. Where any freehold, copyhold, or customaryhold property shall descend upon any woman married after the passing of this Act as heiress or co-heiress of an intestate, the rents and profits of such property shall, subject and without prejudice to the trusts of any settlement affecting the same, belong to such woman for her separate use, and her receipts alone shall be a good discharge for the same.

9. In any question between husband and wife as to property declared by this Act to be the separate property of the wife, either party may apply by summons or motion in a summary way either to the Court of Chancery in England or Ireland according as such property is in England or Ireland, or in England (irrespective of the value of the property) the judge of the County Court of the district in which either party resides, and thereupon the judge may make such order, direct such inquiry, and award such costs, as he shall think fit; provided that any order made by such judge shall be subject to appeal in the same manner as the order of the same judge made in a pending suit or on an equitable plaint would have been, and the judge may, if either party so require, hear the application in his private room.

10. A married woman may effect a policy of insurance upon her own life or the life of her husband for her separate use, and the same and all benefit thereof, if expressed on the face of it to be so effected, shall enure accordingly, and the contract in such policy shall be as valid as if made with an unmarried woman.

A policy of insurance effected by any married man on his own life, and expressed upon the face of it to be for the benefit of his wife or of his wife and children, or any of them, shall enure and be deemed a trust for the benefit of his wife for her separate use, and of his children, or any of them, according to the interest so expressed, and shall not, so long as any object of the trust remains, be subject to the control of the husband or to his creditors, or form part of his estate. When the sum secured by the policy becomes payable, or at any time previously, a trustee thereof may be appointed by the Court of Chancery in England or in Ireland according as the policy of insurance was effected in England or in Ireland, or in England by the judge of the County Court of the district, or in Ireland by the chairman of the Civil Bill Court of the division of the county, in which the insurance office is situated, and the receipt of such trustee shall be a good discharge to the office. If it shall be proved that the policy was effected and premiums paid by the husband with intent to defraud his creditors, they shall be entitled to receive out of the sum secured an amount equal to the premiums so paid.

11. A married woman may maintain an action in her own name for the recovery of any wages, earnings, money, and property by this Act declared to be her separate property, or of any property belonging to her before marriage, and which her husband shall, by writing under his hand, have agreed with her shall belong to her after marriage as her separate property, and she shall have in her own name the same remedies, both civil and criminal, against all persons whomsoever for the protection and security of such wages, earnings, money, and property, and of any chattels or other property purchased or obtained by means thereof for her own use, as if such wages, earnings, money, chattels, and property belonged to her as an unmarried woman; and in any indictment or other proceeding it shall be sufficient to allege such wages, earnings, money, chattels, and property to be her property.

12. A husband shall not, by reason of any marriage which shall take place after this Act has come into operation, be liable for the debts of his wife contracted before marriage, but the wife shall be liable to be sued for, and any property belonging to her for her separate use shall be liable to satisfy, such debts as if she had continued unmarried.

13. Where in England the husband of any woman having separate property becomes chargeable to any union or parish, the justices having jurisdiction in such union or parish may, in petty sessions assembled, upon application of the guardians of the poor, issue a summons against the wife, and make and enforce such order against her for the maintenance of her husband as by the thirty-third section of "The Poor Law Amendment Act, 1868," they may now make and enforce against a husband for the maintenance of his wife who becomes chargeable to any union or parish. Where in Ireland relief is given under the provisions of the Acts relating to the relief of the destitute poor to the husband of any woman having separate property, the cost price of such relief is hereby declared to be a loan from the guardians of the union in which the same shall be given, and shall be recoverable from such woman as if she were a *feme sole* by such and the same actions and proceedings as money lent.

14. A married woman having separate property shall be subject to all such liability for the maintenance of her children as a widow is now by law subject to for the maintenance of her children: Provided always, that nothing in this Act shall relieve her husband from any liability at present imposed upon him by law to maintain her children.

15. This Act shall come into operation at the time of the passing of this Act.

16. This Act shall not extend to Scotland.

17. This Act may be cited as the "Married Women's Property Act, 1870."

Profitable Poultry Keeping.—Divide the ground into two parts by a suitable wire fence; the part containing the fowl-house to be treated in the following manner: Have a three-inch layer of furnace clinkers, well rammed into the surface soil, fill the interstices with coal ashes; then place on them a six-inch layer of gravel, and go over the whole with a heavy roller. The other part to be drained and sown with seed to form a grass plat. The fowl-house to be 16ft long, 6ft. wide, 7ft. high at back, 6ft. in front, and divided into two. Have two doors, one in each end. See that the house is well ventilated, without being draughty. The floor to be raised above the level of the yard, sloped towards the doors, and formed of the composition above named. Have moveable perches about 18in. to 2ft. from the floor. Nests on the ground along three sides of the house. The floors should be swept every morning, afterwards strewn with sand, ashes, or dry earth, and the walls, nest boxes, &c., to be occasionally lime washed. Provide covered dust-baths in each yard. If you wish to keep another breed (non-sitters) besides the Brahma, divide the house and gravelled yard into two parts, so as to keep the breeds distinct, as crosses between sitters and non-sitters are to be avoided. Allow each breed to have the run of the grass plat on alternate days. Houdans are good winter layers, and as a second variety choose either those or La Flèche. Crèvecœurs are not so hardy, neither are they such good layers. Why not keep Brahmas only? You cannot have a hardier fowl, and, taking them altogether, are the best for general purposes. As regards the management, endeavour to hatch as many chickens as you require in March, April, and May. These will lay during the winter, and those hatched after will continue the supply in spring. Do not keep hens after they are eighteen months old, *i.e.*, supposing they were hatched in April, 1870, you ought to get rid of them by October, 1871; by this arrangement you will have their eggs during the winter and summer, their protection for the chicks during the spring, and you can get a fair price for them in the autumn. If you found a hen with exceptional qualities, you might keep her six or nine months longer. Sell all surplus hens directly they have done laying. Feed on whole barley in the morning, barley meal, middlings, and table scraps (if you have any) at noon, and barley again at night. In the winter you might with advantage add Indian corn and ground oats to the diet, besides giving the mixed food warm. Give as much green food as you can, the more the better; throw all food on the ground, use no troughs or feeding vessels. Give plenty of pure water in clean vessels. A cheap and good drinking fountain is thus described in *The Poultry Book for the Many:* "The articles required are simply a flower-pot and saucer. Detach a piece from the rim of the flower-pot, about three-quarters of an inch deep and one inch wide; plug the hole in the bottom of the pot with a piece of cork; fill the pot with water, placing the saucer on the top, then quickly turn the whole upside down, when the water will fill the space in the saucer around the pot. The hole in the rim of the pot must not be quite so *deep* as the height of the side of the saucer, and the plug must be *air-tight*, that is the secret of success. It is easily cleaned, simple, and cheap, and no fear of the chickens dabbling in it." We have used this apparatus two years, therefore can recommend it. On a suitable soil, with the same care and attention, fowls will return as large a profit as any live stock kept by the farmer."

Lip Salve.—The ingredients required for lip salve are—two ounces of oil of sweet almonds, half an ounce of white wax, and half an ounce of rose water. A mortar must be place in a vessel containing boiling water, and the wax, cut into very small pieces, be put into the mortar. When it has melted take the mortar out, and add the oil by degrees, beating with the pestle until it is cool, then mix in the rose water. If it be preferred coloured, rub in a little carmine with the oil before mixing it with the wax.

The Queen and Royal Family.

THE QUEEN.—VICTORIA, of the United Kingdom of Great Britain and Ireland, &c., Queen, Defender of the Faith. Her Majesty was born at Kensington Palace, May 24, 1819; succeeded to the throne June 20, 1837, on the death of her uncle King William IV.; was crowned June 28, 1838; and married Feb. 10, 1840 to his Royal Highness Prince Albert. Her Majesty is the only child of his late Royal Highness Edward, Duke of Kent, son of King George III. The children of Her Majesty are:—

Her Royal Highness Victoria Adelaide Mary Louisa, PRINCESS ROYAL OF ENGLAND AND PRUSSIA, born Nov. 21, 1840, and married to his Royal Highness William of Prussia, Jan. 25, 1858, and has had issue, Frederick William Victor Albert, born Jan. 27, 1859; Victoria Elizabeth Augusta Charlotte, born July 24, 1860; Albert Wilhelm Heinrich, born Aug. 14, 1862 (dead); Frederica Wilhelmina Amelia Victoria, born April 12, 1866; Joachim Frederick Ernest Waldemar, born Feb. 10, 1868; and Sophia Dorothea Ulrike Alice, born June 4, 1870.

His Royal Highness Albert Edward, PRINCE OF WALES, born Nov. 9, 1841; married, March 10, 1863, Alexandra of Denmark (Princess of Wales), born Dec. 1, 1844, and has issue, Prince Albert Victor, born Jan. 8, 1864; George Frederick Ernest Albert, born June 3, 1865; Louisa Victoria Alexandra Dagmar, born Feb. 20, 1867; Victoria Alexandra Olga Mary, born July 6, 1868; and Maude Charlotte Mary Victoria, born Nov. 26, 1869.

Her Royal Highness Alice Maud Mary, born April 25, 1843; married to H.R.H. Prince Frederick Louis of Hesse, July 1, 1862, and has issue three daughters (Princesses Victoria, Elizabeth, and Irene) and two sons (Princes Ernest and Frederick).

His Royal Highness Alfred Ernest Albert, born Aug. 6, 1844.

Her Royal Highness Helena Augusta Victoria, born May 25, 1846; married to his Royal Highness Prince Frederick Christian Charles Augustus of Schleswig-Holstein-Sonderburg-Augustenburg, July 5, 1866, and has issue two sons and a daughter.

Her Royal Highness Louisa Caroline Alberta, born March 18, 1848; married to the Marquis of Lorne, eldest son of the Duke of Argyll, March, 1871.

His Royal Highness Arthur William Patrick Albert, born May 1, 1850.

His Royal Highness Leopold George Duncan Albert, born April 7, 1853.

Her Royal Highness Beatrice Mary Victoria Feodore, born April 14, 1857.
